We have spoken now, surely, in terms too concrete to admit of any further doubt or question. An evident principle runs through the whole program I have outlined. It is the principle of justice to all peoples and nationalities, and their right to live on equal terms of liberty and safety with one another, whether they be strong or weak. Unless this principle be made its foundation no part of the structure of international justice can stand. The people of the United States could act upon no other principle, and to the vindication of this principle they are ready to devote their lives, their honor and everything that they possess. The moral climax of this, the culminating and final war for human liberty has come, and they are ready to put their strength, their own highest purpose, their own integrity and devotion to the test.

PLANS GUERILLA DEFENSE

Russia May Resume Military Operations of That Kind.

Petrograd, Jan. 9.—At Russian army headquarters in the field, a war council is being held. Steps are being discussed that may lead to a resumption by Russia, not of military operations on a vast scale, such as offensives of the Brusiloff type, but of active, energetic guerilla defense of the Russian lines.

In this defense Russia does not ask Allied aid. She rejects it, even.

She proposes to throw chaos into the teeth of any military move the Germans may make. She will give the Teuton commanders the thing they fear more than organized armies—a crippled land of endless vastness, that has no food—no transportation, and whose productiveness is paralyzed, a land, peopled by human guerillas, "every one of them armed with a rifle," as Trotzky puts it.

SEES PERMANENT CONTROL

Vanderlip Thinks Government Will Continue Rail Operation.

New York, Jan. 9.—"It looks as if the railroads have passed permanently from private control in the form that we have known it. Whether this is a good thing must remain to be seen," said Frank A. Vanderlip, president of the National City bank, speaking at the Rubber Association of America banquet. "The breakdown did not come Dec. 28; it started far back of that in unfair treatment of the railroads," he said. "We are seeing a type of state socialism the world over, reflected in price fixing and food administrations."

FEW STUDENT AIRMEN KILLED

Split Lip, Cracked Elbow, Total Casualties in 6 Weeks in Camp.

With the American Army in France, Jan. 9.—One split lip and one cracked elbow is the casualty list for six weeks at one of the biggest American flying schools in France.

The old suspicion that embryo fliers were killed off like Spartan weaklings is being relieved by facts from the flying centers.

In six weeks at the school, a dozen machines crashed to the ground. In every case the flier pulled himself together and walked out of the tangle.

lk Men Indicted.

Jan. 9.—Indictments
embers and officers of
league have been re-
violation of the New
aw. It is alleged the
nspired to fix retail
indictments are based
n the rate author-
a legal confliction be-
authorities on what
legal price fixing and
reached on this
al government.

Milk-Fuel Famine Faces Chicago

Chicago, Jan. 9.—There will be a milk and fuel famine here unless the citizens combine to defeat the menace. In one day the city spent $10,000 for 2,200 laborers, 631 teams and seven snow plows. The whole force hardly made a dent in the drifts that have blocked all delivery of food and coal. Each citizens is being urged by the commissioner of public works and the Association of Commerce to lend a hand. Neither milk nor groceries could be delivered in normal quantities.

Federal Judge Accused.

Seattle, Jan. 9.—Citizens of Nome, Alaska, have filed charges of pro-Germanism against Federal Judge William S. Holzeimer, recently appointed to Nome division. Other charges of gambling and excessive drinking were also made.

Washington, Jan. 9.—Construction of an army cantonment at Revoir, Va., near Washington, for training of 16,000 engineers for overseas duty, is authorized by the War department.

Urges Importing China Farmers.

San Francisco, Jan. 9.—The California State Development board has adopted a resolution favoring importation of experienced Chinese farmers to California for the period of the war.

St. Paul Packing Hearings Postponed.

Washington, Jan. 9.—The St. Paul hearings of the trade commission inquiry into the packing industry have been postponed until Monday, January 14.

ALL MEN AT HOME SHOULD PREPARE FOR WAR

The first test a man is put thru for either war or life insurance is an examination of his water. This is most essential because the kidneys play a most important part in causing premature old age and death. The more injurious the poisons passing thru the kidneys the sooner comes decay—so says Dr. Pierce of Surgical Institute, Buffalo, N. Y., who further advises all people who are past thirty to preserve the vitality of the kidneys and free the blood from poisonous elements, such as uric acid—drink plenty of water—sweat some daily and take Anuric, double strength, before meals.

This An-u-ric is a late discovery of Dr. Pierce and is put up in tablet form, and can be obtained for 60c. at almost any drug store. For that backache, lumbago, rheumatism, "rusty" joints, swollen feet or hands, due to uric acid in the blood, Anuric quickly dissolves the uric acid as hot water does sugar. Take a little Anuric before meals and live to be a hundred. Send 10 cents to Dr. Pierce for trial package of Anuric.

NEWS OF SUPERIOR

Superior, Wis.—"One bottle of Dr. Pierce's Favorite Prescription put me on my feet, and the second bottle completely cured me. I had an operation for tumor and my strength would not come back. The doctors seemed powerless to help me. I heard of a lady who had been in as bad a condition as mine and Dr. Pierce's medicine helped her, so I tried it, with the very best of results, and I have been in the best of health ever since. I cannot say enough in praise of 'Favorite Prescription' for women."—MRS. L. R. CARMAN, 1721 Twenty-second St.

The Prescription is made up in liquid or tablet form. It contains no alcohol or narcotic. Ingredients are printed on the wrapper. Tablets 60c.

If not obtainable at your dealer's, send 10 cents to Dr. Pierce, Invalids' Hotel, Buffalo, N. Y., and he will mail a trial package of tablets.—Adv.

Your Liver Is the Best Beauty Doctor

A dull, yellow, lifeless skin, or pimples and eruptions, are twin brothers to constipation. Bile, nature's own laxative, is getting into your blood instead of passing out of your system as it should. This is the treatment, in successful use for 50 years — one pill daily (more only when necessary).

CARTER'S LITTLE LIVER PILLS.

Small Pill—Small Dose—Small Price

Carter's Little Liver Pills For Constipation

Genuine bears signature Brent Good

Puts You Right Over Night

Pallid, Pale, Putty-Faced People Need Carter's Iron Pills

The Reason.

"So the scandal-mongers did not succeed in floating that rumor?"

"No; it wouldn't hold water."

Says Dodd's Kidney Pills, Wonderful Remedy

Mrs. Della Olson, of New London, Wis., like many others, knows after experiencing the use of Dodd's Kidney Pills that they are unexcelled. Here is what Mrs. Olson recently wrote us:

"I suffered with rheumatism for years. There was a gravel deposit in the urine and I had frequent headaches. I had dark circles around my eyes and was always tired. I bought a box of your Dodd's Kidney Pills, and am glad I did, for I secured quick relief and think they are a wonderful remedy."

Mighty few people realize in time that kidney trouble is making its advances upon their health. They put off treatment—they say, "Oh, I'll be all right in a day or two." And the malady tightens its grip. Result: Bright's Disease, hospital treatment, doctors' bills—often death.

When you have backache, dizziness, pain in loins, stiffness in stooping or lifting, spots before the eyes, sediment in secretions, rheumatic pains, or swollen joints, immediately start toning the kidneys by the regular use of the remedy endorsed by hundreds of users—DODD'S Kidney Pills.

The General Rule.

As a general thing, the girl who gets kissed under the mistletoe would get kissed under any other circumstances.

Dr. Pierce's Pellets are best for liver, bowels and stomach. One little Pellet for a laxative, three for a cathartic. Ad.

Without a Telescope.

"Hit me again, James; I believe I've discovered a hitherto unknown stellar luminary."

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Any druggist can put this up or you can mix it at home at very little cost. Full directions for making and use come in each box of Barbo Compound. It will gradually darken streaked, faded gray hair, and make it soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off. Adv.

If a man never changes his mind, he is either very right or very stubborn.

Piles Cured in 6 to 14 Days
Druggists refund money if PAZO OINTMENT fails to cure Itching, Blind, Bleeding or Protruding Piles. First application gives relief. 50c.

New Zealand wheat acreage is 20 per cent short.

Resolve not to be poor; whatever you earn, spend less.—Doctor Johnson.

The Easiest Way.

The unsuccessful classic sculptor gazed sadly at the masterpiece he had just modelled in clay. Then he set upon it with fists and stick, and made of it a shapeless mass. Quoth he:

"One can, by taking thought, add a cubist to his statue!"

Catarrhal Deafness Cannot Be Cured

by local applications as they cannot reach the diseased portion of the ear. There is only one way to cure Catarrhal Deafness, and that is by a constitutional remedy. HALL'S CATARRH MEDICINE acts through the Blood on the Mucous Surfaces of the System. Catarrhal Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result. Unless the inflammation can be reduced and this tube restored to its normal condition, hearing may be destroyed forever. Many cases of Deafness are caused by Catarrh, which is an inflamed condition of the Mucous Surfaces.

ONE HUNDRED DOLLARS for any case of Catarrhal Deafness that cannot be cured by HALL'S CATARRH MEDICINE.

All Druggists 75c. Circulars free.

J. M. BISHOP, Pres. [illegible]

Often Destroyed by Fire.

Time after time, together with the rest of the city of Moscow, the Kremlin has been burned, the last occasion being in 1812 when it was occupied by Napoleon and the inhabitants of the city themselves started the conflagrations in all parts of the city. It was indeed these fires which forced the little corporal to commence his disastrous retreat across the snowbound steppes of Russia. Napoleon had his headquarters in the Kremlin, and while the flames were not so destructive there as in other parts of the city, yet they forced evacuation.

Compressing Cotton.

Scientific investigation has proved that compression of a high degree does not injure the fiber, and cotton is packed in other countries today at a density substantially three times that of ours by the most economical practice. The Egyptian package has a density of about 37 pounds a cubic foot; the Indian cotton is compressed to 45 pounds per cubic foot; while some Indian and Chinese baling plants effect a density of from 55 to 60 pounds of cotton per cubic foot.

The Arab as a Neighbor.

The Arab makes a good neighbor. His love of the beautiful in architecture is evidenced in a hundred cities where his handiwork survives. Every visitor to Granada knows what was left behind at the Alhambra. When the Arab met Rome, he produced Palmyra; having absorbed the Sassanian dynasty of the neo-Persian empire in 637, the Arab created Bagdad; in overrunning Spain, he worked magic at Cordova and Secille.

To Remove Smoke Stains.

This suggestion will be beneficial to housewives who have not the convenience of electricity or the modern gas fixtures. Frequently the ceiling above an old-fashioned gas jet becomes discolored from smoke and heat. The discoloration may be removed if a layer of starch and water is applied with a piece of flannel. After the mixture has dried it should be brushed lightly with a brush. No stain or mark will remain.

Women Catch Fish With Hands.

Fishing in Samoan seas is often done by the women, and without nets, boats or hooks. They simply wade into the water and form themselves into a ring. The fishes being so plentiful, they are almost sure to imprison some in the ring. These women are very quick and active, and every time they catch a fish with their hands they simply throw it, alive, into the basket on their back.

Translation of Y. M. C. A.

W. Gordon Griffiths of the Y. M. C. A. told an audience at Cefu that he was proud to be a Welshman although he was unable to speak the "language of Paradise." He had, however, learned one thing in Welsh and that was that the letters Y. M. C. A. may be translated to mean "Yma Mae Cyfle Arderchog" ("Here is a splendid opportunity.")

Coffee a Nutrient.

Coffee is not a stimulant pure and simple, but a very considerable nutrient. Justus Liebig proved that, by taking equal lots of men, working in the salt mines, feeding one lot bread and meat, the other bread and coffee, and comparing results. The coffee squad did more work and came out in better shape than the meat eaters.

Strict Regulation.

Freeman was visiting at his grandpa's home, and as he was a mischievous little chap, was constantly being told, "Don't do this," and "Don't do that." Finally, with a look of disgust on his face, he climbed up into a chair and asked, seriously, "What can a fella 'in this house, anyway?"

Studying Plant Life in India.

In order to encourage arboriculture and the study of plant life the government of India has offered a series of valuable prizes to be awarded to those who are most successful in various lines in connection with the growth of trees and shrubs on government land

Neatly Put.

We are told that Tom Hood liked best to work in a serious vein, on such poems as "The Bridge of Sighs." As he put it himself: "It's only for my livelihood that I'm a lively Hood."—Boston Transcript.

Endurance of Reindeers.

The reindeer is said to be able to endure more fatigue than any other draft animal except the camel. It has been known to pull 200 pounds 10 miles an hour for 12 hours.

Wrong Side Up.

Climbing.

You can climb no higher than Juji with your feet, but with your mind you may inherit eternity.—A Japanese Philosopher.

Cruel Enlightenment.

He—"You seem to think I couldn't make any woman happy." She—"O[illegible]

Fatigue and Toxin.

The idea that fatigue is due to a specific toxin, as suggested by Weichart early in the century, has been a popular one, but the late investigation of Lee and Aronovitch at Columbia university shows it to have no good foundation. There is nothing, therefore, to encourage the hope that an antitoxin may be found. In the experiments made with animal muscles, a test muscle suspended in the juice of a fatigued muscle lost much in contractile power, but the juice of a nonfatigued muscle produced substantially the same effect.

Largest Poisonous Reptile.

The Surucucu, known as the bushmaster, is the largest poisonous reptile in the world, and is fortunately rare and found only in the depths of the jungle and swamps, where man rarely penetrates. It attains a length of twelve to fifteen feet; the color of its body is rose, or rather yellowish pink, with brown patterns and tints of purple. Its bite is almost always fatal. Its fangs are an inch long and as much as ten ounces of venom have been extracted.

Thought and Faith.

Men who are seeking for knowledge in regard to subjects as to which there can, in the nature of things, be none, might well ask themselves whether there is to be no sphere left in human thought in which faith can operate. It was said of Arnold of Rugby that his mind could rest as quietly in the presence of doubt as in that of discovered truth. It is a great thing to be able to believe where we cannot prove. —Exchange.

Floods in Brazil.

The native inhabitants of Brazil have lately been suffering from the disastrous effects of the flooding of the Amazon, whose relentless waters have submerged the countryside for hundreds of miles around. At regular intervals this mighty river overflows its banks, and a famous traveler estimated that no fewer than 5,000,000 natives have lost their lives during the last five centuries through these terrible floods.

He Didn't Know.

In a murder trial six experts were examined. Most of them had a national reputation. A hypothetical question of 20,000 words, which it required two hours to read, was asked of Doctor Jelley, a Boston expert on insanity. The learned doctor answered the question in three words: "I don't know." A frank answer, but rather perplexing to counsel.—Case and Comment.

Figures Time of Falling Stone.

The time a stone would require to fall the 4,000 miles to the center of the earth has been calculated for the Paris Academy of Sciences, by M. Sanger. Considering the influence of the varying density of the earth, he finds the time would be 19 minutes 15 seconds, but if the mean density is assumed to be the condition, the time would be 79 seconds greater.

Our Rabbits.

The term rabbit was formerly more properly applied to the burrowing species of the old world, Lepus cuniculus (meaning to burrow), though by common usage our molly cottontail has so long been termed a rabbit that the name will now stand, as will that of jack rabbit for the big western hare of the prairies and Pacific coast.

One Cure For Disloyalty

A Cure that is used in many cases with good effect.

There are many places in Minnesota where disloyalty exists and some of them are not asking for much help in dealing with it. The "cure" is rough in many cases but after reasonable argument fails and information given is not accepted in the effort to bring about a change of heart, the drastic method appeals to loyalists as the only recourse left.

In one instance a member of a certain "gang" pulled a Red Cross button off a young man's coat and threw it into a spittoon with a curse. He was "beaten to a pulp" by a crowd of loyalists, put in jail, fined $100 and costs, made to sign a pledge and this proved to be a plenty. This had a very salutary effect on the balance of the disloyal element and they began to seek information on the war and its causes in a conscientious manner.

The time is coming when even a disloyal utterance or lukewarm attitude will be resented by the American people in every section. There is no "half way" citizenship that can live in these times.

The Public Safety Commission is glad to assist its county units in handling all sedition and disloyalty. The Commission has every confidence in the integrity and judgment of the county directors and in most cases it is found that the organization has been a great influence in bringing about a change in disloyal sentiment and punishing open sedition.

Reiner News.

Mrs. T. Morken gave a sleighing party to a few Ladies by taking them to the Ladies Aid at the T. Halvorson home.

Ole Vraa and Mr. and Mrs. Geo. Vraa left Thursday for Climax, Minn., to attend the wedding of Geo. Vraa's cousin Henry H. Dale of that place.

Mayor.

MUSIC REACHES THE HEART

Performer Dealing in Emotions Captivates Women More Swiftly Than the Poets or Painters.

The poet deals in words, while the painter deals in color and form, but the musician deals in emotions and therefore his appeal to women is always more swift, as it is always more subtle, than the appeal of any other artist.

Such, summed up by a writer in the Philadelphia North American, is the latest theory to explain the lure of music for women and the attraction of the dark-eyed, long-haired musician himself.

The average woman, say the theorists, is hemmed in with conventions that make her feel a prudish discomfort if a book or a poem talks too openly of what she thinks of, but never puts into words. With a picture it is the same way, but in the music, she hears with emotional delight all the romanticism, all the beauty, and all the vague dreams which she hides so closely from the world. In consequence she reads into the music her own feelings, and then she confuses the musician with his music. He, too, is keyed up to a high tension; he feels telepathically the emotion he has communicated, and so a spark is kindled between them. As for the result—well, sometimes it is love, sometimes a momentary infatuation—that all depends upon how much music they hear together and how much pent-up nervous emotionalism lies buried in the woman's soul.

Small Prescriptions.

Many physicians have a habit of writing prescriptions without calculating the quantity of medicine their patients are to take. This leads to a great waste of drugs and much unnecessary expense. Which leads the New York Medical Journal to urge physicians to be more careful.

Another evil result of this far too common practice, is that partly used prescriptions are stored away in the medicine chest, and next time the patient has, or thinks he has, the same symptoms, he takes what he supposes to be the same medicine.

But the chief reason why physicians should not prescribe four or six ounces when they know only one or two will be used, is that it is wasting the drugs and making the patient pay far more for his medicine than is at all necessary.

First Introduced Canes.

The Mexicans first used canes in America. When the Spanish conquered the country, a queer custom was introduced. The chief executive of the towns carried a stick with a gold or silver head. It was a kind of scepter.

The people, of course, rarely knew how to read or write, and when anyone was wanted for a crime, one of the mayor's subordinates would take the cane, find the culprit and place it horizontally upon the latter's chest. The proceeding was equivalent to a summons, and the man had to appear before the mayor under the penalty of being cast into prison. This action was borrowed from Spain, where it still prevails in the more important actions.

Find Skeleton of Giant.

A perfect sketeleton was uncovered in Surrey, England, during the work of carrying out alterations to surface water drainage in one of the main streets in Farnham. The chief bones were in a perfect state of preservation, and were sufficient to show that the body was that of a man of unusual stature. Close by was found a bone of a horse. The site of a Norman cemetery is only a little distance from the spot where the body was found, and here some years ago cinerary urns were discovered, which were stated to be perfect examples of first-century urns. Some of these are now preserved in Waverly abbey.

TELLS ABOUT JOHN RANDOLPH

Thomas H. Benton Relates Interview With Eccentric Man, in Which He Depicts His Melancholy Mood.

Thomas H. Benton in his "Thirty Years' View" gives an interesting account of an interview he had with the eccentric John Randolph of Roanoke.

The interview was at Mr. Benton's room in Crawford's hotel, in Georgetown. It was in the gloom of the evening, before the lamps were lit. Mr. Randolph, reclining on a soft, silent and thoughtful, repeated, as if to himself, Johnson's lines on "Senility and Imbecility," that show his life under its most melancholy form:

"In life's last scenes what prodigies surprise,
Fears of the brave and follies of the wise.
Down Marlborough's eyes the streams of dotage flow,
And Swift expires a driveller and a show."

When Mr. Randolph finished repeating these lines, Mr. Benton said to him: "Mr. Randolph, I have often heard you repeat these as if they could have an application to yourself, while no one can have less reason than yourself to fear the fate of Swift."

To this Randolph replied: "I have lived in dread of insanity."

While Randolph was not insane in the ordinary sense of the word, it is certain that he had occasional temporary aberrations of the mind, and it was during such times that his talk was most brilliant, a copious flow for hours of wit and classic allusion, a perfect scattering of the diamonds of the mind.

His will was contested on the ground of insanity, but it was not set aside.

MIX DOUGH WITH SEA WATER

Wider Adoption of the Practice Is Recommended by French Naval Pharmacist, Health Advantages.

It has long been a custom in certain parts of France to make up the dough for bread with sea-water instead of using, as is customary, fresh water, with the addition of salt required to make bread both healthful and appetizing, says the Literary Digest. M. Abert Saint Sernin, a French naval pharmacist of the first class, urges the wider adoption of the practice, which has according to him, several advantages; the bread keeps moist longer, owing to the affinity for water possessed by the magnesium chloride sea-water contains; it is very wholesome, since it provides not only the chlorides of sodium and magnesium, but other mineral substances which the body can make use of.

The water must be collected at a suitable distance from land and should be taken from a depth of six or seven yards if possible. The yeast must be prepared with fresh water and the salt water used for mixing the dough. The French writer adds:

"Bread made with sea water, useful for everybody, is to be recommended especially for growing children, for convalescents, and for all those who need to repair the wastes due to fever or to hard labor."

Half-Way Work.

We are, none of us, so good architects as to be able to work habitually beneath our strength; and yet there is not a building that I know of, lately raised, wherein it is not sufficiently evident that neither architect nor builder has done his best. It is the especial characteristic of modern work. All old work nearly has been hard work. It may be the hard work of children, of barbarians, of rustics; but it is always their utmost. Let us have done with this kind of work at once; cast off every temptation to it; do not let us degrade ourselves voluntarily, and then mutter and mourn over our shortcomings; let us confess our poverty or our parsimony, but not belie our human intellect. It is not a question of doing more, but of doing better. Do not let us boss our roofs with wretched, half-worked, blunt-edged rosettes; do not let us flank our gates with rigid imitations of medieval statuary. Such things are more insults to common sense, and only unfit us for feeling the nobility of their prototypes.—Ruskin.

Four-Arc Rainbow.

A four-arc rainbow was seen by a vessel at sea recently, one pair intersecting the other pair. Two arcs are often seen on land, and three are sometimes seen; but the invariable rule is that these arcs all have a common center lying below the horizon. The explanation of the two pairs of arcs was, however, quite simple. The sea at the time was exceptionally calm, and acted as a gigantic mirror. Two of the arcs, which had a common center below the horizon, were due to the sun itself; the other two arcs, which had a common center above the horizon, were due to the reflection of the sun in the sea.

WANTED!

Farmers to bring in their hogs to us and get the highest market price for same. We can handle them at any time.

WORTH A DOZEN OF THE OTHER KIND.

Rise above small things. The woman who lets small things worry her will be completely undone the first time she meets with a really big problem. It is disintegrating to your mental and nervous condition, not to mention your physical condition, to worry. You needn't be resigned to fate nor slip your troubles off as the old friend duck's back throws water. But you can meet troubles with a will to conquer them or adjust them—and, after that, "they should worry," but not you. —Exchange.

History of the Louvre.

The Louvre was originally a royal residence. Napoleon turned it into a museum and deposited in it the finest collection of paintings, statues and art treasures known in the world. Many of those brought from Italy have been restored to their rightful possessors. The magnificent buildings of the new Louvre, begun by Napoleon I and completed by Napoleon III, were inaugurated in 1857.

Chinese Plant Statuettes.

Chinese gardeners sometimes plant statuettes of tiny men firmly in pots, just like real plants, and then train live evergreens to grow up over these statuettes. The vines thus form a kind of robe for the statuette men, their white faces and hands protruding from the green leaves.

An Arab's Saying.

"It is well that all men are not rich. Riches corrupt the soul, but virtue enlarges the hope." These words were found in the parchment of an Arabic treatise by some ruler, and is no doubt the bitter verdict of many that are rich today.—Exchange.

What Might Have Been.

"What are you worrying about?" "If I eat eggs I think about the chickens they would have produced, and if I eat chickens I think about the eggs they might have laid; and it's becoming difficult for me to enjoy anything."

WILSON OPPOSES WAR COUNCIL BILL

DENOUNCES SENATE PLAN FOR SPECIAL CABINET TO HANDLE WAR PROBLEMS.

REPLIES TO CHAMBERLAIN

Collapse of Proposal to Create War Council Seen as Result of Presidential Opposition—Says Baker Is Able.

Washington, Jan. 22.—All doubt as to President Wilson's views of proposals in congress for reorganization of the government's war-making machinery was swept away by a statement in which the president said the war department had accomplished a task of unparalleled magnitude and difficulty with extraordinary promptness and efficiency. He denounced the congressional war investigations and declared reorganization by legislation was proposed after effective measures of reorganization had been perfected

On the statement most observers at the capitol saw the collapse of what promised to be a historic struggle. Senator Chamberlain, whose committee has framed bills to create a war council all powerful under the president and to provide one-man control of munitions and supplies, declared he would continue his fight in spite of presidential opposition. It was rather generally conceded, however, that the measures would have but little chance in the senate and probably none at all in the house.

Senator Chamberlain made a statement in reply to the president, saying he spoke extemporaneously in New York and that his criticisms were directed at the war department only and not at other branches of the government.

President's Statement.

The President's statement follows:

"When the President's attention was called to the speech made by Senator Chamberlain at a luncheon in New York on Saturday he immediately inquired of Senator Chamberlain whether he had been correctly reported and upon ascertaining from the senator that he had been, the President felt it his duty to make the following statement.

"'Senator Chamberlain's statement as to the present inaction and ineffectiveness of the government is an astonishing and absolutely unjustifiable distortion of the truth. As a matter of fact the War department has performed a task of unparalleled magnitude and difficulty with extraordinary promptness and efficiency.

"'There have been delays and disappointments and partial miscarriages of plans, all of which have been drawn into the foreground and exaggerated by the investigations which have been in progress since the Congress assembled — investigations which drew indispensible officials of the departments away from their work and officers from their commands and contributed greatly to the delay and confusion which had inevitably arisen. But in comparison with what had been accomplished, these things, much as they were to be regretted, were insignificant and no mistake has been made which was repeated.

"Nothing Helpful Developed."

"'Nothing helpful or likely to speed or facilitate the war tasks of the government has come out of such criticism and investigation. I understand that reorganizations by legislation are to be proposed—I have not been consulted about them and have learned of them only at second hand—but their proposal came after effective measures of reorganization had been thoughtfully and maturely perfected and inasmuch as these measures have been the result of experience, they are much more likely than any other to be effective, if the Congress will but remove the few statutory obstacles of rigid department organization which stands in their way.

"'The legislative proposals I have heard of would involve long additional delays and turn our experience into mere lost motion. My association and constant confidence in the secretary of war have taught me to regard him as one of the ablest public officials I have ever known. The country will soon learn whether he or his critics understand the business in hand.

"'To add as Senator Chamberlain did, that there is inefficiency in every department and bureau of the government is to show such ignorance of actual conditions as to make it impossible to attach any importance to the administration's whole policy rather than out of any serious intention to reform its practice'."

U. S. Charters 80 Holland Ships.

Washington, Jan. 22.—Charter to the United States government of all Dutch steamers now being held in American ports has been decided upon by the Dutch government in a provisional agreement just signed in London. The agreement provides charter for one round trip for the upward of 80 vessels now in American ports. The vessels are not to go into the war zones, but five of the steamers will carry for Switzerland and two will carry for The Netherlands Overseas trust.

SENATOR STONE

Missouri senator who, in a speech in the senate, denounced Theodore Roosevelt as "the most potent agent of the kaiser and the most seditious man of consequence in the United States.

CONQUEST AIM DISAVOWED

AUSTRIAN PREMIER SAYS ONLY HONORABLE PEACE DESIRED.

Labor Delegates Are Told That Everything Is Being Done To Bring War To End.

Vienna, Jan. 22.—(Delayed.)—"It is his majesty's wish to end the war at the soonest moment possible by an honorable peace.

"In pursuance of this desire and on the principles it repeatedly has announced, the government of the dual monarchy has done everything in its power, and will continue to do everything possible, to bring about most speedily a general peace.

"If for the present, however, only a separate peace with Russia is practicable, the responsibility rests solely with the Allied powers, which have rejected repeatedly our peace offers."

These statements were mad by Dr. von Seydler, Austrian prime minister, in the course of a speech at an important conference between the government and labor leaders. Those present included Count von Toggenburg, minister of the interior; Lieut. General Czapp, minister of defense and labor representatives Adler, Seitz and others.

Afterward he proceeded to disavow any aims at conquest and declared that the government continued its adherence in the belief that international agreement regarding disarmament and arbitration courts could form a suitable basis for a general peace.

CHINESE REBELS FIRE ON AMERICAN GUNBOAT

One U. S. Sailor Is Killed and Two Wounded—Explanation Demanded.

Peking, Jan. 18.—(Delayed.) — The American gunboat Monacacy was fired upon by Chinese 50 miles above Yochow, on the Yangtzkiang. A sailor named O'Brien was killed and two other sailors were wounded. The firing lasted for half an hour. It is presumed that the assailants were a detachment of the southern revolutionary forces.

Paul S. Reinsch, the American minister, will demand of the foreign office that responsibility for the attack be fixed and the offenders punished and also that measures shall be taken to safeguard ships. Dr. Reinch believes the attack was intended to bring up complications for the central government.

Miners Support Garfield.

Indianapolis, Ind., Jan. 22. — The United Mine Workers of America, in biennial convention here, pledged to Dr. H. A. Garfield, federal fuel administrator, "unqualified support and co-operation in his great task." The union miners also pledged to him the maximum production of coal possible in the field under their jurisdiction.

Guard Is Strengthened.

San Francisco, Jan. 22.—Additional precautions to guard the San Francisco and Oakland water fronts were taken following a mysterious fire on the steam schooner Wahkeena, which burned to the water's edge. The fire came immediately on the heels of information received in federal circles of a widespread plot by enemy aliens to wage a campaign of terror on the Pacific coast. Two hundred bluejackets from the San Pedro naval training station are assisting in patrolling the water front.

COAL SAVING DAYS RELIEVE SITUATION

TWO OF CHIEF ACCOMPLISHMENTS SOUGHT ALREADY ACHIEVED.

EARLY LIFTING OF BAN SEEN

Homes in East and Seaboard Receive Coal—Weather Hinders Relief of Railroad Congestion.

Washington, Jan. 22.—Two of the chief accomplishments sought by the government in closing down industry by cutting off fuel supplies have been achieved, Fuel Administrator Garfield announces.

Homes throughout the East, he said, are receiving coal in larger quantities than has been reported for weeks, and bunker coal is again moving to seaboard in sufficient volume to supply transatlantic shipping.

A third aim, the clearing of railroad congestion, has not been attained as yet, largely, Dr. Garfield declared, because of unusual weather conditions.

Rail Director McAdoo said if weather conditions grow no worse that the fuel situation will be relieved much sooner than was expected. In Washington there is hope that the closing order may be set aside within 30 days.

Business Halts In East.

The first of the 10 Monday holidays was observed generally, and business everywhere in the East was at a standstill. Reports told of few violations of the order, and said that thousands of establihments were closed, even though they had a technical right to remain open.

Late reports said New York had on hand enough coal to fill the bunkers of 50 vessels and Hampton Roads had received supplies sufficient for more than a hundred ships held in port.

Coal Now at the Piers.

"We are supplying coal to the piers," said Dr. Garfield. "It now is a question of putting it aboard ship."

Reports received indicated that business generally observed the spirit as well as the letter of the closing order.

Asked if he would extend the five days' industrial closing if it appeared that the accomplishments sought had not been fully obtained, Dr. Garfield said he did not wish to cross that bridge until he came to it.

Dr. Garfield took occasion to denounce proprietors of manufacturing plants who have announced that they will work overtime five days a week to make up the time lost Mondays. That, he said, would be a plain evasion of the order.

PRESIDENT ASKS POWER TO FIX PRICES OF FOOD

Proposed Bill Would Give Blanket Authority To Name Prices.

Washington, Jan. 22.—Draft of a bill giving the President broad power to fix prices of foods and other products essential to the conduct of the war or for domestic consumption has been laid before members of the House agricultural committee by President Wilson with the request that it be pressed for passage. Members of the committee declined to disclose details of the bill.

Chairman Lever was to study its provisions and, if satisfied with it, introduce it at once. It is understood the measure would give the President, through any agency that he may designate, blanket authority to fix prices without specifying the products.

AUSTRIAN CABINET QUITS VIENNA DISPATCH SAYS

Toggenburg Charged With Task of Forming New Ministry.

Amsterdam, Jan. 22.—The Austrian ministry has resigned, according to a Vienna dispatch to the Berliner Morgen Post.

Count von Toggenburg, minister of the interior, has been charged with the task of forming a new cabinet.

The Vienna dispatch does not make it clear which ministry has resigned—the imperial ministry, of which Count Czernin holds the portfolio of foreign affairs, or the minor body, of which Dr. von Seydler is president. But the fact that Count von Toggenburg, who held the post of minister of the interior in the Von Seydler cabinet has been asked to organize a new ministry would indicate it is the latter.

May Train at Southern Camps.

Camp Dodge, Iowa, Jan. 22.—It is now thought likely if the second draft army is called in the near future, the 88th division of the national army, training here, will be sent to southern camps to complete the work before going overseas. War department officials have announced that regular army and national guard units will go over before the national army, because of experience, and the fact drafted men will require longer and more careful preparation. Allies have found a year's work necessary.

MAJOR GRAYSON MURPHY

Extraordinary work accomplished by the American Red Cross in Europe, particularly in France, was described by Maj. Grayson P. Murphy, former directing head of the organization abroad, on his arrival at an Atlantic port from overseas. He said soldiers in France will lack nothing when the real fighting begins.

STONE ATTACKS ROOSEVELT

MISSOURI SENATOR GOES FOR COLONEL IN ROUGH FASHION.

Reference to Former President as "Most Potent Agent of Kaiser" Starts Partisan Fireworks.

Washington, Jan. 22.—Smouldering fires of partisan feeling were set ablaze in the senate by Senator Stone, veteran Democrat, with a long prepared speech accusing Rpublicans of playing politics in their criticisms of the government's conduct of the war and calling Theodore Roosevelt "the most seditious man of consequence in America."

When he closed Senators Penrose, Lodge, New and others on the Republican side answered with vigorous defense of their right to make proper criticism of inefficiencies and, with counter charges of partisanship.

Senators Lewis, Kirby and other Democrats joined in the fray, which lasted until the session ended, with adjournment until Thursday.

Quoting liberally from Roosevelt's published criticisms of the Wilson administration conduct of the war Senator Stone said:

"The heart of this man is aflame with ambition and he runs amuck. On my responsibility as a senator, I charge that since our entrance into the war Roosevelt has been a menace and obstruction to the successful prosecution of the war. His chief thought has not been to help the government solve the mighty problems they have to solve, but always his chief thought has been of Roosevelt.

"I inquire why Roosevelt may say things with impunity which a citizen of lesser consequence dare not even repeat without danger of indictment for disloyalty?"

UNEARTH PLOT TO BLOW UP AMERICAN DOCKS

Conspiracy Included Principal Seaports On Both Coasts.

Washington, Jan. 22.—The government has unearthed a plot to blow up docks at the principal seaports on both coasts. The conspiracy called for the execution of wholesale sabotage at a given hour. Precautions have been taken.

Telegraphic orders sent out by the Department of Justice are expected to result in a number of arrests. Officials are extremely reticent, but it was admitted that guards have been doubled at all the principal docks, munitions factories and other important reservations along both seaboards. Shipyards, it is stated, were also to be destroyed.

Officials of the Department of Justice, it is understood, say that measures taken to safeguard all threatened points will be effective. Guards were particularly instructed to inspect closely all passes to the guarded areas.

ULTIMATUM GIVEN BY TEUTON POWERS

Copenhagen, Jan. 22.—"When Russian Foreign Minister Trotzky returns to Brest-Litovsk," says a delayed Berlin ditpatch, quoting a Lokal Anzeiger editorial, "he must definitely accept or reject the Teuton powers' demands, otherwise the Teuton powers will immediately break off negotiations."

Guard Against Spies.

New York, Jan. 22.—A warning issued by Chairman Hurley of the government shipping board that the submarine boat corporation shipyard at Port Newark was to be blown up or set afire by enemy spies, has caused a strong guard of police and soldiers to be thrown about the place. The plant, built at government expense, cost approximately $5,000,000. Adjoining it is a huge supply depot being built for the quartermaster's department which will cost $7,000,000.

UKRAINIA MAKES SEPARATE PEACE

LITTLE REPUBLIC PRACTICALLY CONCLUDES TERMS WITH GERMANS.

NATION IGNORES BOLSHEVIKI

All That Is Necessary Now Is For Both Sides To Consult Responsible Authorities of Home Governments.

Amsterdam, Jan. 22.—Ukrainia has practically concluded a separate peace with Germany.

Word from Brest-Litovsk, received via Berlin, gave this first news of a breach among the Russians. The agreement between Germany and the infant Ukrainian republic was concluded several days ago. Previous word had stated that all Russian delegates had departed from Brest-Litovsk and this had been supposed to include the Ukrainians.

To Consult Home Authorities.

Later dispatches declared the basis of the separate peace treaty had been agreed upon and that all that was necessary now was "for each side to consult responsible authorities at home."

The German semi-official dispatches said the German-Ukrainian conference had adjourned, but that delegates would return immediately and conclude all negotiations, including signature of the treaty.

Berlin's comment on this achievement was:

"Thus we have succeeded, for the first time in the war, of finding a basis for the re-establishing of a state of peace."

Blow to Bolsheviki.

Decision by the Ukrainians to make a separate peace and not to act in concert with Bolsheviki delegates representing Russia at large, will undoubtedly be a heavy blow to the Bolsheviki hopes. The fact that the Ukrainian delegates above all others should be willing to conclude such an agreement, when part of their territory is included in the land whose future in under dispute, is significant.

The general Russian delegates refused to accept the German offer to let inhabitants of Courland, Poland and Lithuania decide their determination in the future while under supervision of the German army, which would not be withdrawn.

Foreign Minister Trotzky had previously stated he could not allow the Ukrainian delegates to treat the question of occupied territory independently. They have apparently gone exactly counter to his wishes.

PRUSSIAN ASKS PROOF AMERICA CAN'T FIGHT

Socialist Takes Minister to Task for Discounting Strength of the United States.

Amsterdam, Jan. 22.—In the lower house of the Prussian diet Dr. Franz Mehring, Independent Socialist, made the following inquiry:

"If Canada, with less than 9,000,000 inhabitants, has been able to throw 250,000 soldiers in Europe, who were not able to fly or swim, what grounds has the finance minister for denying to the United States, with 110,000,000 inhabitants, any military capacity?

Dr. Mehring proceeded to reprove the Prussian finance minister, Dr. Hertz, for such contempt which he declared, was likely to bring heavy penalties in its train, especially if coupled with empty threats.

The minister, replying, admitted he was unable to prove his statement concerning the American army but was still convinced it could not come over.

SPANISH RIOT RESULTS IN KILLING OF THREE

Mob Forces Factories to Close and Attacks Stores and Private Houses.

Madrid, Jan. 22.—Disorders have occurred at Alicante, the chief seaport of Valencia. They are reported in an official telegram from Alicante, which says a mob forced the factories to cease work and attacked shops and private houses. Women of the middle class were compelled by the demonstrators to join them.

The civil guard fired on the rioters, killing three persons and seriously wounding four others.

Assistant Treasurer Named.

Washington, Jan. 22.—Martin Vogel of New York has been nominated by President Wilson to be assistant treasurer of the United States at New York.

Garfield Makes Milwaukee Dry.

Milwaukee, Jan. 22.—Milwaukee "bone dry." What thousands of prohibitionists have failed to do, Fuel Administrator Garfield did to Milwaukee. The home of a famous beverage was dry as a desert so far as the dispensation of liquor was concerned. Promptly at midnight Sunday every saloon cleaned its bar and shut off the lights. Radiators were just warm enough to keep from freezing. Not in the memory of the oldest patriarchs of the business had this come to pass before.

EAT SKINNER'S THE BEST MACARONI
MY SIGNATURE Paul F. Skinner ON EVERY PACKAGE
SKINNER'S MACARONI

62 BREEDS, Pure-bred Chickens, Ducks, Geese, Turkeys. Hardy northern raised, vigorous, beautiful. Fowls, eggs, incubators, at low prices. America's Pioneer Poultry Farm; 24 years exp. Large fine Annual Poultry Book and Catalog FREE. F. A. NEUBERT, Box 5, Mankato, Minn.

"You need a change of scene."

"But, doctor, I'm a traveling man."

"Why—er—that's the point. Stay at home awhile and see somebody besides hotel rooms and railroad stations."

Says Dodd's Kidney Pills, Wonderful Remedy

Mrs. Della Olson, of New London, Wis., like many others, knows after experiencing the use of Dodd's Kidney Pills that they are unexcelled. Here is what Mrs. Olson recently wrote us:

"I suffered with rheumatism for years. There was a gravel deposit in the urine and I had frequent headaches. I had dark circles around my eyes and was always tired. I bought a box of your Dodd's Kidney Pills and am glad I did, for I secured quick relief and think they are a wonderful remedy."

Mighty few people realize in time that kidney trouble is making its advances upon their health. They put off treatment—they say, "Oh, I'll be all right in a day or two." And the malady tightens its grip. Result: Bright's Disease, hospital treatment, doctors' bills—often death.

When you have backache, dizziness, pain in loins, stiffness in stooping or lifting, spots before the eyes, sediment in secretions, rheumatic pains, or swollen joints, immediately start toning the kidneys by the regular use of the remedy endorsed by hundreds of users—DODD'S Kidney Pills.

Full Meaning.

"Why do they call that one a crack regiment?" "Because there is so much snap about it."

Cuticura Stops Itching.

Sicilian Nut Crop Small.

The crop of almonds this year has been very small in Sicily, being only about 15,000 bags of 220 pounds! There are, however, 40,000 bags remaining from last year. In consequence of the short crop prices have remained high, and buyers are paying 335 lire per bag. At normal exchange the lire is worth 19.3 cents, United States currency.

The filbert crop has been abundant this season and is estimated at 150,000 bags of 220 pounds. There is none of the old crop left. The price is 142 lire a bag.

The new pistachio crop is good and there is a considerable quantity of the old crop still remaining in the shell. The price is about 2s. 6d. (60 cents) a pound.—Commerce Reports.

Falsification.

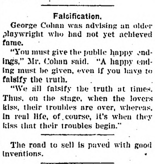
George Cohan was advising an older playwright who had not yet achieved fame.

"You must give the public happy endings," Mr. Cohan said. "A happy ending must be given, even if you have to falsify the truth.

"We all falsify the truth at times. Thus, on the stage, when the lovers kiss, their troubles are over, whereas, in real life, of course, it's when they kiss that their troubles begin."

The road to sell is paved with good inventions.

Covetousness is the one sin many a man is guilty of without knowing it.



There is no purer or more healthful food for children than Grape-Nuts

Its natural sweetness appeases the child's appetite for added sugar, and the quanity of milk or cream needed is about half that required for the ordinary cereal.

GRAPE-NUTS IS AN ECONOMICAL FOOD

THE TWO SWORDS

By Lewis F. Crawford, President State Board of Regents, North Dakota

("The Hymn of the German Sword" appeared in a German paper published in Leipzig, Germany, and has been widely copied in papers of other countries. A copy which came to the attention of Lewis F. Crawford, Sentinel Butte, N. D., president of the state board of regents, impressed him so strongly that he prepared "The American Sword," as a contrast to the spirit shown in "The German Sword.")

HYMN OF THE GERMAN SWORD

It is no duty of mine to be either just or compassionate; it suffices that I am sanctified by my exalted mission, and that I blind the eyes of my enemies with such streams of tears as shall make the proudest of them cringe in terror under the vault of heaven.

I have slaughtered the old and the sorrowful; I have struck off the breasts of women; and I have run through the bodies of children who gazed at me with the eyes of the wounded lion.

Day after day I ride aloft on the shadowy horses in the Valley of Cypresses and as I ride I draw forth the life blood of every enemy's son that dares to dispute my path.

It is meet and right that I should cry aloud in my pride, for am I not the flaming messenger of the Lord Almighty?

Germany is so far above and beyond all the other nations that all the rest of the earth, be they who they may, should feel themselves well done by when they are allowed to fight with the dogs for the crumbs that fall from her table.

When Germany the divine is happy, then the rest of the world basks in smiles; but when Germany suffers, Ged in person is rent with anguish, and, wrathful and avenging, he turns all the waters into rivers of blood.

THE AMERICAN SWORD

I am the American sword.

I have never been unsheathed except in the cause of justice and humanity.

I punish only under solemn and compelling obligation.

In my presence national perfidy and dishonor never go unchallenged.

I opened in generous trust to all nations the portals of American opportunity and gave equal rights to all in the inheritance created by the toil and blood of our ancestors.

In me everything that is good finds approval, everything mean meets rebuke.

My people are enticed to love me by the gentle persuasiveness of my life.

I am the visual enchantment of the downtrodden and the oppressed; the emblem of national honor; the embodiment of the world's hope.

In me is linked the command of duty with the love of Calvary; it is mine to trace the hidden equities of divine reward and connect national wrong-doing with its swift retribution; under me fulfillment adds splendor to the gorgeous Mosaic of our dreams.

O kaiser! obsessed with power, drunk with passion, enemy of peace and right and freedom throughout the world, slayer of age and infancy, ravisher of virginity, spreader of contagion, fiend incarnate!

Against thee barren fields cry out in protest; venerated works of art and architecture, hallowed by the centuries, thou has crumbled under shells of frenzy; thou art wasting the flower of the world's manhood in red ruin spurred on by the grim reaper of Hate.

Thou international brigand, enslaver and robber of Belgium, looter of Servia, betrayer of neutrals! thou art a pirate running mad on the pathless sweep of oceans, plundering and murdering on the world's highway.

Diplomatic intriguer, thou has faithlessly broken age-old treaties, thou has torpedoed hospital ships, bombarded defenseless cities and unleashed liquid fire and poison gas—outlaw demons of destruction. In this epilepsy of the world's horror thou art not bowed with a sense of unfathomable guilt and sodden shame; thou, the arch gutter-snipe of civilization, art more unsparing than Torquemada, more cruel than Nero, more atrocious than Caligula, more crafty than Geronimo; thou hast loosed the hosts of ill upon a peaceful world and darkened the heavens with blasphemy.

Thou art chased by the maddening billows; the deeps in malice open to receive thee; ashen faces turned toward flame-lit skies, appeal for vengeance.

My presence gives courage to endure the appalling strain and omnipresent peril of battle.

I bestow superhuman nerve, sleepless caution, capacity for sacrifice, and the justice of my cause palsies the hand of brutal might and insensate ambition.

I pity the victim, not the violator; the sorrows I bring wear no weeds of mourning.

I open a new era in history; I fire the human soul with new daring and new hope; I will survive this conflict and pronounce its sentence.

When the name of kaiser shall have lost its stench and been covered with the dust of countless centuries, I shall still be glorified as the mainstay of democracy—the peacemaker of the world.

Bill and the Bank President

Mates on the Good Ship of Thrift

It was long after banking hours and only the assistant janitor and the bank president were "on the job" in the great Chicago banking institution. The executive, having cleaned up the mass of business on his desk, lighted a long, pencil-shaped cigar and lolled back in his swivel chair. Bill, the red-faced, good-natured member of the clean-up brigade, entered the office and headed for the waste basket. The bank president remembered that Bill had bought a $100 Liberty bond in the second campaign.

"Are you having any trouble in meeting the payments on your Liberty bond, Bill?" asked the executive.

"No trouble, sir," replied the janitor. "I've done a bit o' plannin' and trimmin', though, but it ain't given me any trouble. I'm better off for th' plannin' and trimmin'."

"I imagine you have—well, a sort o' better opinion of yourself for saving up and lending your money to the government," said the president.

"I'm sorry I ain't young enough to be 'over there' with the boys," said Bill, "but since I ain't there and won't be there unless the army needs men with rheumatiz in one out o' every three joints, I feel it necessary to do what I can do here at home."

"It's a fine thing to be a bondholder—a real partner in the great firm of Uncle Sam & Co.," said the president. "One really has a better opinion of himself when he feels that he is lending a hand."

"You have bought a Liberty bond; your wife has trimmed here and there in order that you might have the necessary money, and your daughter is buying the war-savings stamps," said the bank president. "Your little home, Bill, is doing its full duty, and you ought to be thoroughly proud of it—including yourself."

"Oh, I ain't doin' as much as I'd like to-do," said Bill, blushing at the compliment, "but I'm doin' about all I can do, so I really ain't ashamed of myself."

"I'm trimming, too, Bill," said the bank president. "This cigar I'm smoking costs just one-third as much as the one I've been in the habit of smoking, and I'm not smoking as many cigars a day as I used to smoke. I've had my shoes resoled for the first time in 20 years. It used to be that every time I'd run my heel down a little I'd chuck the shoes and buy a new pair. I'm going to wear this suit of clothes until it wears out, no matter how glossy it becomes. I'm going to—"

"Oh, but you don't have to pinch that way," interrupted Bill a bit apologetically; "you can afford to wear the best."

"I know it," said the bank president, "but I'm going to be thrifty myself. As you say, there's real sport in playing the game of thrift. The government can have all I've got. I mean that. It has been good to me and I'm going to try to show my appreciation. I'll be right there when the third loan is out."

"I'll be ridin' along with you, sir," said Bill with a chuckle.

And now Bill and the bank president are mates on the good ship Thrift.

ENLISTS AND LOSES PENSION

Man Who Served Under Funston Makes Sacrifice to Re-Enter the Service.

Westfield, Mass.—Back in the service again, although sacrificing a pension to re-enter it, Fred H. Lenois of Westfield has been assigned to the Twenty-fifth engineers. Lenois served two full enlistments with the regulars and did service in the Philippines and Cuba. He was at one time an orderly for the late Maj. Gen. Frederick Funston.

He has tried to enlist at recruiting stations several times, but has been turned down because of his permanent disability discharge, received as a result of trouble with one of his ears. Not dismayed by repeated failures to get back in the service, through Attorney H. E. Howard he applied to Washington for an opportunity to pass a physical examination at least, claiming that he was in better health than ever.

The permission came, he passed the examination, was assigned for service and lost his pension.

Cheerful Open Grate Is Most Inefficient Device Used in Heating a House.

The winter days call attention to the proper use of the grate fire by those who will try to help the country save coal. When the need of using fuel economically is as strong as it is now, writes Van H. Manning, director of the bureau of mines, department of the interior, we can say, twisting our words a bit, that the proper way to use the grate is to use it not at all. If we look at the open grate as merely a heating device, and know how small a proportion of the total heat in the fuel enters the room to be warmed, we must regard the open grate as probably the most inefficient of all the inefficient devices used in heating a house. The cheer and companionship of an open-grate fire must not be charged against the heating bill, but to some other account.

Efficiency is always a ratio or fraction, and is what you get out compared with what you put in. Into the grate one puts fuel that has the ability to produce a large amount of heat, but the useful heat obtained from this fuel is relatively small. Most of the heat in the fuel goes racing up the chimney, in company with a large amount of air from the room, this air being replaced by cold air drawn in through cracks and crannies in the windward side of the house. As a device for drawing in cold air a grate is excellent, but it furnishes much more ventilation than is needed. Mush less fuel, properly burned in a stove, would warm the house better.

BACK YARD POULTRY KEEPING

If the best results are to be expected from the flock, the hens must not be allowed to become overrun with lice or the house with mites. Usually there will be a place in the yard where the hens can dust themselves in the dry dirt. If such a place is not available, a box large enough (about two feet square) for the hens to get into it should be provided in the house and a quantity of dust such as ordinary road dust or fine dirt placed in it to allow the hens a place to dust themselves. A dust bath aids the hens in keeping lice in check and therefore adds to their comfort. Usually the lice are not present on the birds in sufficient number to prove particularly harmful. However, it is better to keep the hens as free as possible from this pest, and if they are not able to keep them in check by dusting themselves, other measures can be undertaken.

To rid the hens of lice, each one can be treated by placing small pinches of sodium fluorid, a material which can be obtained at most large drug stores, among the feathers next to the skin—one pinch on the head, one on the neck, two on the back, one on the breast, one below the vent, one at the base of the tail, one on either thigh, and one scattered on the underside of each wing when spread. Another method is to use a small quantity of blue ointment, a piece about as large as a pea on the skin one inch below the vent. If mercurial ointment is used instead of blue ointment, it should be diluted with an equal quantity of vaseline. Any of these methods will be found very effective in ridding the hens of lice and should be employed whenever the lice become troublesome. Two or three applications a year usually prove sufficient.

Mites are more troublesome and more harmful than lice. They do not live upon the birds like the lice, but during the day hide in the cracks and crevices of the roosts and walls of the house, and at night they come out and get upon the fowls. They suck the hen's blood, and if allowed to become plentiful—as they certainly will if not destroyed—will seriously affect her health, and consequently her ability to lay eggs. They may be eradicated by a few thorough applications of kerosene or some of the coal-tar products which are sold for this purpose, or crude petroleum, to the interior of the poultry house. The commercial coal-tar products are more expensive but retain their killing power longer, and they may be cheapened by reducing with an equal part of kerosene. Crude petroleum will spray better if thinned with one part of kerosene to four parts of the crude oil. Both the crude petroleum and the coal-tar products often contain foreign particles, so should be strained before attempting to spray. One must be sure that the spray reaches all of the cracks and crevices, giving especial attention to the roosts, dropping boards and nests.

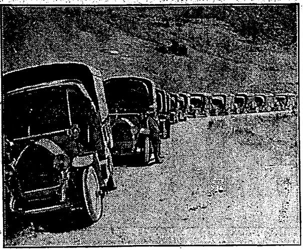
How Men Laugh.

The far-seeing man with a sense of humor laughs in his throat in spasmodic little bursts. He looks before he leaps. He takes a good survey of a question before committing himself. Neither laughter nor speech escapes easily. He lets them out judiciously.

Puts Goats to Work.

Halstead, Kan.—Frank Ashcroft, a farmer, has obviated the scarcity of harvest hands by utilizing six goats in his silos to trample down the silage. One man handles the distribution and the goats do the rest. When the silos are filled the goats are let down by ropes around their horns. Their reward will come next winter when the feed is opened.

MOTORTRUCKS LOADED WITH SOLDIERS BIG FACTOR IN PROSECUTION OF WAR



TRAIN OF WAR TRUCKS ON WAY TO FRONT.

The photograph shows a large convoy of heavy motortrucks loaded with French soldiers ready to start on their last lap to the front. These great machines are bearing some of the great burdens of the war and run hour after hour transporting supplies, munitions, and men all over the section directly back of the firing lines.

TO CROSS TRACKS

Simple Things That May Prevent Trouble on Railroad.

SHIFT INTO SECOND SPEED

Engine Is Run at Rate Which Removes Danger of Stalling—Full Throttle Will Insure Better Control of Machine.

(By WILLIAM H. STEWART, JR.)

An item of extreme importance to the motorist is the proper crossing of railroad tracks, especially crossings where there are no gates. The usual method is to throttle down and drive across in high, not bothering about shifting to a lower gear. Consideration of the matter will show that the engine may easily be stalled when so handled. To drive in high gear requires a certain amount of gas. If the amount is reduced too much the engine will stall. By shifting into second speed all such danger is overcome. The car may be driven across the tracks at approximately the same rate, but the engine is run at a speed which removes the danger of stalling. The distance is short and a full throttle will insure better control and send the machine clear if necessary.

Engine Is Choked.

Usually the driver opens the throttle too suddenly, thus choking the engine. This is because the air valve yields readily to the increased suction, giving a sudden rush of air before the spray nozzle can respond with sufficient gasoline. The throttle, whether opened by hand or accelerator, should be opened gradually enough to allow the engine to respond.

Stalling the engine on the tracks with the train approaching at high speed is a ticklish experience, to say the least. There is no time to start the engine, so the operator who keeps his presence of mind uses the starter to pull out of danger. He quickly shifts into low speed and presses the starter pedal. The car moves forward slowly, but it moves! Keeping this fact in mind, a driver may save his life in such an emergency and also the lives of those with him.

Gears In Speed.

When starting down a long, steep grade it is advisable to leave the gears in a speed for use in an emergency. The rear wheels will then turn the engine, which resistance affords a very good braking effect. A light car on a moderately steep hill will slow down quickly and a heavier car will move slowly enough to be under control. This is called "using the engine as a brake." It should be practiced from time to time so that the driver may become familiar with the method.

Many drivers do not know how to take the bumps easily. A good way is to throw out the clutch and apply the foot brake gradually. This relieves the shock so that many times it may not be noted by those riding.

AMPHIBIOUS TRUCK IS RARE

Reason to Believe Land-and-Water Vehicles Will See Battlefields "Somewhere in France."

Amphibious automobiles are not altogether unfamiliar contrivances, but land-and-water motortrucks designed primarily for military purposes are far from usual. Such a machine has been developed, says Popular Mechanics Magazine. There is reason to believe that it will in time see the battlefields of France. It has behaved well in recent tests and inspired considerable confidence in the minds of those who have seen it perform. While carrying a dozen passengers the car has been driven into rivers and lakes and cruised the same as a motorboat. For scouting parties and others operating in advance of an army, it is thought that the car should prove immensely useful, especially in view of the fact that the enemy in retiring never leaves bridges standing.

FOIL PERSISTENT CAR THIEF

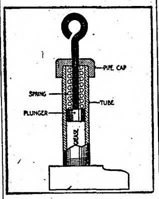
Device on New Model Makes It Impossible to Move Auto Without Towing It Away.

There seems to be good reason to believe a way has been found to foil the persistent car thief. Among the features included on a new automobile model is a gear-shift lock which gives this car the distinction of being thief proof. Only by towing the car away can it be moved against the wishes of the owner. The new lock is an integral part of the transmission cover. A hardened steel tube acts as the lock. This tube slides into engagement with the change gear lever, which becomes locked solid. In this position it becomes impossible to move the lever out of neutral and so engage the gears. The machine is locked against theft by a light shove with the foot on this steel tube. The key is necessary only for unlocking.

SELF-FEEDING GREASE-CUP

Simple Device Shown in Illustration Can Be Attached Without Altering the Axle.

The accompanying sketch shows a simple self-feeding grease cup which any mechanic can assemble without difficulty. This cup may be applied without any alterations to the automobile axle. It consists of a brass tube threaded at both ends and of the proper size for the pipe thread in the tapped hole of the axle. One end screws into the axle, and on the other end a pipe cap with a hole in it for the plunger rod is fitted. The plunger and rod with a light compression-spring are assembled as shown. This spring should not be too strong lest the grease be forced out of the bearing and wasted.



Lubricator for Pivots.

The proper size spring will make this lubricator far more economical than the compression type of grease-cup. The height of the plunger above the cap indicates the amount of grease which is in the tube.—W. Burr Bennett, in Popular Science Monthly Magazine.

GYPSIES USING MOTOR CARS

Traveling Bands Abandon Horses and Covered Wagons and Are Adopting Automobile.

Even the traveling bands of gypsies are abandoning the old style of traveling through the country by horses and covered wagons, and are adopting the automobile. This month a band of these wandering people traveled through Wisconsin in three automobiles. The autos were decorated with red blankets and the "kids" were sleeping in beds fixed on the hoods. The machines attracted much attention as they were being driven through.

Seeing Through the Rain.

For those who do not care to carry on their windshields the more or less cumbersome squeegee devices, a special cloth is now to be had, prepared chemically, for cleaning wet windshields. The chemical not only removes the mist formed by the rain, but deposits a thin coating that prevents further mist from gathering.

ENTENTE DECLARED READY

ALLIES WAITING FOR EXPECTED TEUTON ONSLAUGHT.

Have Reinforced Positions And Are Fully Prepared For Heavy Compaign.

Washington, Jan. 22.—The Allies are maintaining an expectant attitude on the western front, Secretary of War N. D. Baker says in his weekly war review, while recent events in Russia have greatly increased strategic freedom for the Central Empires.

The review is for the week ending Jan. 19. It says:

There is little to record in the way of military activity. On the western front the Allies are maintaining an expectant attitude.

"While the enemy has been busy concentrating his offensive forces, the British and French have greatly strengthened their defensive positions, and are now prepared for every eventuality.

"The recent events in Russia, which have removed from the theater of active operations over 900 miles of front in the east, the invasion of Italy and the consequent shortening of the battle line in this zone by nearly 150 miles, have resulted in greatly increased strategic freedom for the Central Empires.

"The Italians launched a series of formidable assaults which resulted in a decided advantage for their forces.

Austrian Menace Lessened.

"This last achievement has removed the menace of the enemy being able to turn the Italian flank in the region of the Monte Grappa. The only reaction on the part of the enemy took place in the Piave delta, where the Austrians attempted to regain the ground lost east of Capo Sile. The enemy was driven back without gaining any of his objectives and suffered severe casualties. It would seem that the pressure of the Austrians in this area has been materially lessened."

RAILROAD TRAINMEN HAVE 5,000 MEN IN WAR

Has Already Paid More Than 100 Death and Disability Claims for Men in Service.

Cleveland, Jan. 22.—With a membership of 160,000 men in train and yard service, the Brotherhood of Railroad Trainmen today has more than 5,000 men in the military forces of the nation, according to W. G. Lee, president of the brotherhood.

The national union, Mr. Lee said, has paid more than 100 death and disability claims as a result of the experiences of members overseas. Of the 5,000 men at the front, more than 500 were residents of Canada. The organization is paying the dues and assessments of all members in active service.

CARSON RESIGNS POST IN BRITISH MINISTRY

Government's Failure to Conscript Irish Is Held Back of Step.

London, Jan. 22.—Sir Edward Carson, minister without portfolio in the war cabinet, has resigned. This announcement is made officially. The prime minister has advisede the king to accept Sir Edward's resignation. The correspondence published shows that Sir Edward's resignation was on the Irish question and had nothing to do with the conduct of the war.

Soldier Says He Started Fire.

Washington, Jan. 22.—Frederick L. Woodward, private in the quartermaster corps, has confessed he started the fire which threatened the quartermaster storehouse here last week and destroyed $50,000 worth of supplies. An official statement says Woodward declared himself a pyromaniac and had in 1916 fired a house in Worcester, Mass.

To Import Porto Ricans.

Washington, Jan. 22.—Arrangements for the early transportation of 50,000 common laborers to the United States from Porto Rico are being made by the department of labor. As soon as tonnage is available 60,000 others will be brought from Porto Rico and the Virgin Islands.

RUSSIAN MINISTERS MURDERED IN BEDS

Petrograd, Jan. 22.—A. I. Shingaroff, minister of finance in the Kerensky cabinet, and Prof. F. F. Kokoshkine, state comptroller under Kerensky, were murdered in their beds in the Marine hospital.

To Lease Alaska Coal Fields.

Washington, Jan. 22.—Completion of the work of surveying and dividing into leasing units the more accessible part of the Tanana coal field in Alaska has been announced by Secretary Lane, with notice that the blocks soon would be for lease. The area comprises about 19,000 acres in the valley of Lignite Creek. Coal in the field is said to be lignite of fair grade, which will be used by the Alaskan railway, by Tanana river boats and by local consumers, all of whom have applied for it.

EVEN THE CHILDREN WEAR GAS MASKS IN REIMS

Copyright, Underwood & Underwood

The clouds of asphyxiating gases with which the Teutons drench the allied lines are no respecters of persons, so even the little children in the districts close to the fighting lines must wear gas masks to protect themselves from Hun frightfulness. The tots in this group on their way to school in Reims are all provided with masks.

AIR FEATS OF THE LAFAYETTE MEN

Walcott, Since Shot Down Over German Lines, Tells of Comrades Daring.

MAKES DIVE OF 10,000 FEET

Aviator Reaches Ground Safely Although All the Wires on His Machine Are Loosened — Spend Holiday in Air.

Washington.—Word pictures of the work of the members of the Lafayette Squadron and other American aviators in France are given in letters which Dr. Charles D. Walcott, secretary of the Smithsonian institution, has received from his son, E. S. Walcott, whose airplane fell "somewhere behind the German lines" along the western front. The allusions to the work of the American aviators contained in these letters are all the more interesting at this time in view of the fact that the men about whom Walcott wrote have just been commissioned in the American air service on the recommendation of General Pershing.

Doctor Walcott has received a dispatch from Paris informing him that his son fell within the enemy lines December 12 while fighting three single-seaters, after having demolished an enemy two-seater, and that his fate is uncertain. Inquiries are being made to ascertain, if possible, from Germany whether young Walcott was seriously injured or not.

In a letter dated November 13, in response to an inquiry about Campbell, an aviator from Chicago, who was reported lost, young Walcott wrote as follows:

"Campbell was in the Lafayette Escadrille, and they are a member of the same group as Squadron 84, so I have asked them about him. He was on a patrol with another chap; they attacked some Boches, and when it was over the other chap was alone. Campbell was brought down in German territory and so reported missing. I believe the chap he was with has seen and talked to Campbell's father or some close relative since.

"Another chap named Bulkely was brought down in similar circumstances about the 1st of September. Ten days ago word was received from the American embassy that he had communicated with them, a prisoner in Germany.

"There are many similar cases where men brought down with crippled machines, or wounded, escaped destruction by a miracle. The only sure thing is when a machine goes down in flames or is seen to lose a wing or two.

"For instance, there are two officers in the group who are in the best of health and daily working. Several months ago they were on patrol together and collided in the air. One machine cut the tail rigging completely off the other plane, and then they separated, one plane without a tail and the other machine with various parts of a tail mixed among the cables and struts of one side of his machine. They both landed in France, one on his wheels, followed by a capotage, or somersault turnover, the other quite completely upside down. Then a term in the hospital, and back they are again.

"Kenneth Marr, an American and a friend of Pete's, had the commands of both his controls cut in a combat, the rudder and elevator, leaving him nothing but the aileron, the lateral balance control, and the motor. He landed with only a skinned nose for casualties, and got a decoration for it.

Dives Vertically 10,000 Feet.

"Another chap, in an attack on captive balloons, dived for something like 10,000 feet vertically and with full motor on, thereby gaining considerable speed, as you can imagine. He came right on top of the balloon, shot and, to keep from hitting it, yanked as roughly as he could, flattening out his dive in the merest fraction of a second. Imagine the strain on the machine! When he got home all the wires had several inches sag in them; the metal connections of the cables into the struts and wood of the wings had bit into the wood enough to give the sag.

"Machines are built to stand immense pressure on the under side of their wings. In some acrobatic maneuvers I was trying the other day I made mistakes and caused the machine to stall and then fall in such a way that the full weight was supported by the upper surface—by the wires which in most machines are supposed merely to support the weight of the wings when the machine is on the ground.

"Yes, the Spad is a well-built machine, the nearest thing to perfection in point of strength, speed, and climbing power I've seen yet. Of course, it's heavy, and that's why they put 150-230 horse power in them. The other school, that of a light machine with a light motor, depending for its success on lack of weight rather than excess of power, may supplant the heavier machine in time; I can't tell.

"Yesterday there was a review here in honor of Guynemer, and decorations for the pilots of the group who had won them. Three Americans received the Croix de Guerre—members of the Lafayette Escadrille. Lufbery, the American ace, carried the American flag presented to the escadrille by Mrs. McAdoo and the employees of the treasury department, besides the two aviation emblems of France. He was called to receive his decoration for having in the course of one day held seven combats, descended (six) one German plane in flames, and forced five others to land behind their lines, (which means that he is officially credited with one—his thirteenth—and that the other five, though probably brought down, do not count for him because there were not the necessary witnesses required by the French regulation.)

"Aviators are not very military. The chief of one of the escadrilles was commissioned to command the mechanics, who are plain soldiers with rifles and steel helmets, for the occasion. He is a bit of a clown and amused the entire gathering, kidding with the officers. The pilots of each of the five escadrilles were in more or less formation, most of them with hands in their pockets, for it was chilly, and presenting a mixture of uniforms unparalleled in its heterogeneity. Every branch of the service represented endless personal ideas in dress.

Spent Their Holiday in the Air.

"Because of the occasion, repose had been granted to the entire group for the afternoon, another group taking over our patrols. So that after the review every one had the afternoon to waste—a sunny day, which is quite unusual this month. Within a half hour every machine that was in working order was in the air, forming into groups and then off for the lines, just looking for trouble—voluntary patrol, they call it. Which opened my eyes a bit as to the spirit in the French aviation service after three years of war."

In another letter, written December 1, young Walcott says:

"I tried to give you some idea of the strength of a Spad in a letter a while ago. At home people speak of a factor of safety, meaning the number of times stronger the machine is than is necessary for plain flying. The Spad is made so that a man can't 'bust' it, no matter what he does in the air—dive as far and as fast as he can and stop as brutally as he can, it stands the racket. Of course, motors do stop, and if it happens over a mountain range—well, that's just hard luck.

"Have had a few patrols since last I wrote. One at a big height—4,000 to 4,500 meters, considerably above the clouds, which almost shut out the ground below; a wonderfully beautiful sight, but beastly cold—and a couple when the clouds were low and solid. The patrol stays at just the height of the clouds, hiding in them, slipping out again to look around. If it stays below the enemy antiaircraft guns pepper it whenever near the lines, and at a low altitude that is rather awkward, so the patrol shows itself as little as possible.

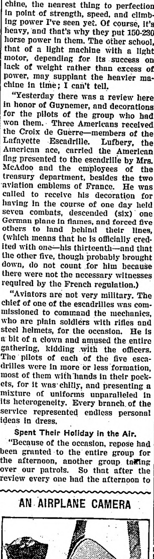
"It's lots of sport to try to keep with the patrol; be behind the chief of patrol, see him disappear, and then bump into a fog bank, a low-hanging cloud, and not see a darn thing. Then dive down out of the cloud, wondering whether the other guy is right underneath or not; dart out of the cloud and see him, maybe 500 yards away, going at right angles. Then back up and turn around fast and give her the gear—full speed to catch up—and so on. See a Boche regulating artillery fire, start to maneuver into range, and, zip; he's out of sight in the clouds, and the next you see he is beating it far back of his lines. Not very dangerous this weather, but lots of fun."

In a letter from the front, dated November 30, the following passages occur:

Yesterday was Thanksgiving day, and, praises be! the Lafayette bunch invited me and my partner to dinner, or rather to the feast. They have the most remarkable chef. Soup and fish prepared the way for a most remarkably big bird called the turkey, barricaded by chestnuts. And then a plum pudding—a regular American one—and as good as I ever tasted. I sat at the table with Captain Thenault, Lieutenants Thaw and Lufbery, and some Frenchmen.

"An early patrol this morning, despite low clouds. Lots of fun it was, ducking in and out of the clouds, keeping from hitting other machines in the clouds and from losing the patrol. Saw a few Boches, but all they had to do was to slip up out of sight when the patrol approached. Every now and then their antiaircraft guns would blaze away a bit, but there was lots of room for them to miss and for us to leave the place they were shooting at."

AN AIRPLANE CAMERA



This type of camera which no doubt will be used by American aviation corps men for reconnaissance work is attached to the airplane and is operated by the pulling of strings or the pressing of buttons. The camera is almost automatic, as everything can be set in advance and the entire operation of taking the picture is the pressing of the button or the pulling of the strings. The camera makes an almost perfect view of the terrain and will be invaluable in the reconnaissance work of the army. The camera is loaded with plates and a number of pictures can be taken successively without additional work. A British royal flying corps man is in the machine.

USES OVERCOAT AS BANK

Negro Proves Ownership to Garment by Disclosing Location of Savings.

New York.—Monroe Smith, a negro, insisted in the court of special sessions that he had not stolen the overcoat of Leslie Davis while he entertained Davis in his home. Smith said the coat was his own property and he had a right to pawn it.

"I can prove I own the coat," said Davis. "There is nine dollars sewed in the lining."

Promptly the justice ordered the lining ripped open and the money was found.

KILL DEER TO REDUCE COST

Chippewa Falls Park Board Forced to Slay Because of Cost of Keep.

Chippewa Falls, Wis.—An increase in the herd of deer at the public park in this city and an increase in the cost of food for the animals, has caused the park board to have five of the deer slain, and the venison placed on sale in one of the markets. Permission to kill the deer had to be obtained from the state conservation commission.

DADDY'S EVENING FAIRY TALE

By MARY GRAHAM BONNER

THE TIGER.

"That old lion makes me very angry," said the tiger in the zoo.

Now, We Go Out at Night.

"Dear me, dear me," said Mrs. Tiger, "I hear many of the animals complain of him. In fact the lions aren't so popular with us as they are with the people."

"And pray tell who cares for the people?" asked Mr. Tiger. "I am sure I don't." This he said with a snarl as he wrinkled up his forehead and showed his teeth.

"Some of the animals have been grumbling too," said Mrs. Tiger. "They have said that the lion is considered so fine and that he simply roars well. He's not so wonderful as they are."

"Who said that?" asked Mr. Tiger.

"The rhinoceros family said so," answered Mrs. Tiger.

"They are right," said Mr. Tiger. "Yes, they are right."

"Why are you so especially angry at them just now?" asked Mrs. Tiger.

"Because that old lion in yonder cage has been roaring and roaring and everyone has been noticing him."

"Well, we can't blame people for noticing the lion family more than they notice us. They act for the people. They roar and make a fine noise and they sit up ready to be admired," said Mrs. Tiger. "We look far over the heads of people, beyond, way beyond, and we dream of the jungles and the wild life."

"I suppose the lion dreams of it too," said Mrs. Tiger, "but then he does not know the wild life as well as I do. He is too conceited even out of captivity."

"He is conceited and so is that lioness in the next cage. But still," continued Mrs. Tiger, "she looks as if she had wilder thoughts than he."

"I admire her more," said Mr. Tiger. "She has more sense. She is more of a wild beast. That is what we should be—wild beasts!" And Mr. Tiger growled in a low, fierce manner.

"You didn't tell me what was making you so angry today?" asked Mrs. Tiger. "What are you grumbling about so much more than usual?"

"The roaring of Mr. Lion," said the tiger, "reminds me of the days back in the jungle. And it reminds me of the stories Old Grandpa Tiger used to tell me of his adventures and of the things I must learn to do."

"Tell me about it," said Mrs. Tiger. "I knew you were thinking of something—of the wild life, for you looked as if you could see way over the heads of all the people right into the jungle where you could hunt and get your own dinner."

"My grandpa," said Mr. Tiger, "told me that the lion was not nearly so fine as he was. And he said that in the years to come he would never improve.

"'He is so fond of his noisy roar,' my grandpa said, 'that he is often very foolish. He thinks his roar is so brave and fine. He is so proud of it that he wants to boast and brag about it all the time. And the only way he can do that is by talking about it—and the way he talks is to roar.

"'He will often go out into the wilds to hunt in the daytime when he can be caught. He is not clever about his hunting. He is very, very stupid. Now, we go out at night.'

"I asked the reason for this and my grandpa was quite angry at first. Then he saw I had to be taught.

He Is Too Conceited.

"'Because we do not want to be seen. We are quiet and clever and tricky,' he said. 'Tigers are twice as clever as lions in their hunting, and they stand far less chance of being caught.

"'We never take any foolish risks. It's only the one who boasts and roars who does such a thing. And so, my little grandson, be sure you hunt when it is dark. Do not take foolish risks. Be clever, be cunning, be quick, be quiet. And do not boast, for boasting gets you nowhere at all and it might get you captured or killed.'

"Such was the advice my grandpa gave me, and I have been thinking of it today as I have heard the lion roar and have watched the crowd gathering around.

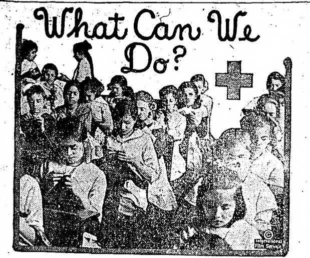
"But we are famous for being better hunters and if only the people who don't know about our powers like the roaring of the lion, we will not mind, for they are simply stupid!"

Quite Right.

Teacher (after explaining the part played by carbohydrates, proteids and fats respectively in the upkeep of the human body)—Can any girl tell me the three foods required to keep the body in health?

There was a silence, till one maiden held up her hand and replied: "Yer breakfast, yer dinner and yer tea."

What Can We Do?



In instructing schoolchildren in knitting, they must begin with the simplest things first and advanced to those that are more difficult, as in anything else. Some of the schools started out with the six-inch squares made of colored yarns on No. 3 needles, and after that they undertake mufflers, then wristlets. The squares are used by the Red Cross by joining them to make small quilts or coverlets.

Yarn and knitting needles can be purchased either from stores or Red Cross chapters. The standardized Red Cross needles are in three sizes, and their numbers and sizes are as follows:

Knitting needles, No. 1—135-1,000 inch in diameter.

Knitting needles, No. 2—175-1,000 inch in diameter.

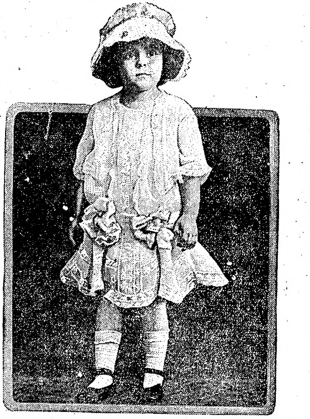
Knitting needles, No. 3—200-1,000 inch in diameter.

The children use No. 3 needles. They are first taught to "cast on" and to avoid making their first stitches too tight. Beginning on the small squares the children practice until they can make the stitches even and firm. They must be taught to pick up a dropped stitch and sometimes ravel out and re-knit a square several times. Both boys and girls like the work.

They are taught to splice the yarn when it must be joined or to leave ends two or three inches long to be darned in. All knots and ridges are to be avoided. When they have learned to knit the squares they can take up the mufflers. For these they must use the regulation gray or khaki colored yarn that is sold for army garments, and one pair of No. 3 needles. For a muffler 2½ hanks of yarn (⅝ pound) are needed. Cast on 50 stitches (or a few more or less if necessary) to make a width of 11 inches. Knit in the same way as for the squares, with the plain or garter stitch until the muffler is 68 inches long.

Wristlets may be knitted on No. 2 needles, using one pair. They require ½ hank of yarn (⅛ pound). Cast on 48 stitches, knit 2 and purl 2 for 12 inches, and sew up, leaving 2 inches open space for the thumb, 2 inches below the edge. The next garment to be taken up in the course of training is considerably more difficult than the muffler, but only requires two needles. Direction for it will be given in another article.

Fads And Fancies Of Fashion



CALMLY CONSCIOUS OF HER PRETTY CLOTHES.

Mothers love to make dainty finery for their little girls at any season of the year, but more especially now, at the season when indoors is more inviting than outdoors. In the North the long winter evenings must be filled somehow and leisurely sewing on pretty white clothes is as much pastime as work. Many mothers count on January and February as the time for getting the little one's sewing out of the way, before the approach of Easter compels them to give time and attention to the more important needs of themselves.

In January dry goods stores put on their annual sales of white goods and present their new-season models in children's frocks—assortments are complete and prices low, so the merchant plays into the hands of those patrons who count on making up lingerie and children's clothes at this time. Styles for little folks do not change much; there is so little room for improvement in them. We all like to see the same sheer white fabrics trimmed with the same simple needlework, or fine embroidery and lingerie laces that we have come to associate always with babyhood.

Above a dress-up frock for the small lady of three or four years is pictured. It is made of fine batiste and narrow val lace. This is a frock for state occasions, like a birthday party, in the life of the little miss. It is, therefore, indulged in more lace and embroidery than any other of her belongings..

It is cut with a long body and a short, full skirt, scalloped at the bottom. There is a straight piece of fine swiss embroidery down the front set in with lace insertion at each side. Little jacket fronts are set on at each side with val edging set in a scant ruffle on the edges.

Rosettes of pink satin ribbon at each side of the front emphasize the beginning and the end of a skirt sash that marks the joining of the waist and skirt. A wide soft ribbon makes this sash a very splendid affair that matches up well with the hat of pink ribbon and white lace. There is a miniature rose on its brim. No wonder the little one is calmly conscious of being well dressed!

Julia Bottomley

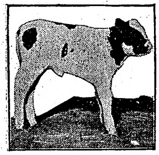
DAIRY

SKIMMED MILK IS VALUABLE

Little Richer in Protein Than Whole Milk, but Lower in Carbohydrates —Feeding Calves.

Skimmed milk is a little richer in protein than whole milk, but lower in carbohydrates. Since most of the fat has been removed in the cream the skimmed milk will need carbohydrates to make it a balanced ration for calves.

A good plan is to replace a portion of the whole milk with skimmed milk, gradually increase the skimmed milk with some form of carbohydrates till all of the whole milk is replaced by skimmed milk. Fine ground meal is one of the best carbohydrate supplements to be fed with skimmed milk. Some feeders cook the meal, stir it in the skimmed milk and feed it to the calf. After the calf is two weeks old it will eat fine ground meal and if fed small quantities will assimilate it. Linseed meal is also used.



Whole Milk Age.

Care should be taken in feeding calves. They should be taught to drink from the pail as soon as possible. Nothing but clean vessels should be used and the milk should be clean and warm.

KICKING COW EASILY CURED

Rope Passed Around Body of Offending Animal, Drawn Tight, Will Prove Effective.

The kicking cow is easily cured by the proper methods. To cure the offending animal take a rope with a loop in one end of it or a trunk strap and pass it around the body of the cow. Draw it tight. The cow usually will jump a little at first, but when she finds she cannot get out of the rope, she will stand—and cannot kick. If this method causes the cow to give bloody milk, place the rope or strap behind the udder and draw it up in the same manner. With some cows this cannot be done because of the shape of the udder.

Another method is to hobble the cow by passing the rope around each leg behind the udder, and tying just above the hocks. This is rather dangerous for the man tying the rope. After the preventive measure has been repeated several times the cow will stand readily to be milked.

SUCCESS IN DAIRY BUSINESS

Dairyman Must Put Himself Through Some Process of Training—Knowledge Is Essential.

Under the strained circumstances of these days, to succeed in dairy work you must know how to think, and that means that you must have put yourself through some process of training, either on your own hook or by proxy, that is, with the help of a school or working for some practical dairyman. It does not matter at all how you get your information, just so you get it, but to begin dairying without it is as hopeless as to jump into a deep river without knowing how to swim.

DRINKING WATER FOR STOCK

Cow Will Not Reach Maximum Production Unless She Has Abundant Supply in Winter.

Warm drinking water for the dairy stock will save feed and also benefit the milk flow. It saves feed because it does not draw on the vitality of the cow, as does cold water. It benefits the milk flow because a cow will not reach her maximum production unless she drinks water abundantly. This she will not do if it is ice cold.

COW TESTING IS PROFITABLE

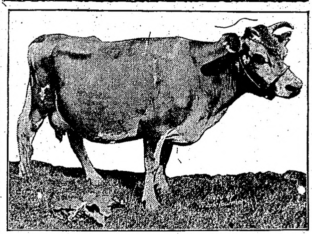
Farmers May Have Work Done at Nominal Cost by Joining Association—Cost Is Divided.

Farmers who are too busy to test their own cows may now have this work done for them at a nominal cost by joining a cow-testing association. A cow-testing association is an organization of about twenty-six dairy farmers who employ co-operatively a man to test their cows for economical production.

AGRICULTURAL DEPARTMENT

This department of THE ELEVEN TOWNS is devoted to the interests of the agriculturists of Pennington and Marshall Counties. All the articles are by foremost authorities, including U. S. Government experts.

SILAGE IS SUPERIOR WINTER COW FEED



SPLENDID TYPE OF JERSEY COW FOR DAIRY.

(Prepared by the United States Department of Agriculture.)

Silage is a splendid winter feed particularly adapted for dairy cows. In many sections silage has come to be the dairy farm's main reliance for cows, for it is the best and cheapest substitute for fresh grass. While the real food and nutritive value of silage is not great, about three-fourths of its total weight being water, it is succulent and palatable. It contains a large amount of carbohydrates in proportion to the protein and will give best results when fed with some other feed richer in dry matter and in protein. As a feed containing a large amount of water in the form of natural plant juices, it is easily digested and serves the useful purpose of keeping the whole system of the animal in good condition. A silage-fed animal is rarely troubled with digestive disturbances, the coat is noticeably sleek and soft, and the skin is pliable. No rough feed is more palatable than good corn silage, which is of great importance in feeding dairy cattle as it induces a large consumption and stimulates the secretion of digestive juices.

Feeding Leguminous Hay.

Leguminous hay such as clover, cow peas or alfalfa should be fed in combination with silage. These will tend to correct the deficiencies of the silage in dry matter, protein and mineral constituents. A ration of silage and, say, alfalfa hay alone is satisfactory, however, only for cows which are dry or giving only a small amount of milk and for heifers and bulls. Cows in full milk require some concentrated feed in addition to hay and silage, as they cannot consume enough of these feeds to keep up a large flow of milk and maintain body weight.

Amount to Feed.

The amount of silage to feed a cow will depend upon the capacity of the animal to consume feed. She should be fed as much as she will clean up without waste when consuming it with her hay and grain. Raise or lower the amount until the proper quantity is ascertained. Generally speaking, a good cow should be fed just short of the limit of her appetite. If she refuses any of her feed it should be reduced at once. The small breeds will eat 25 or 30 pounds per day; the large breeds 40 or more; and the medium-sized ones amounts varying between.

Rations.

Ironclad directions for feeding cows cannot be given. In general, however, they should be supplied with all the roughage they will clean up with grain in proportion to butterfat produced. The hay will ordinarily range between 5 and 12 pounds per cow per day when fed in connection with silage. For Holsteins 1 pound of concentrates for each 4 pounds of milk produced will prove about right. For Jerseys 1 pound for each 3 pounds of milk or less will come nearer meeting the requirements. The grain for other breeds will vary between these two according to the quality of milk produced. A good rule is to feed seven times as much grain as there is butterfat produced.

The following rations have been found satisfactory:

For a 1,300-pound cow yielding 40 pounds of milk testing 3.5 per cent:

	Pounds.
Silage	40
Clover, cowpea, or alfalfa hay	10
Grain mixture	10

For the same cow yielding 20 pounds of 3.5 per cent milk:

	Pounds.
Silage	40
Clover, cowpea, or alfalfa hay	5
Grain mixture	5

For a 900-pound cow yielding 30 pounds of 5 per cent milk:

	Pounds.
Silage	30
Clover, cowpea, or alfalfa hay	10
Grain mixture	11

For the same cow yielding 15 pounds of 5 per cent milk:

	Pounds.
Silage	30
Clover, cowpea, or alfalfa hay	8
Grain mixture	5

A good grain mixture to be used in a ration which includes silage and some sort of leguminous hay is composed of:

	Parts.
Corn chop	4
Wheat bran	2
Linseed oil meal or cottonseed meal	1

In case the hay used is not of this kind some of the corn chop may be replaced by linseed or cottonseed meal. In many instances brewers' dried grains or crushed oats may be profitably substituted for the bran, and oftentimes gluten products can be used to advantage in place of bran or oil meals.

Time to Feed.

The time to feed silage is directly after milking or at least several hours before milking. If fed immediately before milking the silage odors may pass through the cow's body into the milk. Besides, the milk may receive some taints directly from the stable air. On the other hand, if feeding is done subsequent to milking, the volatile silage odors will have been thrown off before the next milking hour. Silage is usually fed twice a day.

Many objections have been made to the feeding of silage, some condenseries even refusing to let their patrons use it. These objections are becoming less common, since milk from cows fed silage in a proper manner is in no way impaired; furthermore there is nothing about silage that will impair the health of the animals.

Feeding Frozen Silage.

Frozen silage must be thawed before feeding. If it is then given immediately to the cows before decomposition sets in no harm will result from feeding this kind of silage; neither is the nutritive value known to be changed in any way.

Care of Horse's Feet.

Keep your horse's feet soft, and have him shod often. More feet are ruined in the stable than on the road.

FEED FOWLS SPROUTED OATS

Enables Farmer to Reduce Grain Ration About One-Third—Influences Laying of Hens.

Giving the hens once a day all the sprouted oats they want to eat, which is about a square inch of sprouts, grain and roots, enables one to reduce the grain ration about one-third and thereby effecting a saving in high-priced grain. Oat sprouts can be produced at about 20 to 25 cents per bushel, while the price of wheat is about $2.20 per bushel. It is also remarkable how sprouted oats influence the laying of the hens. A change in this respect can be noticed within a few days after sprouted oats have been fed.

INDICATES GOOD LAYING HEN

Large Bright Red Comb Is Characteristic of Best Producers—Notice the Black Minorcas.

One of the characteristics of a good laying hen is a large comb. The old-timers used to say, "the bigger the comb, the better the layer," and there is a great deal of truth in it. Notice the large comb of the black Minorca, one of our very best layers, and the layer of the largest egg of any breed. Notice the large combs of the Leghorns, the best of egg-layers. Put it down as an axiom of truth that a hen with a large comb, and a bright red comb, is a good layer.

AVOID POORLY KEPT SILAGE

Sheep Are Peculiarly Susceptible to Moldy Feed—Oats and Bran Are Excellent

Sheep are peculiarly susceptible to injury from moldy feed. Poorly kept silage is therefore to be avoided. A ration of oats and bran makes an excellent feed for ewes with lambs at their side. The flock should have access to water and salt at all times.

Straw Good for Sheep.

Clover and other legume straws may be used with profit in feeding sheep particularly if fed with silage or roots and in this way a large amount of hay may be saved.

PUBLIC ROADS

DRAG PREPARES GOOD ROADS

Length and Position of Hitch, and Position of Driver Are of Much Importance.

(By H. L. THOMPSON, Oklahoma Experiment Station, Stillwater.)

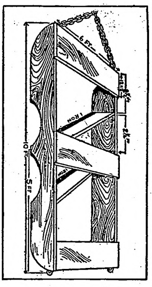
The successful handling of the drag on the road depends on two principles. These are the length and position of the hitch, and the position of the driver on the drag.

For ordinary work the clevis should be fastened far enough on the chain toward the ditch end of the blade to force the unloaded drag to follow the team at about an angle of 45 degrees. This will cause the earth to move smoothly along the face of the drag and will make the draft light on the team, provided the driver rides in the line of draft. If small weeds are to be cut, or if the furrow of earth in the ditch is to be moved, the hitch should be attached rather close on the chain to the ditch end of the drag. This will cause the drag to move nearly ditch-end foremost. The driver should put his weight on the extreme forward end of the front blade, which will make the drag swing back to the proper angle and make the blade plow.

For such work the team should be driven slowly and carefully to keep the drag from dipping forward. If a wet spot is met, the driver should shift his weight backward so as not to dig too deeply. If the blade becomes clogged with straw or weeds it can be made to clean itself usually if the driver shifts his weight as far as possible from the ditch end of the blade. If there is a low place or a mudhole to be filled the drag can be made to drop its load of earth if the driver shifts his weight quickly from the ditch end.

The distance from the drag at which the team is hitched affects the depth of cutting. A long hitch causes the blade to cut deeper and is used often when a rough road is to be smoothed up. Shortening the chain seems to lift the furrow blade from the ground and makes lighter cutting when doing light smoothing work.

For a new road with bumps and holes the three-blade steel drag is excellent, as it carries considerable earth and will not drop into the ruts or holes as badly as a two-blade drag. However, it usually requires four horses. The team should ride the whole distance, going up one wheel track and back the other. It is a mistake to try to improve too wide a strip at one time. The best work can be done by the drag when the soil is moist, but not sticky, so the earth will move freely along the face of the blades. If the roadway is very badly rutted it may be well to drag it when the earth is wet. This is particularly true just before a spell of cold weather in winter when it is possible to have a roadway to freeze smooth.



Road Drag Is Not Costly.

Clay hills after considerable dragging frequently become too high in the center. This can be corrected by dragging the earth away from the center once and toward the center twice. The road drag is only good in clay or similar soils, as its effectiveness depends on the smearing action which it has and by means of which it can make a water-tight coat. The sand road will be injured by crowning it toward the center and dragging because the sand road needs all the moisture it can hold, and a crown will drain this moisture away.

Follow Test Directions.

One reason why people do not get better results from testing is that they do not follow directions. They try to make a short cut to save time, but sacrifice thereby accuracy in the test.

Call for Dairy Cattle.

The call for dairy cattle is more money making than the demand for beef cattle.

Hog Weather.

A hog doesn't mind cold weather, if his pen is dry and snug.

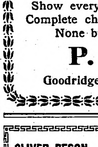
JOB PRINTING We can do the finest class of printing, and we can do the class just a little cheaper than the other fellow. Wedding invitations, letter heads, bill heads, sale bills, statements, dodgers, cards, etc., all receive the same careful treatment—just a little better than seems necessary. Prompt delivery always.



Let Us Be Your Waiter
We never tire of helping others when they ask for good job printing. We can tickle the most exacting typographic appetite. People who have partaken of our excellent service come back for a second serving. Our prices are the most reasonable, too, and you can always depend on us giving your orders the most prompt and careful attention. Call at this office and look over our samples.

HUSBAND SAVES WIFE

From Suffering by Getting Her Lydia E. Pinkham's Vegetable Compound.

Pittsburgh, Pa.—"For many months I was not able to do my work owing to a weakness which caused backache and headaches. A friend called my attention to one of your newspaper advertisements and immediately my husband bought three bottles of Lydia E. Pinkham's Vegetable Compound for me. After taking two bottles I felt fine and my troubles caused by that weakness are a thing of the past. All women who suffer as I did should try Lydia E. Pinkham's Vegetable Compound."—Mrs. Jas. Rohrberg, 620 Knapp St., N. S., Pittsburgh, Pa.

Women who suffer from any form of weakness, as indicated by displacements, inflammation, ulceration, irregularities, backache, headaches, nervousness or "the blues," should accept Mrs. Rohrberg's suggestion and give Lydia E. Pinkham's Vegetable Compound a thorough trial.

For over forty years it has been correcting such ailments. If you have mysterious complications write for advice to Lydia E. Pinkham Medicine Co., Lynn, Mass.

BLACK LEG LOSSES SURELY PREVENTED by CUTTER'S BLACKLEG PILLS

Low-priced, fresh, reliable; preferred by western stockmen, because they protect where other vaccines fail.

Write for booklet and testimonials.

10-dose pkg. Blackleg Pills, $1.00
50-dose pkg. Blackleg Pills, $4.00

The Cutter Laboratory, Berkeley, Cal., or Chicago, Ill.

Professional Bias.

The conductor was looking for one of his passengers in order to return his ticket. She was not in the Pullman, and the big dusky porter suggested that she might be on the observation car.

"How'll I know her when I see her?" asked the conductor sharply.

"Ah'll jes d'scribe huh, suh. Ah'll d'scribe huh tu yuh."

"Go ahead," said the conductor.

The porter scratched his head. "Wal, suh," he began, "wal, suh, she's got on a black dress wid a white collah, suh—an' ah's jes done shine huh shoes, suh."

Piles Cured in 6 to 14 Days

Druggists refund money if PAZO OINTMENT fails to cure Itching, Blind, Bleeding or Protruding Piles. First application gives relief. 50c.

Baby's Underwear.

Small Bobby was telling his mother about a parade he had just seen. He picked up a shoe box, and, beating it with a stick, marched round the room, explaining that he was a band.

His younger brother, who had never seen a parade, also beat on a box and, as he followed Bobby, remarked:

"Mother, I'm a shirt."

Three cheers for a wet day in a dry town.

Body Terribly Swollen

Mr. Madara's Condition Was Critical Until Doan's Were Used. Health Was Restored.

"For six months I couldn't walk, I was so swollen as the result of kidney trouble," says Geo. T. Madara, 15 Mt. Vernon Ave., Pitman Grove, Camden, N. J.: "Backache drove me nearly wild and big lumps formed over each kidney. I bloated until I weighed 407 pounds, and I was a sight to behold. The water in my system pressed around my heart and I sometimes felt as if I was being strangled. The kidney secretions were scanty and contained a thick sediment.

Mr. Madara

"No one can imagine how I suffered. I finally went to the hospital, but when an operation was suggested I would not consent and came home.

"I heard how Doan's Kidney Pills had helped others, so I discarded all the other medicines and started taking them. The second day I began to improve and as I continued, my back stopped paining and the swelling went down. The other kidney troubles left, too, and I was soon as well as ever."

Sworn to before me,
Philip Schmitz, Notary Public.

Boys of the Country Are Proving Great Aid in War

Photo From Western Newspaper Union

The boys of the United States are doing much to help the country in the war crisis. This picture shows men of tomorrow learning trades at New York's Vocational school. One is doing electric wiring in the shop.

Uncle Sam Becomes Teacher And Adviser to Every Home On Materials for Household

A new book just issued on "Materials for the Household" is of interest to every family. It was prepared by the bureau of standards in popular language to meet the need for reliable information for home use and will be especially welcome to all who desire to manage the home as efficiently as a modern office or shop. In this work Uncle Sam becomes teacher and adviser to every household. Interesting accounts are given of the great variety of materials used in building and furnishing the home and in the many minor industries and activities of the household.

The circular is practical and aims to stimulate interest in household materials (other than foods and drugs), to explain their desirable properties, and to aid in their intelligent selection, effective use, and preservation. A better utilization of materials will aid the efficient administration of the home and promote the health, comfort, and general well-being of the household. Home economics is of universal and permanent concern, and as its importance is more fully realized it will become a vital factor in national well-being, says Commerce Reports. The excellent instruction in the subject now given in high schools and colleges has begun a new era in home management. This circular is a contribution from the bureau of standards to the growing literature in this field.

Household materials are of added interest to the housewife and student from the fact that formerly many such materials were made up in the home. The making of soap, candles, yarns and fabrics, leather, sugar, alkali, wax, tallow, pens and inks formed an interesting group of the old-time household industries. In fact, most modern industries are the outgrowth of what were originally household industries. The modern factory has taken up these home industries, and already some social control over the quality, form and price of factory-made products is beginning to be felt through agencies such as the consumers' leagues, co-operative societies, publicity in the public press, misbranding laws, government control and the like.

Our National Songs.

The United States has three songs which serve on occasions as national songs, but by historic associations and common consent one stands first, observes a writer. This is the "Star-Spangled Banner," written in 1814 by Francis S. Key of Maryland, while the British were bombarding Fort Henry, near Baltimore, and when the Americans did not know at what moment the fort might be captured or the flag shot down. While it has never been officially adopted as a national song the circumstances under which it was written and its universal popular approval cause it to stand pre-eminent. The other songs of a national character, but not so stirring or so popular are "Hail Columbia," written by Joseph Hopkinson, in 1788, and "America," by Samuel F. Smith, a Baptist preacher and poet, in 1832. The "Star-Spangled Banner" easily holds first place.

Robert Burns Never Went To School, but Read and Wrote at Very Early Age

Robert Burns, the "patron saint" of Scotland, and undoubtedly one of the world's greatest poets, never went to school, relates London Tit-Bits. His father, although his income probably never exceeded the proverbial forty pounds a year, was a man of exceptional intelligence and a great reader, and the future poet of "The Cottar's Saturday Night" could himself read the Bible at an early age, and was writing verses when most boys are learning multiplication. It is quite possible that had Burns had great advantages instead of great reverses and hardships he would not have developed his peculiar gifts.

Perhaps the greatest of Lloyd-George's predecessors never went to school. This was Pitt the younger, the marvelous boy who talked on equal terms with the greatest men of his day at fourteen, and was prime minister at the age of twenty-four, when the average young man is just beginning to earn his bread and butter. But Pitt had the advantage of a home education which would put the best schools in the shade.

Should Cease Our Grumbling Because of Inconveniences

There should be a damper put on the grumbling disposition. Things cannot run smoothly in these harrowing days. Every one thinks that he could manage things to perfection, but if he had to confront the new set of conditions he would likely change his mind, asserts the Ohio State Journal. Here is an institution that is ordered to cut off light, heat and service, and yet we wonder because we are discommoded. There are new conditions confronting us whichever way we turn, and they all grow out of this horrid old war. They cannot be helped, though sometimes we think the situation might be improved, but we should not think the improvement should come all at once.

When we get used to our inconveniences they will seem easier, partly because they will be made lighter and partly because we will become more philosophical. But there is one suggestion which is that no one should permit the war conditions to stand in the way of a wise and thoughtful management of whatever interest he may control. The war adds duties to authority as well as to the people who bear the burdens.

Use Logging Cars.

In the serious shortage of railway cars which has existed during recent months the lumber companies, along with other concerns, have utilized every available resource to obtain transportation facilities. A large lumber company in Louisiana found a way out of the difficult situation by taking 50 of its logging cars from its logging roads and making them up into one long lumber train. By this unusual arrangement it was able to transport 1,500,000 feet of lumber in a single trainload. The effort was so successful that the train has made a number of trips to the North.

NO PLACE FOR SHIRKERS

Even Waxed Figures Forced to Display War Insignia in French Capital.

Paris.—The poilu's detestation for the shirker, or "embusque," as he is called in French, was amusingly shown the other day. In the window of a hat shop near the Gare de l'Est, where it was seen daily by thousands of soldiers either going to or coming from the front was the life size wax bust of a handsome young man. On its head was displayed each day a hat or a cap of the latest style.

A group of soldiers stopped in front of the window to see the hats and one of them, spitting vigorously, as poilus do when desiring to emphasize their remarks, said: "Look at that devil of a shirker!"

The remark was overheard by the proprietor, who was standing in the doorway, probably watching for customers. The next day the bust of the handsome young man sported the ribbon of the Croix de Guerre and the insignia worn by soldiers who have been honorably discharged from the army because of wounds or disabilities.

Influence of Good Sense Always Made Itself Felt In Guiding the Russians

"Next to free speech and free listening, free action is a popular pastime," writes William G. Shepherd in an article on distracted Russia published in Everybody's.

"Anarchists have seized palaces and newspaper offices and automobiles and paintings and even wealth. But in the midst of this apparent anarchy, this lack of government, there is always—and this is an astonishing fact that has impressed the members of the American commission and all the other foreign statesmen who have come to Russia since the revolution—a checking influence of what we in the United States call 'common sense.'

"There is always somebody in a meeting who offsets wild speeches; somebody in a crowd who gives a matter a second thought and offsets and checks the man who wishes to act without thinking. There is an unexpected hardheadedness about even the mobs. The country districts of Russia, thousands of its little towns, villages and cities, were being governed, three months after the revolution, by public opinion and common sense alone—and astonishingly well governed.

"But all this makes a weird world, full of weird happenings.

"Anything can happen in Russia these days. But the point I am making is that in Russia the influence of common sense has always made itself felt from the first day of the revolution, and the council of workmen and soldiers was a concrete embodiment of this characteristic at a time in Russia when peaceful anarchy ruled; when one opinion or theory was as good as another and when there was a machine gun behind every theory."

GOOD LAUGHS

In the Restaurant.

Patron—Waiter, this is a meatless day, isn't it?

Waiter—Why, no, sir. What made you think so?

Patron—It struck me it must be from this lamb stew.

Not Much of a Tale.

"It won't be much of a story, will it?"

"What?"

"When our grandchildren ask us what we did in the great war, and we have to tell them that once a week we went without meat."

Grounds for Fear.

"I wonder."

"What are you wondering about?"

"If this long, cold spell is going to spoil the ice crop."

Justifiable Peace.

"Can separate peace ever be justifiable?" demanded the parlor orator. "Yes," answered the man who wasn't supposed to. "I once knew a man who made up with his wife, but kept her mother out of the house."

His Small Economy.

"My friend, there is really no excuse for your not looking neat and clean."

"Sorry, mister," explained Plodding Peter, "but I'm conserving my bit along wit de rest o' de folks. You jes' happened to hit me on my soapless day."

Their Sort.

"Didn't the suffrage pickets sue for mercy when they were jailed?"

"No, but they're suing for damages now."

Modern Cookery.

"Didn't I tell you to cook this egg four minutes?"

"I did so, sir," answered the waiter. "It was just out of cold storage. Four minutes wasn't enough time to do much more than thaw it nicely."

A Food Producer.

"There goes a man who is doing his duty in the trenches."

"Abroad?"

"No, at home. He makes the trenches with a plow."

Now Answer Up.

"I hear your poetry is selling like wildfire."

"Uh-huh! But who in the dickens wants to buy wildfire?"

Force of Food.

Geek—Well, old sport, how do you feel? I've eaten a bowl of oxtail soup and feel bully.

Guke—I've just eaten a plate of hash and feel like everything.

Search for graphite deposits in the United States since the war started has brought to light the largest known deposit of high-grade mineral on the continent, says the New York state department of labor. It is between Lake George and Lake Champlain, in the vicinity of Black mountain.

NEW YEAR'S GREETINGS

The Heads of Canada's Western Provinces, and Their Message.

The United States having been in the great world's war for about nine months, the touch of war's spirit has permeated the great commonwealth, and in every hamlet and district is felt and shown the interest that was to be expected from a people whose love of liberty and justice rises supreme to all else. Day by day their appreciation of what it means to give up now for the future happiness of themselves and the generations that follow grows greater and greater. There will be losses of loved ones, but there will be no badge of mourning to indicate the great sorrow that will be felt. It is realized that the sacrifice is the toll that is demanded for making the whole world better, and, sensing this, there is preparation and willingness to sacrifice until the goal—the defeat and downfall of despotism—is assured. When the people look back, and see what Canada has done, and learn that Canada today is bigger and better than ever, they will take heart, and with increasingly growing vigor carry on with a greater courage. Canada has been in the war for three and a half years. She has sent 400,000 out of a population of eight million, she has subscribed to Victory Bonds over and over again and there is no sound of a whimper. At each demand that is made upon her resources, she meets it, and gets ready for the next. Recently her people were asked to subscribe $300,000,000. She handed over $460,000,000.

Having already contributed 400,000 soldiers, Canada was recently asked to approve of sending another 100,000. With a sweeping majority, consent was given.

How the war affects Canada is best shown by the willingness of the people to contribute. They, too, realize the great and noble part they are taking in this great conflict. They are a unit on making the world better. Canada's wealth was never shown to better advantage than in the present struggle. It possesses great wealth in the soil, in its mines, its other natural resources, and wonderful riches in the tenacity and courage of its men and its women. The soil and the climate, and the hardihood and determination of the farming class to win, by cultivating and cultivating, growing wheat and raising cattle to build up the resources so necessary to carry on the war, are factors that will count.

Probably the best word of encouragement comes from the Premiers of the three great provinces where the bulk of the food products will come from. When one reads what these men, prominent in their country say, it gives inspiration. If there are any who may be pessimistic of the future, the message that these gentlemen send forward should remove all doubt. Three and a half years in the war, able to speak as they do, the future should look bright to those who may have their seasons of doubt!

Hon. T. C. Norris, Premier of Manitoba, says:

"Manitoba has prospered exceedingly during the year 1917, and the new year finds us not only still ready and willing, but unceasingly able to bear whatever burdens the fourth year of the war may bring.

"Manitoba farmers, generally speaking, have never been in better condition to carry on. Out of her prosperity Manitoba is giving lavishly toward the winning of the war. Every appeal for funds has met with quick and generous response. The people of the Province are well settled into the collar in all war efforts. There's a spirit of determination, of willingness to make sacrifices, of confidence in the certain outcome, of which there is no room for pessimism. Manitoba will carry on."

Saskatchewan had a prosperous and successful year in 1917, and when Premier Martin sent out his New Year message it was filled with an optimism that was fully warranted.

"There is no doubt that the province today is in a better condition financially than ever before. True, the effects of the town and city real estate boom have not altogether passed away, but speaking generally, the farmers on the plains and the merchants in the towns are in a better financial position today than at any previous time. Our people are industrious and progressive.

"While we have in some portions of the Province a mixed population, education and scientific methods are making rapid strides and we are looking forward with every confidence to a glorious future and the development of a people on the central plains of Canada, of which the whole Dominion and the British Empire will have every reason to be proud."

While Alberta has given over to the war thousands of her virile manhood, thus taking from the farmer a large percentage of its producers, it still stands up big and buoyant. The farm help thus temporarily removed means a demand for farm help and increased farm effort to till its highly productive acres. Hon. Chas. Stewart, Premier of Alberta, in a message to the people on the 1st of January, speaks with such buoyancy and hope of the future and so highly of the work of the past year, that his statement is reproduced. He says:

"The prosperity of the farming communities is reflected in the towns and cities by increased wholesale business and bank clearances. Wholesalers report increases from 20 per cent to 25 per cent and their collections the best in the history of the Province. Alberta being essentially an agricultural Province at the present time, these conditions are a source of great gratification to our people, and no doubt will be to Canada as a whole—taking into consideration the fact that Alberta forms no small part of the granary to which the Empire at present looks as the source of its food supply."—Advertisement.

ANOTHER KIND OF MACHINE

Wife Had No Intention of Letting Hubby Forget He Had Not Married Needle Worker.

Speaking at a dinner party, Senator James W. Wadsworth of New York referred to the poor memory possessed by some people, and fittingly contributed this anecdote:

One evening a business man, who had married his pretty stenographer, went to his room to dress for a session of his favorite lodge. A few minutes later he was heard calling at the head of the stairway.

"Jessie, dear," said hubby in a kind and gentle voice, "can't you come here just for a minute?"

"I suppose I can," indifferently answered Jessie, arising from her easy chair and starting for the stairway. "What do you want?"

"There is a little ripped place in the shirt that I want to wear to the lodge tonight," returned hubby. "Can't you sew it up for me?"

"Of course not," was the prompt rejoinder of wifey. "I will get Jane to do it. You seem to forget that you married a typewriter, not a sewing machine."

The Quinine That Does Not Affect Head

Because of its tonic and laxative effect, Laxative Bromo Quinine can be taken by anyone without causing nervousness or ringing in the head. There is only one "Bromo Quinine." E. W. GROVE'S signature is on box. 30c.

Cider in Ireland.

Cider was at one time manufactured on a large scale in the south of Ireland, but the industry became extinct. In 1904 the department of agriculture revived it to such an extent that whole villages were engaged in the employment. Since the outbreak of the present war most of the large firms interested in the project have suspended operations for one reason or another.

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Any druggist can put this up or you can mix it at home at very little cost. Full directions for making and use come in each box of Barbo Compound. It will gradually darken streaked, faded gray hair, and make it soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off. Adv.

Easy Wisdom.

"All things come to him who waits."

"Yes, one never knows what one can do until one loafs."

He Knew Her.

She—I've had that parrot two years and it has never said a word.

He—Why don't you give it a chance?

Dr. Pierce's Pleasant Pellets are the original little liver pills put up 40 years ago. They regulate liver and bowels. Ad.

Shop Talk.

Pessim—Life is not worth living.

Optim—You talk like an undertaker trying to drum up trade.

Our works are the mirrors wherein our spirit first sees its natural lineaments.—Carlyle.

SWAMP-ROOT FOR KIDNEY AILMENTS

There is only one medicine that really stands out pre-eminent as a medicine for curable ailments of the kidneys, liver and bladder.

Dr. Kilmer's Swamp-Root stands the highest for the reason that it has proven to be just the remedy needed in thousands upon thousands of distressing cases. Swamp-Root, a physician's prescription for special diseases, makes friends quickly because its mild and immediate effect is soon realized in most cases. It is a gentle, healing vegetable compound.

Start treatment at once. Sold at all drug stores in bottles of two sizes, medium and large.

However, if you wish first to test this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Adv.

Not So.

He—This is a bare apology for a salad!

She—'Tisn't! I dressed it myself.

It is impossible to tell how much a man is amused by the volume of laughter he lets escape.

BOSCHEE'S GERMAN SYRUP

will quiet your cough, soothe the inflammation of a sore throat and lungs, stop irritation in the bronchial tubes, insuring a good night's rest, free from coughing and with easy expectoration in the morning. Made and sold in America for fifty-two years. A wonderful prescription, assisting Nature in building up your general health and throwing off the disease. Especially useful in lung trouble, asthma, croup, bronchitis, etc. For sale in all civilized countries.—Adv.

Fortunate is the girl who can sing well—also the girl who knows she can't.

As a general thing the other fellow has no use for your opinion unless it coincides with his own.

INDUSTRIES STOP TO CONSERVE COAL

FUEL ADMINISTRATOR GIVES DRASTIC ORDER TEMPORARILY HALTING BUSINESS.

EDICT AFFECTS ALL LINES

Manufacturing Suspends For Five Days and All Activities To Observe Following Nine Mondays As Holidays.

Washington, Jan. 18.—Threatened with a national calamity due to the shortage of coal, President Wilson, through Fuel Administrator H. A. Garfield, ordered a temporary shutdown of factories and other industries and a general halting of business east of the Mississippi, including the entire states of Minnesota and Louisiana.

The shutdown is ordered from next Friday to the following Tuesday, inclusive, and the nine following Mondays.

On these 14 days no manufacturing plants will be operated except those requiring continuous operation to avoid injury to plant, those producing perishable foods and those producing other foods whose operation is desired by the food administrator.

The Regulations.

Regulation making provision for a more adequate supply of coal for railroads, domestic consumers, public utilities and other uses necessary to the national security.

The United States fuel administrator, acting under the authority of an executive order of the president of the United States, dated Aug. 23, 1917, appointing said administrator, in furtherance of the purposes of said order, and of the purposes of the act of congress therein referred, approved Aug. 10, 1917, and finding it essential effectively to carry out the provisions of this act to make provision for a more adequate supply of fuel for railroads, domestic consumers, public utilities, and for other uses necessary to the national security in certain parts of the United States, hereby makes and prescribes the following regulation:

"Until further order of the United States fuel administrator all persons selling fuel in whatever capacity shall give preference to orders for necessary requirements:

"A—Of railroads.

"B—Of domestic consumers, hospitals, charitable institutions and army and navy cantonments.

"C—Of public utilities, telephones and telegraph plants.

"D—Of ships and vessels for bunker purposes.

"E—Of the United States for strictly governmental purposes; not including orders from or for factories or plants working on contracts for the United States.

"F—Of municipal, county or state governments for necessary public use.

"G—Of manufacturers of perishable food or of food for necessary immediate consumption.

"The order further provides that on Jan. 18, 19, 20, 21 and 22, 1918, no fuel shall be delivered to any person, firm, association or corporation for any uses or requirements not included in the foregoing list until the requirements included in the list shall have been first delivered.

Certain Plants to Run.

"On Jan. 18, 19, 20, 21 and 22, 1918, and also on each and every Monday beginning Jan. 28, 1918, and continuing up to and including March 25, 1918, no manufacturing plant shall burn fuel or use power derived from fuel for any purpose except—

"A—Such plants as from their nature must be continuously operated seven days each week, to avoid serious injury to the plant itself or its contents.

"B—Manufacturers of perishable foods.

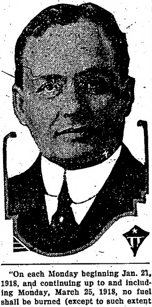
"C—Manufacturers of food not perishable and not in immediate demand, who may burn fuel to such extent as is authorized by the fuel administrator of the state in which such plant is located or by his representative authorized therefor, upon application by the United States food administrator.

"D—Printers or publishers of daily papers may burn fuel as usual excepting on every Monday from Jan. 21 to March 25, 1918, inclusive, on which days they may burn fuel to such extent as is necessary to issue such editions as such papers customarily issue on important national legal holidays, and where such papers do not issue any editions on holidays they are permitted to issue one edition on the said Monday.

"E—Printing establishments may burn fuel on Jan. 18, 19, 20, 21 and 22, to such extent as is necessary to issue current numbers of magazines and other publications periodically issued.

DR. HARRY A. GARFIELD

Fuel administrator who halted business to save fuel.



"On each Monday beginning Jan. 21, 1918, and continuing up to and including Monday, March 25, 1918, no fuel shall be burned (except to such extent as is essential to prevent injury to property from freezing) for the purpose of supplying heat for:

"A—Any business or professional offices except offices used by the United States, state, county or municipal governments, transportation companies or which are occupied by banks and trust companies and by physicians and dentists.

"B—Wholesale or retail stores or any other stores, business houses or buildings whatever, (except that for the purpose of selling food only, for which purposes stores may maintain necessary heat until 12 o'clock noon, and for the purpose of selling drugs and medical supplies only, stores may maintain necessary heat throughout the day and evening:)

"C—Theatres, moving picture houses bowling alleys, billiard rooms, private or public dance halls, or any other place of amusement.

Saloons Not To Be Heated.

"On the above specified Mondays no fuel shall be burned for the purpose of heating rooms or buildings in which liquor is sold on those days. No fuel shall be burned on any of the foregoing specified Mondays for the purpose of supplying power for the movement of surface, elevated, subway or suburban cars or trains in excess of the amount used on the Sundays previous thereto.

"The order provides that nothing in this order shall be held to forbid the burning of fuel to heat rooms or such portions of buildings as are used in connection with the production or distribution of fuel.

"The state fuel administrators are authorized by the order to issue orders on special applications for relief where necessary to prevent injury to health, or destruction of or injury to property by fire or freezing.

Nothing in this regulation shall be construed to apply to or affect the operation of any mine or plant producing fuel, nor shall this regulation be construed to forbid the heating of such rooms or offices, or such portions of buildings as are used in connection with the production, transportation or distribution of fuel.

"The order is effective in all the territory of the United States east of the Mississippi river, including the whole of the states of Louisiana and Minnesota."

Any person, firm, association or corporation which violates or refuses to conform to the above regulation may be liable to the penalty prescribed in the aforesaid act of congress.

—H. A. GARFIELD.
United States Fuel Administrator.

FOUR U. S. VESSELS WRECKED

Lost In Terrific Storms On Gulf of St. Lawrence.

Washington, Jan. 17.—Four vessels of the Shipping board fleet, being brought from the Great Lakes to the Atlantic seaboard, were lost in terrific St. Lawrence storms, it is announced by the Shipping board.

The vessels were the Codorus and the G. N. Orr, now ashore east of Quebec, the Saranac, ashore near Halifax, and the Tuscarora, which disappeared somewhere on the voyage. No trace of the Tuscarora has been found. Nor is it known whether her crew perished.

It is believed that none of the other crews abandoned their ships, and it is believed they all were rescued.

"U" Has 900 Men in War Service.

Minneapolis, Jan. 18.—The University of Minnesota has 900 men in various branches of the United States war forces, and 152 of them have enlisted since the college year began, Oct. 10, Dean J. B. Johnston of the academic college announces. Registrar E. B. Pierce said that 658 additional men in the engineering, medical and dental colleges have enlisted in the technical reserve and will be called into service on graduation

To Lose Millions In Wages.

New York, Jan. 18.—More than $37,000,000 will be lost to workers in New York state in unpaid wages for the five day period and the Monday holidays during which industries must close, it is estimated. Fuel Administrator H. A. Garfield's order for coal conservation means a condition approaching starvation to New York's poorer classes, it was declared, as some workers live virtually from hand to mouth. State, county and city administrators were astounded.

News of the State

Condensed for Busy Folks

The members of the Kaiser club, at their annual meeting at New Ulm, voted to change the name of the organization to the Gopher club.

Minnesota farmers have applied for loans from the Federal Farm Loan bank amounting to $6,813,900, of which $4,736,500 have been approved. The amount actually loaned in Minnesota is $1,664,600.

A retail merchants' association has been organized by the merchants at Little Falls with a view of improving business conditions there and promoting a closer understanding among the local retail dealers.

Albert Kolbe and Walter Niske were severely injured here by a premature dynamite explosion while they were excavating in a clay bank. They used a red hot iron to drill a hole near the dynamite. Both may die.

Since the college year began October 10, 152 University of Minnesota men have enlisted in various branches of the army, making a total of 900 university men now in the war, according to announcemet by Dean J. B. Johnston.

Mrs. Eugene Goodridge of Long Prairie is making a Minnesota record as a Red Cross worker. She raises the sheep and cuts the wool from thei backs, cards the wool and also makes the yarn with which to knit socks for a soldier nephew.

Among the nominations of candidates for entrance to West Point military academy at the March examinations announced by the war department are the following: Harold O. Sand, Atwater; James W. Thayer, first alternate, Morristown; Kitmer S. Bagley, second alternate, Duluth.

Herman Zempke, farmer, is under $1,000 bond, at Red Wing, charged with saying: "We had no business in this war against Germany. Germany told us to keep off the seas and we should have minded Germany. We can raise 10,000,000 men here and start a revolution to help Germany."

Major Matt L. Higbee, Minneapolis, has been assigned to command the 135th infantry (First Minnesota) at Camp Dodge during absence of Colonel Erle D. Luce, who with two other Minnesota National Guard colonels is attending a special school of instruction for higher officers at San Antonio, Texas.

The Northwestern Lumbermen's association concluded its convention at the West hotel, Minneapolis, by electing F. J. Ward, Clinton, Iowa, president, and I. R. Goodridge, Minneapolis, vice president, and adopting resolutions pledging the organization to support and assist the government during the war in whatever manner may be demanded to the fullest extent of its resources.

Dairying and buttermaking each came in for their share of discussion and advocacy at the joint meeting at Thief River Falls of the state dairymen and the butermakers of the Red River valley. Chief among the papers delivered was that of H. H. Kildes, professer and chairman of dairy husbandry, University Farm, St. Paul, on increasing the production from the average Minnesota dairy herd.

The safe in the office of Dr. John Schacht, dentist, at Fergus Falls was robbed of $265 while he was at lunch. No suspects have been arrested.

The new $500,000 building erected to house the Minnesota Historical society, across from the capitol building in St. Paul, has been thrown open to the public.

On complaint of Game Warden Peter J. Karpen of St. Peter, Ernest Laabs and Julius Domer of LeSueur were fined $33 each for killing two raccoons out of season.

The Pipestone firemen are making plans for a big patriotic meeting to be held here Lincoln's birthday. Prof. Jaeger of the University of Minnesota has been invited to be the principal speaker of the occasion.

Arrest of six Minneapolis men and recovery of 184 automobiles stolen from that city during the last few months are announced by deputy sheriffs who have been investigating automobile thefts. Information which will lead to the recovery of more than 100 additional machines has been obtained, officials state.

Ben Dohling, of Freeport, driving a team of horses, heard the bell which told of the approach of Great Nothern passenger train No. 1, but thought he could beat the train to the crossing. The engine and horses ran a dead heat, and though Mr. Rohling escaped by an apparent miracle, both steeds were killed.

Park Rapids is the first Minnesota town to report that it has entirely substituted wood for coal to aid in averting a possible coal shortage, according to an announcement by C. R. Tillotson, a wood expert sent to Minnesota by the Federal fuel administration to aid in organization of the wood-for-fuel movement.

Although they have not yet been officially notified of the Minnesota Safety board's order prohibiting shipments of liquor into Clay county, Minnesota, Sheriff Dan McDonald has issued an order prohibiting express companies from making any further deliveries of liquor. The order, it was said, would not only be a powerful weapon in dealing with illicit liquor traffic here, but it will prevent importation of spirits into North Dakota, which has in the past found its way across the border despite the federal and North Dakota "bone dry" laws.

STATE CAPITOL TO CUT USE OF FUEL

Measures Inaugurated Which Are Expected To Cut Coal Bill One-Third.

M'GEE DEFENDS ORDER

Tells Brick Manufacturers Things About Coal Prices and Conditions—Says Profiteers Should Face Firing Squad.

St. Paul.

Fuel economy measures expected to reduce coal consumption by fully one-third at the state capitol were inaugurated at a conference between Gustaf Lindquist, secretary to Governor Burnquist; Chief Engineer Alex Nicoll and Secretary J. H. Schoonmaker of the department of public property. Closer regulations of cold air intakes and the closing of north entrances and of the house and senate chambers were the chief orders made.

The heating and lighting plant is consuming an average of fourteen tons of coal a day at $8.35 a ton. On cold days the consumption is as high as nineteen tons a day.

Reports showed that about four tons of coal a day is required to heat the new State Historical Society building.

Officials may decide to close the capitol all day Saturdays.

* * *

Defends Garfield Order.

John F. McGee, fuel administrator for Minnesota, told the brick and tile makers of the Northwest, at their convention the other day, something about coal prices and conditions.

"Transportation is the pricipal difficulty," he declared. "Some of the biggest kicks that come to me from outside of the large cities come from points where wood is abundant, from the heart of Minnesota's wood producing district.

"Take my word for it, there will not be the amount of coal moved to the Head of the Lakes this year that was moved last. It is going somewhere else to help win the war the United States and her allies are waging for the sake of civilization.

"The people of Minnesota have only the faintest idea of the importance and the severity of the struggle we are in. This morning from the time I arrived at my office, at 6 a. m., until I came over here to speak, I was literally stormed with people wanting special dispensations.

"A poolhall proprietor came up with a vehement kick. A dance hall proprietor came up and wanted to know if he couldn't be allowed to run in spite of the order. The phones were paralyzed with complaints. They aren't alive to the fact that they're United States citizens.

"If they could see the tonnage piled up in warehouses along the seaboard, the food and supplies needed urgently by our troops and our allies on the other side, waiting until there is coal enough to run steamships, they might feel differently. It is a fact that England—little England—after three years and more of war, has actually sent coal over here to run our ships so that supplies can be transported."

In discussing the coal order, Judge McGee asserted that if it needed further modification it would be forthcoming. In the meantime, he urged the manufacturers to support the order without reservation. He welcomed anything that would help bring his boys home from the trenches sooner, he said.

Dealers that extort large margins should be given immediate attention by a firing squad, he asserted.

* * *

Rines Becomes Custodian.

Minnesota State Treasurer Rines has become custodian of the Mayo Foundation securities totaling nearly $1,700,000. The Wells-Dickey company of Minneapolis turned over to him $1,681,000 of bonds and about $12,000 in cash representing the trust fund established by Dr. C. Mayo and Dr. W. J. Mayo of Rochester for carrying on medical research at the University of Minnesota. Reinvestment of interest earnings is expected to increase the fund to $2,000,000.

* * *

Marshall Girl Named Inspector.

Miss Louise Schutz of Marshall has been appointed factory inspector in the women's bureau of the state department of labor. The appointment was announced in the office of Governor Burnquist. Miss Schutz succeeds Mrs. Lorin Bowker, formerly Miss Jessie Walkup, Minneapolis who resigned after her recent marriage.

* * *

Plea for More Trains Denied.

Denial of demands for additional train service on the Winona-Simpson branch of the Chicago-Great Western road was announced by Chairman Ira B. Mills of the state railroad and warehouse commission. The view taken by the commission was indicated in a letter to A. V. Gardner, secretary-manager of the Winona Association of Commerce, which said: "If we insist on them doing any more they probably will be relieved from doing what they are now doing by the federal government."

W. N. U., Minneapolis, No. 4--1918.

OUR BOYS IN FRANCE AND HOME PROTECTION
The men on the firing line represent the pick of our American youth. One in four of our boys at home was sick, rejected because of physical deficiency. Many times the kidneys were to blame.
If we wish to prevent old age coming on too soon, or if we want to increase our chances for a long life, Dr. Pierce of the Surgical Institute, Buffalo, N. Y., says that you should drink plenty of water daily before meals. Then procure at your nearest drug store Anuric (double strength). This An-u-ric drives the uric acid out and cures backache and rheumatism.
If we wish to keep our kidneys in the best condition a diet of milk and vegetables, with only little meat once a day, is the most suitable. Drink plenty of pure water, take Anuric three times a day for a month. It sells for 60c.
Step into the drug store and ask for a sixty-cent package of Anuric, or send Dr. Pierce 10c for trial pkg. Anuric, many times more potent than lithia, eliminates uric acid as hot water melts sugar. A short trial will convince you.

A MINNESOTA MAN
Boy River, Minn.—I have used Dr. Pierce's medicine with good results in my family for years. Last winter I was taken with La Grippe and it left me run down and with pains in my hips and back. I took different medicines without getting any benefit. At last I sent and got some Anuric and took it and am feeling well and doing a good day's work. When I commenced taking the Anuric Tablets I could hardly get out of the bed, felt as though a knife was sticking in my back."—A. C. BLODGETT.
Write Dr. Pierce, President of the Invalids' Hotel, Buffalo, N. Y., for confidential advice—no charge whatever.—Adv.

J. M. BISHOP, Pres. [illegible] Cashier

Often Destroyed by Fire.

Time after time, together with the rest of the city of Moscow, the Kremlin has been burned, the last occasion being in 1812 when it was occupied by Napoleon and the inhabitants of the city themselves started the conflagrations in all parts of the city. It was indeed these fires which forced the little corporal to commence his disastrous retreat across the snowbound steppes of Russia. Napoleon had his headquarters in the Kremlin, and while the flames were not so destructive there as in other parts of the city, yet they forced evacuation.

Compressing Cotton.

Scientific investigation has proved that compression of a high degree does not injure the fiber, and cotton is packed in other countries today at a density substantially three times that of ours by the most economical practice. The Egyptian package has a density of about 37 pounds a cubic foot; the Indian cotton is compressed to 45 pounds per cubic foot; while some Indian and Chinese baling plants effect a density of from 55 to 60 pounds of cotton per cubic foot.

The Arab as a Neighbor.

The Arab makes a good neighbor. His love of the beautiful in architecture is evidenced in a hundred cities where his handiwork survives. Every visitor to Granada knows what was left behind at the Alhambra. When the Arab met Rome, he produced Palmyra; having absorbed the Sassanian dynasty of the neo-Persian empire in 637, the Arab created Bagdad; in overrunning Spain, he worked magic at Cordova and Seville.

To Remove Smoke Stains.

This suggestion will be beneficial to housewives who have not the convenience of electricity or the modern gas fixtures. Frequently the ceiling above an old-fashioned gas jet becomes discolored from smoke and heat. The discoloration may be removed if a layer of starch and water is applied with a piece of flannel. After the mixture has dried it should be brushed lightly with a brush. No stain or mark will remain.

Women Catch Fish With Hands.

Fishing in Samoan seas is often done by the women, and without nets, boats or hooks. They simply wade into the water and form themselves into a ring. The fishes being so plentiful, they are almost sure to imprison some in the ring. These women are very quick and active, and every time they catch a fish with their hands they simply throw it, alive, into the basket on their back.

Translation of Y. M. C. A.

W. Gordon Griffiths of the Y. M. C. A. told an audience at Cefu that he was proud to be a Welshman although he was unable to speak the "language of Paradise." He had, however, learned one thing in Welsh and that was that the letters Y. M. C. A. may be translated to mean "Yma Mae Cyfle Ardderchog" ("Here is a splendid opportunity.")

Coffee a Nutrient.

Coffee is not a stimulant pure and simple, but a very considerable nutrient. Justus Liebig proved that, by taking equal lots of men, working in the salt mines, feeding one lot bread and meat, the other bread and coffee, and comparing results. The coffee squad did more work and came out in better shape than the meat eaters.

Strict Regulation.

Freeman was visiting at his grandpa's home, and as he was a mischievous little chap, was constantly being told, "Don't do this," and "Don't do that." Finally, with a look of disgust on his face, he climbed up into a chair and asked, seriously, "What can a fella in this house, anyway?"

Studying Plant Life in India.

In order to encourage arboriculture and the study of plant life the government of India has offered a series of valuable prizes to be awarded to those who are most successful in various lines in connection with the growth of trees and shrubs on government land

Neatly Put.

We are told that Tom Hood liked best to work in a serious vein, on such poems as "The Bridge of Sighs." As he put it himself: "It's only for my livelihood that I'm a lively Hood."—Boston Transcript.

Endurance of Reindeers.

The reindeer is said to be able to endure more fatigue than any other draft animal except the camel. It has been known to pull 200 pounds 10 miles an hour for 12 hours.

Wrong Side Up.

"Why didn't you toss a coin to decide which to do?" "I did, but the darn thing didn't come down the way I wanted it to."—Buffalo Express.

Climbing.

You can climb no higher than Fuji with your feet, but with your mind you may inherit eternity.—A Japanese Philosopher.

Cruel Enlightenment.

He—"You seem to think I couldn't make any woman happy." She—"Oh [illegible]

Fatigue and Toxin.

The idea that fatigue is due to a specific toxin, as suggested by Weichart early in the century, has been a popular one, but the late investigation of Lee and Aronovitch at Columbia university shows it to have no good foundation. There is nothing, therefore, to encourage the hope that an antitoxin may be found. In the experiments made with animal muscles, a test muscle suspended in the juice of a fatigued muscle lost much in contractile power, but the juice of a nonfatigued muscle produced substantially the same effect.

Largest Poisonous Reptile.

The Surucucu, known as the bushmaster, is the largest poisonous reptile in the world, and is fortunately rare and found only in the depths of the jungle and swamps, where man rarely penetrates. It attains a length of twelve to fifteen feet; the color of its body is rose, or rather yellowish pink, with brown patterns and tints of purple. Its bite is almost always fatal. Its fangs are an inch long and as much as ten ounces of venom have been extracted.

Thought and Faith.

Men who are seeking for knowledge in regard to subjects as to which there can, in the nature of things, be none, might well ask themselves whether there is to be no sphere left in human thought in which faith can operate. It was said of Arnold of Rugby that his mind could rest as quietly in the presence of doubt as in that of discovered truth. It is a great thing to be able to believe where we cannot prove. —Exchange.

Floods in Brazil.

The native inhabitants of Brazil have lately been suffering from the disastrous effects of the flooding of the Amazon, whose relentless waters have submerged the countryside for hundreds of miles around. At regular intervals this mighty river overflows its banks, and a famous traveler estimated that no fewer than 5,000,000 natives have lost their lives during the last five centuries through these terrible floods.

He Didn't Know.

In a murder trial six experts were examined. Most of them had a national reputation. A hypothetical question of 20,000 words, which it required two hours to read, was asked of Doctor Jelley, a Boston expert on insanity. The learned doctor answered the question in three words: "I don't know." A frank answer, but rather perplexing to counsel.—Case and Comment.

Figures Time of Falling Stone.

The time a stone would require to fall the 4,000 miles to the center of the earth has been calculated for the Paris Academy of Sciences, by M. Sanger. Considering the influence of the varying density of the earth, he finds the time would be 19 minutes 15 seconds, but if the mean density is assumed to be the condition, the time would be 70 seconds greater.

Our Rabbits.

The term rabbit was formerly more properly applied to the burrowing species of the old world, Lepus cuniculus (meaning to burrow), though by common usage our molly cottontail has so long been termed a rabbit that the name will now stand, as will that of jack rabbit for the big western hare of the prairies and Pacific coast.

Rev. Bjornson has resigned from his congregation in Goodridge. A call was issued to Rev. Tungseth, formerly living at Gully, but now located here in Goodridge.

NOTICE: I am now in first class shape to handle all your Watch, Clock and Jewelry Repairing.

[illegible] Olson, of Pelican Rapids arrived here Wednesday evening to visit with friends and relatives.

Stanley Scott arrived here Wednesday evening after spending a few weeks working in the woods at Mizpah, Minn.

P. P. Palmer was a business visitor in Thief River Falls Wednesday.

Alvin Rathke and Alvin [illegible] went to Thief River Falls Friday to take the examinations for the draft.

NOTICE: I am now in first class shape to handle all your Watch, Clock, and Jewelry Repairing.

The ladies of the Goodridge Branch of the Red Cross will meet in the school house Saturday afternoon Feb. 2, to make bandages. All the lady members are urged to be present as bandages are more and more urgently needed as time goes by.

MORIN & STEPHENSON
Agents for Musikland Phonographs Double disk records at 35cts.

The Goodridge Young Peoples Society recently organized, will render their program at 2 P. M. at the Anstad Schoolhouse. The Misses Lund will entertain the society. Do not miss this opportunity of spending a pleasant and profitable afternoon.

The Goodridge Young Peoples Society met Jan. 13th. at the Nor. Luth. Church. The society was reorganized and the following officers elected. Pres. Cora Lund, Vice Pres. Rev. G. A. Tungseth, Sec. Mrs. B. Johnson, Treasurer, Kaia Lund. Program Committee, Mrs. Thoreson, Petra Wiseth and Rev. G. A. Tungseth. Forty-three members were secured.

FOUND—A robe between Ole Quams and Severt Johnson's place. Owner can have same by proving it and also paying for this ad. Call at this office for particulars.

Alfred Tvedt has been sick with pleurisy for over a week. At this writing he is recovering nicely however, and it is hoped he will soon be over the sickness.

Tuesday evening Chester Tvedt left enroute for Fort Riley, Kansas, where he will enter the medical corps of the U. S. Army to train for war service. H. W. Smith left Thursday for the same destination and the same purpose.

Potatoes for sale at $1.00 per bushel Inquire at High Landing store.
Will Korstad.

A meeting of the teachers of eastern Pennington county will be held in the schoolhouse at Goodridge at 1:30 P. M. Saturday, Feb. 2, 1918. The purpose of this meeting is to plan the sale of War Savings and Thrift stamps. It is hoped that every teacher will be present so that an effective campaign can be planned.

FOR SALE—One Piano organ and one Oliver typewriter. Inquire at this office.

All mills, jobbers, and retailers of flour have been ordered by the food administration to require their customers to purchase the same amount of rye, or barley flour, or cornmeal as they do of white flour. For instance if you buy fifty pounds of white flour you must buy fifty pounds of the other kinds, either all of one kind or mixed. Flour can now be bought on no other condition.

The Goodridge Young Peoples Society will meet at the Anstad school house Feb. 3rd. Miss Kaia Lund will entertain. Refreshments will be served after the program which reads as follows

Aliens register with the local postmaster.

Stage Play at Grygla.

Saturday evening, Jan. 26 the members of the cast who presented "As the Twig is Bent", in Goodridge the evening before proved their bravery and hardihood by undertaking to stage the play at Grygla. In spite of cold weather and adverse forecasts as to the outcome of the venture the trip was enjoyed immensely by all who participated. With Sam Rouze's splendid span in the lead and Seavey's ditto second followed by the latter's comfortable bus containing the players, the journey was made without a mishap, not even a tip-over. As usual the people of Grygla gave the visitors a splendid reception, both as to turn out and appreciation. Stuart McLeod who had gone ahead with the regular stage in the morning, had ordered supper at Knutson's Hotel. If ever a supper was enjoyed, that one was. Mr. Knutson served a splendid chicken supper with all the good things that accompany it. The meal was a credit to the hotel. After the show the players had a light lunch at Abbots restaurant where a couple of hours were spent very pleasantly. The return drive commenced at 12:30 a. m. and brought them to Goodridge at 6. The trip was made rather more for pleasure than as a money making affair. Although it is almost laughable to talk about pleasure with the temperature between 20 and 40 below, still the participants would not have missed the trip for anything. Hearty thanks is due the people of Grygla for their patronage. The total receipts being about Twenty-five dollars.

Farewell Party.

Monday evening the young people of Goodridge arranged a farewell reception for the local boys who have enlisted and are leaving these days for Fort Riley, Kansas. The boys are Alfred and Chester Tvedt, and H. W. Smith. They have all enlisted in the Medical Corps. The Goodridge hall was beautifully decorated for the occassion, the colors of course being red, white and blue. Over the stage the word "Welcome" was happily arranged while the center of the room was appropriately graced by the American flag. Games and dancing were indulged in until a late hour. At 12 o'clock dainty refreshments were served.

Home Talent Play a Winner.

Friday evening, Jan. 25, the Goodridge Literary Society staged a play entitled "As The Twig is Bent" in the schoolhouse. The play is by Miss Estelle Cook, teacher of English at our Agricultural School in St. Paul. It is a rural school drama and depicts the transformation of a backsliding district into a modern one with a consolidated school equipped with a teachers' cottage and all the necessary appliances for carrying out the up-to-date methods of teaching. Both the humorous and the more serious episodes of the play were well acted out by the different characters each of whom was particularly fitted for his or her role.

The lesson to be drawn from this play was not applicable to Goodridge and vicinity, for the stage of development described is already past, but this afforded a keener enjoyment for those who heard it. The staging of the play was pronounced a success from start to finish by the large audience that filled our school auditorum. The cast of characters has been published before, so it is not repeated here. The [illegible] receipts was $27.85. The Literary Society deeply appreciates the support of the people in the good work they are doing. It is the ambition of this Society to be a factor for good in the community and it recognizes the patronage it receives as vital to its future useful existence.

Star Notes

[illegible] returned Wed. from Thief River Falls where he had been to visit his oldest boy, Walter, who has recently undergone an operation for throat troubles at the Physicians Hospital.

Joseph K. Enebo has been busy during the last week hauling in his hay and wood supply ere he leaves for the county seat to serve as juryman.

The Telephone meeting held at Erie Saturday afternoon was well attended and much enthusiasm prevailed throughout.

Mr. and Mrs. Oscar Thoreson were most pleasantly surprised at their home Saturday evening of last week when a host of their neighbors rather unexpectedly dropped in presenting the Thoresons with a swell rocking chair and a set of parlor chairs. The crowd enjoyed dancing for a few hours and a good time was enjoyed by all. George Hole, one of our rising young violinists furnished the music.

Olaus Sand and John Nelson and families visited at the Christ Vad home last Sunday.

Gust Iverson succeeded in shooting and killing a medium sized brush wolf Saturday. The varmint was first disabled with a splintered front leg as a result of the first shot; then followed an hour's chase on horse-back. The "poor devil" was brought to bay with a deadly shot through his most vital organ. "Hub. Jack." was close second in the chase but says he will try his darndest to be first in the next battle—if not "over there".

Oscar Thoreson was a business caller at Camp Sub Urban Saturday.

Miss Diana P. Wold spent the week end at her home near Kratka.

Christ Vad has been cutting and hauling to the Gilbert Hanson mill, a good supply of poplar saw-logs from the "Sub Urban" woods during the last [illegible] weeks.

Misses Christine and Martha Halvorson and Tellma Taddeivson visited Mrs. Hilary Irvinson Monday forenoon.

Notice.

Notice is hereby given that all owners of female dogs are requested to chain them up and keep them off the streets of the Village of Goodridge during their mating season. Failing to comply with this order the village marshall will dispose of them.

H. A. Halvorson,
Mayor.

IN EXILE WITH HER FATHER

Daughter of Millionaire of Kieff, Accompanies Parent to Save Him From Dreaded Loneliness.

Children in the exile districts seem grotesquely misplaced, yet there were many. Sometimes the gendarmes' magic would lift a father from his too liberal fireside in Russia and set him down without the humiliation of a trial in the glorious Narym solitude, writes Fortier Jones in the Century. "Not infrequently his family followed him in order to share the new life, for, as elsewhere, fathers are loved in Russia. Particularly among educated men the continual, unrelieved loneliness tended to bring on insanity.

"I know one fine business man, a millionaire of Kieff—and a direct descendant of Rouget de Lisle, whose little daughter came into exile with him to save him from this dreaded loneliness. She was fourteen years old, and they lived in a dreary village by the great old river, in a log cabin with pink chintz curtains and a piano. She was a winning little thing, with happy, brown eyes and long curls, and to all appearances was no whit the worse for her exile existence. The fascinating life of the forest was familiar to her, the birds and flowers, and her father cared for her French and history. What a bright spot she was in that wretched place, and what a curious life for a little girl whose illustrious forefather had composed the 'Marseillaise!' Her mother, who joined them later when her health would permit, and they had gained permission to live in a town on the railway, was a sister of Mme. Curie."

AMERICAN MANNERS OF TODAY

Prevailing Bearing in Thoroughfares and Street Cars Indicates That Courtesy Is on the Decline.

As for manners, we are kindhearted as a people and civil when appealed to, but no one would suspect it if our bearing in thoroughfares and street cars be a criterion. The spirit of the age is first come, first served; to be waived only in favor of the crippled and the positively infirm. Courtesy in the old-fashioned sense—the deference of the young for the seniors, of the stronger for the weaker sex, of the vigorous for the frail—if not extinct is so sporadic as to be noticeable when manifested, Robert Grant writes in the Yale Review. The young men who push their way forward in public conveyances retain without compunction the seats for which they have struggled.

Here again we have the philosophy of the tired business man: "I got there first; we are all equals in the United States, and I want to read my newspaper." The apotheosis of naturalness, and in self-defense we all more or less subscribe to it; but after all, it is natural for pigs to struggle for places at a trough. Well may we ask ourselves if it is impossible to safeguard independence, initiative and equality except at the cost of all the social graces that prevailed when society was more artificial.

Buds and Flowers in Cooking.

The French Canadians are said to use the acid flowers of the redbud, or Judas tree, in salads, while the buds and tender pods are packed in vinegar. Honey locust pods, often locally called "honey-shucks," contain a sweetish, thick, cheeselike pulp, which is often eaten. Those of the mesquite furnish the Mexicans and Indians with a nutritious food. The Creoles of Louisiana, famous for their cookery, are reported to use the young buds of the sassafras as a substitute for okra in thickening soups.

Nova Scotia's Fish Army.

Nova Scotia is literally "the land of fish"—cod, herring, mackerel and the giant albacore or tuna. Nova Scotia is so much a land of fish, says a writer, that it produces over one-fourth the value of the entire Canadian catch, or $9,166,851 worth. Every tiny haven around the extensive Bluenose Land coast harbors fishing smacks galore, while Lunenburg, Canso, Liverpool and Chester are home ports for hundreds of fleet-winged deep-sea banking schooners.

DELICIOUS CORN MUFFINS.

Here's an old fashioned recipe for corn muffins that has recently been revived and used with unusual success in several of the larger New York hotels: To make three and a half dozen muffins take one quart milk, six ounces butter substitute, twelve ounces of light syrup or honey, four eggs, pinch of salt, two ounces baking powder, one and a half pounds cornmeal and one and a half pounds rye flour. The butter and syrup should be thoroughly mixed; then add the eggs gradually. Pour in the milk and add the rye flour mixed with cornmeal and baking powder.

Uncle Eben's View of Life.

"Life," said Uncle Eben, "is like a trip in a flivver. If you misses de right way, the harder you travel de worse you gits lost."—Washington Star.

Culture Not Enough.

Alien Enemies must Register.

Registration of German Alien Enemies is fixed within the District of Minnesota to commence at six A. M. on February 4th, 1918, and to continue on each day successively thereafter between the hours of six A. M and eight P. M., up to and including the 9th day of February, 1918, at eight o'clock P. M. Aliens register with the local postmaster.

Stage Play at Grygla.

Saturday evening, Jan. 26, the members of the cast who presented "As the Twig is Bent", in Goodridge the evening before proved their bravery and hardihood by undertaking to stage the play at Grygla. In spite of cold weather and adverse forecasts as to the outcome of the venture the trip was enjoyed immensely by all who participated. With Sam Rouze's splendid span in the lead and Seavey's ditto second, followed by the latter's comfortable bus containing the players, the journey was made without a mishap, not even a tip-over. As usual the people of Grygla gave the visitors a splendid reception, both as to turn out and appreciation. Stuart McLeod who had gone ahead with the regular stage in the morning, had ordered supper at Knutson's Hotel. If ever a supper was enjoyed, that one was. Mr. Knutson served a splendid chicken supper with all the good things that accompany it. The meal was a credit to the hotel. After the show the players had a light lunch at Abbots restaurant where a couple of hours were spent very pleasantly. The return drive commenced at 12:30 a. m. and brought them to Goodridge at 6. The trip was made rather more for pleasure than as a money making affair. Although it is almost laughable to talk about pleasure with the temperature between 20 and 40 below, still the participants would not have missed the trip for anything. Hearty thanks is due the people of Grygla for their patronage. The total receipts being about Twenty-five dollars.

Farewell Party

Monday evening the young people of Goodridge arranged a farewell reception for the local boys who have enlisted and are leaving these days for Fort Riley, Kansas. The boys are Alfred and Chester Tvedt, and H. W. Smith. They have all enlisted in the Medical Corps. The Goodridge hall was beautifully decorated for the occassion, the colors of course being red, white and blue. Over the stage the word "Welcome" was happily arranged while the center of the room was appropriately graced by the American flag. Games and dancing were indulged in until a late hour. At 12 o'clock dainty refreshments were served.

Home Talent Play a Winner.

Friday evening, Jan. 25, the Goodridge Literary Society, staged a play entitled "As The Twig is Bent" in the schoolhouse. The play is by Miss Estelle Cook, teacher of English at our Agricultural School in St. Paul. It is a rural school drama and depicts the transformation of a backsliding district into a modern one with a consolidated school equipped with a teachers' cottage and all the necessary appliances for carrying out the up-to-date methods of teaching. Both the humorous and the more serious episodes of the play were well acted out by the different characters each of whom was particularly fitted for his or her role.

The lesson to be drawn from this play was not applicable to Goodridge and vicinity, for the stage of development described is already past, but this afforded a keener enjoyment for those who heard it. The staging of the play, was pronounced a success from start to finish by the large audience that filled our school auditorum. The cast of characters has been published before, so it is not repeated here. The [illegible] receipts was $27.85. The Literary Society deeply appreciates the support of the people in the good work they are doing. It is the ambition of this Society to be a factor for good in the community and it recognizes the patronage it receives as vital to its future useful existance.

Star Notes

Emil G[illegible] returned Wed. from Thief River Falls where he had been to visit his oldest boy, Walter, who has recently undergone an operation for throat troubles at the Physicians Hospital.

Joseph K. Enebo has been busy during the last week hauling in his hay and wood supply ere he leaves for the county seat to serve as juryman.

The Telephone meeting held at Erie Saturday afternoon was well attended and much enthusiasm prevailed throughout.

Mr. and Mrs. Oscar Thoreson were most pleasantly surprised at their home Saturday evening of last week when a host of their neighbors rather unexpectedly dropped in presenting the Thoresons with a swell rocking chair and a set of parlor chairs. The crowd enjoyed dancing for a few hours and a good time was enjoyed by all. George Hole, one of our rising young violinists furnished the music.

Olaus Sand and John Nelson and families visited at the Christ Vad home last Sunday.

Gust Iverson succeeded in shooting and killing a medium sized brush wolf Saturday. The varmint was first disabled with a splintered front leg as a result of the first shot; then followed an hour's chase on horse-back. The "poor devil" was brought to bay with a deadly shot through his most vital organ. "Hub. Jack." was close second in the chase but says he will try his darndest to be first in the next battle—if not "over there"?

Oscar Thoreson was a business caller at Camp Sub Urban Saturday.

Miss Diana P. Wold spent the week end at her home near Kratka.

Christ Vad has been cutting and hauling to the Gilbert Hanson mill, a good supply of poplar saw-logs from the "Sub Urban" woods during the last [illegible] weeks.

Misses Christine and Martha Halvorson and Tellma Taddeivson visited Mrs. Hilary Irvinson Monday forenoon.

Notice is [illegible] owners of [illegible] chain them up [illegible] them off streets of [illegible] of Goodridge during [illegible] season. Failing to comply [illegible] the village marshall will dispose of them.

H. A. Halvorson

Mayor.

IN EXILE WITH HER FATHER

Daughter of Millionaire of Kieff, Ac[illegible] Companied [illegible] to Save Him From Dreaded Loneliness.

Children in the exile districts seem grotesquely misplaced, yet there were many. Sometimes the gendarmes' magic would lift a father from his too liberal fireside in Russia and set him down without the humiliation of a trial in the glorious Narym solitude, writes Fortier Jones in the Century. "Not infrequently his family followed him in order to share the new life, for, as elsewhere, fathers are loved in Russia. Particularly among educated men the continual, unrelieved loneliness tended to bring on insanity.

"I know one fine business man, a millionaire of Kieff and a direct descendant of Rouget de Lisle, whose little daughter came into exile with him to save him from this dreaded loneliness. She was fourteen years old, and they lived in a dreary village by the great old river, in a log cabin with pink chintz curtains and a piano. She was a winning little thing, with happy brown eyes and long curls, and to all appearances was no whit the worse for her exile existence. The fascinating life of the forest was familiar to her, the birds and flowers, and her father cared for her French and history. What a bright spot she was in that wretched place, and what a curious life for a little girl whose illustrious forefather had composed the 'Marseillaise!' Her mother, who joined them later when her health would permit, and they had gained permission to live in a town on the railway, was a sister of Mme. Curie."

AMERICAN MANNERS OF TODAY

Prevailing Bearing in Thoroughfares and Street Cars Indicates That Courtesy Is on the Decline.

As for manners, we are kindhearted as a people and civil when appealed to, but no one would suspect it if our bearing in thoroughfares and street cars be a criterion. The spirit of the age is first come, first served; to be waived only in favor of the crippled and the positively infirm. Courtesy in the old-fashioned sense—the deference of the young for the seniors, of the stronger for the weaker sex, of the vigorous for the frail—if not extinct is so sporadic as to be noticeable when manifested, Robert Grant writes in the Yale Review. The young men who push their way forward in public conveyances retain without compunction the seats for which they have struggled.

Here again we have the philosophy of the tired business man: "I got there first; we are all equals in the United States, and I want to read my newspaper." The apotheosis of naturalness, and in self-defense we all more or less subscribe to it; but after all, it is natural for pigs to struggle for places at a trough. Well may we ask ourselves if it is impossible to safeguard independence, initiative and equality except at the cost of all the social graces that prevailed when society was more artificial.

Buds and Flowers in Cooking.

The French Canadians are said to use the acid flowers of the redbud, or Judas tree, in salads, while the buds and tender pods are packed in vinegar. Honey locust pods, often locally called "honey-shucks," contain a sweetish, thick, cheeselike pulp, which is often eaten. Those of the mesquite furnish the Mexicans and Indians with a nutritious food. The Creoles of Louisiana, famous for their cookery, are reported to use the young buds of the sassafras as a substitute for okra in thickening soups.

Nova Scotia's Fish Army.

Nova Scotia is literally "the land of fish"—cod, herring, mackerel and the giant albacore or tuna. Nova Scotia is so much a land of fish, says a writer, that it produces over one-fourth the value of the entire Canadian catch, or $9,166,851 worth. Every tiny haven around the extensive Bluenose Land coast harbors fishing smacks galore, while Lunenburg, Canso, Liverpool and Chester are home ports for hundreds of fleet-winged deep-sea banking schooners.

DELICIOUS CORN MUFFINS.

Here's an old fashioned recipe for corn muffins that has recently been revived and used with unusual success in several of the larger New York hotels: To make three and a half dozen muffins take one quart milk, six ounces butter substitute, twelve ounces of light syrup or honey, four eggs, pinch of salt, two ounces baking powder, one and a half pounds cornmeal and one and a half pounds rye flour. The butter and syrup should be thoroughly mixed; then add the eggs gradually. Pour in the milk and add the rye flour mixed with cornmeal and baking powder.

[illegible] Natural Gas.

Natural gas is probably formed in the earth by a process of natural distillation from the animal and vegetable remains of past geological epochs, and is nearly the same product as is distilled from coal in the retorts of gas factories, only instead of the heat of fires the internal heat of the earth, aided perhaps by chemical decomposition, has caused its formation on a sufficient s[illegible]

INTENTIONAL DUPLICATE EXPOSURE

BAKER ANSWERS SENATE CRITICS

Says Lack of Guns no Longer Exists and That Greatest Need Is for Ships.

EVERY MAN IS READY

Many Times Number of Soldiers Already Overseas as Originally Planned—Hospital Conditions Good.

Washington, Jan. 30.—Secretary of War Baker struck back at critics of the war department with the declaration that "every man in 32 national guard and national army camps is ready now to be set to France whenever needed."

Tonnage is the crux of the whole situation, and this country is using French artillery to save ships for supplies, he said.

The Allies urged troops before anything else—saying France and England could supply us with artillery.

In a sweeping statement delivered before the senate military committee Baker showed the great steps this government has taken—some of them necessarily sudden and hence without sufficient preparation—to win the war.

Facts and Figures Given.

In reply to those who have criticised the war department, the secretary of war declared:

That laxity in the medical service at camps will not be tolerated.

Three officers have been court martialed and dismissed from the army because of negligence in attending sick.

General Pershing himself O. K.'d the adoption of the modified Enfield rifle.

A great army was called out before guns were ready for it on the earnest recommendation of Major General Leonard Wood, who said the men would first need other training besides that in the use of guns.

Every man in France has his own gun and is trained to use it.

Many times as many men are now in France as had been originally planned for this date.

General Pershing himself decided against the Lewis machine gun for land work.

On Nov. 1, 140 machine guns were sent to each training camp.

Every man in 32 training camps is now ready for service in France.

Has Right Type of Artillery.

"Our army in France—now large, and it will be much larger"—will have the type of artillery it wants and needs.

That 300 three-inch anti-aircraft guns will be turned out monthly in this country before another year.

Official reports based on careful information showed that camp hospitals in many cases are the equal of civilian hospitals and all are in splendid shape.

Greatly in Earnest.

Secretary Baker was greatly in earnest when he replied to Senator Chamberlain's charges of inefficiency in the war department at a public hearing before the senate military committee.

Incidentally in defending the war machinery against the charge of inefficiency and lack of initiative to prepare for war when war was assured, the secretary disclosed facts hitherto held confidential.

At the outset the secretary said he thought much criticism came from impatience of the American people "to do this great thing greatly."

He conceded freely that in so great enterprises it was impossible there should not be "delays and shortcomings." The confidence of the country, however, he said, was necessary to the aremendous effort.

Medical Staff the Best.

"I want the country to know that the health and care of the men in camps is a responsibility I will not allow to be dodged," said Baker. He next took up measures taken through the surgeon general's office under Baker's direct orders, to inspect camp hospitals.

"We have a medical staff, the like of which does not exist elsewhere on the face of the earth. No army was ever brought together or ever can be, that will not be subject to communicable diseases. The most we can do is fight these things."

Change in Ordnance.

Baker next turned to shortages in the supply of ordnance. He reviewed the rifle situation, answering criticisms of the delay in settling on the modified Enfield as the army rifle for the United States forces.

General Pershing, Baker said, was at the conference at which the modified Enfield was decided on. It was a week before Pershing went to Europe:

"We did not then know whether our army was to fight with the French or the British.

"The result of our decision to subordinate great speed in rifle production to excellence has been that not a man has gone to France who has not a rifle and had training in the use of it. Many times the number of men have gone to France than it was expected would be there by this time. And not a man will go to France without a first class rifle and trained in its use."

Major General Wood suggested the calling out of a large army before rifles or other supplies were ready. "General Wood told me," Baker said, "that the men called out would need many things before they needed rifles. He said they needed to learn how to live together, how to keep step and how to observe rules of camp sanitation.

Pershing in Accord.

Discussing the machine gun situation, Baker declared that criticism of the department over the Lewis gun has been baseless.

He said General Pershing did not desire the Lewis gun for ground work. Every effort is being made to get the manufacturers of the Lewis gun to speed up production for aircraft work, Baker said.

"We found last June that French artillery production had reached such proportions that it was evident the wastage would not nearly equal the production.

"Therefore, France agreed on July 13 to supply us with 75 and 155-millimeter howitzers. The French realized the importance of having America's troops at the front as soon as possible."

Senator Reed interrupted:

"If I get you, the war department's view was that France had built bigger factories than she needed and that you thought it better to use her facilities that were already in quantity production than to wait until we got going ourselves?"

"Exactly," said Baker, "and I'm telling no secret when I say that tonnage is the crux of the whole situation, and we saved tonnage by buying in France."

"Was the arrangement any detriment to France?" asked Senator Beckman.

"On the contrary, I think it was a benefit," said Baker.

"When General Bliss went to France with the House mission he asked what America could do best and quickest to win the war.

"Both France and England stated that they had supplies, ordnance produstion and urged that America should hurry troops across while the artillery would be furnished by the Allies with no strain."

ASSERTIONS OF BAKER REPLYING TO CRITICS

Ships are the crux of the problem in our war with Germany.

Every soldier who needs a rifle has one, and the weapon is of a better type than the British Enfield rifle.

In regard to the lack of Lewis machine guns, General Pershing does not want Lewis guns for his ground forces, but only for the aviators.

We will not tolerate brutal treatment of soldiers and sailors in good health or when they are ill, and all persons guilty of such offenses will be punished to the limit.

We have found errors, naturally, in steps taken to prepare for war, and we have immediately sought to correct such errors.

This department is against callous disregard of human life in our army camps, and I ask that all complaints be referred to me for immediate investigation and action.

Major General Leonard Wood recommended the calling out of a large army, even though the men could not be at once provided with arms and uniforms.

I have tried honestly to be open and frank in all my statements, and to set forth clearly and plainly the actual conditions that confront the country.

FLOODS HIT KENTUCKY TOWN

People of Jackson Driven to Mountains By Water.

Lexington, Ky., Jan. 29.—Word has reached here that Jackson, Ky., is stricken by a flood which followed the breaking up of ice gorges in mountain streams and that the town is threatened with destruction. All residents have taken to the mountains sides, the railroad tracks have been washed away and the damage already is reported to be in the neighborhood of a quarter of a million dollars in the valley in which Jackson is located.

The college town of Onedia in Clay county also was inundated.

Bandits Fight From Behind Drifts.

Chicago, Jan. 29.—Snow drifts were used as barricades by five bandits and police in a 15-minute revolver battle before police received reinforcement to surround the quintet. The five men, all of whom are Italians, were challenged by police when they tried to enter the guarded home of an Italian who has been threatened with death by Black Hand members after he refused to comply with their demands for $5,000. His home was bombed a month ago.

Two Held in Jewel Theft.

Chicago, Jan. 29.—Robert Burton and a man by the name of Hawkins are held by the police on suspicion they participated in the robbery of the Heller-Rose jewelry store, which netted the thieves jewels valued at more than $100,000. A report a woman was under arrest in connection with the robbery was denied by the police. Burton's arrest followed the information that some time ago he displayed a badge which he represented to be that of a detective.

FIRST PHOTOGRAPH OF THE PEACE PARLEY AT BREST-LITOVSK

First photograph received in America from the Russo-Teuton peace conference at Brest-Litovsk, showing the conference in session and Prince Leopold of Bavaria signing the agreement for an armistice.

HAS FINANCING PLAN

McAdoo Would Have Government Extend Aid.

Proposed Corporation Would Make Loans to Enterprises Essential to War.

Washington, Jan. 30.—Secretary McAdoo has recommended to congress the creation of a half billion dollar government corporation to make loans and advances to enterprises essential to the war and otherwise assist in private financing.

The secretary also asked that all private issues of securities of more than $100,000 be made subject to the approval of the government body, to be known as the "War Finance Corporation."

The proposed corporation would have power to make advances to banks which finance industrials, essential to the war, or buy direct the securities of such corporation, subject to certain restrictions concerning price and length of the loans. The corporation also would make short time advances to the savings banks.

GERMANY DEFIED BY SWEDEN

To Let U. S. Have Ships Despite the Threats Made.

Washington, Jan. 29.—Despite threats by Germany that she will unleash her submarines against Sweden if such action should be taken, a preliminary agreement has been reached between Sweden and the United States, according to official dispatches from London yesterday, providing for charter of Swedish ships to the United States to be used principally in the South American trade.

German newspapers have declared recently that such an act on Sweden's part would be a breach of neutrality.

Some ships of the Swedish fleet now in American waters will be allowed to sail with the cargoes, while others, it is understood, will be unloaded and put in service of the United States.

35 SLAIN BY MEXICAN REBELS

Train On Mexican Central Held Up And Robbed.

El Paso, Texas, Jan. 29.—Mexican rebels, supposed to be members of Canuto Reyes' band, held up and robbed a passenger train on the Mexican Central line, 50 miles south of Chihuahua City, last Wednesday. Thirty-five persons were killed.

The bandits stripped the passengers of their valuables and their clothes, and rode off in the direction of Horcasitos. News of the robbery has just been received in El Paso in letters.

ONLY 8,588 BRITISH CASUALTIES IN WEEK

London, Jan. 29.—British ualties during the past week were 8,588, divided as follows:

Killed or died of wounds—officers 25, men 1,714.

Wounded or missing—officers, 128; men, 6,721.

Realty Profiteers Cut Vessel Output.

Washington, Jan. 28.—Real estate profiteers, operating around shipbuilding plants, are cutting the expected output of ships in half, declared Admiral Bowles before the house merchant marine committee. He urged immediate passage of the bill authorizing the corporation to provide sufficient government housing for shipworkers wherever needed. "We could double the number of employes at many of our plants if we had quarters to house the men," Admiral Bowles said.

ENEMY RAIDERS ATTACK LONDON

Foe-Airmen Visit British Capital Twice, Dropping Bombs Each Time.

ONE INVADER DOWNED

Hostile Craft Penetrate Metropolis At Night—No Report of Casualties or Damage Made.

London, Jan. 30.—It is officially announced that enemy air raiders have made two night attacks on London. The first raid came between 9 and 10 o'clock and the attacking airplanes returned at 2:30 in the morning.

Bombs were dropped in the city in both cases. One of the invading aircraft was brought down in Essex.

The text of the first communication says:

"Hostile airplanes crossed the Kent and Essex coasts shortly before 8 p. m. and proceeded toward London. Some of the machines penetrated to the capital, where bombs were dropped between 9 and 10 o'clock.

"The latest reports show that one enemy machine was brought down by our airmen in Essex."

The attacks lasted intermittently for nearly five hours and for two hours there was a heavy and almost continuous gunfire.

Members of the Royal Geographical society were assembled to hear a speech by Lieut. Gen. J. C. Smuts. Police announced the audience would be safer if they went to the basement. There were loud cries of "Carry on" and the audience remained in the hall.

The raid was carried out by a considerable number of airplanes which followed the familiar tactics of attacking in relays. As far as could be seen not more than three or four airplanes broke through the London defenses.

KAISER IS CALLED HANGMAN

Berlin Paper Advocates Revolt By People.

Amsterdam, Jan. 29.—A Berlin dispatch says the Deutsche Tages Zeitung openly calls on the German people to revolt against the present regime.

"We, too," saps this pan-German organ, "have a Judas among us today. He appears in the red coat and mantle of Germany's hangman. Who will save Germany from these traitors but the German people? It is now Germans help yourself and God will help."

Although Emperor William is not named in the article, the expression "Germany's hangman," is meant for the kaiser, says the correspondent.

Austrians Bomb Hospital.

Washington, Jan. 28.—Bombing of Allied hospitals by Austrian aviators in recent raids was reported to the Red Cross headquarters here in cablegrams from Robert Perkins, chairman of the American Relief commission to Italy.

On Trial on Treason Charge.

New York, Jan. 26.—Paul C. Hennig, said here to be the first person in the United States to face a charge of treason growing out of the war with Germany, went on trial in the federal court in Brooklyn. Federal authorities allege that as foreman of the assembling department of the plant of E. W. Bliss & Co., Hennig, a naturalized American of German birth, "maliciously mutilated" parts of gyroscopes for use in torpedoes made for the United States government. Selection of a jury will be difficult.

GEN. WOOD WOUNDED

Accidental Explosion Causes a Slight Injury to Arm.

Distinguished American Has Been With General Pershing For Some Time.

Washington, Jan. 29.—Announcement is made that Maj. Gen. Leonard Wood has been wounded in France.

He was the victim of an accidental explosion. One arm was slightly injured. Announcement of the accident was made by the Secretary of War.

Lieut. Col. Charles E. Kilbourne and Maj. Kenyon A. Joyce also were injured. Colonel Kilbourne received a wound in the eye and Major Joyce's arm was hurt.

Five French soldiers were killed outright.

Secretary Baker has cabled General Pershing for full details.

The War department statement follows:

"A cable dispatch from the headquarters of General Pershing just received states that an accidental explosion occurring there killed five French soldiers and injured Maj. Gen. Leonard Wood slightly in the arm, Lieut. Col. Charles E. Kilbourne in the eye, and Maj. Kenyon A. Joyce in the arm."

General Wood has been in France for some time. His presence at General Pershing's headquarters was learned simultaneously with the announcement of the testimony of Representative Medill McCormick of Illinois before the Senate Military affairs committee last December.

Mcormick quoted Lloyd George as expressing wonderment over what had become of General Wood. The British premier was surprised that so distinguished a soldier should be "buried" when the United States was engaged in such a great war.

CHOPS OFF ALL LOBBY FUNDS

McAdoo Makes Sweeping Order Concerning Railroads.

Washington, Jan. 29.—William G. McAdoo, director of railroads, has issued orders to all railroads to cut off immediately from the payrolls all legislative railroad lobbyists, supernumerary lawyers, useless railroad literary associations, political payments and all passes, intrastate as well as interstate. The order chops off all political subscriptions.

BIG OMAHA HOTEL CLOSED

Proprietor Fined $300,000 For Violating "Dry" Law.

Omaha, Neb., Jan. 29.—For alleged continual violations of the state prohibition law, Judge Day, in district court, signed a decree closing the 300-room Millard hotel here for one year. The furniture and fixtures were ordered confiscated and sold, the proceeds to be given to the school fund. A fine of $300,000 was laid against the proprietors.

Rendering Plant Burns.

Syracuse, N. Y., Jan. 29.—Fire of mysterious origin here destroyed the plant of the Syracuse Rendering company, a branch of the Boston Consolidated Rendering company. The damage was estimated at $100,000.

War Output Decreases.

Washington, Jan. 28.—The Lake Superior iron district, producing about 85 per cent of the 75,324,000 gross tons of iron ore mined in the United States in 1917, was able to meet war demands, but did not duplicate its record shipments of 1916, according to the geological survey. The survey announced that less favorable weather for shipping early and late in the 1917 season rather than inability of the lake fleet to handle the ore mined was the cause of a 2,000,000 tons decrease in shipments.

MAY MEAN MORE HEATLESS DAYS

Heavy Storms In East May Increase Number of Coal Saving Days.

PROBLEM IS SERIOUS

Chicago Goes To Use of Coal Cards and New York Faces Fuel Famine—Heavy Snows Continue.

Washington, Jan. 30.—As the result of a series of unprecedented storms of an unprecedented winter which have swept over the East and into New England more fuel holidays are in prospect. Railroads are blockaded, making the problem of alleviating the coal famine more serious than it has been at any time this winter.

Dr. Harry A. Garfield, national fuel administrator, speaking before 7,000 persons in the Billy Sunday tabernacle, declared that unless the weather abates immediately it probably will be necessary to declare more fuelless Mondays to relieve the situation.

The snowstorms that swept over the country west of the Mississippi river stopped all traffic on many of the Eastern lines. The handling of sufficient coal for homes and necessary war industries became more of a problem than it has been since the Garfield order was issued.

Officials of the railroad and fuel administrations were frankly worried, but explained they did not believe it necessary to declare another five-days industrial shutdown.

No extension of the official Eastern freight embargo is necessary, railroad administration officials said, because railroads are now accepting practically no shipments except of fuel and food.

Face Fuel Famine in Gotham.

New York, Jan. 30.—The metropolis again faces a fuel famine. This time it is of graver proportions than before, according to fuel administration officials.

Coal Cards in Chicago.

Chicago, Jan. 30.—The coal card has been put into effect for Chicago consumers. Dealers were authority for the statement that the city's fuel situation was more serious at the present time than [illegible] fore, because of storms, a [illegible] ckades. Industrial plan [illegible] er shut downs because of [illegible] At German Valle [illegible] ..ies were reported without coal and at Shannon, shade trees are being used for fuel.

FINLAND RISES AGAINST RUSS

Conditions of Anarchy Are Said to Prevail.

Stockholm, Jan. 30.—The long threatened revolution in Finland is proceeding in eastern provinces, according to sparse reports reaching Haparanda and forwarded here.

The railway station at Helsingfors is reported to have been occupied by the Russian Red Guard. Sharp fighting has taken place at Viborg.

Russian soldiers are said to be aiding the Red Guard and reinforcements are reported to have been sent from Petrograd.

Helsingfors is commanded by the guns of Russian war-ships under control of Bolsheviki sailors.

A Bolsheviki organ at Helsingfors says the Red Guard got out of hand and was guilty of murdering and plundering. Conditions of anarchy are said to prevail.

FRENCH TRANSPORT IS MINED

Forty Lives Lost When It Goes Down With Trawler.

Paris, Jan. 29.—Forty lives were lost through the sinking of the French transport Drome and the trawler Kerbihan, which struck mines January 23, within sight of Marseilles. The Drome first came in contact with a mine and the Kerbihan shortly afterward struck another near the same place.

Aviators later discovered other mines in this region which immediately were swept in an endeavor to clear them away.

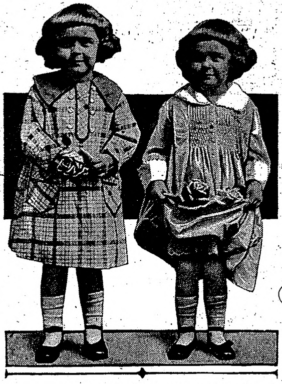
Rehearing Denied Emma Goldman.

Washington, Jan. 29.—The supreme court by declining to grant a rehearing of their case and ordering the mandate issued at once, has refused to delay further sentences of Emma Goldman and Alexander Berkman, convicted in New York of conspiring to violate the draft law. The court sustained their convictions Jan. 14.

German Attacks Red Cross.

Wells, Minn., Jan. 29.—William Huber, a wealthy German and a leader of the Nonpartisan movement in this section, challenged the announcement from the pulpit of the German Lutheran church here that the women of the congregation would gather during the week to sew for the Red Cross. Huber, who spoke in German, is alleged to have declared that the Germans should stick together and should not aid Red Cross work. His case will be laid before United States District Attorney Jaques at St. Paul.

What Well Dressed Women Will Wear



SPRING DRESSES FOR LITTLE GIRLS.

Spring dresses for little girls are abundantly displayed just now and all women appear to enjoy looking at them. Surely she who has no interest in any little one is missing something that belongs to her; for these little dresses bring a smile and a lingering look to all eyes.

Cottons as fine and smooth as those woven in French looms, and enticing colors, gay and soft, make the sections of stores where the dresses are shown as bright as spring gardens. These fine cottons are the product of American looms and these lovely colors show how great an advance has been made in the manufacture of American dyes.

The dress at the left is so adequately pictured that it hardly needs description. It is shown in several patterns of fine gingham and is made with pockets cut on the diagonal, narrow bias banding and a collar of plain chambray of the same color as the dark bar in the gingham. The little dress at the right is of Peter Pan cotton, much like a smooth chambray but softer. It is shown in light yellow, medium shade of blue and two or three pink tones. There is a smocked panel between plaits at the front and back and collar and cuffs of white cotton, with buttonholed scallops on the edges. Any of the heavier weaves of cotton will serve for these.

Patterns for dresses very like these are to be had of any of the standard pattern companies. Mothers select the plainest ones and make up quantities of ginghams for play dresses. The Peter Pan dress is not for such hard wear; it has more needlework on it and is not so easily laundered. It may survive several dinner times, or visits, or trips to Sunday school, before it must be consigned to the tub. And it may be depended on to emerge as good as new as fresh and sweet as it should be for so sweet a wearer.

The separate skirt and the separate blouse are made for each other and each makes its entry very early and in force, in the vanguard of spring styles. Sport skirts and blouses and those for morning and street wear are necessities in the smart woman's appareling; she needs them wherever she goes and whatever she does.

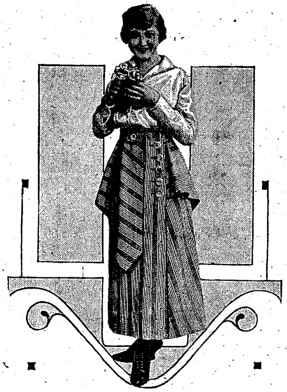
In all new materials for spring, whether of wool or cotton or silk, stripes and plaids and crossbars appear. Plaids are large and stripes are varied and each inspires the designer in his work of providing new models. Combinations of plain goods with all the others promise a season of endless variety and clever ideas in separate skirts.

A good beginning with striped material is apparent in the skirt illustrated. There is a smart overdrapery that begins and ends under a wide fold made on the straight of the goods at the front. There is a narrow belt, made of the light stripe in the goods, that extends part way about the waistline. Large buttons and simulated buttonholes finish off the design, which commends itself for washable skirts of cotton or silk.

An effective sports skirt is made of a crossbar in two colors, as tan barred with blue, set on to a yoke that is extended into pockets at each side and cut from plain blue material. The yoke narrows to a wide girdle at the back and front. In front it is slashed into two short straps, each having a buttonhole in the end. These fasten over flat buttons. A single button finishes the pockets.

These skirts with surfaces broken by plaids and stripes, are to be worn with blouses in a plain color or white. But blouses with collar and cuffs, and perhaps narrow shoulder yokes like the skirt result in pretty costumes, leaving the skirt the privilege of changing partners if it is so minded and appearing with other blouses that do not wear its colors.

Julia Bottomley



SEPARATE SKIRTS MAKE EARLY ENTRY.

The KITCHEN CABINET

Beware of desperate steps. The darkest day
Lived till tomorrow, will have passed away.

FOOD FOR THE FAMILY.

There are plenty of good things still within reach of the common purse if we use thought in our buying. Vegetables when grown in the home garden are a great addition to the food for the family. We have such a variety that we need never tire of them.

Fish are excellent, and in many localities are very reasonable in price. A stuffed fish roasted and served with the following sauce will be a welcome dish. This sauce is also good served with either fried or broiled fish.

Spanish Sauce.—Chop fine three small onions and cook until soft in a tablespoonful of fat. Stir in a pint of tomatoes, a chopped pepper, or a few chopped olives. Season to taste with red peppers and salt, and when the fish is ready turn the sauce over it just as it goes to the table.

Buttermilk Biscuit.—Sift together four cupfuls of flour with a tablespoonful of soda and the same of salt. Melt three tablespoonfuls of lard and stir into two cupfuls of buttermilk, then add to the flour. Mix soft enough to handle and roll out just as soft as possible. Cut into small biscuits and cake in a hot oven.

Prune Crumb Pudding.—Steam a pound of prunes until soft, remove the stones and cut in small pieces. Put a layer of bread crumbs into the pudding dish, then the prunes, then more bread crumbs, sprinkling each layer with brown sugar, cinnamon and dots of butter. Over the last layer of prunes sprinkle a few chopped walnuts, cover with crumbs and turn in a cupful of the prune juice. Bake until the crumbs are brown. Serve with a sauce made of the prune juice a little cornstarch flour, a tablespoonful of butter substitute, and sugar, all cooked until thick.

Sweet Potato Custard Pie.—To one and a half cupfuls of boiled and mashed sweet potato allow one egg, two tablespoonfuls of butter substitute, half a cupful of sugar, three-quarters of a cupful of milk and nutmeg to taste. Beat the eggs, cream the sugar and fat and add milk and potato, beating well to mix thoroughly. Turn into a pastry-lined plate and bake as usual.

Souffle of Meat.—Make a white sauce of a pint of milk, two tablespoonfuls each of butter and flour. Melt the fat, any sweet fat will take the place of butter, and when hot stir in the flour, then add the milk, cook until smooth, add two cupfuls of cooked meat finely chopped, a teaspoonful of salt, a half cupful of crumbs, and the yolks of two eggs well beaten. Then fold in the stiffly beaten whites and pour into a well buttered baking dish and bake over hot water a half hour.

Just granulated sugar creamed with a butter substitute and nutmeg makes a most tasty pudding sauce.

It is the height of every man's ambition to reach the point where he can say just what he thinks.

HELPFUL HINTS FOR HOUSEMOTHERS.

There are times when a needleful of silk of a certain color is most needed—when you are ready to discard your old embroidery silks, don't, but wind them on a card, cutting out a little V-shaped piece at each end to keep the silk from slipping, then put them away in a small box, where they may be found when needed.

Small caps or bags of various colors of silk, cut in a circle and shirred with an elastic, may be slipped over electric light globes, softening the glare and giving just the note of color for different occasions.

Water color paint will retint slippers, flowers and other fady things. Oil paint the kind that comes in tubes, if dissolved in gasoline will color feathers, silks or hat trimmings. One must be careful of fire when using such inflammable stuff. To work outdoors and allow the things dyed to hang in the air for a long time is most desirable.

Wear a heavy cotton glove on ironing day to save the hands from the heat of the iron, even an electric iron heats the hand unpleasantly.

Iron stains in sinks and other places where there is no metal to be corroded should be treated with a mild solution of muriatic acid and water, it acts like magic in removing stains.

Nellie Maxwell

Chase Due Next Season.

A Cincinnati writer figures big things from Hal Chase in a batting way next season. He argues that Chase has a batting slump every other season and that 1917 was his slump year. Therefore he is to hit around the top in 1918.

Wants Swimming Races.

The Riverton (N. J.) Yacht club wants to hold the 1918 men's national long-distance swimming race. The Delaware river is an ideal place to hold the event.

ENGLISH WOMEN WHO BUILD MOTOR TRUCKS, BUSSES AND OTHER CARS

WOMEN MACHINISTS AT WORK IN FITTING SHOP.

Since the beginning of the war the employment of women in the British metal industries has increased 84 per cent. Work of a highly technical nature, requiring long experience and practice, is now being performed efficiently by women in many branches of the London General Omnibus company's factories in constructing motorcars and busses.

The photograph shows a young woman at work on the engine of a motorbus.

Not only are women displacing men in England, but also in this country, and a movement has been started on the Pacific coast by labor unions demanding the fullest protection from exploitation of woman workers.

AUTOS IN WINTER

Help Starting Device by Providing Rich Gas Mixture.

How Antifreezing Solution Should Be Fed Into Radiator — Proportions Will Depend Largely Upon Temperature.

Every year motorists find themselves overlooking the fact that Jack Frost is no respecter of persons and automobiles, and that he will go out of his way to pay his respects to the radiator and congealing the water therein—and in the water jackets of the cylinders—cause a pretty repair bill and deny the owner the use of his car for a week or more.

The first fall of snow is no longer viewed with alarm by motor car owners—it is no longer the signal for them to put their cars away until spring. More and more car owners are coming to realize that in keeping their cars in dead storage for three or four months every year, they are carrying an idle investment, besides doing the car more harm than good. Disuse breeds depreciation as surely as does misuse.

Provides Gas Mixture.

On cold days help your starting motor by providing a rich gas mixture. Prime the carburetor in the usual way, or, better still, choke the air inlet. Not all of the gasoline in the rich mixture will reach the cylinder—much of it will condense on the cold walls of the intake manifold. So you will understand why it is wise to provide as rich a mixture at the carburetor as is possible, and the careful owner will take this means of removing a good share of the burden from his battery.

Insure Against Damage.

Provide yourself with a few gallons of denatured alcohol, and when the weather turns in a decided manner feed a little into the radiator, thus insuring yourself against damage that surely will come otherwise. The proportions depend upon the temperature. It will require a 5 per cent solution of alcohol to prevent freezing at 25 degrees, and a 23 per cent solution will take care of the water system down to zero. As low as 10 below the solution should be 30 per cent, and if the mercury happens to drop to 15 degrees below the percentage will be 35 of alcohol, whereas 10 more degrees below will require a 40 per cent solution. At present prices glycerin is out of the question as an antifreezing agent—besides, alcohol is far better and cheaper, even if it does tend to evaporate easily.

Cover your radiator when car is allowed to stand idle, and if it is to remain in the cold for any length of time let it face the wind and not back up to it. If left in the latter position the wind has a clear passage under the car and above the drip pan to the motor.

It requires no more effort to do things correctly than it does to do them wrongly, and lack of understanding is the only barrier. Watch the little details.

Changing Auto Tires.

In changing a tire take the precaution to run the hand carefully around the inside of the casing in search of sharp objects which may puncture the tubes. Very frequently slow leaks are caused by picking up loose nails or tacks; the head prevents the air from coming out of the casing at the punctured spot; but not so of the tube.

New Electric Brake.

The inventor of a new electric brake of automobiles claims it will stop a car moving at a speed of 50 miles an hour within 45 feet without skidding.

PLAN TO PREVENT TROUBLES

Novice Often Goes to Wrong Parts for Adjustment, and Repair Bill Soars Accordingly.

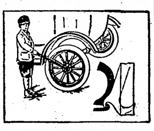
Very often the reason why the novice has trouble and the expert has none is found in the old saying: "Fools rush in where angels fear to tread." With the misjudgment born of inexperience, the motoring novice often goes for the adjustment of parts as if they were logical objects for adjustment—and the repair man's bills soar accordingly. The way to avoid trouble may be to anticipate it, but don't meet it halfway with a smile of welcome.

TOOL FOR AUTOMOBILE TIRE

Operator First Inserts Foot Flatwise Between Flange and Rim and Turns Rapidly.

(By C. J. LYNDE, Macdonald College, Quebec.)

In using this tool the operator first inserts the "foot" flatwise between the flange of the shoe and the rim, and then turns it rapidly; he next slips the socket over the hub, and removes the tire by running the tool around the wheel. To replace the tire he reverses the tool and repeats these operations backward.



CARRYING LUGGAGE ON AUTO

Holder Which Attaches to Running Board of Any Car Is Handy—Can Be Kept Under Seat.

A luggage holder which attaches readily to the running board of any car sells at three dollars. It is made of enameled steel and webbing, which expands as needed to take in the added items. Suitcases, lunch baskets, etc., may be carried without slip or rattling. The carrier weighs about three pounds and will support a load of 300 pounds. When not in use it folds into a canvas bag to go under the seat.

Regulate Speed of Car.

A device that enables a person in any seat of an automobile to regulate its speed without the knowledge of the chauffeur has been invented by a German.

Prevent Theft of Autos.

Among the new locks to prevent theft of automobiles is one that secures the steering wheel after it has been turned slightly, enabling a car to be moved only in a circle.

Collapsible Auto Body.

An automobile body made of seven flat sections, which can be taken apart for shipping flat or replaced if injured, has been invented by an Englishman in South Africa.

Duplex Spring Invented.

Duplex automobile springs have been invented by a Californian, an auxiliary spring coming into action if the main one breaks or is overloaded.

Carrying Spare Tire.

A new device for carrying spare tires on the back of an automobile can be dropped to serve as a carrier of baggage or freight.

DADDY'S EVENING FAIRY TALE

BY MARY GRAHAM BONNER

THE BUFFALOES.

"I think we're pretty fine," said Mr. Buffalo.

"Why so?" asked Mrs. Buffalo.

"Because," Mr. Buffalo said, "we don't mind rain or snow. We never grumble about the weather. We take it as it comes, and that is always the best way to take the weather."

"It certainly is the best way," agreed Mrs. Buffalo. "But that doesn't exactly make us fine, does it?"

"To be sure," said Mr. Buffalo. "It shows we are sensible, and it's fine to be sensible. So there you are!"

"Yes, here I am," said Mrs. Buffalo. "And I'd say you were making things mean what you wanted them to mean."

"Perhaps," said Mr. Buffalo, "but that is also an excellent plan. It's such a nuisance to always be fighting about what things mean. Have them mean what one wants to, I say."

"So I see," said Mrs. Buffalo.

"You may see now, but you don't always! Just think," Mr. Buffalo continued, "of the trouble people have when we are in a stampede. We pay no attention to anyone. We go right on as though we were blind. That's the way we act. Just as though we could not see a single thing."

"Neither can we then," said Mrs. Buffalo.

"That's what I meant when I said you could see now but you couldn't always," said Mr. Buffalo. "And for once I didn't have to change the meaning to suit myself. I was absolutely right with no trouble!"

He seemed to be very happy and much pleased with himself as he stamped about a little.

"We are fine," he went on, "especially we daddy buffaloes."

"Dear me," said Mrs. Buffalo, "that's it, talk about yourselves before you talk about us."

"Glad you urge me to," said Mr. Buffalo, paying no attention to the tone in which Mrs. Buffalo had spoken. "It saves me all the trouble of having to talk about myself without being urged to."

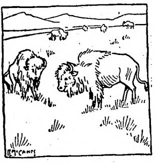
"Go on, go on, and say what you have to say," remarked Mrs. Buffalo impatiently.

"As I was saying a few minutes ago," continued Mr. Buffalo, "we daddies are very nice because we are very good to the children. We are as nice to them as can be."

"And why shouldn't you be nice to the precious ones?" asked Mrs. Buffalo indignantly.

"Many animal daddies aren't," said Mr. Buffalo, "and so it shows our fine natures that we are nice to the young!"

"I only call that decent," said Mrs. Buffalo. "Have you anything else to say about yourself that is really fine, or only make-believe fine? It's make-believe when you call being nice to your children such a fine thing. That is only right."



He Seemed to Be Much Pleased With Himself.

"Right and fine mean the same, my dear," said Mr. Buffalo.

"Well, I never pretended to know much about words," admitted Mrs. Buffalo.

"One more thing," said Mr. Buffalo, "We all go for our own kind when a stranger comes along. And what's better if we are put to a still greater test, all the male buffaloes will stick to the males, and all the females will stick by the females."

"I don't consider that so fine," said Mrs. Buffalo. "You'd protect one of your own kind rather than me! Gracious! I call that very ungentlemanly. Very!"

"It's fine, for the same reason as I said fine before. It's sensible, and to be sensible is fine!"

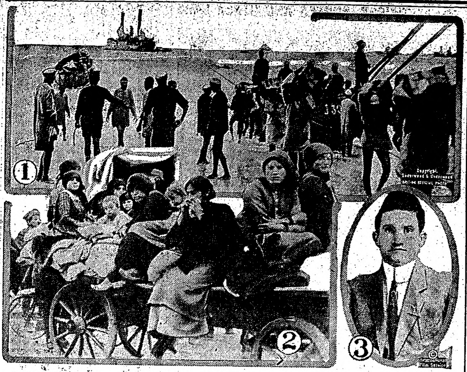
But just at that moment a strange animal came along and all the buffaloes went together for defense and safety.

"We'll play in a storm or lie in the sun," Mr. Buffalo went on after the danger was past, "and we're a strong, powerful lot when we all get together."

And Mrs. Buffalo agreed to this for she had seen how a big herd of buffaloes could frighten other creatures.

Sweetening the Year.

There are some people whose very nearness brings pleasure. They may not be particularly witty nor very wise. They may never dazzle you with their brilliancy along any line. But just as the summer breezes sometimes bring you a whiff of hidden rose grades and mignonette beds, so you cannot come near certain people without detecting the sweetness of their natures, their unselfishness, their untiring kindness. Roses fall and their sweetness passes, but the blossoming gardens of the heart diffuse their fragrance through every day of the year.—Girl's Companion.

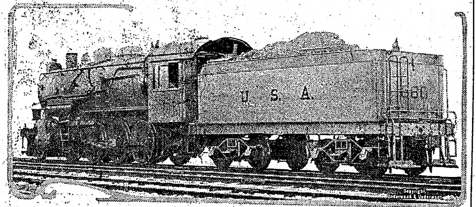


1—Landing supplies on the Palestine coast for the British forces. 2—Women and children of northern Italy made refugees by the invading Teutons. 3—Patrick Henry Farman of Albany, N. Y., who is in charge of a thousand bricklayers that are being trained at San Antonio, Tex., for service abroad.

REMOUNT DEPOT SOLDIERS LEARN HORSE-SHOEING

This photograph shows a class of soldiers of the remount depot, No. 308, stationed at Camp Hancock, Augusta, Ga., learning the not very gentle art of horse-shoeing. These men use the hoofs taken from dead horses to practice on; each man is holding a hoof in his hand. They will soon sail to France to shoe Uncle Sam's horses over there.

ENGINES MADE FOR RUSSIA WORK FOR U. S. A.



Marked with the insignia of the government railways, engines made for Russia, which have not been shipped because of the uncertainty of the situation there, are doing duty "somewhere in New Jersey" hauling long lines of coal cars to places where the fuel is greatly needed. The tender is marked U. S. A., and the engine is one of the many now owned by the government and being used to relieve the coal situation.

NO, THESE ARE NOT SOLDIERS OF THE KAISER

BRITISH OFFICIAL PHOTO.

Copyright, Underwood & Underwood

They're not Boches, though at first glance one might be led to that belief. Really they are mighty efficient Tommies, who man the motor machine guns, having a jolly good time wearing Teuton spiked helmets that formed part of the spoils they won from the Boches in a recent engagement.

GERMAN TOY FACTORY

In order to keep busy the German sailors in the internment camp at Fort McPherson, Ga., have turned their quarters into a veritable toy factory and make large numbers of ships, dolls and soldiers which are sold by the army canteen.

FORCED TO WORK IN KRUPP PLANT

Deported Men and Prisoners Are Driven Into Slavery by German Authorities.

MAKE STARTLING DISCLOSURE

Hollander Tells How Deported Belgians and French Prisoners of War Are Compelled to Work in Munitions Factory in Essen.

By W. J. L. KIEHL.
(Correspondent of the Chicago News.)

The Hague, Holland.—A Netherlander who until four days ago was employed at Krupp's munition works in Essen, Germany, makes the startling disclosure that some 4,000 Hollanders are working at Essen in the munition and war material factories. Most of these men get there through the machinations of what this "escaped" Hollander calls "Seelenerkaufer"—Cohen & Ossendegner of Rotterdam, who seem to act as agents for supplying Germany with greatly needed labor. Eighty or ninety men a day generally find their way across the border by means of their agents, lured by the prospect of very high wages and good food. What they find in reality and how next to impossible it is made for them to return to their own country is thus told in the Hollander's words:

No Return Pass Given.

"When this firm of agents secured my services they did not mention war work," he said. "I was given to understand that field labor and trade work was required. Also I was promised that I could return any Saturday to Holland to stay through Sunday. The promised wages were high and food was said to be plentiful. I accepted, my pass was ready in a few moments, but I did not know that the signatures and vises required for my return to Holland had been omitted, as they always are in the passes given by these agents, no doubt because they know perfectly well that after a week in Germany no single Hollander would ever think of returning there after his week-end in Holland.

"Soon after my entrance upon German soil at Elten, where I found several compatriots like myself, we were met by an agent from an 'arbeits bureau,' who secured our services for shellmaking at Krupp's by telling us that food was good there and wages very high. He said that in other branches of labor food was but indifferent and the wages nothing like Krupp's, so we men went to Essen. How good the food was there you can judge of by the fact that my weight was reduced by 24 pounds while there.

"For breakfast we received two slices of bread without any butter or fat whatever. For dinner potato soup that left us hungry an hour after eating. Then in the evening again two slices of bread like at breakfast. If the Hollander felt too ill or feeble to work the Germans simply took away his bed from under him to make him get up. Oh, yes, there is a doctor, but he always diagnoses the same. 'You can work—if you don't work you won't eat'—'nicht arbeiten—nicth essen,' as we used to put it.

"The laborers are housed by the 500 together in barracks, which are but insufficiently warmed and imperfectly cleaned. Typhus claims many victims. In the barracks where I was housed I found four men lying dead of typhus beside my crib one morning. After a few days of this sort of thing it is not to be wondered at that many Hollanders try in every way to get back to their country, although the vises on their passes are lacking.

"If they are captured they are thrown into prison for a fortnight on bread and water. If they survive they are then drafted back to Krupp's, and set to work again. Production is pushed to the utmost. Numbers of soldiers are employed as a change from the front, and these men are so afraid of being again sent to the front that they would rather work themselves to death at Krupp's.

Where Deported Belgians Work.

"Deported Belgians and French prisoners of war also work at Krupp's. Discipline is strictly enforced, and any utterances of anti-German views are at once punished.

"I got the impression that Germany flung itself like mad into munition work as its last card. But raw material is getting scarce, especially copper. In Essen all copper faucets and the like had already been replaced by iron and tin. The general idea in Germany is that the war can be prolonged at the utmost for another half year, so they are employing their last forces for a supreme effort.

"Every evening at Krupp's alarms is made—'Flieger Gemeldet' [airplanes reported]. All lights are then extinguished. This is done so that we should not know when flyers really came to bombard the factories. No one is allowed to talk of the damage done by allied bombs, and the newspapers are enjoined to keep silence on these matters. Still, I can say that some damage has been done, although I cannot say how much nor exactly where. On the other hand, stories likely to stimulate the energy of the people are eagerly promulgated, such as those of enormous submarines of dreadnaught type, of guns that can shoot 90 kilometers that are soon to be used against the allied armies."

GETTING MAIL IN THE TRENCHES

French soldiers in the trenches made happy by letters from the loved ones at home.

CREWS CRAZED BY SUFFERING

U-Boat Victims Lick Boats for Moisture and Seek Death in Sea.

TELLS TALES OF PLUCKY DEEDS

Heroic Acts of Officers and Men Belonging to All Branches of Sea Services, Naval and Mercantile.

London.—Much has been written about the hardships endured by the crews of vessels sunk by German submarines. Here are some particulars dealing with the plucky deeds performed by officers and men belonging to all branches of the sea services, naval and mercantile.

The first case is that of a passenger steamer which had been torpedoed on a Monday, without warning, as usual, in the Atlantic, 320 miles from land. The chief officer took charge of No. 2 lifeboat, which had on board 31 persons, including two women and a baby four months old.

Bad weather prevailed all that day and throughout the night, increasing the plight of the miserable people. Provisions, too, were scarce, but what existed was taken charge of by the chief officer, who doled out half a dipper (half-pint) of water to each person night and morning.

They had been barely twenty-four hours in the boat when the horrors of the situation were added to by madness. On the Tuesday the cook lost his reason, and on the Wednesday he died. That night witnessed the insanity of the storekeeper, who had to be lashed down. On Thursday he too died. On Friday an A. B. expired.

Water Begins to Get Low.

The water was now beginning to give out and the boat's company suffered from intense thirst.

A fireman was found dead in the bottom of the boat on Saturday morning, and the third-class pantry boy died during the day.

On Sunday the cattleman tried to jump overboard three times, and succeeded at the fourth attempt. The survivors were in too feeble a state to save him, although they turned the boat round and searched for him. The water gave out on Sunday.

There were occasional showers of rain, but everything was saturated with salt, and the little water they got was undrinkable. They licked the woodwork, hoping to gather up the raindrops

Then they broke up the water keg, and licked the inside, which they found saturated with moisture, and delicious. At 3 p. m. on Monday land was sighted, but it was a long way off, and by the time they drew near darkness and a heavy northerly swell made a landing impossible. They lay to, and during a squall their mast carried away at the heel, but that did not matter much, for it acted as a sea anchor.

At daylight on Tuesday they were sighted by a couple of fishing boats, which towed them into port. The baby lived for some time after being landed. The linen keeper died as he was being lifted from the boat. Two of the crew refused to leave the boat, having gone mad. A trimmer died from gangrene two weeks later.

The chief officer remarked: "I would like to testify to the excellent behavior of the boat's crew throughout our period of eight days' hardship and exposure."

GIVES HUSBAND AND 3 SONS FOR COUNTRY

Lingle, Wyo.—A husband and three sons for Uncle Sam's liberty forces is the contribution of Mrs. John M. Bennett, of this town.

With all the male members of her family preparing in various training camps for the fight for democracy and humanity, Mrs. Bennett and her two young daughters spend a great deal of their leisure doing Red Cross work.

HOLD LIBERTY BONDS

People Urged to Retain Them as Permanent Investment.

Government Discourages Practice of Merchants in Accepting Them in Exchange for Merchandise.

United States treasury officials are seeking to discourage the practice followed by many merchants throughout the country of offering to accept Liberty bonds of the first and second issues at par, and in some cases at a premium, in exchange for merchandise. They hold that such practice defeats the primary object of the sale of the bonds, discouraging the general thrift movement and increasing expenditures, thus depriving the government of labor and material needed for war purposes.

"While I have no doubt that merchants are actuated by patriotic motives," said Secretary of the Treasury McAdoo, in a statement given out through the federal reserve banks, "I am sure that they have failed to consider the effect which the acceptance of their offers have upon the situation. We are making the strongest effort to have these government bonds purchased for permanent investment by the people at large, to be paid for out of the past and future savings of those who buy them. Purchases thus made not only result in providing funds for the uses of the government, but they also effect a conservation of labor and material.

"When the bonds are exchanged for merchandise, the primary object of their sale is defeated, discouraging thrift and increasing expenditure. In addition to this, such bonds, when taken in exchange for merchandise, must in most cases be immediately sold in the open market. This naturally tends to depress the market price of the issue and makes it less easy to sell future issues at the same rate."

Secretary McAdoo believes that the merchants of the country, upon a more careful consideration of the subject, will discontinue their efforts to sell merchandise and take Liberty bonds in payment for it.

FIND GUINEA EGGS IN SNAKE

Setting Hen Finishes the Job by Hatching Out Seven Little Guineas.

Moultrie, Ga.—Seven young guineas, all christened "Jonah," because they spent part of their prenatal period in the stomach of a reptile without harm to themselves or the snake, until the latter was unhappily cut open, are the proud possession of L. D. Alford of Colquitt county.

While picking cotton early this fall, Mr. Alford noticed a snake lying in a cotton row in a torpid state with its body considerably swollen. Killing the snake and cutting it open, Alford found seven guinea eggs inside of it, which had recently been stolen from the nest of a setting hen. Placing the eggs under a setting hen in his nearby barn, Mr. Alford was overjoyed a few days later to find seven little guineas hatched out and happy.

FOR THE ELEVEN TOWNS

THE DAIRY

GENTLE COWS ARE SUPERIOR

Animals Seem to Partake of Disposition of Keeper—Economical Grains for Heifers.

To have gentle cows there is nothing like raising them yourself. The cow seems to partake of the disposition of her keeper. No dairyman can afford to have a man in his stable who is rough and quick tempered.

Many well-bred cows are ruined because they were not properly fed and developed into cowhood. Ground oatmeal and wheat bran with the addition of a small amount of flaxseed meal are the most economical grains for the calf and heifer. These grains, fed in connection with mixed hay, bright corn fodder and wheat straw, will develop bone and muscle and build up a sound, vigorous constitution with a capacity to eat and digest a large quantity of food. It is a common saying "that a cow that is a big eater is also a big milker." And this is true.

A heifer should be well fed before calving and given daily exercise. Calves and heifers should not be tied up in a warm stable with the cows, they thrive best in an open shed with a sheltered yard for exercise.

TO IDENTIFY DAIRY CATTLE

Difficult to Distinguish Certain Heifers From Certain Cows Few Years After Birth.

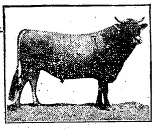
Every farmer who keeps dairy cattle should adopt some scheme for identifying his stock. It is easy to remember the cows in a herd by their names, but it is quite another thing to be able to distinguish certain heifers from certain cows, two or three years after birth. If one is in daily association with his stock, he might be able to remember that one calf is from this cow, another from that cow, and so on, but if the calves are put away on pasture, the chances are that at the end of a year their ancestry will be forgotten.

With breeders of purebreds, it is strictly essential to be able to trace the ancestry. Registration rules specify this, and when a heifer or bull calf is registered, its markings must be noted on a card provided for the purpose.

VALUE OF PREPOTENT BULLS

High-Class Animal Stands Little Chance of Transmitting Inferior Qualities of Ancestor.

The bull is half the herd. If he is prepotent, as all good bulls are, he is much more than half the herd. The purebred bull, all of whose ancestors for several generations were first-class individuals, stands very little chance of transmitting the qualities of some inferior remote ancestor. In the dairy record center at Farmers' Union, Ontario, there were 14 herds of grade cattle. Seven of these herds, comprising 82 cows, had always used grade sires. The other seven, comprising 84 cows, had used purebred sires for many years. At creamery prices for milk, one year's record showed a balance of $31.51 per cow in favor of the seven herds that had used purebred sires.



Purebred Bull.

WINTER EXERCISE FOR CALF

When Weather Is Favorable Young Animal Should Be Turned Out in Sheltered Yard.

Each day during the winter, when the weather is favorable, the calves need to be turned out into a sheltered yard for exercise, which is necessary for their proper growth and health. It is also very important that the calves, from a very early age, be given all the pure, fresh water they care to drink each day. The pens should be disinfected frequently. Quick-lime is excellent to sprinkle on the floor each time it is cleaned, and a frequent spraying with some standard coal-tar-dip solution will prove beneficial.

COW IS CREATURE OF HABIT

Heifer Should Be Milked Up to Within Two Months of Next Lactation Period.

The length of time which a cow will milk depends very largely upon the length of her first milking period. While the tendency for a long milking period is supposed to be hereditary in dairy cattle, they are also creatures of habit, and a heifer should therefore, be milked up to within two months of her next lactation period whether or not she gives enough milk to pay for the milking.

AGRICULTURAL DEPARTMENT

This department of THE ELEVEN TOWNS is devoted to the interests of the agriculturists of Pennington and Marshall Counties. All the articles are by foremost authorities, including U. S. Government experts.

REDUCING MOUSE AND RAT DAMAGE

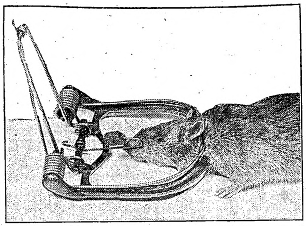
Co-operation and Organization Is of Utmost Importance.

COMMUNITY EFFORT IS BEST

Permanent Results Can Only Be Obtained by Building Animals Out of Shelter and Food—Government Ready to Help.

(Prepared by the United States Department of Agriculture.)

The necessity of co-operation and organization in the work of rat destruction is of the utmost importance. To destroy all the animals on the premises of a single farmer in a community has little permanent value, since they are soon replaced from near-by farms. If, however, the farmers of an entire township or county unite in efforts to get rid of rats, much more lasting results may be attained. If continued from year to year, such organized efforts are very effective.



METHOD OF BAITING GUILLOTINE TRAP.

Community Efforts.

Co-operative efforts to destroy rats have taken various forms in different localities. In cities, municipal employees have occasionally been set at work hunting rats from their retreats, with at least temporary benefit to the community. Thus, in 1904, at Folkestone, England, a town of about 25,000 inhabitants, the corporation employees, helped by dogs, in three days killed 1,645 rats.

Side hunts in which rats are the only animals that count in the contest have sometimes been organized and successfully carried out. At New Burlington, O., a rat hunt took place some years ago in which each of the two sides killed over 8,000 rats, the beaten party serving a banquet to the winners.

There is danger that organized rat hunts will be followed by long intervals of indifference and inaction. This may be prevented by offering prizes covering a definite period of effort. Such prizes accomplish more than municipal bounties, because they secure a friendly rivalry which stimulates the contestants to do their utmost to win.

In England and some of its colonies contests for prizes have been organized to promote the destruction of the English, or house, sparrow, but many of the so-called sparrow clubs are really sparrow and rat clubs, for the destruction of both pests is the avowed object of the organizations. A sparrow club in Kent, England, accomplished the destruction of 28,000 sparrows and 16,000 rats in three seasons by the annual expenditure of but £6 ($29.20) in prize money. Had ordinary bounties been paid for this destruction, the tax on the community would have been about £250 (over $1,200).

Many organizations already formed should be interested in destroying rats. Boards of trade, civic societies and citizens' associations in towns and farmers' and women's clubs in rural communities will find the subject of great importance. Women's municipal leagues in several large cities already have taken up the matter. The league in Baltimore recently secured appropriations of funds for expenditure in fighting mosquitoes, flies and rats. The league in Boston during the past year, supported by voluntary contributions for the purpose, made a highly creditable educational campaign against rats. Boys' corn clubs, the troops of boy scouts, and similar organizations could do excellent work in rat campaigns.

State and National Aid.

To secure permanent results any general campaign for the elimination of rats must aim at building the animals out of shelter and food. Building reforms depend on municipal ordinances and legislative enactments. The recent plague eradication work of the United States Public Health Service in San Francisco, Seattle, New Orleans, and at various places in Hawaii and Porto Rico required such ordinances and laws as well as financial aid in prosecuting the work. The campaign of Danish and Swedish organizations for the destruction of rats had the help of governmental appropriations. The legislatures of California, Texas, Indiana and Hawaii, have in recent years passed laws or made appropriations to aid in rat riddance. It is probable that well-organized efforts of communities would soon win legislative support everywhere. Communities should not postpone efforts, however, while waiting for legislative co-operation, but should at once organize and begin repressive operations. Wherever health is threatened the public health service of the United States can co-operate, and where crops and other products are endangered the bureau of biological survey of the department of agriculture is ready to assist by advice and in demonstration of methods.

NATURAL FEED FOR POULTRY

Hens Should Receive Grains and Other Milling Products, Meat Meals and Green Stuff.

The natural food of poultry consists of grains, insects, green forage and grit, and accordingly in domestication it is reasonable that the hens receive cereal grains and other milling products, and such animal feeds as meat meals and skim milk, and should also have an abundance of green feed or such substitutes for it as roots or steamed clover. Oyster shells, grit and plenty of fresh water should also be supplied.

MULCH AS SOIL PROTECTION

Chief Value Is in Keeping Surface From Packing Under Weight of Snow or Heavy Rains.

The mulch is of value chiefly in protecting the surface soil, keeping it from packing under the weight of snows or heavy packing rains. The mulch also prevents heaving as a result of thawing and freezing. It protects the crowns and roots, adds fertility and sometimes retards budding out in the spring. This may be desirable when there are late frosts.

MILK IS GOOD FOR POULTRY

When Hens Once Get Accustomed to It They May Be Given All They Readily Consume.

Milk is a good feed for hens and when once accustomed to it they may be given all they will readily consume. Constituents of the milk not only help to make the hens lay well but keep them in a strong, vigorous state of health.

Make Coops Fit Fowls.

Coops in which fowls are taken to market should allow the birds to stand erect while in transit. This is somewhat regulated by the breed, requiring a greater height for Langshans than for Leghorns.

Many Horses Neglected.

Throwing a certain number of ears of corn or a measure of oats into the feed boxes and a forkful of hay into the mangers is about all the consideration many farmers give to the feeding of their horses.

Produce Infertile Eggs.

The production of the infertile egg and the proper handling and marketing of eggs by the producer would increase tremendously the number of marketable eggs each year by diminishing the quantity that are rendered unfit for food.

Fall and Winter Eggs.

To produce late fall and winter eggs begin hatching March 1. Hatch at intervals and have all the chicks out not later than May 1.

FOR BETTER ROADS

MAINTENANCE IS BIG SECRET

Great Folly to Spend Money in Construction of Roads Neglected After Completion.

Maintenance is the secret of a good road system. It is great folly to spend money in the construction of roads which are neglected after their completion. Unless intelligence and diligence is used in the up-keep of a system of roads their value will depreciate under ordinary circumstances faster than new roads can be constructed. It is therefore essential that after a road is once built, great care should be taken in its upkeep. There is no question that the cost of proper maintenance is many times saved in the increased economic value of the highway traffic.

Rounding "Dead Man's Curve."

Maintenance may be divided into two general classes: First, the upkeep of roads which have been constructed along standard line with minimum grades, proper drainage and surfacing material; second, the conditioning of roads that have had little, if any, constructive attention.

Highways coming under the first class are not so liable to be neglected by those entrusted with their care, and while their maintenance problem is a very important and necessary one, this class of roads represents only a lesser portion. The greater percentage of roads in the state are not improved. Inasmuch as this class of roads serve the majority of the people and this kind of road will always predominate, it is very necessary that attention be directed to proper ways and means of their maintenance.

Each year more or less construction work is being done and the mileage of improved roads increased, and while this work is going on the unimproved roads should be kept in as good condition as possible at a minimum cost.

The best results can only be obtained by the enthusiasm and local pride of the man who uses the road. He is the fellow most interested, and a small amount of intelligent attention by himself and his neighbors will show great results on their particular section of the road.

This rule applied throughout the length and breadth of any state would mean a system of earth roads that could be pointed to with pride.

PAYING FOR GOOD HIGHWAYS

Improved Roads Have Always Been Necessary Adjunct to State, Community and Individual.

Good highways are and have always been a necessary adjunct to the welfare of the state, community and individual. The argument, "Good roads cost lots of money," may in reality be true when figured in dollars and miles, but is incorrect when considered in reality. Good roads must be paid for, but they are paid for whether they are built or not. The wear and breakage on teams, harness and vehicles, and the increased cost of hauling on poor roads is costing the grower far more than the price of building and keeping in repair the very best roads. He is actually paying for the roads without getting them; and, besides, is put to much inconvenience and worry.

In short, good roads cost nothing.

Stored Seed Corn.

Actual tests have proved that carefully stored seed corn will yield as much as 18 bushels more to the acre than seed from the ordinary storage of the corn crop.

Something Lacking.

There is something lacking in the nature of a man that misuses and mistreats his horses.

Care for Late Farrows.

Sows with late farrows need warm pens and good care for several days.

JOB PRINTING We can do the finest class of printing, and we can do that class just a little cheaper than the other fellow. Wedding invitations, letter heads, bill heads, sale bills, statements, dodgers, cards, etc., all receive the same careful treatment—just a little better than seems necessary. Prompt delivery always.

Let Us Be Your Waiter

We never tire of helping others when they ask for good job printing. We can tickle the most exacting typographic appetite. People who have partaken of our excellent service come back for a second serving. Our prices are the most reasonable, too, and you can always depend on us giving your orders the most prompt and careful attention. Call at this office and look over our samples.

WESTERN CANADA'S CEREAL CROP

One of the Best Ever Harvested.

The cereal crop of Western Canada for 1917 was the most valuable one ever harvested; the returns from all classes of live stock have been equally satisfactory. The wool clip was not only greater than in any previous year, but the price obtained was double that of 1916, which in turn was almost double that of the year before.

As was the case in 1915 and 1916 many farmers were able to pay for their land outright with the proceeds of their first year's crop. Further evidence of the prosperity of Western Canada is shown by the fact that one in every twenty of the population is now the owner of an automobile. If the farming community alone is taken, it will be found that the proportion of automobile owners is still greater. The bank clearings of the leading cities of Western Canada were consistently higher than they were in the corresponding periods of 1916, and then they were higher than the year preceding. In Winnipeg $500,000,000 more was cleared in the 11 months ending November 30 than in the same months a year ago.

The entry of the United States into the war has strengthened the bonds between that country and Canada. We are now working together for the same ends. Those who are not fighting are promoting a greater production of foodstuffs. In this connection Western Canada offers a wonderful opportunity. Not only can larger quantities of staple foodstuffs be produced, but the cost of production is lower and the remuneration greater than where land is more expensive. Notwithstanding the fact that the price of farm products has doubled during the past three years, there are millions of acres of arable land in Western Canada which can still be bought at a low price.

Western Canada has an enormous acreage prepared for seeding to wheat in 1918. It is larger than in 1917, and will probably surpass the record area put into crop in the year 1915, when the largest crop ever known in the West was harvested. The year 1918 should also see a further increase in live stock activity.

Farmers have been investing considerable sums in cattle; the high prices secured for wool and mutton have opened the eyes of Western farmers to the possibilities of sheep, and such was the demand for breeding animals last fall that it was impossible to meet it adequately; the campaign for greater hog production is expected to yield an increase of between 25 and 50 per cent in 1918.

Those who are contemplating coming to Western Canada cannot do better than come early in the spring when they can put in a crop and harvest it in the fall. In this way they will be able to achieve something that will not only be of great benefit to themselves, but also to the great cause for which the Allies, including the United States, are now fighting.—Advertisement.

Says Pile Remedy Worth $100.00 a Box.

Columbus Man Knows What He Is Talking About.

I have had itching piles ever since my earliest recollection. I am 53 years old and have suffered terribly. I have tried many remedies and doctors, but no cure. About 3 weeks ago I saw your ad for Peterson's Ointment. The first application stopped all itching, and in three days all soreness. I have only used one 25c box and consider I am cured. You have my heartfelt thanks, and may everyone that has this trouble see this and give Peterson's Ointment, that is worth a hundred dollars or more a box, a trial. Sincerely yours, A. Newth, Columbus, Ohio.

"It makes me feel proud to be able to produce an ointment like that," says Peterson. "Not only do I guarantee Peterson's Ointment for old sores and wounds, but for Eczema, Salt Rheum, Ulcers, Itching Skin, Pimples, Blackheads and all skin diseases. I put up a big box for 30 cents, a price all can afford to pay and money back from your druggist if not satisfied." Adv.

New York has woman conductors on Broadway cars.

Bread is the staff of life, but the roll of famine is something else.

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Any druggist can put this up or you can mix it at home at very little cost. Full directions for making and use come in each box of Barbo Compound. It will gradually darken streaked, faded gray hair, and make it soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off. Adv.

Some men are born great and then proceed to slump.

GIVES ANSWER TO U. S. TERMS

Count von Hertling, in Reichstag Speech, Replies to President Wilson.

Amsterdam, Jan. 26. — In his speech to the Reichstag Chancellor von Hertling replied to President Wilson's 14 peace conditions as follows:

"'I shall not enlarge upon the distorted representation of German policy which is contained in Mr. Wilson's message, but will deal in detail with the points which Mr. Wilson lays down there, not less than 14 points, in which he formulates his peace program; and I pray your indulgence in dealing with these as briefly as possible:

Agree With First Point.

"The first point is the demand that there shall be no more secret international agreements. History shows it is we above all others who would be able to agree to the publicity of diplomatic documents. I recall that our defensive alliance with Austria-Hungary was known to the whole world from 1888, while the offensive agreement of the enemy states first saw the light of publicity during the war, through the revelations of the secret Russian archives. The negotiations at Brest-Litovsk are being conducted with full publicity. This proves that we are quite ready to accept this proposal and declare publicity of negotiations to be a general political principle.

"In his second point Mr. Wilson demands freedom of shipping on the seas in war and peace. This also is demanded by Germany as the first and one of the most important requirements for the future. Therefore, there is here no difference of opinion. The limitation introduced by Mr. Wilson in the end, which I need not quote textually, is not intelligible, appears superfluous and would therefore best be left out.

"Point three: We too are in thorough accord with the removal of economic barriers which interfere with trade in superfluous manner. We too condemn economic war, which would inevitably bear within it causes of future war-like complications.

"Point four: Limitation of armaments—As already declared by us, the idea of limitation of armaments is entirely discussable. The financial position of all European states after the war might most effectively promote a satisfactory solution. It is therefore clear that an understanding might be reached without difficulty on the first four points of Mr. Wilson's program."

"I now come to the fifth point, settlement of all colonial claims and disputes. Practical realization of Mr. Wilson's principles in the realm of reality will encounter some difficulties in any case. I believe that for the present it may be left for England, which was the greatest colonial empire, to make what she will of this proposal of her ally. This point of the program also will have to be discussed in due time, on the reconstitution of the world's colonial possessions, which we also demand absolutely.

"Point six: Evacuation of Russian territory—Now that the Entente has refused within this period agreed upon by Russia and the quadruple alliance to join in the negotiation, I must in the name of the latter decline to allow any subsequent interference. We are dealing here with questions which concern only Russia and the four allied powers. I adhere to the hope that with recognition of self determination for the people on the western frontier, of the former Russian empire, good relations will be established, both with these peoples and with the rest of Russia, for whom we wish most earnestly a return of order, peace and conditions guaranteeing the welfare of the country.

No Designs on Belgium.

"Point seven: Belgium—My predecessors in office repeatedly declared that at no time did annexation of Belgium to Germany form a point in the program of German policy. The Belgian questions belong to those questions, the details of which are to be settled by negotiations at the peace conference. So long as our opponents have not unreservedly taken the standpoint that the integrity of the Allies' territory can offer the only possible basis of peace discussion, I must adhere to the standpoint hitherto always adopted and refuse the removal in advance of the Belgian affair from the entire discussion.

"Point eight: The occupied parts of France are a valuable pawn in our hands. Here, too, forcible annexation forms no part of the official German policy. The conditions and methods of procedure of the evacuation, which must take account of Germany's vital interests, are to be agreed upon between Germany and France. I can only again expressly accentuate the fact that there can never be a question of dismemberment of imperial territory.

Against Dismemberment.

"Under no fine phrases of any kind shall we permit the enemy again to take from us territory of the empire which ever increasing intimacy has linked itself to Germanism, which has in highly gratifying manner ever and increasingly developed in an economic respect, and of whose people more than 87 per cent speak the German mother tongue.

"The questions dealt with by Mr. Wilson under points nine, ten and eleven, touch both the Italian frontier questions and questions of the future development of the Austro-Hungarian monarchy and the future of the Balkan states, questions in which, for the greater part, the interests of our ally, Austria-Hungary, preponderate. Where German interets are concerned we shall defend them most energetically.

"The matters touched upon by Mr. Wilson in point 12 concerns our loyal, brave ally, Turkey. I must in no wise forestall her statesmen in their attitude. The integrity of Turkey and the safeguarding of her capital, which is connected closely with the question of the straits, are important and vital interests of the German empire also. Our ally can always count upon our energetic support in this matter.

Says Teutons Liberated Poalnd.

Point 13 deals with Poland, it was not the Entente—which had only empty words for Poland and before the war never interceded for Poland with Russia—but the German empire and the Austro-Hungarian monarchy who liberated Poland from the Czaristic regime which was crushing her national characteristics. It may thus be left to Germany and Austria-Hungary and Poland to come to an agreement on the future constitution of this country. As the negotiations and communications of the last year prove we are on the road to this goal.

The last point, the fourteenth, deals with a bond of the nations. Regarding this point, I am sympathetically disposed, as my political activity shows, toward every idea which eliminates for the future a possibility or probability of war and will promote a peaceful and harmonious collaboration of nations. If the idea of a bond of nations, as suggested by President Wilson, proves on closer examination really to be conceived in a spirit of complete justice and complete impartiality toward all, then the imperial government is gladly ready, when all other pending questions have been settled, to begin the examination of the basis of such a bond of nations.

Doubtful of Sincerity.

"Gentlemen, you have acquainted yourselves with the speech of Premier Lloyd George and the proposals of President Wilson. I must repeat what I saw at commencement: We now must ask ourselves whether these speeches and proposals breathe a real and earnest wish for peace. They certainly contain certain principles for a general world peace, to which we also assent, and which might form the starting point and aid negotiations.

"When, however, concrete questions come into the question, points which, for we allies, are of decisive importance, their peace will is less observable. Our enemies do not desire to destroy Germany, but they cast covetous eyes on parts of our allies' lands. They speak with respect of Germany's position, but their conception, ever afresh, finds expression as if we were the guilty who must do penance and promise, improvement. Thus speaks the victor to the vanquished, he who interprets all our former expressions of a readiness for peace as merely a sign of weakness.

Calls Proposals Deceptive.

"If the leaders of the enemy powers really are inclined toward peace, let them revise their program once again, or, as Premier Lloyd George said, 'proceed to reconsideration.'

Seeks Lasting Peace.

"If they do that and come forward with fresh proposals, then we will examine them carefully, because our aim is no other than the re-establishment of a lasting peace.

"As to our purpose, gentlemen, we are all one.

Certain of Victory.

"Let us hold together the government and the nation, and victory will be ours. A good peace will and must come.

"The German nation bears in an admirable manner the sufferings and burdens of a war, which now is in its fourth year. In connection with these burdens, and sufferings, I think especially of the sufferings of the small artisans and the lowly paid officials. But you all, men and women, will hold on and see it through.

"With your political knowledge, you do not allow yourselves to be fooled by catch phrases. You know how to distinguish between the realities of life and the promises of dreams.

"Such a nation cannot founder. God is with us and will be with us in the future."

Demand Abolition of Lords.

Nottingham, England, Jan. 26.—A resolution for the abolition of the House of Lords, was reported to the labor conference in session here. Representatives of the railway men told the conference that the railway employes had reached the breaking point and that the union would back them if they declined to work on account of lack of food. The responsibility, they said, would be due to mismanagement on the part of the government.

Editor to Direct Loan Publicity.

Washington, Jan. 26.—Frank R. Wilson, assistant secretary of the Federal Farm Loan board, has been chosen publicity director for the third Liberty Loan campaign to succeed Oscar A. Price, private secretary to Secretary McAdoo, as director general of railroads. Mr. Wilson formerly was editor and owner of the Sioux City News, and for the past year has been connected with the Federal Farm Loan board. The date of the campaign is withheld.

News of the State

Condensed for Busy Folks

Duluth has 2,692 men subject to the army draft in the first classification of the questionnaire. This number will be called for the first physical examination at once.

George W. Winter of Winona has been appointed a member of the district conscription board, to fill the vacancy caused by the resignation of H. W. Libby of Winona, now secretary of the Minnesota Safety commission.

Alvin Boen, formerly a newspaper man of Fergus Falls, died at the Great Lakes training camp from spinal meningitis. He was the son of former Congressman Halldore Boen, and was the third of the Boen family to enlist.

Deposits in the nine banks of Benton county increased 20 per cent last year, according to statements issued in response to the national call. The deposits in the banks total $1,734,051, an increase of about $350,000 since last year.

Levert Cushing Hale, 29 years old of Morgan, committed suicide by shooting himself through the head with a shotgun. His act is said to have been caused by worry because he failed to fill out his questionnaire within the allotted time.

An idea of the scarcity of seed corn in Pipestone county can be gained from the prices that have recently been paid. At an auction held by George Armstrong some of the seed corn brought as high as $23.50 a bushel, and at the sale of W. B. Hubbard seed corn brought $17.50 a bushel.

Tests of seed corn made by G. A. Strobel, agricultural teacher in the Mankato high school, have shown that much of the corn that was supposed to be good seed fails to germinate. Blue Earth county, banner corn county of Southern Minnesota, will probably have to import some of its seed for the 1918 crop.

H. J. Stern, who was in Fergus Falls last fall and collected $100 for the purpose of recovering the body of his brother-in-law, Ted Johnson, who had been drowned in Carlisle slough, and then disappeared with the cash, has been arrested at Spokane, charged with being a slacker. Otter Tail county authorities want Stern if the federal authorities get through with him.

The greater portion of the state's part of the $7,740,941 which will be spent on roads in Minnesota this year will go to counties least able to provide funds of their own, according to C. M. Babcock, state commissioner of highways, who is preparing for the biggest road program in the history of his department. The state aid amounts to $2,220,000 of this sum, and the law provides that in counties where the assessed value of the property for taxation is less than $5,000,000 the state shall pay 80 per cent to the county's 20; in counties with between $5,000,000 and $10,000,000 taxable value, 70 per cent; between $10,000,000 and $15,000,000, 60 per cent, and in all other counties, 50 per cent.

Taxes levied for all purposes in Goodhue county amounted to $661,635.60 in 1917.

John Swanson of the Hallock Roller mill is making preparations to put on a night shift to double the capacity of the mill. Mr. Swanson has a standing order for all the flour he can turn out for shipment abroad to the soldiers.

John E. Davis of Muskegon, Mich., has arrived in Baudette, where he expects to purchase land and engage in sheep raising. Mr. Davis is an experienced hand at the sheep raising business and considers Northern Minnesota an ideal location for that business.

Seven business houses were destroyed by fire at Brainerd, causing a loss estimated at $50,000. The fire started in a basement pool room of the Ideal hotel, destroying that building and the Cale block, the Empress theater, the Brainerd fur factory, Alex Johnson cigar store, McGill barber shop and the Larrabee furniture store.

Governor Burnquist's attempt to pay the school aid deficiency account of $1,070,193 out of current school aid appropriations is held illegal by a decision of the state supreme court, affirming the Ramsey county district court's action in issuing an injunction asked for by J. F. Mushel, a taxpayer. The decision settles the controversy and releases for distribution to the school districts of the state $5,037,545 in appropriations.

Herman Zempke, German-born farmer near Red Wing, owning 800 acres of land, was held to the grand jury on charges of sedition. Zempke is alleged to have urged that a revolution be started in this country and to have said that 10,000 men could be found in the state who would support the revolution. He is credited with saying that Americans should have stayed off the ocean after the imperial government told them to.

The new Minnesota law aginst circulating literature urging citizens not to assist in prosecution of the war, or discouraging enlistment, is upheld by a decision of the state supreme court, affirming the indictment of C. H. Holm and Frank Holm in St. Paul. The defendants circulated a pamphlet inpugning the motives of President Wilson and congress in entering into the war, and seeking by "unfounded assertions," the court says, to incite antagonism to the war, "the natural tendency of which is to deter enlistment." The law is declared constitutional

SEIBERLICH TO RETAIN PLACE

Draft Board Member Remains When Governor Recommends No Further Action.

BANK DEPOSITS GAIN

Increase in State for 1917 Is $340,000,000 Over Previous Year, Despite War Demands, Indicating Thrift.

St. Paul.

Governor Burnquist has recommended "that no further action be taken in proceedings for the removal of Robert Seiberlich, member of the state boxing commission, from the Eighth ward draft board in Minneapolis, his secretary, Gustaf Lindquist, said, following the demand by Provost Marshal General E. H. Crowder for the Governor's recommendation in the case.

Charges were made that Mr. Seiberlich was strongly pro-German in his sympathies before the United States entered the war and in various ways had proved himself to be unfit to serve on the draft board. Provost Marshal General Crowder refused to act without a recommendation from Governor Burnquist.

✣ ✣ ✣

Bank Deposits Increase.

Wartime thrift and economy among Minnesotans is reflected in increases in their bank deposits. These have gained in spite of liberal subscriptions to the Liberty Loans, Red Cross and other patriotic causes, according to summaries on the latest state bank call made public by F. E. Pearson, state superintendent of banks.

Deposits in Minnesota state banks increased more than $34,350,000 in 1917, and $3,150,000 of the increase was after Oct. 18, when Liberty Loan and other campaigns were taking large sums.

"In the state banks the usual percentage of gains were maintained in the face of wartime demands," said Superintendent Pearson. "This showing is remarkable, because of the unusual financial demands, and indicates that people are learning thrift and are prosperous. The general financial situation is extremely satisfactory."

Deposits totaling $248,311,067 were listed on Dec. 31, against those of $213,960,615 Dec. 27, 1916. Cash reserves were maintained at a high level, in the last call amounting to $42,911,159 or $23,692,749 in excess of legal requirements, and compared with a total of $38,780,282 Dec. 27, 1916. Total assets of 1,113 banks aggregated nearly $287,000,000, having advanced $68,265,000 in the year. Loans were listed at $231,500,000 in the last report, indicating a gain of $31,468,000 during 1917 business.

✣ ✣ ✣

New Hours at State House.

Capitol offices have begun a new schedule of hours from 8:30 a. m. to 5:30 p. m. to make up time under the new order for all-day closing on Saturdays. The Saturday closing order was issued by Gustaf Lindquist, secretary to Governor Burnquist, after consultations with department heads. Fuel saving measures adopted recently are expected to reduce the daily coal consumption at the building from an average of 14 tons to considerably less than 10 tons. Further savings are being attempted at the old capitol building.

✣ ✣ ✣

Hotels Face Action.

W. A. Wittbacker, state hotel inspector, announces that 100 Minneapolis and St. Paul hotel and restaurant keepers who failed to pay the 1917 state license fee are facing prosecution. Lists of these places were turned over to the county attorneys, with requests that actions be brought against them at once. The Minneapolis list of 85 hotels and restaurants includes sceveral large ones.

✣ ✣ ✣

$225,000 Ore Royalties Paid State.

Payments of $225,000 in royalties on iron ore taken from state-owned mineral lands have been virtually completed at the office of State Treasurer Henry Rines. The remittances covered amounts due for the last quarter of 1917. J. P. Funk, mineral lands clerk, said that the showing is a favorable one.

✣ ✣ ✣

Minnesota Ranks Ninth.

Washington, Jan. 23.—Farm products of the United States reached the unprecedented value of $19,443,849,381 last year, an increase of more than $6,000,000,000 over 1916 and almost $9,000,000,000 more than in 1915. Minnesota ranks ninth, with crops valued at $480,230,000.

✣ ✣ ✣

No Legal Barrier.

Reported plans of the Consumers United States company, an offshoot of the Nonpartisan league to invade Minnesota and organize chain stores probably will not be affected by the state blue sky law. Members of the Minnesota Securities commission, charged with administration of the new statute to protect Minnesota investors against wild cat investment schemes, expressed informal opinions to that effect, explaining that the plan involves simply an employment contract.

GREEN'S AUGUST FLOWER

has been a household remedy all over the civilized world for more than half a century for constipation, intestinal troubles, torpid liver and the generally depressed feeling that accompanies such disorders. It is a most valuable remedy for indigestion or nervous dyspepsia and liver trouble, bringing on headache, coming up of food, palpitation of heart and many other symptoms. A few doses of August Flower will immediately relieve you. It is a gentle laxative. Ask your druggist. Sold in all civilized countries.—Adv.

RACES QUICK TO AMALGAMATE

Intermarriage of French and English in St. Louis Began Promptly and Continued.

"Mimi" was a pet name for girls in the old French families a century ago. It was Indian and meant little pigeon. "Virginia" was a favorite name for daughters among the French families. The suggestion did not come from the Old Dominion state. Baby girls were christened Virginia because the mothers had read, tearfully, the story of Paul and Virginia. Bernardine de Saint Pierre's novel came out in 1797. It circulated all over the world and reached St. Louis. The romance made the first literary impression on the village. It prompted the use of the name of the heroine many times.

Commingling of the elements of the population of St. Louis came promptly. There was no line of exclusion in business or matrimony. The evolution of the typical St. Louisan was rapid. Of the more than one thousand descendants of Madame Chouteau, the mother of St. Louis, not two hundred have borne French names. In the present generation these descendants are represented in families of six former nationalities.—From "Missourian One Hundred Years Ago," by Walter B. Stevens.

NEW FOOD CODE EFFECTIVE NOW

Country Goes On Bread Diet Prescribed by President and Food Administrator.

TO HELP ALLIES IS AIM

Government Depends Upon American Women to See That New Food Rules Are Obeyed—Two Wheatless Days Weekly.

CHIEF PROVISIONS OF NEW U. S. FOOD CODE

A BAKER'S BREAD OF MIXED FLOURS, a 5 per cent substitution of other cereals for wheat until a 20 per cent substitution is reached Feb. 24.

SALE BY RETAILERS TO HOUSEHOLDERS of an equal amount of substitute flours for every pound of wheat flour purchased at the time the wheat flour is bought

SALE BY MILLERS TO WHOLESALERS and wholesalers to retailers of only 70 per cent of the amount of flour sold last year.

TWO WHEATLESS DAYS A WEEK—Monday and Wednesday—and one wheatless meal a day.

ONE MEATLESS DAY A WEEK — Tuesday — and one meatless meal a day.

TWO PORKLESS DAYS A WEEK—Tuesday and Saturday.

Washington, Jan. 29.—As a part of a war rationing system prescribed by President Wilson and the food administration, the American people have gone on a war bread diet. "Victory bread," the food administration calls it.

The reduced rations are asked to create a larger export surplus of food for the European Allies. Curtailment of consumptinon will be accomplished largely by voluntary effort, but force will be employed wherever permitted under the food control act

The rationing system, as presented by the President in a proclamation and by Food Administrator Hoover in a list of regulations, forms the food administration's 1918 food conservation program.

The Regulations.

The food administration has issued this statement:

"The following is a summary of the rules that have been formulated by the United States food administration, with the approval of the President, in order to effect the further conservation in foodstuffs necessary to support the Allies and our own armed forces over the next four months. These rules are effective from the morning of Monday, Jan. 28.

Rests With People.

"The effectiveness of these rules is dependent solely upon the good will of and the willingness to sacrifice by the American people. In the last analysis the success or failure of any plan such as here outlined rests with the people. We are dependent upon the co-operation of the trades. We have but one police force—the American woman—and we depend upon her to organize in co-operation with our state and local food administrators to see that these rules are obeyed by that small minority who may fail. Part of the rules will be enforced under the Lever food act; other parts are voluntary and will depend for their success upon public sentiment. Our experience hitherto has shown a willingness of the vast majority of consumers and a full co-operation of the trades, to undergo the self-sacrifice necessary to render such measures effective. The small minority who refuse to co-operate should not be allowed to defeat the nation's necessities.

Equal Purchases Asked.

"1. As their part in reducing the consumption of wheat flour, the consumers of the country are called upon, in purchasing such flour to buy at the same time an equal weight of the other cereals (cornmeal, cornstarch, corn flour, oatmeal, rolled oats, buckwheat flour potato flour, sweet potato flour, soya bean flour and feterita flours and meals.) The housewife may use these products separately in making bread, cakes and pastry, or mix them as she thinks best. Retailers are to sell wheat our only with an equal weight of these other cereals.

Bakers to Supply Mixed Breads.

"2. Consumers will be able to obtain mixed cereal bread from their bakers, who will be required under the license regulations to mix 5 per cent (5 per cent) of other cereals with their wheat flour, both in bread and rolls and will be required gradually to increase this substitution until beginning Feb. 24, a minimum of 20 per cent of such cereals is to be used. The food administration strongly urges on consumers the buying of this bread, which will be known as Victory bread, and will contain not less than 20 per cent of cereals other than wheat. Graham or whole wheat bread will also be given that name, because, containing as they do, 25 per cent more of the wheat grain than ordinary white bread, they, too, will serve the purpose of saving wheat flour.

"If you bake bread at home use wheat substitutes; if you buy it, buy only Victory bread.

White Flour Use Curtailed.

"3. Manufacturers of macaroni, spaghetti, noodles, crackers, breakfast foods, pie, cake and pastry are not to purchase to exceed 70 per cent (70 per cent) of the wheat flour they used during the corresponding months of 1917. These manufacturers will be performing a patriotic service by using cereals other than wheat in their productions.

"4. Wholesalers will be required under license regulations not to buy more than 70 per cent of their purchases of flour from millers as based on their purchase for the corresponding months of the preceding year and their sales to the retail trade must be in the proportion of one pound of wheat flour to one pound of other cereals, this being in the same proportion in which the seller sells to the consumer unless the wholesalers satisfies himself that the substitutes have already been purchased from another source.

No Profiteering.

"A ruling has been made that in making any combination sales under this program, dealers shall name a price for each of the articles so sold which shall not represent more than a normal pre-war profit on any one of the articles sold.

"5. Millers of flour are to distribute their output through their customary channels and markets in such a manner that each city, town and district may receive its usual proportion. The wheat millers have been required to produce one barrel of flour (196 pounds) from 264 pounds of wheat. This is a white flour and represents from 2 per cent to 4 per cent higher extraction than from last year's harvest.

Two Wheatless Days.

"6. To assist further in conservation, Monday and Wednesday of each week are to be observed as wheatless days and one meal of each day as a wheatless meal. This applies both in the home and in the public eating place and on such days and meals no crackers, pastries, macaroni, breakfast food or other cereals containing wheat should be used. The only exception to this is such small amounts of flour as may be needed for thickening soups or gravies or as a binder in cornbread or other cereal breads.

"7. On wheatless days and at wheatless meals, the food administration urges that bread baked in the home be other than wheat bread. Where bread is purchased either for use in public eating places or in the home, Victory bread should be used, if no wheat substitutes can be found.

State Chief to Name Meal.

"The federal food administrator in each state will announce the meal to be observed as a wheatless meal in his state. If no meal is designated, the United States food administration prefers that the evening meal be wheatless.

"8. It is further desired, in order that meat and pork products be conserved, that one meatless day (Tuesday) in every week, and one meatless meal in every day, be observed, and, in addition, two porkless days (Tuesday and Saturday) in every week, be strictly kept. By 'meatless' is meant without hog, cattle or sheep products. On other days use mutton and lamb in preference to beef or pork. By 'porkless' is meant without pork, bacon, lard or other pork products, fresh or preserved. Use fish, poultry and eggs.

"9. For local situations where exceptions are necessary application should be made to the state food administrators."

BIG CUNARDER TORPEDOED

Steamship Andania Is Hit, but Not Sunk.

Belfast, Jan. 29.—The Cunard line steamer Andania was torpedoed, but not sunk, off the Ulster coast, says the Irish Daily Telegraph. The newspaper adds it is believed that no deaths resulted from the explosion.

The Andania was outward bound. She had on board about 40 passengers and more than 200 men in the crew.

The first torpedo missed the steamer, but the second found its mark amidships. The captain ordered the ship abandoned and passengers and crew embarked in the ship's boats.

After rowing for an hour they were rescued by trawlers and patrol boats and landed at a North Irish coast town.

First U. S. War Patients Reach Here.

Baltimore, Jan. 29.—The first war patients to arrive in Baltimore from France have reached here and are at the United States General hospital, Fort Henry. A total of 60 men—51 enlisted men, seven officers and two nurses—are now at the fort. The men arrived at an American port Wednesday and were brought direct to the hospital. It took them two weeks to get from France to an American port. They left on Jan. 9 and arrived on Jan. 23.

Bandits Get $300,000 in Gems.

Chicago, Jan. 29.—Four robbers, one of them posing as a detective, entered the offices of the Heler-Rose company, jewelers, in the heart of the downtown district, and escaped with jewelry valued at $300,000 after locking a member of the firm and two stenographers in a washroom. The robbers entered the office of the company, which is on the ninth floor of the Marshall Field Annex building, while President Frank E. Rose and the stenographers were alone.

PRESIDENT PUTS U. S. ON WAR DIET

Issues Proclamation Calling On People To Cut Wheat Consumption Further.

BURDEN ON AMERICA

Reduced European Productivity, and Destruction of Shipping Increases Load Which U. S. Must Carry, Says Executive.

Washington, Jan. 29.—Calling upon the people to make their greatest effort toward coservation of food for the Allies, President Wilson has issued a proclamation in which he says the reduced productivity of Europe, the partial failure of crops and the destruction of shipping have placed practically the entire burden upon the shoulders of this country.

The message follows:

A Proclamation.

Many causes have contributed to create the necessity for a more intensive effort on the part of our people to save food in order that we may supply our associates in the war with the sustenance vitally necessary to them in these days of privation and stress. The reduced productivity of Europe because of the large diversion of man-power to the war, the partial failure of harvests and the elimination of the more distant markets for foodstuffs through the destruction of shipping places the burden of their subsistence very largely on our shoulders.

The food administration has formulated suggestions, which if followed will enable us to meet this great responsibility, without any real inconvenience on our part.

30 Per Cent Reduction Asked.

In order that we may reduce our consumption of wheat and wheat products by 30 per cent—a reduction imperatively necessary to provide the supply for overseas—wholesalers, jobbers and retailers should purchase and resell to their customers only 70 per cent of the amounts used in 1917.

All manufacturers of alimentary pastes, biscuits, crackers, pastry and breakfast, cereals should reduce their purchases and consumption of wheat and wheat flour to 70 per cent of their 1917 requirements, and all bakers of bread and rolls to 80 per cent of their current requirements.

Consumers should reduce their purchases of wheat products for home preparation to, at most, 70 per cent of those of last year, or when buying bread should purchase mixed cereal breads from the bakers.

To provide sufficient cereal food, homes, public eating places, dealers and manufacturers should substitute potatoes, vegetables, corn, barley, oats and rice products and the mixed cereal bread and other products of the bakers which contains an admixture of other cerals.

In order that consumption may be restricted to this extent, Mondays and Wednesdays should be observed as wheatless days each week and one meal each day should be observed as a wheatless meal.

In both homes and public eating places, in order to reduce the consumption of beef, pork and sheep products, Tuesday should be observed as a meatless day in each week, one meatless meal should be served in each day, while in addition Saturday in each week should further be observed as a day upon which there should be no consumption of pork products.

It is imperative that all waste and unnecessary consumption of all sorts of foodstuffs should be rigidly eliminated.

Maintenance of Health Necessary.

The maintenance of health and strength of our own people is vitally necessary at this time and there should be no dangerous restriction of the food supply, but the elimination of every sort of waste and the substitution of other commodities of which we have more abundant supplies for those which we need to save, will in no way impair the strength of our people and will enable us to meet one of the most pressing obligations of the war.

I, therefore, in the national interest, take the liberty of calling upon every loyal American to take fully to heart the suggestions which are being circulated by the food administration and of begging that they be followed. I am confident that the great body of our women who have labored so loyally in co-operatoin with the food administration for the success of food conservation will strengthen their efforts and will take it as a part of their burden in the national service to see that the above suggestions are observed throughout the land.

WOODROW WILSON.

German Held at Virginia.

Virginia, Minn., Jan. 29.—H. Lebeler, a German who has been cooking in a camp of the Virginia and Rainy Lake company, was arrested on a technical charge of being a deserter, but is held on suspicion of being implicated in fomenting trouble among lumberjacks employed by the company in the Cusson country. It is reported there will be a strike here Feb. 1. Lebeler has been in this country four years. He is alleged to have registered in Connecticut, then to have left before taking physical examination.

Long Dead.

The Barber (after the shave)—"Hair dyed, sir?" Customer (baldheaded)—"Yes, it did, about five years ago."

Value of "Holding On."

The bulldog grip—the grace of holding on—is a powerful asset in any boy's life, declares a writer. A good many who start out with "Great Expectations," as Dickens puts it, peter out. A man past middle life brought some of his paintings to the great English painter, Rossetti, for examination and judgment. Rossetti was obliged to tell the man that the works were lacking in strength and power. Then the man drew out other paintings and drawings, saying that they were the work of a young student. Rossetti declared them full of talent and promise, and asked who the student was. The middle-aged man, with pathos in his voice, admitted that they were the products of his younger days. He had failed to live up to the promise and possibilities of his young manhood; he had failed to hold on to his ideals. It's a good plan to learn to "hold on."

SELF DEFENSE

Defeat Backache and Kidney Trouble With Anuric

Many people in this section have suffered from rheumatism and kidney trouble and have found that Anuric was the most successful remedy to overcome these painful and dangerous ailments.

The lucky people are those who have suffered, but who are now well because they needed nature's warning signal in time to correct their trouble with that wonderful new discovery of Dr. Pierce's called "An-u-ric" (double strength). You should promptly heed these warnings, some of which are dizzy spells, backache, irregularity of the urine or the painful twinges of rheumatism, sciatica or lumbago. To delay may make possible the dangerous forms of kidney disease, such as stone in the bladder. If you want quick relief buy Anuric now (60c a package)—or send Dr. Pierce 10c for trial pkg. This will prove that "Anuric" eliminates uric acid as hot water melts sugar.

WOMEN OF MIDDLE AGE

Need Help to Pass the Crisis Safely—Proof that Lydia E. Pinkham's Vegetable Compound Can be Relied Upon.

Urbana, Ill.—"During Change of Life, in addition to its annoying symptoms, I had an attack of grippe which lasted all winter and left me in a weakened condition. I felt at times that I would never be well again. I read of Lydia E. Pinkham's Vegetable Compound and what it did for women passing through the Change of Life, so I told my doctor I would try it. I soon began to gain in strength and the annoying symptoms disappeared and your Vegetable Compound has made me a well, strong woman so I do all my own housework. I cannot recommend Lydia E. Pinkham's Vegetable Compound too highly to women passing through the Change of Life."—Mrs. FRANK HENSON, 1316 S. Orchade St., Urbana, Ill.

Women who suffer from nervousness, "heat flashes," backache, headaches and "the blues" should try this famous root and herb remedy, Lydia E. Pinkham's Vegetable Compound.

160 ACRE FARMS IN WESTERN CANADA FREE

Canada made me Prosperous

—that's what thousands of farmers say, who have gone from the U. S. to settle on homesteads or buy land in Western Canada. Canada's invitation to every industrious worker to settle in Manitoba, Saskatchewan or Alberta is especially attractive. She wants farmers to make money and happy, prosperous homes for themselves by helping her raise immense wheat crops to feed the world.

You Can Get a Homestead of 160 Acres Free

or other lands at very low prices. Where you can buy good farm land at $15 to $30 per acre that will raise 20 to 45 bushels of $2 wheat to the acre—it's easy to become prosperous. Canadian farmers also grow wonderful crops of Oats, Barley and Flax. Mixed Farming is fully as profitable an industry as grain raising. The excellent grasses, full of nutrition, are the only food required either for beef or dairy purposes. Good schools and churches; markets convenient; climate excellent. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or to

AMERICAN SUGAR SENT TO FRANCE

American Price Rigidly Regulated by United States Food Administration.

CONSUMERS HERE PAY 9c

Sugar Cost 35 Cents a Pound During Civil War—Refiners' Profits Now Curtailed.

Sugar is selling today throughout America at from 8½ to 9 cents a pound to the consumer, even though there is a world shortage which has reduced this nation's sugar allotment to 70 per cent. of normal.

Through the efforts of the United States food administration the sugar market has been regulated as far as the producer, refiner and wholesaler is concerned. The food administration has no power to regulate retail prices except by public opinion. Even though more than 85,000 tons of sugar have been shipped to France in the last four months the retail grocer's sugar price is around 8 to 8½ cents. He should sell this sugar at 8½ to 9 cents, the food administration believes, and asks the American housewife to pay no more than this amount.

Last August when the food administration was organized the price of sugar rose suddenly to 11 cents a pound. During the Civil War sugar cost the consumer 35 cents a pound. By regulation of the sugar market and reducing the price to 8½ and 9 cents and keeping it from advancing to 20 cents the food administration has saved the American public at least $180,000,000 in four months, according to a statement made by Herbert Hoover the other day.

"It is our stern duty to feed the allies, to maintain their health and strength at any cost to ourselves," Mr. Hoover declared. "There has not been, nor will be as we see it, enough sugar for even their present meagre and depressing ration unless they send ships to remote markets for it. If we in our greed and gluttony force them either to further reduce their ration or to send these ships we will have done damage to our abilities to win this war.

"If we send the ships to Java for 250,000 tons of sugar next year we will have necessitated the employment of eleven extra ships for one year. These ships—if used in transporting troops—would take 150,000 to 200,000 men to France."

Reason for World Shortage.

As Mr. Hoover pointed out, the United States, Canada and England were sugar importing countries before the war, while France and Italy were very nearly self supporting. The main sources of the world's sugar supply was Germany and neighboring powers, the West Indies and the East Indies.

German sugar is no longer available, as it is used entirely in Germany, which also absorbs sugar of surrounding countries.

England can no longer buy 1,400,000 long tons of sugar each year from Germany. The French sugar production has dropped from 750,000 to 210,000 tons. The Italian production has fallen from 210,000 tons to 75,000 tons. Thus three countries were thrown upon East and West Indian sources for 1,925,000 tons annually to maintain their normal consumption.

Because of the world's shipping shortage the allied nations started drawing on the West Indies for sugar; East Indian sugar took three times the number of ships, since the distance was three times as great. Suddenly the west was called on to furnish and did furnish 1,420,000 tons of sugar to Europe when 300,000 tons a year was the pre-war demand. The allies had drawn from Java 400,000 tons before the shipping situation became acute.

"In spite of these shipments," Mr. Hoover stated the other day, "the English government in August reduced the household sugar ration to a basis of 24 pounds per annum per capita. And in September the French government reduced their household ration to 13 2-10 pounds a year, or a bit over 1 pound of sugar a month. Even this meagre ration could not be filled by the French government it was found early in the fall. America was then asked for 100,000 tons of sugar and succeeded in sending 85,000 tons by December 1. The French request was granted because the American household consumption was then at least 55 pounds per person, and it was considered the duty of maintaining the French morale made our course clear."

Today the sugar situation may be summarized by stating that if America will reduce its sugar consumption 10 to 15 per cent. this nation will be able to send 200,000 more soldiers to France.

Sugar today sells at seaboard refineries at $7.25 a hundred pounds. The wholesale grocer has agreed to limit his profit to 25 cents a hundred plus freight, and the retail grocer is supposed to take no more than 50 cents a hundred pounds profit. This regulation was made by the food administration, which now asks the housewife to reduce sugar consumption as much as possible, using other sweeteners, and also reminds her that she should pay no more than 9 cents a pound for sugar.

Control of Cane Refiners' Profits.

"Immediately upon the establishment of the food administration," Mr. Hoover said, "an examination was made of the costs and profits of refining and it was finally determined that the spread between the cost of raw and the sale of refined cane sugar should be limited to $1.30 per hundred pounds. The pre-war differential had averaged about 85 cents and increased costs were found to have been imposed by the war in increased cost of refining, losses, cost of bags, labor, insurance, interest and other things, rather more than cover the difference. After prolonged negotiations the refiners were placed under agreement establishing these limits on October 1, and anything over this amount to be agreed extortionate under the law.

"In the course of these investigations it was found by canvass of the Cuban producers that their sugar had, during the first nine months of the past year, sold for an average of about $4.24 per hundred f. o. b. Cuba, to which duty and freight added to the refiners' cost amount to about $5.66 per hundred. The average sale price of granulated by various refineries, according to our investigation, was about $7.50 per hundred, or a differential of $1.84.

"In reducing the differential to $1.30 there was a saving to the public of 54 cents per hundred. Had such a differential been in use from the 1st of January, 1917, the public would have saved in the first nine months of the year about $24,800,000."

Next Year.

With a view to more efficient organization of the trade in imported sugars next year two committees have been formed by the food administration:

1. A committee comprising representatives of all of the elements of American cane refining groups. The principal duty of this committee is to divide the sugar imports pro rata to their various capacities and see that absolute justice is done to every refiner.

2. A committee comprising three representatives of the English, French and Italian governments; two representatives of the American refiners, with a member of the food administration. Only two of the committee have arrived from Europe, but they represent the allied governments. The duties of this committee are to determine the most economical sources from a transport point of view of all the allies to arrange transport at uniform rates, to distribute the foreign sugar between the United States and allies, subject to the approval of the American, English, French and Italian governments.

This committee, while holding strong views as to the price to be paid for Cuban sugar, has not had the final voice. This voice has rested in the governments concerned, together with the Cuban government, and I wish to state emphatically that all of the gentlemen concerned as good commercial men have endeavored with the utmost patience and skill to secure a lower price, and their persistence has reduced Cuban demands by 15 cents per hundred. The price agreed upon is about $4.60 per hundred pounds f. o. b. Cuba, or equal to about $6 duty paid New York.

"This price should eventuate," Mr. Hoover said, "to about $7.30 per hundred for refined sugar from the refiners at seaboard points or should place sugar in the hands of the consumer at from 8½ to 9 cents per pound, depending upon locality and conditions of trade, or at from 1 to 2 cents below the prices of August last and from one-half to a cent per pound cheaper than today.

"There is now an eliminating of speculation, extortionate profits, and in the refining alone the American people will save over $25,000,000 of the refining charges last year. A part of these savings goes to the Cuban, Hawaiian, Porto Rican and Louisianian producer and part to the consumer.

"Appeals to prejudice against the food administration have been made because the Cuban price is 34 cents above that of 1917. It is said in effect that the Cubans are at our mercy; that we could get sugar a cent lower. We made exhaustive study of the cost of producing sugar in Cuba last year through our own agents in Cuba, and we find it averages $3.39, while many producers are at a higher level. We found that an average profit of at least a cent per pound was necessary in order to maintain and stimulate production or that a minimum price of $4.37 was necessary, and even this would stifle some producers.

"The price ultimately agreed was 23 cents above these figures, or about one-fifth of a cent per pound to the American consumer, and more than this amount has been saved by our reduction in refiners' profits. If we wish to stifle production in Cuba we could take that course just at the time of all times in our history when we want production for ourselves and the allies. Further than that, the state department will assure you that such a course would produce disturbances in Cuba and destroy even our present supplies, but beyond all these material reasons is one of human justice. This great country has no right by the might of its position to strangle Cuba.

"Therefore there is no imposition upon the American public. Charges have been made before this committee that Mr. Rolph endeavored to benefit the California refinery of which he was manager by this 34 cent increase in Cuban price. Mr. Rolph did not fix this price. It does raise the price to the Hawaiian farmer about that amount. It does not raise the profit of the California refinery, because their charge for refining is, like all other refiners, limited to $1.30 per hundred pounds, plus the freight differential on the established custom of the trade.

"Mr. Rolph has not one penny of interest in that refinery."

Garden Hose Restores Vision.

Garden hose, at full pressure, restored a man's sight at San Rafael, Cal., recently. The man, Charles Brown fell 40 feet from the roof of his home. Neighbors turned the garden hose on his head as a first aid measure and after an examination Brown was found to be the better instead of the worse for his tumble. His vision was completely cured. He is wondering whether it was the fall or the garden hose that was responsible.

DE LAVAL

Service Day

At Our Store

For the benefit of all users of De Laval Cream Separators we have established a DE LAVAL SERVICE DAY to be held annually.

On these dates we shall be glad to have any De Laval user bring his separator to our store for a complete and careful inspection and adjustment, which will be made Free of Charge. Should any parts, due to usual wear, or accident need to be replaced, this will be done, the only charge being for the price of the new parts used.

The De Laval Service man, will be with us to have charge of this work. Bring in your Separator and receive the benefit of his advice on the care and operation of your machine, as well as the Free Service. It is our wish, and that of the De Laval Company, that every user of a De Laval Separator get the maximum of efficiency at the minnimum of cost.

No expert is required to keep a De Laval in repair. A little care with the use of De Laval Separator Oil will keep it running satisfactory for years if adjustments are made when needed.

Remember the Date, Feb. 27th.

Have your machine in by 10:30 A. M.

He did not bring his family along as he first intends to survey the situation. His stay is temporary at present, but if he finds the conditions favorable he may locate here permanently. We hope he will stay with us and we can assure him that he has landed in one of the most progressive communities in our progressive state.

HOOVERIZE!

Mondays and Wednesdays are now designated as wheatless days. Besides there must be one wheatless meal a day. In Minnesota supper has been designated as such. Tuesday is, as we know, a meat and porkless day and Saturday must see no pork used.

New Automobile Numbers.

New automobile licenses for the next three years must now be secured. They cost five dollars now, as against one and a half before. The money goes to improve the roads, so not many of us will complain of the seeming high license.

See To Your Personal Tax.

When you see the personal property tax and find your tax given proceed to pay it forthwith, as you will receive no personal notice as heretofore. The only notice now sent out is in the form of the published list. This tax must of course, be paid by the first of March.

Smilage Books

The latest drive inaugurated by the government is for the sale of smileage books. They sell at one dollar each and contain twenty coupons each of which admits the holder to any show or entertainment. These books are to be bought by the people and presented to their soldier friends for use in the camps. No one but the soldiers can make use of them.

Save Your Old Automobile Numbers.

The old automobile numbers will be collected and sent in to the state auditor by whom they will be disposed of and the proceeds given to the Red Cross. No one has as yet been designated in Goodridge to collect them, but if you wish you can bring them to this office and they will be taken care of until the time comes to send them in.

A Kind word to Old Subscribers Who Are Behind with The Price of the Paper.

Friends, we are in dire need of the money. Do your part and we will do ours cheerfully. Just you watch if we don't. If you do not remember how long it is since you paid your subscription drop us a line or drop in and we shall put you wise. We have to do it anyway in the shape of a dun later on, but we prefer not. However, it is no disgrace to receive such a letter as it is simply a reminder that we have forgotten very important. And most of us are so constituted that we are not offended by such a reminder.

GOODRIDGE, MINNESOTA.

Goodridge Loyalty

Goodridge loyalty on a small scale was exemplified again last Monday when the second heatless day was observed in the business places.

Death has Claimed the First Two Pennington Boys Who Went to Fight For Their Country.

Death seems to be present in the United States also and not only in the trenches in Europe. Its first two victims from this county was Henry L. Anderson, for many years employed at the First National Bank in Thief River Falls. Mr. Anderson died from pneumonia January 23 at the Jefferson Barracks, St. Louis, Mo. A week ago Monday the remains were interred at Borup, Norman Co., this state, which was the childhood home of the deceased. The second victim followed closely after when C. Henry Hermanson of Thief River Falls succumbed to the same disease Jan. 24, at Fort Jackson, North Carolina. Both of these young men had enlisted in the ordnance department of the army. Both of them were young men in the neighborhood of thirty years and were in the prime of life. Their passing at this time before they had crossed the water disproves the contentino that so many uphold that the trenches is the most dangerous place for the soldier.

A Busy Evening.

Last Thursday evening was a busy evening in the schoolhouse. The band in charge of Mr. Greenfield met for their regular rehearsal at seven o'clock. immediately afterwards the Goodridge Literary Society held its regular meeting. The band under the able instruction of Mr. Greenfield is progressing very satisfactory and it will not be long before the boys will be heard from.

The Literary Society rendered an exceptionally good program, after which a short business meeting was held, Mr. H. B. Rockne was elected treasurer to suceced Mr. Chester Tvedt who enlisted a short time ago. Owing to the order recently issued to school clerks by the fuel administration that schoolhouses must not be open to entertainments for which extra heat is required the society decided to discontinue its meeting in the schoolhouse until warmer weather arrives. Mrs. McDonald invited the society to give its next program at her home. An invitation that was gratefully accepted. It would have been rather unfortunate if the splendid work that the society is doing schould have been interrupted for any lenght of time.

Did nor turn our Good.

The teachers meeting scheduled to be held in the schoolhouse Saturday afternoon did not turn out as profitable to those concerned as was expected. The topic to be discussed was the buying and selling of war Savings Stamps and certificates, a very timely and important subject. But a cog must have slipped somewhere, as nobody arrived from headquarters to elucidate the matter to those present. About half an hour before the time set for the meeting the local principal received a request over the phone to take charge of the meeting. Not having anything in particular prepared for such an undertaking he could not do it to any satisfactory degree. A short explanation, however, was given of the purpose and method of disposing of the stamps and certificates.

The following teachers were present:

Alma Sether	Dist. No. 59
Anna Paulson	Dist. No. 136 and 70
Annie Haugen	Dist. No. 38
Agnes M. Stucy	Dist. No. 67
Jaren Highland	Dist. No. 5
Clarence S. McReynolds	Dist. No. 37

New County Agent.

FORMER AGRICULTURAL INSTRUCTOR IN THIEF RIVER FALLS HIGH SCHOOL IS ELECTED.

Mr. Ross P. White, who was engaged last fall as agricultural instructor in the Thief River Falls High School but who later resigned to do organization work for the government, has returned to this county and will soon commence his activity as county agent of Pennington County to which position he has recently been elected. A hustler like Mr. White ought to do well in this county and we predict that his work will be more than noticed.

Group II Declamatory Contest.

Friday evening, Jan. 25, a declamatory contest was held at Thief River Falls for the purpose of selecting a reader to represent this territory at Crookston in a contest to be held there during the Farm Crop Show. Marshall Race was representative from our local school and did his part with much honor both to himself and his school. First place went to Miss St. Aubin of Red Lake Falls. The committee in charge of securing judges for this contest made a serious blunder in selecting the judges from cities that had representatives in the contest. This should under no circumstances be done and it is to be hoped that the committee next year will know better.

WANTED!
Farmers to bring in their hogs to us and get the highest market price for same. We can handle them at any time.
The City Meat Market
C. H. ROSSMON, Proprietor,
Goodridge, Minnesota.

When You Buy
GROCERIES
You most assuredly want
Dependable Quality
Thats the kind we handle
and we sell them at
reasonable prices

Eleven Towns Changes Hands

After editing the Eleven Towns since November 1st, 1915, and making many friends in Goodridge and vicinity, the time has come for me to say good-by to both friends and newspaper. Its the war, you know. War is effecting many changes in the world over and even the village of Goodridge has not been passed over by the great scene shifter. Our boys have responded loyally to the call of Uncle Sam and I am happy in the thought of being one of them. By the time this gets in print I will be at Fort Riley, Kansas.

I wish to take this opportunity of thanking all the patrons of the Eleven Towns for standing by the paper so loyally during the time it was in my possession. I also wish to express a word of appreciation for all the good friends who have made my stay in Goodridge a pleasure.

My successor in the newspaper field Mr. A. O. Halvorson, is well known to you all. He needs no introduction from me, but I would like to ask all my friends to stand by him as loyally as you have supported me. He will I am sure, far out-do his predecessor and, knowing Mr. Halvorson as I do, I feel no hesitancy in saying that if the people of Goodridge and vicinity give him the help and encouragement he deserves, he will give the readers of the Eleven Towns the best paper they have ever had and one that will be a credit to the village and country at large.

I shall look with pleasure for the weekly appearance of the old paper in my mail and endeavor to keep in touch with the doings of all my old friends and when I have put in my best licks for Uncle Sam I hope to be back at Goodridge. So with a health for Goodridge, a health for my successor and a health for all the readers of the Eleven Towns I will say goodbye until I have done my part to get the Kaiser.

Respectfully Yours.
H. W. Smith

Lost Her Supper.

While out to a party and just getting ready to eat supper one of the young ladies was told that somebody wanted to see her, she did not return to finis her supper but went right on home.

Schools To Organize A Junior Red Cross.

"Every School for the Red Cross" is the slogan in a drive to be inaugurated Feb. 12-22 for the purpose of having every school in the United States organize a Junior Red Cross. The condition upon which schools can become members is that a sum equal to 25cts for each pupil must be raised before an organization can be effected. In our school that would mean approximately twenty-five dollars. And Goodridge Consolidated Schools does not desire to be found wanting. So it has been decided to give an ice cream social Monday evening Feb. 11, for raising money for this purpose. Coffee and cake will be served for those who do not eat ice cream. A fish pond will be operated and those having any knick-knacks around, that they wish to get rid of, are requested to donate them for use in the fish pond. Remember the date and the purpose Come and do your "bit".

Star Notes

Selma, the 3 year old daughter of Mr. and Mrs. Knut Sunsdahl suffered a most painful accident one evening last week as a result of placing a celluloid comb to close to the flame of the lamp. The comb instantly threw the fire all around the little girl, but yet, fortunately, Mrs. Sunsdahl succeded in quenching the fire and removing her charred garments in time for immediate and effective treatment By the kind and prompt response of nearby neighbors, Mrs. Sunsdahl was aided to alleviate pain as much as possible and the unlucky, yet lucky little lassie is now well on the way to recovery.

Gilbert Hanson and Ed. Dempsey were Goodridge and Thief River Falls business visitors Thursday.

Nichelay Urdahl of Goodridge twp. was a pleasant caller in S. E. Star Friday.

Miss Diana Wold teacher in Dist. No. 1, visited with her home folks near Kratka and friends in the Goodridge vicinity over Saturday of last week.

Among those from east Erie tracts answering the draft call of physical examination at the county seat latter part of the week were Henry Bye, Martin Larson, Henry Stage and Joe Stangl.

BAKER SCORED BY NEBRASKAN

Secretary Hitchcock Makes Attack on War Secretary's Recent Statement.

SAYS WILSON BETRAYED

Solon Brands Secretary's Statement Regarding Readiness of American Troops as Wholly False and Preposterous.

Washington, Feb. 6.—Senator Hitchcock, Nebraska, renewed demands in the senate for further co-ordination of the nation's war efforts by declaring that the War department is "better equipped with brakes than with motive power" and that chaos has resulted from other departmental work.

Secretary Baker's recent statement to the Senate military committee that the United States would have half a million soldiers in France early this year and that prospects were not unpromising for ships to carry a million more were characterized by Senator Hitchcock as "absolutely preposterous and . . . so exaggerated as to convey an entirely false impression as to what we can do and what we are doing."

President's Attitude Unfortunate.

"The President has announced he does not want the committee to report the cabinet bill, and if press reports be true he objects to even a discussion of this legislation in the Senate," Senator Hitchcock stated.

"This attitude on the part of the President is unfortunate, but not altogether unnatural. The President belongs to the school of political philosophers who adhere to the belief that all important legislation should originate with and be proposed by the executive to the legislative body.

"I cannot subscribe to this scheme of government, although it has obvious advantages in that it provides leadership, order and program.

"Since he became President, Mr. Wilson has enforced his views on Congress in a large degree and generally with good results. Now and then, however, there must be exceptions.

Hears Only One Side.

"I agree with Senator Chamberlain that the President does not know the whole situation. He cannot give two months to investigation, as we have done. Like a king, surrounded by his court, he hears practically only one side. The people who complain do not reach the President, nor even members of his cabinet.

"Shall the Congress not be permitted to amend defective machinery? Cannot one of its great committees be permitted to report its conclusion on a pending bill? Shall the Senate be even prohibited from discussing bills?

"I cannot believe our duty to the country will be performed by such weak abdication of responsibility. To use a slang phrase, 'It is up to us.'"

Specific Charges.

Senator Hitchcock charged specifically that—

The War department has fallen down in most of its important functions.

Secretary Baker's efforts to correct defects in his department would be futile.

The transportation system has fallen down and is a "gigantic wreck."

There is no power to co-ordinate transportation across the Atlantic and production here.

Lack of proper directing authority has resulted in the present fuel situation. The present condition of our shipbuilding is "nothing less than shocking."

Efforts to move food for our Allies and ourselves have miscarried.

Williams Replies.

A torrent of bitterest reproach was turned on the Nebraskan when John Sharp Williams, senator from Mississippi, in replying, charged that the attacks that had been launched upon the administration were pro-German in their origin. The proposed war cabinet, the Mississippian compared to the committee of asses that almost ruined Lincoln.

There is more of it to come. Friends of war cabinet and munitions director legislation, determined to go through with their fight, have completely disregarded the request of the President, that the bills be killed and debate brought to a close.

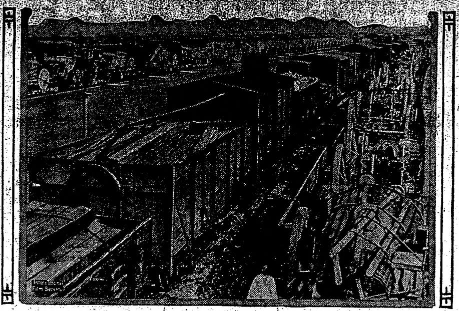
New Hungarian Party Grows.

Amsterdam, Feb. 5.—The Hungarian constitutional party, headed by Count Andrassy and the United Independence party, the leader of which is Count Apponyi, has decided to join the new government party, according to a Buda Pest dispatch to the Vossische Zeitung of Berlin.

U. S. Congressman Addresses Italians.

Milan, Feb. 5.—The Italian parliamentary union captured Captain Fiorello M. La Guardia, representative to Congress from New York, who was on his way to the American headquarters in France, and had him speak at a monster mass meeting here. His auditors, numbering many thousands of persons, including senators, deputies and members of patriotic associations, who vociferously declared themselves in favor of a vigorous prosecution of the war. Premier Orlando was unable to be present.

PREPARING TO MEET THE GREAT GERMAN OFFENSIVE



The allies on the west front have made every preparation to meet and check the great offensive which has been threatened by the Germans for some time. The illustration shows the never-ending supply trains that carry guns, munitions and food to the front.

ORDERS HEATLESS DAYS

Canadian Program Almost Duplicates That of U. S.

President May Have to Decide on the Continuation of Program in This Country.

Ottawa, Ont., Feb. 6.—The operation of manufacturing plants February 9, 10 and 11, as a conservation measures, is ordered by the cabinet on recommendation of C. A. McGrath, Dominion fuel controller. The order includes all munitions plants. It does not apply to Western Canada or the maritime provinces.

The order follows closely along the lines of the American five-day closing order, and grants virtually the same exceptions.

Two Open Days for Clubs.

It also is provided that during the months of February and March all golf, yacht, canoe, hunt and country clubs must be closed except on Wednesdays and Saturdays.

For the present heatless Mondays are ordered only for theaters and other places of amusement. They must remain closed every Monday from February 18 to March 25.

Deadlock on Fuelless Monday.

Washington, Feb. 5.—President Wilson may have to intervene and say when fuelless Mondays shall stop.

Dr. Harvey A. Garfield, the fuel administrator, who issued the closing order, will have a conference with William G. McAdoo, director general of railroads, to thresh out the problem. Indications are that the two men would deadlock on the question.

Dr. Garfield wants the order to remain in effect indefinitely. Director General McAdoo wants the order abrogated immediately and the [illegible] program abandoned.

8,700 MINNESOTANS TO CAMP

Orders Issued to Begin Entrainment February 23.

St. Paul, Feb. 5.—Completion of the first draft call has been ordered.

All remaining white men of Minnesota's current draft army quota, approximately 8,700, will be sent to Camp Dodge the last of this month.

Orders to this effect were received by Adjutant General Rhinow from Provost Marshal General Crowder. Entrainment is to be completed in the five days beginning February 23. Only white men are included in the order.

Every effort should be made, according to the call, to complete local division quotas from men placed in Class 1. To this end expediting of physical examinations is directed of enough Class 1 men to insure the desired number.

This order regarding physical examinations is, in some degree, a reversal of orders from General Crowder previously sent, calling for cessation of all such examinations pending receipt of new regulations.

Honduras Cuts Off German Trade.

San Juan Del Dur. Nicaragua, Feb. 5.—German commission houses of Amapala, a Pacific port of Honduras, have been cut off from Maritime shipping facilities. President Bertrand of Honduras has placed an embargo on all lighters belonging to Germans and has interned their owners. Thus ends a German trade monopoly in southern Honduras which lasted for more than 30 years.

Committee Agrees on Rail Bill.

Washington, Feb. 4.—Differences between members of the Senate Interstate Commerce committee over the railroad bill were adjusted when the committee adopted the report of the sub-committee. The report recommended that the bill be submitted to the Senate with the provision fixing the period of government control to one year after the war and retaining the section authorizing the President to fix rates but permitting an appeal to the Interstate Commerce commission when desired.

SAMMIES STOP RAID BY TEUTONS

Prompt Action By American Artillery Puts Kink In the Enemy Program.

CASUALTIES INFLICTED

Germans Taken Completely by Surprise and Halted—U. S. Troops Now Hold Sector Near Toul.

With the American Army in France, Feb. 6.—The military censor has permitted the announcement that the Americans hold a sector in the battle line at a point to the northwest of Toul. Announcement of the number of men holding the line is not permitted.

Toul is the great French fortress about 40 miles to the west of Nancy.

Prompt action by the American artillery has once again prevented an attempted German raid. There is no doubt in the minds of the officers which directed the Sammies' fire that heavy casualties were inflicted upon the German officers and men who were massed in the enemy's front line for an attack. Information had reached the Americans that the Germans were about to deliver a surprise attack shortly after midnight. The assault was to be launched without artillery preparation, the Germans evidently counting upon the previous night's artillery duel having cut out wire entanglements.

But they had reckoned without the Sammies.

Our artillery laid a heavy barrage along the enemy front line just a few minutes before the time of the contemplated German attack. This took the enemy completely by surprise.

During the day the Germans shelled the roads with gas. There were no casualties on our side.

Toul is an important link in the great chain of French southern fortresses built to ward off a German invasion from the Alsace-Lorraine bases, other bulwarks being Nancy, Epihal, and Belfort and to the north of Toul, Verdun itself.

WANT 250,000 SHIP BUILDERS

12,000 U. S. Agents To Campaign For Them.

Washington, Feb. 5.—The Department of Labor announces that more than 12,000 agents throughout the country will be engaged for the next two weeks in the enrollment of 250,000 men skilled in the shipbuilding trades.

Two thousand of the agents are appointees of trades unions, who are co-operating in building up the industrial army for a final drive to victory.

King of Belgium Visits France.

Paris, Feb. 5.—King Albert of Belgium passed through Paris for the south of France, where he will spend a few days with the queen. He called on President Poincare, who asked the king to hand to the queen a newly created medal, "France's gratitude," on behalf of the French government.

Would Have Virgin Isles "Dry."

St. Thomas, Virgin Islands, Feb. 4.—The government has introduced in the legislature a measure prohibiting importation, manufacture, sale, giving away or having possession of intoxicating drinks within six months after approval of the bill. In proposing this legislation the government pointed out the extent of the temperance movement throughout the world, especially in the United States, and recommended the Virgin Islands take action rather than await the mandate of superior authority.

MAY REDUCE IMPORTS

More Ships Needed for Transportation of Troops.

Administration Considering Drastic Orders to Obtain More Shipping.

Washington, Feb. 6.—The administration has under consideration a 50 per cent reduction in the volume of imports as one of the measures for making available ships transporting troops to France.

Overseas transportation is recognized as the real problem facing the government in its effort to put on the firing line a big fighting force and keep it in supplies. Estimates of the amount of tonnage necessary to keep an army supplied vary all the way from four to seven tons in continuous service for each man engaged. The United States now has in all services about 4,000,000 tons of shipping, of which probably one-fourth is engaged in bringing in materials heretofore regarded as essential to the National industrial life.

Neutral Ships to Help.

If negotiations now under way with neutral countries are concluded successfully a large amount of neutral tonnage will be used to supplant American ships engaged in the non-hazardous trades. It is regarded as unlikely that the entire 1,000,000 tons of American ships engaged will be put into the transatlantic service leaving the neutral ships to supply so far as possible the gap made. The general opinion is that about 50 per cent of the shortage will not be supplied.

In addition to its efforts to obtain neutral tonnage the government expects to take over all American sailing ships and a large number of French sailing ships, all to be put in the non-hazardous trades. This move will add some tonnage to that available for bringing in imports.

If a cut in imports is made the government will select for elimination articles regarded as non-essential in the prosecution of the war.

BLAMED FOR HALIFAX BLAST

Captain and Pilot of Steamer Mont Blanc Held.

Halifax, Feb. 5.—Capt. Aime Lamedie, who commanded the French munitions ship Mont Blanc, and Frank Machey, the pilot, who brought it into the harbor when it collided with the Belgian relief ship Imo a few minutes before the disastrous explosion on December 6, last, will be given a preliminary hearing at once on the charge of causing the death of William Hayes, pilot of the Imo.

The men were arrested after the Drysdale commission of inquiry had reported that the explosion was brought about by the failue of the captain and pilot "to observe the rules of the road."

DuPont Buys Waldorf-Astoria.

New York, Feb. 5.—T. Coleman Du Pont has bought the Hotel Waldorf-Astoria in this city, one of the best known hotels in the world, it is announced by George C. Boldt, the former owner.

Canada Sends Fish to U. S.

Winnipeg, Feb. 5.—Eighteen carloads of fish have been shipped to the United States to aid meat conservation there.

German-Americans to Aid U. S.

Des Moines, Feb. 4.—Organization has been effected here of the German-American Patriotic association with membership limited to United States citizens of German parentage, whose purpose is the furtherance of the interests of this country in the war on kaiserism. While the association's charter membership is confined to Iowans, the hope was expressed that similar organizations will result in other states. It was said the organization was the first of its kind in the country.

STRIKE LEADER GIVEN 5 YEARS

German Socialist to Be Imprisoned In Fortress For His Activities.

RIOTERS RESUME WORK

Backbone of German Strikes Believed Broken by Military Court Martial Law Effective in Many Places.

Berlin, Feb. 6.—As the result of a trial by extraordinary court martial on the charge of inciting to high treason, resistance to public authority and transgression against participation in the general strike, Wilhelm Dittman, the radical socialist deputy, has been sentenced to five years' confinement in a fortress.

Strike Believed at End.

London, Feb. 5.—From the meager accounts of the economic situation in Germany reaching neutral countries—and they are meager to a degree—the general strike that prevailed throughout the empire last week has virtually ended. Apparently the hard hand of the military authorities had much to do with the breaking up of the movement on the part of the workers, whose full energies are required by the government at the present moment to aid in the prosecution of the war, for even their leaders are reported to have advised the men to return to their work.

The proclamation of martial law in Berlin and throughout Brandenburg by the military commander evidently had its full effect, for with the threat of summary court martial and execution staring them in the face, the strikers carried out no disorders in Berlin Saturday, like those earlier in the week.

Industrial Centers Quiet.

Industrial quietude now seems to prevade the entire country except at Jena, capital of the Duchy of Saxe-Weimar, where new trouble has arisen. It is not improbable that the strike here has been engendered by sympathetic feelings on the part of the numerous students in this educational center.

That under the surface the politiial waters in Germany and Austria-Hungary still are disturbed is indicated by the announcement that the German and Austro-Hungarian foreign ministers and General von Ludendorff, chief of the German war lords, next to Von Hindenburg, are to meet in close conference in an endeavor to bring about an amelioration of the tense economic and political questions affecting Germany and the dual monarchy and doubtless lay pans to combat the peace views and desires of large parts of the populations in the two countries.

TRANSPORTS FOR 500,000

Ships Are Ready, Is Statement of Secretary Daniels.

Washington, Feb. 5.—Secretary Daniels has authorized the statement that the Navy is assured of enough transport facilities to make sure that there will be 500,000 American troops in France early this year, as was stated by Secretary Baker recently before the Senate Military committee.

He made the statement when informed that Secretary Baker's forecast for the number of men to be sent abroad was challenged in the Senate by Senator Hitchcock. He would not say whether the navy department's outlook for ships was such as to warrant the expectation of having 1,000,000 more men in France by the end of 1918.

Secretary Baker declined to comment in any way upon Senator Hitchcock's address.

VENICE VISITED BY AIRMEN

Enemy Flyers Also Bomb Other Towns With Bombs.

Rome, Feb. 5.—Venice and a number of towns on the Venetian plain have been bombed by enemy airmen, according to the Italian official communication.

While no damage and no casualties resulted from the attack on Venice, much destruction was fraught in the towns of Padau, Treviso and Mestre, where also many civilians were killed or wounded.

Fuel Administrator Closes Brewery.

La Crosse, Wis., Feb. 5.—The Hussa brewery at Bangor, 14 miles from here, has been closed by County Fuel Administrator D. W. MacWillie of La Crosse for alleged violations of the Monday closing order issued recently by Fuel Administrator Garfield.

6,000 Cars of Corn Daily to East.

Washington, Feb. 5.—Six thousand carloads of corn are being rushed daily to the markets of the East and intermediate points, it was announced by Director General McAdoo. The cities to be relieved first are New York, Philadelphia and Baltimore for shipments to the Allies. Large stores are moving also to Chicago, Kansas City and Omaha. Assurances have been given that with any degree of a letup in the heavy weather the corn belt would be cleared of its burden of over-production by the end of March.

FOOD CONTROLLER OF CANADA GIVES WARNING

Food Production Should Be Increased at All Cost.

In his letter to the public on the 1st of January, Hon. W. J. Hanna, Canada's Food Controller, says:—

"Authoritative information has reached me that food shortage in Europe is terribly real, and only the sternest resolve on the part of the producers, and equally stern economies on the part of all as consumers, can possibly save the situation.

"France last year had a crop between one-third and one-half that of a normal year. Women did the work of draught animals in a determined effort to make the impoverished soil of France produce every possible ounce of food. They now look to us to make up their deficiency of essential supplies.

"The harvest in Italy was far below normal and will require much larger supplies to feed her people until next harvest.

"It is impossible for the allies to spare many cargo carriers to transport foodstuff from India, Australia, New Zealand and even the Argentine Republic. This means that the allied nations are practically dependent upon North America to supply them with the food which must be forthcoming if terrible suffering is to be avoided and the fighting efficiency of the armies maintained.

"On December 1, the United States had not a single bushel of wheat for export, after allowance was made for domestic requirements on the basis of normal consumption, and the United States Food Administration is endeavoring to bring about a reduction of 20 per cent in home consumption of wheat and flour. This would release 100,000,000 bushels for export, but the Allies will require nearly five times that amount before the 1918 harvest.

"Canada is the only country in the world, practically accessible to the Allies under present conditions of shipping shortage, which has an actual exportable surplus of wheat after allowance for normal home requirements. The surplus today is not more than 110,000,000 bushels. A reduction of 20 per cent in our normal consumption would save an additional 10,000,000 bushels for export. The outlook for production of food stuffs in Europe next year is distinctly unfavorable.

"Such is the situation—grave beyond anything that we thought possible a few months ago. Unless our people are aroused to a realization of what the world shortage means to us, to our soldiers and to our Allies, and of the terrible possibilities which it entails, disaster is inevitable.

"Production, too, must be increased to the greatest possible extent. Present war conditions demand extraordinary efforts, and every man, woman, boy or girl who can produce food has a national duty to do so.

"I am confident that when the people of this country realize that the food situation is of utmost gravity they will willingly adjust themselves to the necessities of the case and make whatever sacrifices may be required. The call which is made upon them is in the name of the Canadian soldiers at the front, the allied armies, and the civilian populations of the allied nations who have already made food sacrifices to an extent little realized by the people of this country."

Here is an appeal made by a man, upon whom rests the great responsibility of assisting in providing food for the allies and the soldiers at the front, who are fighting the battles in mud and blood. It cannot be ignored. At home we are living in luxury and extravagance inclined to idleness and forgetfulness. This must cease. We must save and produce. Our lands must be tilled no matter where it may be, in Canada or the United States. It is our duty to cultivate. Splendid opportunities in the United States are open for further cultivation of lands. Western Canada also offers opportunities in high producing lands at low prices. Decide for yourself where you can do the most good, on land in the United States or in Canada, and get to work quickly.—Advertisement.

Hooray!

Husband—At last I have an army contract. The dogs of war have chased the wolf from the door.

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Any druggist can put this up or you can mix it at home at very little cost. Full directions for making and use come in each box of Barbo Compound. It will gradually darken streaked, faded gray hair, and make it soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off. Adv.

Misdirected energy is when a young man runs after a girl who doesn't appreciate him.

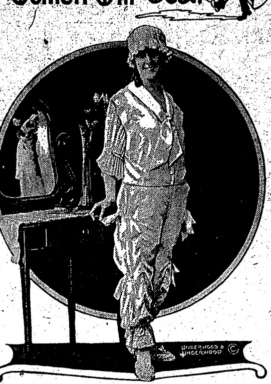
What Well Dressed Women Will Wear



WHIMSICAL STYLES IN SLEEPING GARMENTS.

Having undertaken the wearing of pajamas women proceeded to feminize them. They have developed these sensible sleeping garments into many dainty conceptions of the original and have produced, in the process, attractive new sleeping garments that are neither pajamas nor nightgowns. There are one-piece and two-piece pajamas, pajamas with slipover mandarin coats and others with short jackets like that shown in the picture. Wash satin, crepe de chine and georgette go to make up these very modern conceptions of the originally plain and practical pajamas. They are called boudoir pajamas; those with jackets or mandarin coats proving the most dignified and becoming of the several designs.

If one determines upon silk for sleeping garments the soft texture of wash satin and crepe de chine, and the sheerness of georgette along with their dainty colorings, are sure to inspire gay and frivolous affairs like that shown in the picture. Nearly all the boudoir pajamas, however, are less fanciful than these which exaggerate the style in order to call attention to it. The pantalettes are of plain satin with crepe georgette set in at the sides between front and back pieces tied together with satin ribbon bows. The short jacket of satin has sleeves of plaited georgette ending in a ruffle with a ribbon band above it. The collar is of ribbon lengthened into tie ends.

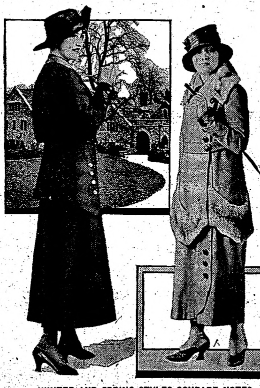
Nothing less colorful and fine than bedroom slippers of ribbon would do to wear with the magnificence of these pajamas, and they are hardly to be imagined without an attendant cap of lace and ribbon. These extravagant luxuries require accessories to match themselves in daintiness.

Few pajamas are so elaborate. Pantalettes are usually straight and full and gathered into a ruffle about the ankle. Coats or jackets are bordered with satin or crepe in a contrasting color. Sometimes narrow lace edges the collar or the frills at the ankle and sometimes hemstitching is the only decoration.

A trim, fresh-looking and practical tailored suit is the mainstay of the American woman's wardrobe, every month in the year. Sometimes it happens that she must choose a new one just between seasons, as in February or January. Winter suits are offered at bargain prices then, and early spring styles have appeared, enticingly new and tempting. The shopper is torn between two minds, and no one can settle the matter for her. It must be decided by the climate she lives in, the kind of service she requires of the suit, becomingness of the styles and other personal matters.

Winter and spring styles compare notes in the two suits shown here. At the left an advance model for spring reveals a trim affair of dark-colored cloth, with a plain skirt that does not commit itself to the very narrow style which has been considerably heralded. The coat approves the conservation of wool by being short, enforcing its opinion especially in the back of the garment, which is shorter than the front. This is a fine model for a slender figure, with a yoke to the shoulders and the front and back attached to it, plaited at the sides. The coat sleeves broaden the figure by means of a little fullness at the top. There is a narrow belt and springtime touches in light buttons, in an overcollar of white satin and insert of white in the V-shaped cut-out on the plain cuffs.

A suit of duvetyn at the right, trimmed with chinchilla fur, commends itself for either the northern or southern winter, and has much distinctive style. The skirt is as narrow as it can be, conveniently; the coat hangs as straight as a plumb-line, but tempers its severe simplicity with rounded points at the bottom. The sleeves are allowed a little fullness at the top and finished at the hand with strap and button trimming. A narrow belt of the cloth suggests the waistline, and very large buttons fasten the coat and are lined up on the skirt in a way to emphasize the long, straight line that will commend this model to many women.



WINTER AND SPRING STYLES COMPARE NOTES.

Current Wit and Humor

HIS ONLY CHANCE.

It was an old situation. Mother went through the pantry, and found that son had been at the layer cake. She sighed, assumed her severe look, and went back into the living room.

"Robert," she said, "didn't I tell you not to touch that cake without asking permission? And didn't I tell you that you couldn't have any cake just before meal time?"

"Yes'm."

"Then why did you take some cake without asking permission?"

"Because I wanted some cake just before meal time."

His argument was flawless, whatever is said about his obedience.

A Busy Line.

"Central, how much longer must I wait to get 4476 Juniper?"

"How long have you been waiting?"

"About ten minutes."

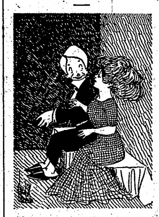
"Judging from the kind of conversation I heard the last time I 'listened in,' there's an engagement ring at 4476 Juniper that is about to be returned. You may have to wait an hour."

Vocally Overzealous.

"Is Bliggins patriotic?"

"Yes, but not always with judgment. He insists on singing 'The Star-Spangled Banner,' no matter how he makes it sound."

PROBABLY NOT



"I think we could be very happy together."

"But do you think we could be as happy as we could apart?"

Different.

"He can't get blood from a turnip,"
When a collector calls, says Will,
But the persistent mosquito can
When he presents his bill.

Suitable Place.

"I should think they could easily raise chickens on board ship."

"What are you talking about?"

"Aren't there hatchways convenient and doesn't a ship often lay to?"

Paradoxical Assertion.

"Why does Jims sit so long in the park?"

"Because he says he has a right to sit there as long as he pleases, and he intends to stand up for his rights."

True Sign.

Friend—That's a wide-awake looking man I met coming out of your office.

Doctor—Yes; I'm treating him for insomnia.

Exactly.

"There is one odd thing about hot competition."

"What is that?"

"How it freezes out competitors."

Proving It.

He—My friend says he is very fond of animals.

She—I should think so from the way I had to help him to our roast lamb.

The Language.

"I see where the firm of Rags & Tags is going up."

"Yes; I'm sorry they're going under."

By Slow Degrees.

"Do you really enjoy Camembert cheese?"

"I'm eating it as a matter of discipline. If I can learn to like it maybe I'll get so I can stand a cold-storage egg."

Unappreciated.

The Victim—You said you could give my hair an artistic cut and you've made me look like a wild man."

The Tonsorial Artist—I fear you know nothing of art. I'm an insurgent.

The Kitchen Cabinet

He is a capitalist—
Who sees the rainbow and the light,
When shadows and the storms appear,
Hath vision far—faith serene and bright—
And meets each task without a fear.
—J. H. Ayers.

GOOD EATING.

As we are forgetting how a frosted cake looks these days, we can without overstepping the bounds of economy occasionally use a rich filling for a layer cake, which is most satisfying.

Banana Cream Filling.—Beat the whites of two eggs until stiff and dry. Mash four bananas until smooth, sprinkle sugar over them to keep them from turning dark, add the bananas to the whites, a spoonful at a time, beating after each addition. A cupful of powdered sugar is used to add to the banana pulp. Sufficient beating will make this cream light and fluffy.

Ginger Rice.—Scald a quart of milk and stir in five tablespoonfuls of washed rice, add salt, three tablespoonfuls of sugar and a tablespoonful of finely chopped preserved ginger, bake for two hours in a slow oven.

Virginia Spoon Bread.—Stir a cupful of cornmeal into a pint of scalding hot milk, cook five minutes, then add two tablespoonfuls of butter and a cupful of cold milk, then add two well beaten eggs, beat well and gradually add another cupful of milk. Put the mixture into a well buttered granite baking dish and bake a half hour in a hot oven. Serve at once from the baking dish.

Breadcrumb Pancakes.—Two cupfuls of fine bread crumbs, soaked in two cupfuls of milk over night, then beat smooth, add two well-beaten eggs, a tablespoonful of melted shortening, and a cupful of flour with two teaspoonfuls of baking powder and a half teaspoonful of salt sifted with the flour. Cook on a hot greased griddle, spreading them very thin and serve hot with maple sirup.

Jugged Soup.—Put six potatoes sliced very thin in a bean pot, add a cupful of canned peas, a thinly sliced turnip, a sliced onion and a quarter of a cupful of well washed rice. Season with salt and cayenne and pour over a quart of well seasoned beef broth. Put on the cover and place in the oven, cook three hours and serve with crackers.

The more some people have the more they want, which may explain the secret of borrowing trouble.

SEASONABLE WAR FOODS.

The women all over the land who are trying to conform to the food-conservation requisites are having more fun housekeeping than ever before in their lives. Being economical and resourceful is now the fashion and it is developing many latent geniuses. Women are putting the thought that they used to spend on clothes or amusements on the proper food for the family, with the result that the importance of food study is finding its proper place.

When possible buy the unpolished rice; it is far more wholesome and can be purchased often enough by the dealer to have it always in good condition. The same is true of any of the butter substitutes; buy of a grocer who sells it so freely that it is sure to be fresh.

Oleomargarine is very palatable if well made and after working in the color and a teaspoonful of sugar, to a pound, with more salt if it is liked, it will take the place most acceptably of 55-cent butter that is none too good. For cake making of various kinds this butter substitute will take the place of butter with no one the wiser.

Brown Rice.—Add a teaspoonful of salt to three cupfuls of boiling water and drop in a half cupful of unpolished rice, cook stirring with a fork until well boiling, then cook until tender more slowly. Dry in the oven and serve as a vegetable seasoned with salt, pepper and butter.

Pea Puree.—Wash and soak a cupful of green split peas overnight in three cupfuls of water. In the morning put on to cook in the water, add a large onion sliced, a stalk of celery, both browned in a little hot fat. Add to the peas in the kettle a large slice of bread, a half teaspoonful of salt, a fourth of a teaspoonful of pepper and a half cupful of mashed potato; bring to the boiling point and serve. This may be thinned with hot milk or served as a thick puree.

Nellie Maxwell

Conserve All Feed.

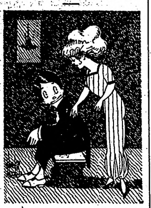
All stock should be well fed, but there should be no waste of either grain or forage. There are six months in which the stock must be fed at the barn before spring pasture may be had.

Salt Necessary for Cow.

If cows are permitted to have free access to salt they will consume from one-half to one ounce per cow per day, and it has been proven that this amount is actually necessary for their proper sustenance.

Cap and Bells

WILLING TO OBLIGE



"George, give me that horrid cigarette at once."

"I'll buy you a package of ladies' size if you're so crazy over them."

Generous.

The man who thinks he knows it all
Is generous, you'll agree;
He wants mankind, both great and small,
To be as wise as he.

Exhausted.

After telling the story of the wanderings of the Israelites in the wilderness a teacher the other day asked:

"When at last after forty years they found themselves out of the wilderness, what would they be?"

She expected the answer that they would be old men and women, but a little girl who put up her hand promptly replied:

"Out of breath."

An Impression of Uselessness.

"Some day," said the man who converses much on exploration, "we shall discover the north pole and give a new continent to the world."

"I hope not!" exclaimed Miss Cayenne.

"Why?"

"I am a member of the Society to Prevent Useless Giving."

Old Treasures.

Visitor—You must have saved old things for years to make that large rag bag.

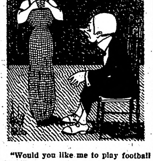
Elderly Friend—Dear me, yes. Why, there's my confirmation frock, and there's my going-away dress, and there's my mauve poplin of the Paris exhibition. They've all some wear in them yet!"—London Opinion.

The Fate of Genius.

"I don't see Three-Finger Sam around Crimson Gulch any more."

"No," answered Broncho Bob. "Sam met the fate of genius. He had so many original ideas he got to introducin' new rules in every card game and we just naturally had to make him feel unwelcome."

PROBABLY



"Would you like me to play football dear?"

"Yes; maybe you'll get that nose of yours straightened out."

Counting Every Cent.

"Now that we're married we won't have to write any more letters," said the young man.

"Yes," replied the young woman. "Think of what a lot we saved by finishing our correspondence before a letter required a three-cent stamp."

Exactly.

Learned Theorist—What do you think of this study of the language of the simians?

Plain Citizen—I think it is all monkey business.

Daddy's Evening Fairy Tale

By MARY GRAHAM BONNER

THE MOONBEAMS.

"A party," chuckled Mr. Moon to himself. His broad smile grew broader.

The Moonbeams Looked Bright.

And the little moonbeams repeated after him—"A party."

"I'll have to see about putting on my best suit and starting off for an evening of pleasure," he said.

"We have our little suits all ready," said the moonbeams, hinting for an invitation to go along too.

"Oh, you have, have you?" asked Mr. Moon, as he grinned. "I suppose I will have to take you along, then."

The moonbeams looked very bright and happy. "Don't you really want us?" they asked, though they did not doubt it for a moment.

"Of course I want you," said Mr. Moon, "and so do the people. Moonbeams are so gay and happy. They dance and they almost seem to sing."

"We'll sing just for you, Mr. Moon," they said.

And the moonbeams sang this song:

"Oh, not when it's day,
Do we laugh and play.
But when it is night,
We shine and are bright.
We laugh and we sing.
We love everything.
We love Mr. Moon.
We'll soon, very soon
We're going to shine
For a party of nine."

"That's a wonderful song," said Mr. Moon. "But might I ask how you're going to shine for a party of nine? Did you say that just for the rhyme?"

"We might have," the moonbeams admitted, "but we didn't have to this time. For there are really nine people going on this sleigh ride. Do you see? There are eight children and a nice, good-natured old farmer who seems to be looking forward to the ride as much as the children are."

"Let me see," said Mr. Moon, as he blinked one eye.

"The moon is very bright tonight," said the children. "It will be wonderful for our ride. And see how the moonbeams dance."

"Well, well," said Mr. Moon, "that certainly means I must work. They can do almost anything with me by encouraging me along. Now I just feel like shining brightly for them because they have praised me and said nice things about me. It does folks good to hear fine things about themselves every little while. I know it makes me feel better, and though I am a moon, I know a lot about people, for I see so many of them all the time."

"They seemed pleased to see us dance," said the moonbeams. "We'll have to give our special treat of our moonbeam game of tag."

"Do," said Mr. Moon. "They'll enjoy that."

So the moonbeams danced and played tag with each other, and Mr. Moon beamed too and shone for all he was worth.

"The moon is so bright," the children said, as they went bounding over the snow in their long sleigh which was filled with straw.

"It almost seems as if I could catch a moonbeam," said one child.

And the moonbeams went so near the children they thought they could really catch them, but the moonbeams always got away in time, for they said they could not be caught by really real children, or they wouldn't be really real moonbeams.

The snow was so soft and white and sparkling. And the snowflakes which had fallen to the ground said to the moonbeams:

"I Almost Caught a Moonbeam."

"Make us look like glorious diamonds and glittering jewels. We want to appear royal and noble and beautiful before the children."

And the moonbeams did as the snowflakes had asked. What a dazzling night it was as they rode along over the snow with the moon, the moonbeams and the children of old King Snow as their companion.

When the children reached the home of the little boy who had given the sleigh-ride party and were having some delicious hot supper, every child in turn said:

"I almost caught a moonbeam."

And outside the window the moonbeams were still dancing and looking at the children, and they laughed: "They couldn't catch us, eh?" they asked of the moon. And the moon, beaming and smiling still, said:

"No, little moonbeams, in your game of tag only the moonbeams can catch each other, and then it's very, very hard! But what fun your game did give the children!"

What Hardships Do to Us.

It seems very pleasant to be protected from everything disagreeable, and to be assisted over hard places, but that is not the way character is made. And to be so sheltered and guarded that one remains a weakling is one of the greatest misfortunes that can befall one.—Girl's Companion.

GORITZ TORN TO PIECES IN LAST GERMAN DRIVE

Correspondent Sees Shell-Battered City Just Before the Italians Retreated.

PAINTS PICTURE OF RUIN

Newspaper Men Have Narrow Escape as They Watch Artillery Battle—Outlines of City Still There, but It Is a City Sieved by Bombardment.

Headquarters of the Italian Army, Northern Italy.—Goritz is a symbol. "On to Goritz!" was the cry of the duke of Aosta's soldiers as they pressed through the little town of Lucinico a few months ago, fighting their way down to the Isonzo river, then across the western bridge leading to the city, when the cry changed to "Goritz at last!"

Then this was reversed when the overwhelming invading force of Austro-Germans took up this same cry, "On to Goritz!" pressing down from the north, across the northern bridge to the city and ending with "Goritz at last!"

Thus Goritz has become a symbol of the huge change which has occurred. It was one of the furthest points forward on the Italian line, the center of a vast arc of fighting front stretching from Plozzo, far in the north, down to the Adriatic at Montefalcone, and it was the most populous and important city in the great crescent of territory which the Italian army had sliced off southwestern Austria—some six hundred square miles in all. And so Goritz was symbolic of that entire region which has twice changed hands in this war, and of the furthest advance in the first Italian campaigns.

I went to Goritz and saw the city on the eve of its agony. It was the last trip made there by anyone outside the military before the retreat began. The roar of the great Austro-German offensive already had commenced, though for the moment it was taken for a spasmodic renewal of the cannonade which had been going on for weeks. Within twenty-four hours the enemy had crossed the Isonzo 15 miles further north, turned the Italian left wing, beaten back the second army under General Capello, threatened to envelop the third army under the duke of Aosta, brother of the king of Italy, and put in execution that gigantic hammer stroke by which they hoped to finish Italy and cripple the whole entente.

Roads Left Clear.

My trip was made by invitation of the supreme command, with staff editor from headquarters as escort. As we sped along the road in the big army automobile I noted there were no troops along the road and bordering fields as one sees approaching Verdun or in the Somme or Flanders. This absence of troops in the rear was part of the system adopted, it was explained. All the reprovisioning of the army was done at night and the roads were left clear by day most of the time.

Ten miles out we crossed the Italian-Austrian frontier and entered Austria.

At Cormons, an Austrian village on the road, the signs above the shops were all in Italian, showing the Italians were right in the claim that all this section was racially Italian.

The cannonade began to be heard for the first time ten miles west of Goritz—a low rumble to the north and east, with now and then the muffled boom of a great gun. Day by day the fire was getting heavier, said our escort, who knew the ground by heart, and he added that the enemy forces had been increased from 120 battalions to 330 battalions.

As we passed through the town of Lucinico, a far-out suburb of Goritz, it was seen to be half destroyed. Along the main street ran rows of battered buildings, with walls half down and shell holes making ugly gashes. But business was going on, men were at the cafes and women and girls strolled the street unconcernedly. Now the automobile turned up the steep side of Padgera hill, one of the outer defenses of Goritz where bloody hand-to-hand fighting occurred. One could see the old trench and wire system, now grass grown. All this hill had been swept bare by shell fire, but nature had kindly obliterated the scars and the hillside was again smiling with its verdure. The sound of firing had now increased to an enormous roar as we passed Padgera hill.

Turning the corner of a shattered wall we saw the Isonzo river lying ahead and on the further side Goritz rising in terraces with the huge battlements of the citadel towering on the right. The river looked about the width of the Potomac at Washington, but with swifter current from the mountain feeders. Along the edge of the river ran rows of shell-torn walls with gaping windows. This whole water front had been torn to pieces, and yet many of the demolished remnants of the buildings were occupied and work along the river wharves was proceeding.

Old Bridges Replaced.

The Isonzo river was crossed by the wooden bridge which Italian engineers built after all the old bridges had been blown up. On one side lay the wreck of a big pontoon. It was on pontoon bridges that the Italians entered the city and this wreck was one of the remnants of that crossing. The big railroad bridge was lying in a wreck from artillery fire. Further on was the massive stone bridge, with one of its main arches blown to pieces. Near these bridges lie several important paper mills, where paper is made for government notes. All these mills were masses of ruins, with a few tall chimneys still standing among the debris.

Goritz itself was under the rain of terrific bombardment, for the full force of the great offensive was now only a few hours off.

And yet with the imminent danger many persons still clung to their homes and belongings with that same tenacity which makes the Vesuvian peasants cling to the mountainside when the volcano is raging and threatening to bury them. But most of these people on the streets are the poor who could not get away and the small shopkeepers who cannot afford to abandon their goods. The big stores are all closed and the place has an air of a deserted city, with only a few stragglers bringing up the rear. Goritz had 30,000 people, but only 5,000 are left, and these make only a scattered showing in the wide main street fringed on either side with its shell-torn fronts. It was raining hard and this added to the lugubrious spectacle.

Entering the city we passed the extensive Jesuit establishment where 600 seminarians are located. One corner was knocked off, the cornices were hanging and several big holes told where the shells had found a mark. The main contour of the street was preserved and the buildings were intact as a whole, but every second or third had been hit, some collapsing entirely, others with their front wall gone and their upper rooms with household goods showing from the street. But there was no vast area of completely leveled debris, as at Verdun or Monastir. The outlines of a city were still there, but it was a city sieved by bombardment.

Trip to the Citadel.

The trip to the citadel was the event of the day. This is a huge pile, with old-time moat and battlements and a great tower dominating the whole country for miles around. Here we were to view Mount Gabriel, Mount Micael, the Biansizza plateau and the whole range of ground which had passed through this upheaval. It was uphill to the citadel. Everything showed the havoc of long continued fire. In one great court there was a pretty little chapel which had come through the ordeal untouched, though all around was a wreck.

Once upon the battlements a commanding view was ahead. There was one point of vantage where this view was particularly good, known as the observation post. We halted a moment, about to enter the post, but others wished to push on to the very front of the wall, and this view prevailed. It was a most fortunate decision, as we soon after had reason to know.

On the battlements a splendid view stretched out for miles over this battleground of mountains, valleys and plains, with the city houses clustered below and the roads winding off through the valleys and foothills. There in front was Mount Gabriel, this side held by the Italians, the other by the Austrians.

"There runs the dividing line," said the escort, pointing to a line of trees and depressions near the summit.

The Italian trenches could be plainly seen, but there was no need of indicating a dividing line, for the bursts of smoke along one side of the summit and the answering bursts from the other side told where the line was. Off to the left was Mount Michael, once swept clean by shell fire, but now green again. Nestled in a hollow was the convent of St. Catarina. The Biansizza plateau was off to the left, and through the mist were the dim outlines of snow-topped Mount Nero, that outpost of the Italian advance.

As we stood surveying this scene there was the steady rumble of guns, with the crack of quick-firers and then the long "whiz" of ever-passing shells. But there was one "whiz" which instantly engaged every attention. We could hear it coming, and it was not going over, nor under, nor at either side. Every one instinctively recoiled, and then—

Crash!

No More Observation Post.

Five of us went down in a heap, stunned as with a hammer blow. There was a great, enveloping noise, with the smash and crack of walls, the flying of fragments, and then the heave of tons of earth, mortar and masonry, plowed up by the huge missile.

It had struck that observation post, just 15 feet away, which we were about to enter. There was no more observation post; it was swept clean. But fortunately the shell had gone straight through, battering down massive walls and digging a deep trench into the earth where it had exploded underground, throwing up great geysers. But while the earth and stone flew like hail, the underground explosion had held the shell fragments. Stunned as we were, the first impulse was of self-preservation. A hasty glance showed no one was seriously injured, though the trickle of blood on the right temple of one of the party told that a flying stone had found a mark.

"They have this range," said the escort as we struggled to our feet, "and one shot means that another will follow."

There was a hasty scramble from the battlement, over the tons of debris thrown up, which now completely blocked the three-foot path skirting the wall.

The shell had suddenly brought to a close our observation of the battle front with all its tragedy and majestic beauty. But worst of all, it put an end to all trips to Goritz, for the officer said no further chances of this kind could be taken. It was just as well, for now the great offensive of the enemy burst unexpectedly, and with it came the retreat from the Goritz line. Fortunately or unfortunately, I had seen it at the last moment when the tide was turning.

Situation Explained.

At the cafe where we went for lunch the officer from headquarters laid out the big military map on the table and explained the military situation. It was this: The enemy was bringing great masses of men to the north of the Biansizza plateau. His design was evident. The Italians by their last advance had swung a ring which was threatening Trieste. To save Trieste the enemy must force the Italians back to the Isonzo river, as another Italian offensive would clear the Carso range and give the Italians the mastery of Trieste. To the enemy the time had come when he must act before the Italians played their final card and held the jewel of the Adriatic.

As we pored over the map the increasing roar of the artillery told that the enemy was losing no time in his part of the military game. The proprietor of the cafe was an intelligent old man, and I asked him if the fire we heard was the same as usual. He shook his head and said: "No, it is very much heavier and it seems as though something was going to happen." This was the instinctive feeling of the people on the spot who had gone through this day after day for months. They felt the blow coming.

On the corner there were two women of the working class talking together under an umbrella, for it was raining hard. Their indifference to the shelling seemed strange, and I stopped to ask them if the bombardment did not frighten them and keep them awake at night.

They were puzzled for a moment, as though not comprehending such an inquiry, and then they shrugged their shoulders.

"We are used to it," they said. "It used to frighten us at first, and the children still cry at night. But what can we do?"

These were typical townswomen who had become habituated to the danger and destruction all around them and were now stopping on the street corner in the rain to exchange the latest gossip. One of the women had the features of an Austrian, and she smiled as she heard the rumble of the Austrian guns and looked off toward the enemy lines so near.

Within three hours when we got back to headquarters the full force of the blow had been struck and the great Austro-German offensive against Italy was in full operation.

Girl Triples Wages.

Denver, Colo.—From $10 per week as a presser in a local dry cleaning establishment to $30 a week as a machinist in a plant that is working on war munitions is the sudden jump of Miss Titlania Bittner, pretty seventeen-year-old Denver girl.

Another instance of the capability of modern women is furnished by two girls of Brooklyn who are operating a meat market and making a success of it.

POILU ON FIFTH AVENUE

Almost everything in the way of war dress can be seen these days in New York, but this Poilu really attracted attention on Fifth avenue because of his steel helmet. His furlough had expired and he was on his way to embark for France and the trenches.

Doctor Royston's Rabbit.

Dr. Barney Royston of Evansville was out hunting near his home, relates the Indianapolis News, and shot a rabbit in the back yard at the home of one of his neighbors. Just as he started to get it, the little daughter of the neighbor ran out and picked it up.

"Wait," Doctor Royston said, "that's my rabbit. I shot it."

"I know, but you shot it in our yard," the child answered. She hesitated a moment and then said:

"Wait, I don't want you to lose anything by it."

She took the rabbit into the house and came out with something in her hand.

"This is yours," she said as she handed Doctor Royston a shell for his gun.

DAIRY

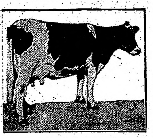
SELECT DAIRY COW BY TYPE

Milk Production and Reproduction Are Essential Functions—Records Are Lacking.

The essential functions of the dairy cow are milk production and reproduction. According to L. W. Wing, Jr., of the Missouri College of Agriculture, the most accurate methods of determining these are:

(1) Milk production by means of the milk scales and the Babcock test; (2) Reproduction by breeding records.

There is only a small proportion of the cows used for dairy purposes on which such records are kept. This necessitates the employment of some other method of selection. In the breeding of high producing animals through several generations it has been observed that there are certain characteristics of the conformation which are correlated with large production. These characteristics are namely: (1) Extreme angular form, carrying no surplus flesh, but in good physical condition. (2) Prominent development of the udder and veins. (3) The symmetrical development of the barrel with large capacity. After one becomes familiar with these external characteristics it is possible to select cows producing 300 pounds of fat per year from those producing 150 pounds. The difficulty comes in picking the animal that will produce 500 pounds of fat per year compared to the one producing 400 pounds.



Champion Dairy Cow.

The selection of animals by this method is rather uncertain. Until records are kept of more animals or some other means devised for selection, the selection by type should be used and it is up to everyone interested in dairy cattle to become familiar with it.

LEGUME HAYS ARE VALUABLE

Utilization of Alfalfa or Clover Partly Solves Dairyman's Problem of Feed.

(By G. E. WEAVER, University Farm, St. Paul, Minn.)

One hundred and seventy-five pounds of good alfalfa or clover hay is worth as much as 100 pounds of the ordinary grain feeds. With the present prices for feeds ranging from $25 a ton for bran to $85 per ton for corn, the average cost for 100 pounds of grain is about $2.75. The cost of its food equivalent in the form of 175 pounds of legume hay is $2.15. This much hay will produce 200 pounds of milk and effect a saving in feed cost of 60 cents, which is at the rate of 30 cents for each hundred pounds.

The utilization of such hay partly solves the dairyman's problem in these days of high feed cost and milk investigations.

HEIFERS OF GOOD BREEDING

No Stock More Profitable as They Consume Less Compared With Growth They Make.

No stock pays better to grow at this time than young heifers of good breeding. They consume less feed compared with valuable growth than almost any other animal and there sure will be a good market awaiting them when they begin to be cows. They should be kept thrifty and doing their best, though—and a very little grain will do this.

TWO COMBINATIONS ARE POOR

Good Cow in Hands of Unintelligent Dairyman Is Most Undesirable Dairy Proposition.

A good cow in the hands of a poor dairyman is a poorer proposition than a poor cow in the hands of a good dairyman. Both are very poor combinations, however; a good dairyman will not keep a poor cow more than one season.

STRONG FENCING FOR STOCK

Where This Improvement Has Been Overlooked There Is Sure to Be Trouble in Herds.

Remember that it takes a good strong fence to hold the cows and calves apart during the long winter months, and where this improvement is lacking there is sure to be trouble for you.

AGRICULTURAL DEPARTMENT

This department of THE ELEVEN TOWNS is devoted to the interests of the agriculturists of Pennington and Marshall Counties. All the articles are by foremost authorities, including U. S. Government experts.

METHODS SHOWN OF PIG RAISING

Work of Boys' Pig Clubs to Be Displayed by Motion Pictures.

TO INCREASE PORK SUPPLY

United States Department of Agriculture Is Organizing Farm Youths in All Parts of Country—45,000 Members Enrolled.

(Prepared by the United States Department of Agriculture.)

Motion pictures, to be shown in picture theaters in all parts of the United States, will show the work of the boys' pig clubs which the United States department of agriculture is organizing in all parts of the country in co-operation with the extension divisions of the state agricultural colleges. The Pig Club film is the second of a series of official films of the department to be released through one of the large motion picture companies which is to distribute them. This educational film will help to increase the pork supply. It shows the method of instructing farm boys, and in some instances girls, who have joined the agricultural clubs; how to raise better pigs, and the methods used by club members in carrying out instructions. The first pig club was organized in Louisiana in 1910. Now approximately 45,000 members are enrolled in the pig clubs throughout the country.

Best Methods to Be Shown.

The first lesson taught in the film story is that it costs no more to feed and care for the pig of carefully selected stock than the scrub, while the results in meat produced is greatly in favor of the well-bred animal. The picture shows further how to feed and care for the pigs, how to protect them from disease, and how to shelter them from the inclemency of winter and the heat of summer. The results of wise selection and intelligent care are shown in the well groomed, fat, healthy porkers wearing the prize ribbons they have won at county and state fairs.

Aid in Increasing Supply.

"The practicability of producing rapid increase in the pork supply and of bringing greatly increased profits to the farmers who produce it are lessons which the bureau of animal industry wishes to call to the attention of all farmers," says an official of that bureau, "and it has been found that education of the farm youths is bringing about valuable indirect education of their elders in the possibilities of more profitable hog lots.

"It has become urgently important, as a war measure, that this country greatly increase its production of foodstuffs, especially of meats and fats. They are needed for our people at home, for our armies abroad, and for the armies and people of the entente nations. While the department of agriculture is working hard to increase our supply of beef, effective increases in the number of the country's cattle is necessarily slow, while much more rapid results can be obtained in the production of pork, as well as mutton."

PIG CLUB MEMBERS EXHIBITING PRIZE HOGS.

COW BETTER WITHOUT HORNS

Danger of Animals Hooking Each Other Is Eliminated—Apply Caustic Potash on Calf.

(Prepared by the United States Department of Agriculture.)

In the average dairy it is better that cows be without horns, as the danger of their hooking one another is thus prevented. Only in purebred herds, where the appearance of the herd is considered important from a show or sale point of view, is there any justification for allowing horns to grow. It is much easier to prevent the growth of horns than to remove them.

The points that ultimately will develop into horns can be felt as small buttons imbedded in the skin. The prevention is most effective if the treatment is applied when the buttons are just large enough to be felt, which is usually the third and the seventh days. To prevent their development, the hair should be removed from the horn buttons; a stick of caustic potash or soda, wrapped in paper to protect the hands of the operator, is then moistened with water and rubbed on each horn button two or three times, allowing the caustic to dry after each application. Care should be taken to apply the caustic, which should not be too moist, to the buttons only, for if it touches the surrounding skin it will cause unnecessary pain. Immediately after the application the calf also should be protected from rain, in order to prevent the caustic from spreading. If the operation is carefully performed the horns will make no growth. If scurs or horn growths appear, it is an indication that the caustic was not properly applied.

FATTEN ALL MARKET FOWLS

This Should Be Done Before They Leave Farm for Added Weight and More Profit.

Fatten all chickens that are to be marketed before they leave the farm or poultry yard. This can be done by confining the birds for a week or ten days and feeding them a good fattening ration. They will be marketed in better condition and their added weight will bring additional profit.

POTATOES SOLD BY WEIGHT

Announcement Made by Food Administration to Prevent Confusion in Making Comparisons.

Potatoes are now sold at wholesale on the hundredweight basis, not by the bushel as formerly. The United States food administration makes this announcement so that persons comparing current prices will not confuse them with quotations referring to bushel measure.

Paradoxical Pullet.

Paradoxical as it may seem it is the early laying pullet that is also the late laying bird.

Millet Is Injurious.

Millet is injurious as an exclusive ration for horses.

Benefit of Bulletin Board.

Have you a bulletin board at your front gate? By judicious advertising you can sell a lot of surplus stuff direct to the consumer.

Proper Growth of Gilt.

The brood sow, if a gilt, should be as growthy as possible, medium to good in condition, but not fat.

Storing Cabbage.

Cabbage may be wrapped in paper and placed on shelves or hung from the top of a root cellar.

Water in Cold Weather.

Give clean, warm water three times a day in cold weather for a large part of the hen's body, as well as a large part of her eggs, is water.

Ten Good Hens Best.

It is not always the largest flock that makes the most profit; for ten good hens will often pay while twenty poor ones will net the owner a loss.

Range Essential for Turkeys.

Plenty of range is essential to success in turkey raising.

ROAD BUILDING

SAFETY FACTOR IN CONCRETE

Aid Traveler at Night to Keep Road and Glaring Reflections of Surface Are Missing.

Any hard road is good, any permanent type—concrete, brick, asphaltum—is better. Each individual advocate has his own favorable argument, so the concrete man says, with a good deal of truth, that "not only do concrete roads harmonize with natural surroundings, and blend with objects in the landscape, but their light-colored surfaces aid the traveler at night to keep to the road. Since the top of a concrete pavement presents a sandy and gritty surface, there are no glaring reflections of sunlight nor mirror-like effects, as are found with many other types of surfaces when worn smooth or when wet.

"Dark-colored roads, merging into the grass and foliage at the roadside at night, are indistinct, and there is a likelihood of accidents at curves, whereas the light-colored surface is distinct from the sides of the road. Under motor traffic the concrete roadway offers an element of safety, as no matter how dark the night the clean, firm, light, nonskid surface is clearly defined to view."

ROAD DRAG MADE EFFECTIVE

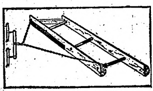
Directions Given for Constructing Implement Weighing About 200 Pounds for Dirt Road.

In response to a query as to the construction of a cheap, but effective road drag the following directions are given:

Take two planks each ten feet long, two inches thick and twelve inches wide, rounding both ends of one edge in a manner similar to the runners in a sled. The two planks are then placed on edge and connected on the top by two planks six feet long, thus making a sled ten feet long and six feet wide.

The two runners are again connected by two planks two inches thick and twelve inches wide. These planks are set on edge, the same as the runners, and at an angle of about 45 degrees to the runners, as follows:

On the right side of the drag start the diagonal plank 12 inches back of the front, and connect with the opposite runner (which will be the left side), 5 feet back of the front runner; then have another plank of the same dimensions exactly 4 feet back of the front diagonal plank. Be sure to make an opening in the runners on the left side, immediately in front of each diagonal plank, the opening to be about 5 inches high and 24 inches long. In order to make the drag solid and well braced run a 2 by 12 inch plank diagonally across the top, opposite the planks which serve as a drag.



Efficient Road Drag.

Have an iron shoe about one-quarter inch thick and 3 inches wide on the front of the two dragging planks, the bottom of the iron shoe to be one-half inch below the runner on the right side and exactly even with the runner on the left side.

Large holes should be bored in front ends of the runners in which to attach the rope or chain to pull the drag. It is well to hitch the horses as close as possible. The total weight of the drag, under these specifications, is about 200 pounds and an ordinary team can pull it on a dirt road, with a heavy man on, with less effort than any other drag of the same dimensions on the market and it will be found that this road leveler will do far better work than a split-log or metal drag.

PLAN COAST-MIDLAND TRAIL

Promoters Propose Route From San Francisco to Washington, Via Denver to St. Louis.

The Midland trail, a highway to extend from San Francisco to Washington, D. C., is the latest piece of modern roadway to cross the continent.

Officials of the executive committee named by the promoters have circulated a communication, with a map, showing the states, cities and towns that will be traversed by the new road. Leaving San Francisco, it will come to Salt Lake City, St. Louis, Louisville, Lexington, Winchester, Ashland, Huntington, Charleston, Richmond and on to Washington.

Peach-Tree Borer.

The peach-tree borer is a most destructive insect when allowed to increase for a few years without molestation.

Like Buttermilk Best.

After a calf learns to drink buttermilk it does not care for the sweet milk.

Plenty of Mite Powder.

Don't let your supply of insect powder run short. Use it regularly and liberally.

JOB PRINTING We can do the finest class of printing, and we can do that class just a little cheaper than the other fellow. Wedding invitations, letter heads, bill heads, sale bills, statements, dodgers, cards, etc., all receive the same careful treatment—just a little better than seems necessary. Prompt delivery always.

Let Us Be Your Waiter

We never tire of helping others when they ask for good job printing. We can tickle the most exacting typographic appetite. People who have partaken of our excellent service come back for a second serving. Our prices are the most reasonable, too, and you can always depend on us giving your orders the most prompt and careful attention. Call at this office and look over our samples.

DOCTOR URGED AN OPERATION

Instead I took Lydia E. Pinkham's Vegetable Compound and Was Cured.

Baltimore, Md.—"Nearly four years I suffered from organic troubles, nervousness and headaches and every month would have to stay in bed most of the time. Treatments would relieve me for a time but my doctor was always urging me to have an operation. My sister asked me to try Lydia E. Pinkham's Vegetable Compound before consenting to an operation. I took five bottles of it and it has completely cured me and my work is a pleasure. I tell all my friends who have any trouble of this kind what Lydia E. Pinkham's Vegetable Compound has done for me."—NELLIE B. BRITTINGHAM, 609 Calverton Rd., Baltimore, Md.

It is only natural for any woman to dread the thought of an operation. So many women have been restored to health by this famous remedy, Lydia E. Pinkham's Vegetable Compound, after an operation has been advised that it will pay any woman who suffers from such ailments to consider trying it before submitting to such a trying ordeal.

His Choice.

"Is he making any special claim for exemption?"

"No. Says he'd rather die in battle than live the rest of his life as a liar."

BOSCHEE'S GERMAN SYRUP

will quiet your cough, soothe the inflammation of a sore throat and lungs, stop irritation in the bronchial tubes, insuring a good night's rest, free from coughing and with easy expectoration in the morning. Made and sold in America for fifty-two years. A wonderful prescription, assisting Nature in building up your general health and throwing off the disease. Especially useful in lung trouble, asthma, croup, bronchitis, etc. For sale in all civilized countries.—Adv.

Edited.

The romantic maiden made the following ecstatic entry in her diary:

"Although he has known me only two days, he loves me!"

Nothing could exceed her anger and mortification when she discovered, much later, that her kid brother had been reading her sacred little book. She knew it, because he had scratched out the word "although" and substituted "because."

Colds Cause Headache and Grip
LAXATIVE BROMO QUININE Tablets remove the cause. There is only one "Bromo Quinine." E. W. GROVE'S signature on box. 30c.

The Era of Censorship.

"A little knowledge is a dangerous thing," exclaimed the man who quotes.

"Possibly," replied Senator Sorghum. "A great deal just now depends on how you got your information and what you intend to do with it."

Watch Your Skin Improve.

On rising and retiring gently smear the face with Cuticura Ointment. Wash off Ointment in five minutes with Cuticura Soap and hot water. For free sample address "Cuticura, Dept. X, Boston." At druggists and by mail. Soap 25, Ointment 25 and 50.—Adv.

Keep Busy.

Had Kidney Trouble From Childhood and Was Discouraged. Doan's, However, Brought Health and Strength.

Mrs. C. Anderson, 4104 W. 22nd St., Chicago, Ill., says: "I had kidney trouble from childhood and three years ago a severe spell developed. If I stooped, a terrible pain took me in the small of my back, and for several minutes I couldn't straighten. Often at night the pain in my back was so bad I had to prop myself up with a pillow. It seemed as if my back would break. Watery sacs formed under my eyes and my feet were so swollen I had to wear slippers. Sudden dizzy spells came on and pains in my head drove me almost frantic.

Mrs. Anderson

"I felt tired and weak and had hardly enough ambition to move. Nothing seemed to help me and I was discouraged until I commenced taking *Doan's Kidney Pills.* They cured me completely and my health has been of the best ever since. *Doan's* surely deserves my endorsement." *Sworn to before me,*
FRANK H. POCH, *Notary Public.*

PISO'S

WILSON URGES GREATER CROPS

Address By President, Read at Urbana, Asks Supreme Effort By Farmers.

MARK MUST PASS 1917

Crisis Has Come, Says Executive, and War Will End This Year, but Farmers Must Make Record Production.

Washington, Feb. 1.—"The achievements of this year, on one side or the other, must determine the issue. The culminating crisis of the struggle has come."

Thus President Wilson warned the farmers of the country. The message was delivered by President James of the University of Illinois in the absence of Secretary of Agriculture D. F. Houston, who was to have represented the president at the farmers conference at Urbana. The president had expected to attend, but indisposition made it impossible and he delegated Mr. Houston, who was prevented from participating by the railroad tieup. The president's message said:

"I am sorry indeed that I cannot be present in person at the Urbana conference. I should like to enjoy the benefit of the inspiration and exchange of counsel which I know I should obtain but in the circumstances it has seemed impossible for me to be present and therefore I only can send you a very earnest message expressing my interest and the thoughts which such a conference must bring prominently into every mind.

Facing Great Task.

"I need not tell you for I am sure you realize as keenly as I do that we are as a nation in the presence of a great task which demands supreme sacrifice and endeavor of everyone of us. We can give evrything that is needed with the greater willingness and even satisfaction because the object of the war in which we are engaged is the greatest that free men have ever undertaken.

War Cause Is Righteous.

"You will not need to be convinced that it was necessary for us as a free people to take part in the war. It had raised its evil hand against us. The rulers of Germany had sought to exercise their power in such a way as to shut off our economic life so far as our intercourse with Europe was concerned and to confine our people within the Western hemisphere while they accomplished purposes which would have permanently impaired and impeded every process of our national life and have put the fortunes of America at the mercy of the imperial government of Germany.

Whole Future at Stake.

"We are fighting, therefore, as truly for the liberty and self-government of the United States as if the war of our own revolution had to be fought over again, and every man in every business in the United States must know by this time that his whole future fortune lies in the balance. Our national life and our whole economic development will pass under the sinister influence of foreign control if we do not win. We must win, therefore, and we shall yin. I need not aesk you to pledge your lives and fortunes with those of the rest of the nation to the accomplishment of that great war.

This Year Will Decide War.

"You will realize as I think statesmen on both sides of the water realize, that the culminating crisis of the struggle has come and that the achievements of this year on the one side or the other must determine the issue. It has turned out that the forces that fight for freedom of men over the world as well as our own depend upon us in an extraordinary and unexpected degree for sustenance for the supply of the materials by which men are to live and to fight and it will be our glory when the war is over that we have supplied those materials and supplied them abundantly and it will be all the more glory because in supplying them we have made our supreme effort and sacrifice.

Farmers Paramount Factors.

"In the field of agriculture we have agencies and instrumentalities, fortunately, such as no other government in the world can show. The department of agriculture is undoubtedly the greatest practical and scienific agricultural organization in the world. The banking legislation of the last two or three years has given the farmers access to the great lendable capital of the country and it has become the duty both of the men in charge of the federal reserve banking system and of the farm loan banking system to see to it that the farmers obtain the credit, both short term and long term, to which they are entitled not only, but which it is imperatively necessary should be extended to them if the present tasks of the country are to be adequately performed. Both direct purchase of nitrates and by the establishment of plants to produce nitrates the government is doing its utmost to assist in the problem of fertilization.

Giving Farmers Every Aid.

"The department of agriculture and other agencies are actively assisting the farmers to locate, safeguard and secure at cost an adequate supply of sound seed. The department has $2,500,000 available for this purpose now and has asked the congress for $6,000,000 more.

"The labor problem is one of great difficulty and some of the best agencies of the nation are addressing themselves to the task of solving it, so far as it is possible. Farmers have not been exempted from the draft. I know they would not wish to be. I take it for granted they would not wish to be put in a class by themselves in this respect. But the attention of the war department has been very seriously centered upon the task of interfering with the labor of the farms as little as possible, and under the new draft regulations I believe farmers of the country will find their supply of labor is much less seriously drawn upon than it was under the first and initial draft, made before we had our present full experience in these perplexing matters.

Americans Best Producers.

"And let me say that the stimulation of the agencies I have enumerated has been responded to by the farmers in splendid fashion. I dare say you know the farmers of the country are as efficient as any in the world. They do not produce more per acre than the farmers of Europe. It is not necessary. It would perhaps be bad economy. But they prodcce three or four times more per man, per unit of labor and capital, than the farmers of any European country. They are more alert and use more labor saving services. And their response to the demands of the present emergency has been remarkable. Last spring their planting exceeded by 12,000,000 acres the largest planting of any previous year. The crops were record breaking yields. Last fall a wheat acreage of 42,170,000 was planted, which was 1,000,000 larger than for any preceding year, 3,000,000 greater than the next largest, and 7,000,000 greater than the preding five year average.

Must Outdo 1917 Records.

"But it is not only necesary that these achievements should be repeated, but that they should be exceeded. I know what it involves. It involves not only labor but sacrifice, the painstaking application of every bit of scientific knowledge and every tested practice available. It means utmost economy, even where the pinch comes. It means the kind of concentration and self-sacrifice which is involved in the field of battle itself, where the object always looks greater than the individual. And yet the government will help, and help in every way possible.

Farmers Are Protected.

"The impression that while the government has sought to fix prices of foodstuffs, it has not sought to fix other prices which determine the expenses of the farmer is a mistaken one. The government has actively and successfully regulated prices of many fundamental materials underlying all the industries of the country and has regulated them not only for purchase of the government but also for the purchase of the general public, and I have every reason to believe the congress will extend the powers of the government in this even essential matter, so that profiteering which is showing itself in too many quarters may be effectively checked. In fixing prices of foodstuffs the government has sincerely tried to keep the interests of the farmer as much in mind as the interests of the communities which are to be served, but it is serving mankind as well as the farmer and everything in these times of war takes on the rigid aspect of duty.

Farmers Are Not Slackers.

"I will not appeal to you to continue and renew and increase your efforts. I do not believe that necessary. I believe you will do it without appeal from me, because you understand as well as I the needs and opportunities of this great hour when the fortunes of mankind everywhere seem about to be determined and when America has the greatest opportunity she has ever had to make good her own freedom and in making it good to lend a helping hand to men struggling for their freedom everywhere. You remember that it was farmers from whom came the first shots at Lexington, that set aflame the revolution that made America free.

"I hope and believe that the farmers of America will willingly and conspicuously stand by to win this war also. The toil, their intelligence, the energy, the foresight, the self-sacrifice and devotion of the farmers of America will, I believe, bring to a triumphant conclusion this great last war for the emancipation of men from the control of arbitrary government and the selfishness of class legislation and control, and then, when the end has come, we may look each other in the face and be glad that we are Americans, and have had the privilege to play such a part."

"SOCIAL REVOLT IN EUROPE"

Bolsheviki Prepares to Support "Coming Upheaval."

Petrograd, Feb. 1.—An official statement issued by the bolsheviki government says that the "New workmen's and peasants' red army will serve to support the coming social revolution in Europe."

"A hard fight for peace remains," said the government telegraph bureau.

"Peace probably will not be concluded in the Casino at Brest-Litovsk, but in the streets of Vienna and Berlin—if the Russian revolution does not betray the principles under which it was born, and refuses to compromise with the Hohenzollerns and Hapsburgs."

Seeks Fact of Teuton Uprising.

Washington, Feb. 1.—The most important events in the history of the war are believed impending in the Teuton empires. Withholding official comment on reports of great strikes in Germany and Austria, uprisings against the government in Austria-Hungary, revolt of the Czechs and Socialists in the Austrian army and destruction of vast quantities of war supplies in both countries, the State department is utilizing every source to learn the truth.

Rations Cost Boosted By War.

Washington, Feb. 1.—Increases in living costs have sent army and navy substistence bills soaring. The bureau of labor statistics has made public a comparison of prices pair for feeding soldiers and sailors showing that the army ration costs 33.25 cents daily, or $121.36 annually while the navy ration costs 43.81 cents daily and $159.91 annually. The daily army ration was 27.99 in 1916 and the annual ration was $102.17. The navy ration in 1916 was 37.65 cents daily.

News of the State

Condensed for Busy Folks

Bemidji. — Henry Funkley spoke here to a number of working men in the city hall on the subject of loyalty.

Glyndon.—For the purpose of organizing a Clay county poultry association a meeting of bird fanciers has been called, to be held here.

St. Paul.—Littlefork, with a population of 104 when every man, woman and child is at home, is doing its bit in the war in various ways and now wants a Home Guard.

Wells.—Prompt work by experts in hog diseases has checked an outbreak of cholera on a farm near this village. It is believed any spread of the malady has been prevented.

Virginia.—Range officers are trying to find Roland Sjodine on request of his brother, Ed. O. Sjodine of Brainerd, who says the man is registered under the draft and must report at once or be classed as a deserter.

Duluth.—C. H. Lawrence, 55 years old, was burned to death when a fire of unknown origin destroyed his home. The building was located three miles from Meadowlands, and rescue was delayed because of distance from neighbors.

Nelson.—A Great Northern passenger train crashed into a rural school bus here, killing two of the occupants and injuring 16 others. The engine caught the rear end of the vehicle, throwing it into the air. Elsie Erickson and Edna Seeley, each 12 years old, were killed.

Moose Lake.—Northern Pacific train No. 63, northbound, hit a school bus in which 20 children were riding, at this place, killing seven. Some of the children, terrified by the accident, fled from the wrecked bus. The train was derailed, but none of the passengers or the train crew injured.

Blue Earth.—Dedication of a new $40,000 consolidated school at Huntley, in this county, took place this week. C. G. Schulz, state superintendent of education, delivered the principal address. Other speakers were Dr. J. A. Hancock of the Mankato state normal school, and J. B. Arp, superintendent of the Jackson county schools.

Red Wing.—Bradford Grow of this city has been named as principal for entrance to West Point by Congressman C. R. Davis. He will take the examination in Minneapolis on February 19. Grow graduated from the Red Wing high school in 1917 and has been attending Carleton college at Northfield since September.

St. Paul.—Gross earnings of the Northwestern Telephone Exchange company in Minnesota for 1917 totaled $5,558,307, against the 1916 total of $4,611,615, a gain of nearly $950,000, according to the state tax commission, where the 3 per cent tax of $166,749 will be certified, subject to recheck. The tax in 1916 was $138,348.

Blue Earth.—The annual report of the Blue Earth Co-operative creamery shows this institution to be the largest co-operative managed butter factory in Southern Minnesota. During the year just closed a total of $111,386.22 has been paid to patrons in cash and $31,307.34 in butter. Butter manufactured totaled 331,291 pounds.

St. Paul.—The state began February business with $5,889,018 in its treasury, nearly double the balance on hand a year ago. The increase is due to the fact that 1917 state aid to schools, usually distributed in October, is in the treasury, having been tied up by litigation. School funds will be disbursed in March, State Treasurer Henry Rines said.

Duluth.—After being arrested and sentenced to prison terms six different times, each time successfully escaping from jail or punishment, Harry Hatch, also known as George Harrison, has been taken to the state prison at Stillwater for a term not to exceed five years, convicted on a charge of swindling. He had a penny matching scheme which netted him good returns.

Winnebago.—Often referred to as the Nestor of the Minnesota bar, Andrew C. Dunn, long active in Gopher politics and one of the pioneer lawyers and citizens of the state, is dead here, aged 84. Mr. Dunn was born in New York city. He came to Minnesota in 1854 and for a time practiced law in St. Paul. He was admitted to the bar of the territorial supreme court while in St. Paul.

St. Paul.—Public improvements in Minnesota meaning increased expense and higher taxation are not to be undertaken during the war, if recommedations of the Minnesota Public Safety commission are followed. The commission also took final action recommending to the state superintendent of banks that no new bank charters be issued during the war. No order is made on either subject, but the commission issued a statement explaining its reasons for discouraging new public enterprises and new banks.

St. Peter.—Walden Koenen of Le Sueur county won the first prize of $25 in the boys' corn growing contest here, having raised 71.7 bushels of corn to the acre. During the past five years prizes have been offered for the boys raising the largest number of bushels of corn on an acre. The average during that time has been 64.3 bushels.

Glencoe.—The funeral of Thomas M. Paine, cashier of the First National bank of Glencoe, was held here. Mr. Paine was once a member of the Republican state central committee and active in politics.

John Coates has disposed of his 500-acre farm bordering on the eastern limits of this city, the new owner being Joseph J. Hicks. The consideration is $40,000.

St. Cloud.—City Treasurer George Magnuson and City Assessor L. R. Swift will represent St. Cloud at the Minnesota tax conference in St. Paul February 27 and 28.

St. Cloud.—Leslie Smith, local stockman, has left again for Scotland, making his third trip to that island for the purpose of buying cattle during the progress of the war.

Crookston. — Attorney James H. Maybury, who was reported several days ago to be seriously ill at St. Joseph's hospital, is still in a critical condition, according to reports.

International Falls. — The Nord & Snyder caterpillar tractor has arrived and will soon be hauling the timber cut on the Snyder 80 south of town. The caterpillar is a 75-horsepower machine.

Crookston. — The Commercial club has arranged with a number of the ladies interested in Red Cross work to furnish and serve the next regular supper for the club. The proceeds of the supper will be for the benefit of the Red Cross.

Pine Island.—Fifty-nine men, out of work Monday because of the fuel orders, attacked a tract of wooded land and cut 11 cords of wood and 19 loads of pole wood. This was sold for $112, half of the amount going to the Red Cross and half to the Y. M. C. A. war fund.

Winona. — On a federal warrant charging the use of the mails in promoting a fraudulent mail scheme, Earl Scott, president of the American Realty Investment company, was arrested here, taken to St. Paul and arraigned before Court Commissioner Samuel Whaley. He was released to arrange for bonds.

International Falls.—A young man named Ward, whose parents live here, disappeared, causing his relatives much worry. He has been working for James Ewalt, a dairyman, residing south of the county farm. He visited in town one day recently and in the evening started for the Ewalt residence. He has failed to reach there.

Wells.—Superintendent C. E. Young of the Wells schools has completed arrangements with Dr. A. D. Wilson, state food administrator, for a "conservation day" in this village Feb. 28. There will be two meetings at the high school. Conservation will be presented by experts who have been observing conditions in England and France.

Hibbing. — December and January were the coldest two months here in years, judging from figures prepared by the Mahoning Ore & Steel company. Twenty-five days out of 31 in January showed a temperature below zero. In December 20 days out of the 31 were below zero. The lowest mark reached in the two months was on December 28, 40½ degs. below zero.

St. Paul.—Oscar Arneson, state superintendent of timber, has returned from the Mesaba range, where he organized wood-for-fuel movements, says that permits for the removal of more than 50,000 cords of fuel wood from state-owned lands near villages on the iron range were issued by him. The work will be done by miners, who plan to use the land for gardening next spring.

St. Paul.—Left at home alone, a three-year-old boy burned to death in a fire which destroyed the dwelling on the farm of J. L. Adrien, in St. Francis township, Anoka county, says a report received at the office of George H. Nettleton, assistant state fire marshal. The overheating of a cook stove is blamed for the fire. The house and contents, partially insured, were destroyed.

Glencoe. — The order of Sheriff Frank Klaus of McLeod county that the Nonpartisan league meeting called there could not be held, was carried out without any disturbance, although 150 farmers, mostly from the section south of here, were in town, and two Nonpartisan league speakers, Leon Durocher and C. J. Townley, a brother of C. A. Townley, president of the league, were here for the meeting.

Deerwood.—The National Nonpartisan league meeting, at which two organizers, Ben L. Wilson and John L. Berg, were to have talked, was turned into a rousing loyalty meeting, addressed by Jerry D. Bacon of Grand Forks, R. N. Wise, chairman of the Crow Wing County Public Safety commission; Rev. H. G. Stacey, Brainerd Episcopal minister; County Attorney S. F. Alderman and Sheriff Theorin.

St. Paul.—Representative C. B. Miller of Duluth, who visited the war zone in France early in the winter, is coming to Minnesota for another speaking tour under the auspices of the America First association. He will make the tour from February 15 to February 22, speaking February 15 at Faribault and February 16 at Mankato. He will be at Clarkfield and Granite Falls February 18; at Red Wing February 20; at Wabasha February 21 and at Winona February 22.

Little Falls.—At a meeting of the Retail Merchants' association held in the city hall the matter of taking up the initiative in regard to the board of commerce was voted down. The merchants feel that at the present time they are not willing to go ahead with the new organization.

Fergus Falls.—Deputy Sheriff Slatten has returned from Spokane, Wash., bringing Dr. H. J. Stern, who, it is alleged, collected over $100 in this city to hire Indian John to search for the body of his brother-in-law, Ted Johnson, and then ran away with the money.

Costs Less and Kills

The Softest.

"Why is it," queried the fair widow, "that they always say a man 'pines' for a woman?"

"I suppose," growled the fussy bachelor, "it's because pine is about the softest wood there is."

OLD PRESCRIPTION FOR WEAK KIDNEYS

Have you ever stopped to reason why it is that so many products that are extensively advertised, all at once drop out of sight and are soon forgotten? The reason is plain—the article did not fulfil the promises of the manufacturer. This applies more particularly to a medicine. A medicinal preparation that has real curative value almost sells itself, as like an endless chain system the remedy is recommended by those who have been benefited, to those who are in need of it.

A prominent druggist says, "Take for example Dr. Kilmer's Swamp-Root, a preparation I have sold for many years and never hesitate to recommend, for in almost every case it shows excellent results, as many of my customers testify. No other kidney remedy that I know of has so large a sale."

According to sworn statements and verified testimony of thousands who have used the preparation, the success of Dr. Kilmer's Swamp-Root is due to the fact that, so many people claim, it fulfils almost every wish in overcoming kidney, liver and bladder ailments, corrects urinary troubles and neutralizes the uric acid which causes rheumatism.

You may receive a sample bottle of Swamp-Root by Parcel Post. Address Dr. Kilmer & Co., Binghamton, N. Y., and enclose ten cents; also mention this paper. Large and medium size bottles for sale at all drug stores.—Adv.

Inadvertent Boasting.

"Do you believe in heredity?"

"Of course I do," replied the gentle egotist. "Why, I've got one of the brightest boys you ever saw."

Dr. Pierce's Pellets are best for liver, bowels and stomach. One little Pellet for a laxative, three for a cathartic. Ad.

Quite So.

"These are the bridal apartments."

"Oh, what a suite thing!"—Baltimore American.

W. N. U., Minneapolis, No. 6--1918.

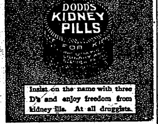
Says Dodd's Kidney Pills, Wonderful Remedy

Mrs. Della Olson, of New London, Wis., like many others, knows after experiencing the use of Dodd's Kidney Pills that they are unexcelled. Here is what Mrs. Olson recently wrote us:

"I suffered with rheumatism for years. There was a gravel deposit in the uride and I had frequent headaches. I had dark circles around my eyes and was always tired. I bought a box of your Dodd's Kidney Pills and am glad I did, for I secured quick relief and think they are a wonderful remedy."

Mighty few people realize in time that kidney trouble is making its advances upon their health. They put off treatment—they say, "Oh, I'll be all right in a day or two." And the malady tightens its grip. Result: Bright's Disease, hospital treatment, doctors' bills—often death.

When you have backache, dizziness, pain in loins, stiffness in stooping or lifting, spots before the eyes, sediment in secretions, rheumatic pains, or swollen joints, immediately start toning the kidneys by the regular use of the remedy endorsed by hundreds of users—DODD'S Kidney Pills.



Insist on the name with three D's and enjoy freedom from kidney ills. At all druggists.

DENTIST'S IDEA OF HUMOR

Seems Mean to Invite a Man to Lunch and Then Fix Him So He Can't Eat.

It was noon when we dropped into the dentist's office. The doctor greeted us cordially as we fell into his chair and prepared to submit ourselves to torture.

There was the usual clatter of instruments on the white tray as we opened our jaws and the dentist peered into them. This time his object of attention was the cavity from which he had recently extracted a tooth.

"What are you going to do after I get through?" said the doctor mildly.

Between his fist and his mirror we blurted out something about lunch.

"Go to lunch with me, will you?"

We nodded our assent and then it happened. Something that felt as big as a crowbar is and was as sharp as a new safety razor blade is supposed to be went up into the roof of our mouth. When we landed down again on the chair and the pain had eased off a trifle we started to laugh.

"You're good," we exclaimed. "Invite a man to lunch, and then fix him so he can't eat."—Detroit Free Press.

Wouldn't Keep Sugar He Found.

Washington has another honest man. He's Edward B. Maddox, who, after suffering for the last two months from the sugar famine, turned 346 pounds of the "precious stuff" over to the Washington police. He had found a barrel of granulated sugar near the substation of the Potomac Electric company. Evidently the barrel had been dropped by a truck. Maddox has been able to get less than two pounds of brown sugar a week, he said. The amount of sugar he found, on the war basis, would have lasted him four years. He was not regretful, however, that he had turned the sugar over to the police to find its rightful owner.—Washington Times.

Physicians' Deaths.

As an example of how malicious and seemingly innocent is German propaganda in the United States may be cited the rumors and the actual facts about mortality among the allied physicians at the western front.

Recently the actual statistics were produced, which showed that the battle risks of a physician are scarcely more than those of civil life. Between the beginning of the war and June 25, 1917, only 195 French and English doctors have been killed, 707 wounded and 62 cut down by disease.

Unlike other cereals Grape-Nuts requires only about half the ordinary quantity of milk or cream. Likewise because of its natural sweetness it requires no sugar. Grape-Nuts the ready cooked food, is an all-round saver.

"There's a Reason"

NEW USES FOUND FOR AUTOMOBILE

Adaptation to War's Needs Brings Changes in Industry.

RAILROADS TO BE ASSISTED

Motor Car Fits in for Direct Purpose of War to Greater Extent Than We Have Yet Discovered—Business to Expand.

Commenting on the use of the automobile in war times, the president of a large tire and rubber concern says:

"The government at Washington is doing some things that startle us because we do not have a proper understanding of what its program is. Much has been said about stopping the automobiles. This is all nonsense. The government is going to lay its heavy hand on the nonessential industries, but the rubber business and the automobile business are not in that class. They are essential industries.

Motors Wanted for War.

"Just because in England and France the use of automobiles had to be checked it does not follow that we have parallel conditions here. You must remember that in England and France they are dealing not with 29-cent gasoline, but with $1 and $1.25 gasoline, and that over there the man power is exhausted, almost to the last man. They have to get every man available, even from the essential industries, on the battle front. They want the automobiles to run for government purposes. When I was there in 1915, they were already 'booing' civilian automobiles along the streets of London.

Commercial Business to Expand.

"But we are not going to get to that point in this country. Here we have a tremendous area, and a great amount of transportation is necessary. The railroads cannot carry it. The automobile fits in for the direct purpose of the war to a greater extent than we have yet discovered. The commercial end of the business will expand tremendously. More commercial cars will be made than we have ever dreamed of. The joy riders will be clipped off, but that does not mean that the man who takes his family out for a ride on Sunday or holiday to get a readjustment from the tension of the week will be criticized.

Tire Industry Essential.

"On the contrary, it is the rational things that ought to be done. The line of demarcation can never be drawn very clearly, but it will not be drawn so arbitrarily that a man will be criticized for taking his family out for a ride, as is the case in England. A great many of the cars now running will take off their touring bodies, and put on other bodies to work economically for war purposes. Tires will be used right along, more and more every year, no matter what happens. The tire industry is essential and it is going on, notwithstanding the production of automobiles may be cut. We are going to find that we must work more as a whole, for the one thing, the plan of the government."

MISFIRING AT SLOW SPEEDS

Common Cause of Complaint With Usual Carburetor System—Go Over Ignition Carefully.

Poor engine operation at low car speeds is a common complaint with the usual carburetor system. Often an air leak throws out the carburetor adjustment so that an insufficient amount of fuel is fed. Wide plug gaps with a magneto with weak magnets is a combination which may give this trouble. With a battery system in use the ignition may be neglected at first and the carburetion attended to, but this done the ignition should be gone over carefully.—Motor.

IMPROMPTU TOLL ROAD PAYS

Kind-Hearted Farmer Allowed Motorists to Pass Through Uncultivated Field for Small Sum.

A motorist bound along the road from Detroit to Toledo, one of the worst to be found in many states, reports that he encountered one 200-yard stretch where, because the grade was high, there was no way to turn off from the paving. "A kind-hearted farmer," he told the Ohio Motorist, "stood at the gate of his barnyard and for the sum of 25 cents allowed each motorist to pass through the gate, over an uncultivated field for about 200 yards, and onto the road again."

RAIN WATER FOR BATTERIES

Hard Liquid, Containing Minerals Is Harmful—Remove Caps at Top of the Battery.

"Hard water, containing minerals, is harmful to the battery," says F. J. Stone, manager of a Boston concern.

"Water that is pure as drinking water is not necessarily pure water for your battery. Distilled water or clear rain water is the best.

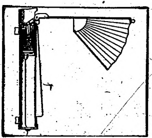
"Removing the caps at the top of the battery, water should be added until it stands well above the plates, though not to the top of the containers."

SIGNALS CHANGE OF COURSE

Invention of Texan Provides Efficient Contrivance Easily Applied to Automobiles.

The Scientific American in illustrating and describing a vehicle signal, invented by G. W. Edmond of El Paso, Tex., says:

The invention relates to signaling devices particularly suitable for use on automobiles to indicate a change of course. The object is to provide an inexpensive and efficient, contrivance which can be easily applied to an automobile so as to become prominent when actuated to attract attention, and for this purpose when thrown into the operative position a folding flag is attached near the free end of the arm, the flag unfolds automatically, to render the arm apparent in the dark, an incandescent light is provided at the extremity of the arm.



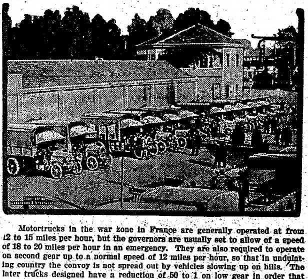
Vehicle Signal.

NOVEL HEADLIGHT FOR AUTOS

Connecticut Man Has New Patent Design to Furnish Illumination Without Glare.

M. N. Finklestein of Greenwich, Conn., has just patented a new headlight for automobiles, designed to furnish a maximum amount of illumination on the highway and to do away with the dangerous glare. The direct rays are shielded in such a way as to cover the ground and light it up thoroughly, without precipitating the light to a distance.

ALLIED RE-ENFORCEMENTS ARRIVE IN ITALY TO HOLD BACK INVADING ARMY



Motortrucks in the war zone in France are generally operated at from 12 to 15 miles per hour, but the governors are usually set to allow of a speed of 18 to 20 miles per hour in an emergency. They are also required to operate on second gear up to a normal speed of 12 miles per hour, so that in undulating country the convoy is not spread out by vehicles slowing up on hills. The later trucks designed have a reduction of 50 to 1 on low gear in order that they will maneuver on low reverse under bad road conditions without it being necessary to race the engine in starting. It is found in practice that even the axles do not suffer so much from this extreme reduction as by racing the engine and letting the clutch in as is necessary with some older type trucks sent from America.

The allies rushed re-enforcements to Italy to help stop the Austro-German advance when it was at its height, and these re-enforcements have been a great aid to the Italians. The photograph shows one of the first batches of French autos as they arrived in Milan. The autos are used as transport trucks.

DADDY'S EVENING FAIRY TALE

By MARY GRAHAM BONNER

SECRETARY BIRDS.

"Come, come," said the secretary bird whose name was Jim, and the one named Joe, answered,

"I am coming."

Now the reason the secretary birds are given such a strange family name is because their long cockades of feathers which drop back from either side of their heads and which are black, are supposed to be like quill pens. In olden times and sometimes nowadays, quill pens are used for writing letters. They are supposed to look like a clerk or secretary who uses these pens in writing. And so these birds, having similar quills, have been named the secretary birds.

"Are you ready?" asked Jim.

Again Joe answered, "Yes, I told you I was coming."

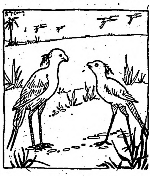
"Don't be cross," said Jim. "If you are I won't show you the place I had in mind for our hunting trip today. I don't have to. I was going to because I am kind and generous."

"Kind and generous," laughed Joe, and his voice was a very harsh one. "I don't believe the snakes and frogs and birds think you are kind and generous."

"They don't think you are kind either," said Jim, "so there is no reason for you to say such a thing to me."

The secretary birds are rather harsh and cruel in any case, and they have many of the same qualities of character which the hawks have.

They always swallow their food whole, without chewing it in the least. And yet they never have indigestion! In fact, they are quite as different from other creatures as is possible. Hawks and eagles are the only birds who resemble them in habits. Of course the secretary birds are very different in looks.



"Kind and Generous," Laughed Joe.

They are more like animals, even though their bodies are feathered. But their legs are extremely long and thin.

"What have you seen today?" asked Joe, who wanted to start right out hunting before they had a quarrel.

"I have seen snakes," said Jim. Now the secretary birds are known better as snake killers than anything else. And Joe was delighted.

"I am quite ready," he said.

"To be sure," said Jim, "after I have told you what I have seen."

"I flatter you," said Joe. "I approve of your taste. And when will we be starting?"

"You're pretty anxious to go now?" laughed Jim.

"Well, aren't you?" asked Joe.

"Yes," Jim replied, and off they started. They looked as if their long legs would get there before their bodies. And gracious, how they could run!

"Snakes, snakes," they kept saying to themselves. And on they ran.

"Where is it?" asked Joe.

"Come along," said Jim. "I wonder why we wasted so much time talking."

"We weren't so hungry then," said Joe, panting. "But now we are and so we can't go quickly enough."

They ran on and on, and how fast their legs did carry them. At last they reached the place where Jim said the snakes were lying around. Some were sleeping and others were just dozing.

Jim and Joe each went for different snakes. Now though the legs of the secretary birds are so extremely long and thin, and though they look as if they would break at a moment's notice, still they are very strong.

They always fight with their feet, and they do not use their beaks at all. They struck at the heads of the snakes with their feet—and such blows as they gave! The snakes they wanted were killed in a second this way. And then they were eaten whole.

"Didn't I invite you to a nice party?" asked Jim, after he had eaten a good deal.

"Yes," said Joe, "but I am a good one to bring to a party of this kind, for I provide my own food."

"And why shouldn't you?" asked Jim. "It was good enough of me to show you the place."

"I was glad to come," said Joe, "but I guess secretary birds can always find snakes!"

Reading Trash.

Never read a poor book for the sake of killing time. Every good book improves with additional readings, and there are certain volumes we can hardly read too often. With the masterpieces of literature as accessible as they are today, there is no excuse for filling the mind with trash. Instead of taking your time to skim over six second-class books, read one first-class book six times over.—Girl's Companion.

LUCKY STRIKE CIGARETTE

YOU'LL enjoy this real Burley cigarette. It's full of flavor—just as good as a pipe.

IT'S TOASTED

The Burley tobacco is toasted; makes the taste delicious. You know how toasting improves the flavor of bread. And it's the same with tobacco exactly.

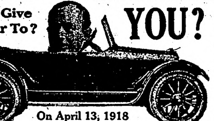
Who Do I Give This Car To? YOU?



On April 13, 1918

I am Going to Give Away Two Automobiles

I have been giving away automobiles for a long time. Now I'm going to give away two more. Send me the coupon down in the corner and I'll tell you about it.

$1500 in Rewards
(Delivered through your local dealer)
1st—Overland Touring Car
2d—Ford Touring Car
3d—Indian Motocycle or Piano
4th—$85 Diamond Ring
5th—17-jewel Elgin Gold Watch
6th—15-jewel Elgin Gold Watch
7th—41-piece Chest of Silver
8th—$15 Victor Talking Machine
9th—7-jewel Elgin Gold Watch
10th—42-piece Dinner Set
11th—42-piece Dinner Set
12th—Eastman Folding Kodak
13th—Eastman Folding Kodak
14th—31-piece Dinner Set
15th—31-piece Dinner Set
Rewards duplicated in case of ties

One of the cars I am going to give away is an Overland. It is the latest model, fully equipped and complete in every detail. It will be delivered right at some one's front door without a cent of cost to them. Don't you want to get it? Send me the coupon and I'll tell you how. The other car is a Ford, and it will also be given to some one. Would you rather have it? As soon as I receive the coupon I'll send you full details of my offer. Besides the two cars I'm going to give away the other rewards listed here at the left. Surely there is something in that list you want.

Cut out and Send the Coupon DO IT NOW!

Maybe you think I am a fraud, or that you know all about my plan. It won't hurt you to send the coupon and find out, and you can't know all about my plan unless I tell you. I can't tell you unless you send the coupon.

The Reward Man, P. O. Box 1632 Philadelphia, Pa.

THE REWARD MAN
P. O. Box 1632 Philadelphia, Pa.
Please send me full information about the automobiles you are giving away. The signing of this coupon does not obligate me in any way.

Piles Cured in 6 to 14 Days
Druggists refund money if PAZO OINTMENT fails to cure Itching, Blind, Bleeding or Protruding Piles. First application gives relief. 50c.

Ice in a Mine.

Ice that formed in the winters of the sixties and seventies, is being uncovered by coal companies at Hazleton, Pa., in running the culm banks of the region through the breakers to meet the demand for anthracite created by the war.—Boston Globe.

Jokes.

"Casey is me pertickeler friend, Oi'd have ye know." "G'wan! If he was pertickeler he wouldn't be yer frind."

"Cold In the Head"

is an acute attack of Nasal Catarrh. Persons who are subject to frequent "colds in the head" will find that the use of HALL'S CATARRH MEDICINE will build up the System, cleanse the Blood and render them less liable to colds. Repeated attacks of Acute Catarrh may lead to Chronic Catarrh.

HALL'S CATARRH MEDICINE is taken internally and acts through the Blood on the Mucous Surfaces of the System.

All Druggists 75c. Testimonials free.

$100.00 for any case of catarrh that HALL'S CATARRH MEDICINE will not cure.

F. J. Cheney & Co., Toledo, Ohio.

Britain is developing a new system of school hygiene.

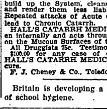
A FIGHT FOR LIFE

It has been fight or die for many of us in the past and the lucky people are those who have suffered, but who are now well because they heeded nature's warning signal in time to correct their trouble with that wonderful new discovery of Dr. Pierce's called "An-u-ric." You should promptly heed these warnings, some of which are dizzy spells, backache, irregularity of the urine or the painful twinges of rheumatism, sciatica or lumbago. To delay may make possible the dangerous forms of kidney disease, such as stone in the bladder.

To overcome these distressing conditions take plenty of exercise in the open air, avoid a heavy meat diet, drink freely of water and at each meal take Dr. Pierce's Anuric Tablets (double strength). You will, in a short time, find that you are one of the firm indorsers of Anuric, as are thousands of neighbors.

Step into the drug store and ask for a 60c package of Anuric, or send Dr. V. M. Pierce, Buffalo, N. Y., 10c for trial pkg. Anuric, many times more potent than lithia, eliminates uric acid as hot water melts sugar.

IOWA NEWS



Fairfield, Iowa.—"This is to certify that I have used Dr. Pierce's Family Medicines in my family at different times and they have proved very good, especially the Anuric Tablets. I have been bothered with my kidneys a great deal of late and found relief from the use of this medicine."—JOHN J. GINTHER, Route 2.

Burlington, Iowa.—"I am glad to say that Doctor Pierce's Pleasant Pellets have been a family remedy for fifteen years. (*Sold by druggists.*) I have found them fine to overcome constipation. They are not only pleasant, but the results never disappoint, and the longer used the better they are appreciated."—MRS. ANNA MOSENA, 1339 Ashmun Street.—Adv.

Women Better or Worse.

Women, when they are bad, are worse than men and more disposed to commit crime. When the sex which is sweet by inheritance once becomes degraded it falls into greater excesses than the other. Women are always either much better or much worse than men.—Bonaparte.

SATISFACTION

There is a satisfying pleasure every housewife feels in preparing a meal from good wholesome materials.

Makeshift foods are unsatisfactory as well as unwholesome.

Our Meats Satisfy

You feel fresh and vigorous after eating a meal prepared from our market. They give the necessary buoyancy and vigor to the system.

And they cost no more than the "other" kind.

Why not eat well when it costs no more?

Fresh fish always on hand.

THE ELEVEN TOWNS

Entered at the postoffice at Goodridge, Minn. as a second-class mail matter.

Do you know how it feels when some one peeps over your shoulder to read what you are writing when you are penning a message to someone else? That is the way the printer feels when you peep over his shoulder to read the copy that he is setting to type.

One of the first improvements we shall make is to give our paper a more appropriate name. The Eleven Towns so well known a few years ago when they were first opened up for settlement, are rapidly passing into history and new conditions arise. New centers of trade and commerce have already sprung up where nothing was in olden times. These have taken place of the former in the mind of the people of today, if not in their memory. Goodridge is one of these centers and it is only fitting that a newspaper published here should bear its name. We have not yet decided upon what appellation to give it, as to do so is quite a task. We have made up our minds to ask our friends to assist us in finding a suitable name in which the word "Goodridge" must appear. Write your choice of name and your own name on a slip of paper, put it in an envelope and seal it and send it or hand it to us on or before Friday, Feb. 15. A committee of five, three men and two ladies will be asked to chose a name from those submitted. This committee will meet and make the choice in the Mercantile Co. store Saturday evening at 7:30 Feb. 16. The one whose name is accepted will receive a years subscription to the Eleven Towns. If more than one have suggested the same name and this is chosen, the lucky one will be chosen by lot.

With this issue Mr. H. W. Smith severs his connection with The Eleven Towns and it passes into the hands of a new management. Time will tell whether the change is for the better or the worse, both for the paper itself and the community. Mr. Smith disposed of his interest in the paper for purely patriotic reasons. in that he enlisted in the U. S. Army for war service abroad. Viewed from a patriotic standpoint, his action was highly commendable. His numerous friends here were sorry to see him leave the community, but glad that they did not contribute in any improper manner to his departure. We all wish him Godspeed on his mission and we hope he will return to us again safe and sound when it is fulfilled.

As far as the new management is concerned we wish to say that we are comparatively inexperienced in journalism so that the public will have to overlook defects that may appear. However we shall try to do our best and to make this paper worthy of the patronage of Goodridge and vicinity, Wherever improvements can be made, they will be made as time goes by, but there may be no great or sudden changes. We shall attempt to fill our columns with readable matter of an interesting and instructive nature. We shall, as far as we are able let our readers know what our business men are doing by inserting the latter's advertisements whenever they wish us to. The public will then know wether they are still alive or gasping for their last breath. In short, we shall endeavor to make our sheet as worth while as it is possible within our limited power to do. We hope that our readers will take kindly to the transfer of The Eleven Towns and that they will stand by us in the future even more solidly than they have in the past.

Respectfully,
A. O. Halvorson.

Each day one wheatless meal --- the evening meal. Each week two wheatles days --- Monday and Wednesday. Each day one meatless meal --- the morning meal. Each week one meatless day --- Tuesday. Each week two porkless days --- Tuesday and Saturday. Every day a fat saving day. Every day a sugar saving day. USE fruits, vegetables, and potatoes, abundantly. Use milk wisely.

On wheatless days and in wheatless meals of other days use no crackers, pastry, macaroni, breakfast food or other cereal food containing wheat, and use no wheat flour in any form except the small amount that may be necessary for thickening soups or gravies or for a binder in corn bread or other cereal breads.

Meatless means without any cattle, hog or sheep products. On other days use mutton or lamb in preference to beef or pork, porkless means without pork bacon, ham, lard or pork products fresh or preserved.

A Special Appeal.

A special appeal is being made this week by Major John D. Yost, Recruiting Officer of the Minnesota district, for men able to handle horses. An urgent call has been sent to all recruiting stations in the district, for men for the Veterinary hospitals, and for the Auxillary Remount Depots. About 4,000 suitable men for the Auxillary Remount Depots, Quartermasters Corps, National Army, are needed at once as are 2,000 men for the Veterinary hospitals.

Men enlisted for the Veterinary Corps will be sent to Medical Officer's training Camps at Fort Riley, Kansas, and Fort Oglethorpe, Georgia, where a short preliminary training course will be given them before they are sent for duty overseas. Veterinary students, agricultural students, farmers stable men, and men who have been accustomed to handling horses are the men wanted for these particular outside of the draft age, from 18 to 21 and from 31 to 41 years of age are eligible for enlistment.

While an urgent call is issued this week by Major Yost, for the above mentioned branches of the Army Service, all other branches are still open for enlistment. Ten thousand tradesman of all kinds, could be observed daily by the Army for a month and there would still be room for that many more, without overcrowding. At Fort Hancock, New Jersey, the Aviation Section of the Signal Corps needs 7,000 specialists. Over 3,000 gas engine men, and auto mechanics are needed as well as the hundreds of other mechanics and tradesmen. It is almost a physical impossibility to gain an idea of the stupendous task of supplying the army with workmen alone, and they are just as essential as the fighting man, in modern warfare.

With pay, government allowances, liberal provisions for dependents, and Government Insurance, the average man is far better cared for in the United States Army today, and can make more money than in civil life.

School Notes.

The schoolhouse is open at 8:30 in the morning and from 1 to 1:15 at noon. Half an hour in the morning and fifteen minutes at noon is ample time for the children in the village to get to the schoolbuilding in time for the sessions.

The upper grade girls and the teachers are practicing a comic dialogue to be given at the next Literary Society meeting to be held at R. H McDonald's Thursday evening, Feb. 14th.

The schoolboard held its regular monthly meeting in the schoolhouse Tuesday afternoon at three o'clock.

Red Cross Notes.

During the past month the Goodridge branch of the Red Cross has completed 43 bandages, 2 pair of socks, 1 pair wristlets, 7 wash cloths.

Quite a few ladies were present at the schoolhouse Saturday afternoon for Red Cross work. Twenty bandages were completed and some were taken home to be finished. In order that no extra heating may be necessary the date was changed to Friday afternoon a meeting every week. All the ladies are earnestly requested to be present and help in this necessary and meritorious work.

The following have joined the Red Cross since the last names were published: Misses Ragna Geving and Anna Paulson, Mrs. J. P. Ferdinandsen, H. Eliason, and Joe Eidelbies. Mr. Harry J. Blye has promised the crop of one half acre land seeded to wheat to either the Red Cross or to the Y. M. C. A. or possibly half to each. Who is nex?

Feed manufacturers and Dealers Must Secure License by February 15th.

Manufacturers of and dealers in commercial feeds for livestock, cattle, and hogs must secure licenses under the Food Administration by Feb. 15. This covers baled hay, shelled and ear corn and many other commodities intended for use as feeds or as ingredients in mixed feeds. The only exceptions are for millers manufacturing bran and ane dealers in course grains, who have already been pladed Food Administration licenses.

Applications license should be addressed to the license division, Food Administration, Washington, D. C. specifying the nature of the business to be licensed.

Monthly Calender Of Regular Meetings.

Village Council—First Monday of the month.

Board of Education—First Tuesday.

Firemen—Second Tuesday.

Literary Society—First and Third Thursdays.

Red Cross Branch—Last Wednesday

Commercial Club—Last Thursday.

All these meetings are held in the evenings at about eight o'clock.

DE LAVAL

Service Day

At Our Store

For the benefit of all users of De Laval Cream Separators we have established a DE LAVAL SERVICE DAY to be held annually.

On these dates we shall be glad to have any De Laval user bring his separator to our store for a complete and careful inspection and adjustment, which will be made Free of Charge. Should any parts, due to usual wear, or accident need to be replaced, this will be done, the only charge being for the price of the new parts used.

The De Laval Service man, will be with us to have charge of this work. Bring in your Separator and receive the benefit of his advice on the care and operation of your machine, as well as the Free Service. It is our wish, and that of the De Laval Company, that every user of a De Laval Separator get the maximum of efficiency at the minnimum of cost.

No expert is required to keep a De Laval in repair. A little care with the use of De Laval Separator Oil will keep it running satisfactory for years if adjustments are made when needed.

Remember the Date, Feb. 27th.

Have your machine in by 10:30 A. M.

GOODRIDGE, MINNESOTA.

To Speak at Auditorium.

The United States Food Administration sent a special mission for a two month,s visit to Europe investigating the war and food conditions. The members of this commission have returned to the United States and are now covering this country on a speaking tour, telling the people of the actual conditions on the firing line and in the trenches.

Dr. Julius Lincoln, pastor of the Swedish Lutheran Church of Jamestown, N. Y., who was a member of the commission, together with Dr. Thomas E. Greene, will speak at the Auditorium at Thief River Falls, on Feb. 27th 1918 at 8 o'clock P. M.

This should be a very interesting and instructive matter and one which no one in Pennington County can afford to miss if possible for him to be present.

Sunbeam & High Landing Items.

Leonard McAndress has now recovered from his sickness, the quarrantine has not been removed yet, but it is expected that it will be soon.

Mrs. T. S. Jacobsen is improving slowly from her illness.

Owing to bad winter weather the attendance has been poor in the High Landing School, only the older pupils are attending. The eight grade pupils are industriously studying for the final examination.

Mrs. W. G. Hunt who has been on the sick list last week with an accute case of Rhuematism is now able to be up and around again.

Mr. Hunt was a business caller in Thief River Falls this week.

Mr. McReynolds attended the teachers meeting at Goodridge last Saturday.

THE WAR SAVINGS STAMP DRIVE.

The Financial search-light of the U. S. Government is now being turned on the War Savings and Thrift Campaign.

Committees have been appointed and the campaign is well under way. Each County is under the supervision of a County Chairman, appointed by A. R. Rogers, State Director. The Chairman in turn appoint Committees, Executive, Advisory, Publicity, etc.

This thrift stamp campaign will accomplish wonderful results if greeted by the people with the same hearty response which was given to the Liberty Loan.

The sale of these stamps affords the People of Minnesota another great opportunity to attest their loyalty to their Government and prove to the people of America that Minnesota is not a state to sit back and let others finance the war.

War savings stamps come within the financial reach of everybody. Where it requires fifty dollars to buy a Liberty bond, it requires $4.13 to purchase a War Savings Stamp and 25cts. to buy a Thrift Stamp.

With the purchase of the first War Savings Stamp you are presented with a War Savings Certificate. Lick the stamp, place it on the certificate, and you have helped lick the Kaiser.

When you buy the first thrift stamp you are given a thrift card. Put these together and keep addidg 25cts thrift stamps until the card is filled with 16 25ct stamps Then it can be exchanged for a War Savings Stamp upon payment of the difference between $4.00 and the price of a War Savings Stamp.

The War Savings Stamps which sell for $4.12 are redeemable in cash, but a thrift stamp is not. It is pointed out by the Treasury Department that Thrift Stamps are not made redeemable in cash, for the reason that these stamps are simply intended as a convenient method for the small savers to accumulate enough to purchase War Savings Stamps, which bear interest and are redeemable in cash. In addition, to provide for redemption of these thrift stamps would involve such an amount of detailed accounting and labor and expense as to impair the practicability of their use. In fact, they would be more trouble and expense to the Government possibly than they are worth.

It is the purpose of the Government to raise two billion dollars within the year by the sale of these stamps. Thus it can be seen what an important part these "Baby Bonds" are playing in the financing of the War.

It is needless to urge the people of Minnesota to respond to this call. The way is clear and this campaign will result in another great achievment for the North Star State. if given the same support which was accorded the Liberty Loan.

Red Cross Notes.

Last Friday afternoon the following ladies were present in the schoolhouse to sew bandages for the Red Cross. Mesdames J. P. Ferdinandsen, M. G. Thoreson, M. Vaughan, R. H McDonald, A. O. Halvorson, M. O. Seavey, and Misses Giefer, Andersen, and Murray. Twelve bandages were finished ready to be shipped and ten more were started.

Friday afternoon, Feb. 15 the cooking class of the Goodridge Consolidated Schools will entertain to raise funds for Junior Red Cross. Everybody welcome.

Proclamation And Order NO. 25.

THE MINNESOTA COMMISSION OF PUBLIC SAFETY hereby proclaims and designates February 25, 26, and 27, 1918, as ALIEN REGISTRATION DAYS through the entire state of Minnesota and orders as follows:

1st. That every ALIEN shall register on one of the above dates at places to be designated by the board of County Commissioners of a county for Village Recorder, City, or Town Clerk, of the municipality of which said alien is a resident, and make certain sworn declaration as to real estate and personal property holdings as prescribed by the Minnesota Commission of Public Safety.

The rest of the order will be printed next week.

The order of the county commissioners follows: BE it resolved that the Town Clerk's office in each township in Pennington County, also each Recorder's office in each village and the city clerk's office in the city of Thief River Falls be and the same are hereby designated as the places for the registration of aliens shall be held in accordance with the order no. 25 of the Minnesota Commission of Public Safety. Dated at Thief River Falls, Minn. this 13 day of Feb. 1918.

Board of County Commissioners,
Pennington County, Minn.
By Oscar J. Peterson, its Chairman.

The Commercial Club will hold an important special meeting in the Farmers State Bank, at 8 o'clock Friday evening, Feb. 15.

Nature Is Outwitted.

The man who invented the s machine achieved what he was when he stopped trying to imitate human hand. If you go into a f you will see machines doing which only human skill could do short time ago, but the process quite different from the manual ed. The inventors have risen su to the formulae that nature w seem to have laid down for them

HOLD YOUR LIBERTY BONDS!

Secretary of the Treasury McAdoo urges the purchasers of Liberty Loan Bonds of both the First and Second issues to hold fast to their Bonds. They are the best investment in the world.

The Secretary's statement was called forth by the fact that Liberty Bond holders are being approached from time to time by agents seeking to induce them to part with their Liberty Loan Bonds and take in exchange securities which in a number of cases are of a very questionable value, and was prompted by the desire to protect the bond-holders against ill-advised disposition of their bonds.

The Secretary expresses the hope that every purchaser of a Liberty Bond will realize that the only genuine help that he gives his Government is keeping his bond as an investment as long as it is possible for him to do so.

He states, however, that no just objection lies to the sale of a Liberty Bond where real necessity exists for its sale.

Rabbit Hair [illegible]

Rabbit hair is [illegible] in the felt hat making industry of Australia, where there are thirty factories in operation at present [illegible] of rabbit fur for this purpose. It is said to be superior to the finest merino, and millions of [illegible] are made use of [illegible].

Figures Time of Falling Stone.

The time a stone would require to fall the 4,000 miles to the center of the earth has been calculated for the Paris Academy of Sciences by M. Sanger. Considering the influence of the varying density of the earth, he finds the time would be [illegible] minutes [illegible] seconds, but if the mean density is assumed to be the condition, the time would be 70 seconds greater.

Our Rabbits.

The term rabbit was formerly more properly applied to the burrowing species of the old world, Lepus cuniculus (meaning to burrow), though by common usage our molly cottontail has so long been termed a rabbit that the name will now stand, as will that of jack rabbit for the big western hare of the prairies and Pacific coast.

Superb Discipline Cuts Loss of Life Aboard Tuscania, Says Secretary of War.

WEEKLY WAR REVIEW

American Troops Now Have Identification In West—Desire For Peace Increasing Daily In Austria-Hungary.

Washington, Feb. 13.—Secretary Baker attributes the relatively small loss of life among American soldiers aboard the Tuscania to the fine discipline of the men and the efficiency of their officers.

In his weekly war review, just published, the Secretary also expresses the nation's appreciation of splendid work of the British navy in rescuing the American forces.

The review points out that recent reconnoitering thrusts by the Germans, notably in Flanders and around Cambrai, may suggest development of Germany's long deferred offensive in the west. Thus far, however, the department's statement says, the actions have been local in character.

Americans Fitted for Task.

American troops occupying a sector on the Lorraine front are described as having proved themselves well fitted for their task.

The review says in part:

"The sector in Lorraine where our forces are in contact with the enemy continued relatively active throughout the week. Artillery duels took place intermittently, but fog and heavy rains prevented infantry engagements. The Germans attempted no further raids, and settled down to systematic shipping and bombing of our positions.

Rations Regularly Assured.

"Our forces engaged have shown themselves well fitted for their tasks in the trenches and are rapidly becoming accustomed to the routine of trench warfare. The welfare of our troops, whether in the trenches or in rest depots, is the object of the immediate personal concern of all our commanders. The rations for the men in the trenches, in spite of the enemy's attempts, have been regularly assured. The care of our wounded at our field dressing stations, as well as at our base hospitals, is being carried on with efficiency and scientific skill.

"The arrival in the Western theater of additional German forces coming originally from the Russian front are noted. Further Austrian divisions are being concentrated in reserve behind the German lines in the West.

"Much dissatisfaction is expressed throughout Austria-Hungary at the policy of dispatching their troops to fight Germany's battles along the Western front.

Renewed Desire for Peace.

"The desire for peace is increasing daily in the dual monarchy, and it is only natural that the Austrians should resent sacrificing their forces on distant battlefields in the furtherance of German ambitions alien to their interests.

"Though surrounded by foes, the Roumanians are still attempting to remain faithful to the Allied cause. The combat strength of the Roumanian army has increased 80 per cent since last year, and according to last reports has taken over the entire front from Galatz to Czernovitz."

RAIL PRIORITY ORDER GIVEN

Aim of McAdoo Is To Move Soft Corn.

Washington, Feb. 11.—Transportation priority for grain, flour, cornmeal and other grain products in Western and Middle Western producing states has been ordered by Director General McAdoo to hasten to market all grains and particularly the vast accumulated stores of soft corn.

The order directs that preference be given in loading cars in Illinois, Indiana, Iowa, Wisconsin, Minnesota, North Dakota, South Dakota, Nebraska, Kansas, Missouri and Oklahoma.

This corn, full of moisture as a result of last years' growing conditions, composes as much as 40 per cent of the stocks in many sections and is threatened with rotting in moderate weather of the last few days unless rushed to elevators and dried.

Goat Flesh Meatless Day Enigma.

Washington, Feb. 12.—Food administration officials are confronted with the question of whether goat flesh may be served on meatless days. Proprietors of barbecue stands in Arizona appealed for the privilege of serving this substitute for beef, mutton and pork.

Germany Plans to Beat Trade Boycott

Washington, Feb. 11.—Germany is launching a counter drive to offset growing fear of an Allied economic boycott after the war. "Secret agreements" to be promulgated by Germany and the greed of other nations will smash any boycott, declares the semi-official Wolff agency, in an article for wide distribution in Germany and Austria, a copy of which has reached this government. "By compensation agreements it would be easy for Germany to prevail upon countries to make exchanges."

NORTHWEST SOLDIERS NOT YET RECORDED

The names of the following U. S. soldiers appear in the list of those still unaccounted since the torpedoing of the Tuscania. It is most likely that many of these are safe and will be reported soon.

Minnesota.

First Lieut. Wm. Binnie, Fridley.
Edwin R. Burley, Bemidji.
Fred K. Allen, Ada.
Robert J. Moody, Cambridge.
Andrew G. Anderson, Nelson.
Wm. A. Coustons, Blue Earth.
Dale M. Fish, Wheaton.
Frank Dratrota, Jackson.
Gunder S. Austad, Oklee.
J. A. Eichhammer, East Grand Forks.
Wm. J. Tragreser, Cottonwood.
John C. Johnson, Big Falls.
Albert I. Nauman, Minneapolis.
Jos. J. Buckley, Minneapolis.
Joseph A. Allen, Shakopee.

Wisconsin.

Raymond Butler, New Richmond.
Alvin U. Collins, Markeson.
Jas. A. Schleise, Rice Lake.
Geo. R. Rogers, Dallas.
Geo. D. Reinhardt, Jefferson.
Chas. E. Swanson, Rothschild.
Fred A. Rudolf, Milwaukee.
Orvel N. Casper, Milwaukee.
Reuben Patterson, Marinette.
Harry S. Peterson, Milwaukee.
Claire Metzenbauer, Chippewa Falls.
Arthur N. Harvey, Eau Claire.
Edward P. Johnson, Ila.
Earl O. Wisenberger, Jim Falls.
Ernest A. Grabow, Milwaukee.
Albert L. Larson, Kenosha.
Arthur C. Junter, Kenosha.
Otto Mowrey, Kenosha.
Karl H. Hultenius, Kenosha.
Jos. J. Marsolet, Independence.
John F. McCutcheon, Washburn.
John McArdle, Nashkoro.
Clarence H. McCue, Poy Sippe.
Frank Sharpe, Milwaukee.
Russell F. Bennett, Plainfield.
Alcide Carollo, Lohrville.
Clifford Norris, New London.
Wm. B. Spencer, New London.
Henry J. Cook, Cameron.
Herbert C. Jenson, Barron.
Harry A. McCarty, Shell Lake.
Hans C. Larson, Rice Lake.
Henry A. Oksull, Ettrick.
Francis J. Fremstahl, Colby.
Jacob W. Kramer, Abbottsford.

ARE WELL PROVIDED FOR

U. S. Survivors From Tuscania In British Camps.

Tommies Share Clothes With Those Unprotected—Officers Are Hardest Hit.

Londonderry, Feb. 12.—All the exception of about 100 sick and injured and a party of 142 who landed in Scotland, all the American survivors from the Tuscania are quartered in two military camps.

The news had spread through the countryside that the Americans were coming in special trains, and at each little railway station groups of farmer folk had gathered to catch a glimpse of the troops. Scottish troops piped the Americans from the railway to the camps.

A complete issue of clothing was made to each officer and private. The outfits came from British stores.

At one camp there were not enough overcoats, so the British Tommies gladly took off the coats they were wearing and put them on the Americans.

Lose Their Funds.

The one thing most appreciated by the men was a visit from Miss Jean Ogilvie, a member of the Red Cross from New York. She was the first American woman they had seen since leaving the United States. Two-thirds of the men lost all of their funds. A few carried money belts and saved their money, which they promptly divided.

The American officers were hit hardest. All lost their kits and the larger part of their uniforms, which, unlike the privates, they must obtain at their own expense.

At the camps the American officers were received in the British officers' mess in the heartiest fashion. One of the first things the Tommies did was to put on a show for them. Then all hands joined in singing some of the latest American ragtime pieces.

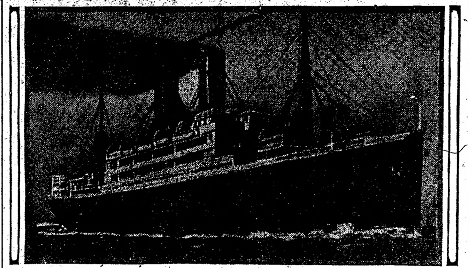
Slurred U. S. Army; Sent to Prison.

London, Feb. 12.—The Hon. Bertrand Arthur Russell, late lecturer and fellow of Trinity college, Cambridge, and heir presumptive to the second Earl Russell, has been sentenced to six months imprisonment by a Bow street magistrate for making certain statements slurring the American army in a publication called "The Tribunal." It was held that the statements were likely to prejudice Great Britain's relations with the United States.

Turkey Pledges Support for War.

Amsterdam, Feb. 10.—"While we are aware of the great value of peace, Turkey will never conclude a separate peace at any price," Halil Bey, new Turkish foreign minister, declared in an address before the chamber, according to a Constantinople dispatch. Halil said Turkey was in complete agreement with Hertling and Czernin and added: "We will hold on until some concrete success is attained. We will make only such concessions as are compatible with our honor and national dignity."

TORPEDOED UNITED STATES TRANSPORT TUSCANIA



The Tuscania, United States transport, formerly of the Anchor line, which was torpedoed and sunk off the Irish coast while carrying American troops to Europe.

DIVER MENACE ENDING

U. S. Develops Transport That U-Boats Cannot Sink.

New Method Is Revealed By Vice Chairman of Naval Board In Speech.

New York, Feb. 12.—According to a statement made by William L. Saunders, vice chairman of the naval consulting board, in an address at a dinner of the University of Pennsylvania alumni in this city, means have been found to make troop transports unsinkable by torpedoes.

Mr. Saunders added that one of the ships recently commandeered by the government "now lies at an Atlantic port and in such shape that she cannot be sunk by an exploding torpedo."

Enemy Should Know.

"I can conceive of no reason why this information should be withheld," he added. "On the contrary, I believe it is well that the enemy may come to realize that the time has been reached when American transports, which that enemy cannot sink, are ready for the transportation of our troops. This ship may have a hole 30 or 40 feet in diameter blown in her side and she will remain afloat. Such a hole would waterlog but one-tenth of the honeycombed airtight cells."

Describes Plan in Detail.

Mr. Saunders described in detail the plan to keep ships afloat after they had been torpedoed, and the manner in which it had been developed by William F. Donnelly, a New York marine engineer, working under authorization of the naval consulting board.

"Of course, it will take some time to equip similarly the large number of transports we have," continued Mr. Saunders. "It is my belief, however, that nothing will be left undone by the administration to safeguard the lives of large troop contingents to be moved across the Atlantic."

CHALLENGE TO SUBMARINES

U. S. Vessel to Enter War Zone Without Escort.

Washington, Feb. 12.—The first nonsinkable ship, the Lucia, achievement of American genius, will load this week and leave for Europe.

She will be without convoy at any stage of the voyage. She goes as an open challenge to the German submarines to disprove that she is invulnerable.

No other test has been made or will be made of the efficacy of her multiplicity of airtight and watertight cells. Her trial trip and maiden voyage will be a defi to the U-boats or the most practical test possible—their marksmanship.

DIPLOMATIC COURIERS HELD

Detained In Stockholm For Lack of Passports.

Stockholm, Feb. 12.—All diplomatic couriers on their way to Petrograd have been detained in Stockholm because of instructions received by the Finnish minister here to vise no passports for foreigners.

Ira Nelson Morris, American minister, received information from Tornea, on the Finnish border, that a train had left for Petrograd, but that there was no certainty that it would get through to the Russian capital.

A Swedish relief boat left for Mahty-Luoto, taking provisions and money furnished by Minister Morris for the American consul at Helsingfors.

Farmers Urged to Market Cereals.

Chicago, Feb. 11.—An appeal to farmers everywhere to make special effort to move corn, oats, rye and barley to market was made public here by E. C. Eikenberry, president of the Grain Dealers' National association. The appeal remarks the inadequacy of railroad facilities and asks that farmers make extraordinary efforts to help. Owing to the poor keeping qualities of the last corn crop, he urges that this cereal be rushed ahead of others, giving corn the preference when roads are best.

NAVAL CREWS ON SHIPS HELD NEED

Military Control of Merchant Vessels Imperative Congress is Told.

MANNED BY ENEMIES

Number of Torpedoed Craft Lost Thru Cowardice if Not Disloyalty Admiral Testifies—Supplies At Plotters' Mercy.

Washington, Feb. 11.—Congress has been advised by the navy department of an alarming state of affairs aboard the merchants ships being operated by the shipping board.

The navy charges that a number of ships, torpedoed while carrying supplies to the American troops, could have been saved had it not been for the cowardice, irresponsibility, and perhaps disloyalty of the civilian merchant crews, which include 3,300 Germans and many other enemy aliens.

Admiral Bares Facts.

In support of a plea by the navy that all American merchant ships be manned by naval crews, Rear Admiral L. C. Palmer, chief of the bureau of navigation, laid bare the facts before the house committee on naval affairs at a secret session. The admiral's statement has just become available.

At Mercy of Plotters.

Supplies are now being sent to the forces overseas are declared at the mercy of enemy plotters in the merchant marine. Unless enemy aliens are weeded out and the supply ships manned by naval crews, the ability of the nation to send abroad and maintain a large army may be crippled by a wholesale destruction of vessels.

IS UNLAWFUL TO KILL HENS

Food Board Protects Egg Producers Until April 13.

Washington, Feb. 12.—The long arm of Uncle Sam has reached out and extended its protection to the humble hen. The purchase or shipment of live or freshly killed hens and pullets is prohibited by order of the federal food administration.

The order is in effect at once and is to stand until April 13, to conserve the hens that are to "go over the top" in April and give the nation its fresh eggs and young chicks.

The sitting hen, the laying hen and even the pullet large enough to have serious thoughts of her mission in life, are protected.

"Licensed dealers in poultry," the order says, "will not purchase, ship, sell or negotiate the sale of any live or freshly killed hens or pullets between Feb. 11 and April 13." Up to Feb. 23, the sale and shipment of hens and pullets killed or shipped before Feb. 11 will be permitted, and hens may be sold at any time for egg producing purposes.

Aged Brothers Burned to Death.

Freeport, Ill., Feb. 12.—Frand Redburn, 65 years old, and his brother, John, 60 years old, were burned to death in their home 10 miles south of here. They were bachelors and reputed to be wealthy. The fire started when the elder brother, an asthma victim, fell against a stove after being overcome by escaping gas fumes.

Germans Ignore Pact With Russ.

London, Feb. 12.—A British official communication calls attention to the Germano-Russian armistice stipulations signed on December 15, that no German troops should be transferred to the West front, save movements already begun. It has been definitely ascertained from prisoners captured, saps the statement, that seven divisions from Vilna, Lemberg, Tarnopol, Pinsk, Warsaw, Riga and Novgorod left the east front between Dec. 16 and 31 and arrived on the west front Dec. 21 and Jan. 7.

SUFFRAGISTS JUBILANT

Cause Is Indorsed by National Democratic Committee.

Women See Early Victory When Senate Is Urged to Take Early Action on Question.

Washington, Feb. 13.—The executive committee of the National Democratic committee, after a referendum to the committeemen representing the 48 states, has endorsed the federal amendment for woman's suffrage.

In the executive committee the vote was 5 to 2. Of the 48 state members of the national committee 28 had voted for the amendment, 14 had voted against it and six had not been recorded.

Resolution Adopted.

The executive committee adopted this resolution:

"Resolved, That the executive committee of the Democratic National committee, after a referendum vote of the members of the national committee representing the 48 states and in pursuance thereof does hereby endorse the Susan B. Anthony amendment to the federal constitution providing for woman suffrage and urges favorable action thereon by the United States senate."

Suffragists were jubilant over the action and issued statements predicting early adoption by the senate of the resolution to submit the amendment to the states, already adopted by the house and supported by President Wilson.

TOWNLEY'S ARREST ORDERED

League Head Charged With Discouraging Enlistments.

Lakefield, Minn., Feb. 12.—Warrants have been issued here charging A. C. Townley, president of the Nonpartisan league, with conspiring to discourage enlistments in the military and naval forces of the United States.

Warrants also were issued accusing Joseph Gilbert, secretary and organization manager, on the same charge and with violating the Minnesota law covering disloyalty.

Gilbert is on trial at Lakefield on a charge of unlawful assemblage. He was arrested here two weeks ago when he attempted to hold a league organization meeting after it had been forbidden by county officials.

The new charges against Townley and Gilbert are brought on the grounds that Gilbert is an agent of Townley, and that while he committed the actual act which is declared to be disloyal, Townley is his employer and, therefore, directs his movements and is guilty of conspiring with Gilbert to oppose the nation's military policy.

FORMER TURKISH RULER DIES

Adbul Hamid Ruled Ottoman Empire 33 Years.

Amsterdam, Feb. 12.—The death of Abdul Hamid, former sultan of Turkey, from inflammation of the lungs, is announced in a dispatch received here from Constantinople by way of Vienna. A state funeral will be held.

Abdul Hamid was for 33 years sultan of the Ottoman empire, sprawling upon the three continents of Europe, Asia and Africa, and at the same time was commander of the faithful army of Moslems. He was paid homage by nearly a hundred million subjects. Shorn of power, he died a prisoner, pitied if not despised.

Blame For Coal Shortage Placed.

New York, Feb. 12.—Greater consumption of bituminous coal by railroads and factories is assigned by the Federal fuel administration at Washington as the reason for the existing fuel scarcity. Government estimates of the production of bituminous coal in 1917 were 544,000,000 net tons, an increase of 41,000,000 over the previous year. In statements received here the National Fuel administration declared that exportation of bituminous coal was not an important factor in the fuel shortage.

Keep Yourself Fit

You can't afford to be laid up with sore, aching kidneys in these days of high prices. Some occupations bring kidney troubles; almost any work makes weak kidneys worse. If you feel tired all the time, and suffer with lame back, sharp pains, dizzy spells, headaches and disorderd kidney action, use Doan's Kidney Pills. It may save an attack of rheumatism, dropsy, or Bright's disease. Doan's have helped thousands back to health.

A Minnesota Case

"Every Picture Tells a Story"

Anthony P. Kern, R. R. No. 7, Faribault, Minn., says: "I suffered from kidney trouble from infancy. My life was a burden. I had such dizzy spells that I hardly realized where I was. I was tired and worn out and my back got terribly lame after a day's work. I kept growing worse until I was a total wreck. After I used Doan's Kidney Pills the ailments gradually left me until I was well. Doan's gave me a new lease on life."

W. N. U., Minneapolis, No. 7--1918.

Maps in Many Colors.

The United States geological survey, department of the interior, printed last year over four million copies of geologic, topographic and other maps and folios, many of them in several colors. Some of the geologic maps required as many as 25 printings. The total number if impressions required was 14,000,000.

Heals Running Sores and Conquers Piles.

Also Stops Itching of Eczema as Soon as Applied.

"I feel it my duty to write you a letter of thanks for your wonderful Peterson's Ointment. I had a running sore on my left leg for one year. I began to use Peterson's Ointment three weeks ago and now it is healed."—A. C. Gilbrath, 703 Reed St., Erie, Pa.

I'd rather get a letter like that, says Peterson, than have John D. Rockefeller give me a thousand dollars. It does me a lot of good to be able to be of use to my fellow men.

For years I have been selling through druggists a large box of PETERSON'S OINTMENT for a trifle. The healing power in this ointment is marvelous. Eczema goes in a few days. Old sores heal up like magic; piles that other remedies do not seem to even relieve are speedily conquered. Pimples and nasty blackheads disappear in a week. 30 cents a box. Adv.

Tulsa Culture.

We hear much of the vulgarity of the newly rich, but there's none of that in Tulsa. A Tulsa matron informs us that all new furniture will have to be bought to go with "the new infant grand piano."—Kansas City Star.

GREEN'S AUGUST FLOWER

has been a household remedy all over the civilized world for more than half a century for constipation, intestinal troubles, torpid liver and the generally depressed feeling that accompanies such disorders. It is a most valuable remedy for indigestion or nervous dyspepsia and liver trouble, bringing on headache, coming up of food, palpitation of heart and many other symptoms. A few doses of August Flower will immediately relieve you. It is a gentle laxative. Ask your druggist. Sold in all civilized countries.—Adv.

Orchid's Drinking Tube.

One of South America's curiosities is an orchid which has a peculiar tube that it lets down into the water when it wants a drink. At other times it is kept curled up.

The Sabbath is so badly broken that it must be the day that breaks so easy.

Brief Items of State News

Bemidji.—Beltrami county's pledge to the Y. M. C. A. was $500 and the war work council announces an oversubscription of $42.50.

Virginia. — Edward C. A. Johnson was elected mayor over Michael Boylan by a majority of 65 votes. J. W. Trimble was elected city treasurer.

St. Paul.—Thirty blind boys at the state school at Faribault are knitting sweaters for soldiers, Charles E. Vasaly, of the state board of control, reported.

Wells.—Wells is to have a Home Guard company under authority granted by Adjutant General Rhinow. A group of members of the Knights of Pythias lodge will enlist members.

St. Cloud.—A service flag displaying a field of 83 stars was blessed at services held at the cathedral. Eighty-three of the young men of that parish are numbered with the forces of the American army in its various departments.

Red Wing.—Dr. A. E. Johnson of Red Wing was elected president of the Goodhue County Medical association at its annual meeting here. Dr. Alva Conley of Cannon Falls was chosen vice president, and Dr. A. G. Beyer of Red Wing secretary-treasurer.

Milaca.—H. Remole of Minneapolis, a representative of the federal tax bureau, spent three days here giving instructions to taxpayers concerning the new income war tax. He made his headquarters alternately at the three banks and was kept busy most of the time.

Moorhead. — The old Nickel Plate saloon building, belonging to the Hamm Brewing company, near the north bridge, which has been occupied for some time by the Mattson & Thorson cigar store, was totally destroyed by fire which started from an overheated flue leading from the heating plant.

Red Wing.—Bids for the construction of 24 barges and four towboats to carry coal and oil to Upper Mississippi river points, including Red Wing, St. Paul and Minneapolis, will be let early in February, according to information received from St. Louis. The new barges will in part be completed for use during the coming season.

Staples.—The K. P. lodge has leased the Sharkey hall for a term of five years and will take possession about February 15. Mr. Sharkey will have several ante rooms partitioned off and a lot of papering and decorating done. The hall proper will be 30 by 60 feet in size, which is quite a little larger the present quarters of the lodge.

Hawley.—Possibilities of wild rice as a forage are being seen by the greed of horses and cows for this particular wild grass, which has been used by the farmers to bed their cattle. The horses, it is said, disregarded the hay in the mangers and ate all the wild rice their halter straps would allow them. The horses thrived and when the experiment was tried on "old brindle," she, too, took kindly to the feed and showed her appreciation by giving a larger amount of milk.

Faribault.—August Ruther, a farmer residing near Dundas, has been brought to trial in district court charged with the murder of his brother-in-law, August Fiske. On September 13, 1917, young Fiske was found dead near the barn on the farm of Ruther, where he made his home. Investigation showed that apparently he came to his death by poisoning from paris green. The night before Fiske died he and Ruther drank several bottles of beer together. The state contends that Ruther poisoned the liquor.

Rochester.—Letting of the contract for clearing the basin for Rochester's $1,000,000 hydroelectric plant has precipitated a legal battle between the council and mayor. The mayor has refused to sign warrants amounting to $5,000 for work already done, and a mandamus writ has been issued against him. The mayor appealed the mandamus writ to the state supreme court and at the same time several local citizens launched injunction proceedings against the council and the contractor, Charles Armstrong, to restrain further work on the contract.

St. Paul.—Proposal that barley flour milled in Minnesota be not sent out of the state until home dealers are supplied was made by A. D. Wilson, federal food administrator for Minnesota, in a telegram to Herbert C. Hoover, the national food chief. Mr. Wilson stated that many dealers were having difficulty in getting substitute flours, that Minneapolis mills were grinding about 10,000 barrels of barley daily and that the output had been ordered 60 days ahead. "It seems criminal," he said, "to send this out of the state and leave some of our dealers unsupplied." He asked whether the government could not find some way to meet the situation.

[illegible].—Two service flags were presented to Northwest School of Agriculture here, one with 38 stars for graduates and other former students [illegible] in military service, and the other with stars for every member of the [illegible] population who has joined the Red Cross. Every one on the campus, [illegible] old, belongs to the Red Cross or its junior auxiliary.

Hibbing.—Two men were killed in an explosion which occurred in [illegible] press mill of the DuPont Powder company's plant at Wilpin. The shock of the explosion was felt here, six miles west of Wilpin.

Tower.—Gilbert Ketenam was elected mayor over the present incumbent, Andrew Bystrom, by a majority of 15 votes.

St. Cloud.—The following American is mentioned in a late Canadian casualty list: Wounded—J. H. Wilson, St. Cloud, Minn.

Red Lake Falls.—Red Lake county will furnish 56 men for the draft call, February 23. The county's quota is 63 and of that number seven are in the training camps.

International Falls.—Deputy Sheriff Van Ettan returned from Duluth with William H. Michael, the young man arrested there for issuing a bogus check on a local merchant for $22.50.

International Falls.—The local lodge of Maccabees, as an order, has knitted and sent to the relatives at the front the following articles: Five sweaters, five pairs of wristlets, five pairs of socks.

Moose Lake.—The general merchandise store of Wilson & Marttila at Kettle River was burned to the ground, the fire starting in the attic. Most of the stock was removed from the building.

Crookston.—Polk county's allotment of the state road fund for construction is $20,752 for 1918 work, and as Polk county is on a 50 per cent basis, this will provide state aid on $41,504 in construction.

East Grand Forks.—John Handlon enlisted in the United States army and has left for Jefferson Barracks, Mo., to go into training at once. Mr. Handlon, while past the draft age, feels that he is not too old to serve his country.

Minneapolis.—Duff D. Green, Minnesota pioneer, died in Asbury hospital after a long illness. Mr. Green was 66 years old and came from Minneapolis to Illinois before the Civil war, making the trip by boat up the Mississippi river.

St. Paul.—Wages are still tending upward, according to the quarterly wage study of the State Department of Labor for the period ending December 31. The average wage for men in this quarter was, a week, $13.91, as compared with $18.19 the previous quarter.

New Ulm.—The resignation of President A. Ackermann of the Dr. Martin Luther college here, was tendered and accepted. Prof. E. R. Bliefernicht, for many years connected with the institution, is acting president of the college, and will remain the executive head until the vacancy is filled.

Brainerd.—Fish clogged the intake pipe leading to the water tank of the Northern Pacific Railway company at Klondyke station and the caretaker wired Superintendent W. H. Strachan of Duluth to send an engine and 100 feet of hose to force the fish to the surface with steam and thus clean the well.

St. Paul.—Failure of the drivers to flag their buses across the railroads, as required by their contracts with the school authorities, is blamed for the killing of nine and injuring of 20 more children near Barnum and near Nelson, in a report filed by O. C. Swain, state rural school inspector, who investigated both accidents.

Fairmont. — Lemuel Wickham, the aged recluse whose body was found frozen in his shack here, is believed to have spent the major part of the money which he received after the death of his sons for firearms. Seventy-five revolvers of different makes and sizes and 25 shotguns, in addition to 6,000 rounds of ammunition, were found in his shack.

Fisher. — Gathering her 16 living children around her, Mrs. Peter Anderson, living near here, celebrated her 44th birthday, with the knowledge that she had been awarded honors for raising the largest family in Minnesota. Two other children are dead. Mr. Anderson owns 237 acres of land, and farms it without help outside of his own family circle.

Albert Lea.—The Minneapolis and Albert Lea Trail association will meet at Shakopee Februray 12 to make arrangements for the marking of the road between Minneapolis and Albert Lea and passing through Hopkins, Shakopee, Jordan, New Prague, Montgomery, Kilkenny, Waterville, New Richmond, Waseca, Hartland and terminating at Albert Lea.

Carlton.—Arthur Collver, 10, son of William Collver, village marshal, accidentally shot and instanty killed himself in front of a store here. He had taken his father's big Colt's revolver and loaded it and gone down town. In examining the weapon and trying to put it into his breast pocket it was discharged, the bullet entering his breast. He was dead when picked up a minute later.

St. Paul.—Taking no chances on fuel shortages and desiring to aid in reducing the demand for coal, 10 employes in the office of State Auditor Preus formed a club to buy fuel wood in wholesale quantities. Subscriptions totalled 100 cords, or about six car loads, but new members are to be added to increase the total, according to Otto Diercks, organizer. It is expected to get tamarack delivered in cord wood lengths at $7 a cord.

Osakis.—Ordered by the sheriff of Douglas county and the mayor to hold no meetings in Osakis, 100 men who came here to attend a rally of the Nonpartisan league, drove their sleighs across the line into Todd county and held a meeting in the open on the snowclad prairies.

Moose Lake.—Three men, cutting wood for Nels Berset at spur No. 243, near here, received a check for $241 for one month's work. This was net to them, after their board and lodgings had been paid. These men had never worked in the woods before, Berset said.

What Can We Do?

Patterns of refugee garments for women are now ready and are known as official American Red Cross patterns, numbering from 151 to 158 inclusive. Making these garments is a work that every woman ought to do with a sense of gratitude that she is thus able to contribute something to the bodily and spiritual comfort of the women who have been caught in the maelstrom of war. Their case is pitiful. They have been driven from their homes and are dependent upon charity for the bare necessities of life.

It is inspiring to know that the women are responding to calls for needed garments and comforts for fighting men with untiring enthusiasm.

Knitting has become the habit with many, and they are providing the sox, sweaters, wristlets, ear-warmers and helmets that the men use, in great numbers. Some of them devote their time to making just one sort of garment. A lady of Coldwater, Mich., who is eighty-two years old, is sending us beautiful sox which she knits at the rate of one a day. This is a fine contribution to Red Cross work.

Another old lady makes only comfort kits, and is now well on toward the three hundredth kit. But most women really like to vary the work they do; those who knit undertaking sweaters, wristlets, sox, etc., in turn, and resting up from knitting with work on surgical dressing, hospital linen or refugee garments by way of variety.

Mrs. Charles G. King, superintendent of the department of knitting and comforts for fighting men, in the Central division, which includes the states of Michigan, Wisconsin, Nebraska, Illinois and Iowa, reports that 10,723 articles was the remarkable record of one day's inspection and packing of knitted goods from the state of Illinois alone, exclusive of the Chicago chapter, on January 17th.

Mrs. John Glass, superintendent of the department of surgical dressings, has received a letter from the associate director of bureau of development, national headquarters, in regard to the remarkable output of the drive for surgical dressings:

"The response to our appeal from all over the country has been very inspiring, and the Central division has had no small part in enabling us to take care of the special request we received from France. I hope that you will express to all those concerned our great appreciation of the work they have done."

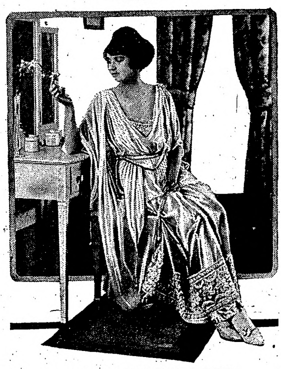
Fads And Fancies Of Fashion



NEGLIGEES GROW MORE LUXURIOUS.

It is a tie between evening gowns and negligees when we make comparisons and draw conclusions as to the most fascinating things that women wear. The negligee may adopt any style it will, be of any gay color it likes, follow no set fashion, for it is one garment at least in which any woman may indulge her fancy—if it is whimsical so much the better. It is for the eyes of her household and she may do as she likes with it.

The lovely negligee which has a representation to many eyes here must have been inspired by a simple classic robe and elaborated with lace and floating draperies of crepe. It is of pale pink satin, with a wide border of heavy lace about the bottom of the satin slip. There is a short bodice with band of lace across the bust. The skirt portion of the slip appears to be laid in narrow plaits across the front.

The satin slip with picot edge at the bottom makes a brilliant foundation for soft draperies of crepe georgette. As to the intricacies of their hanging, that is something not at all easy to tell about. Every negligee has a fashion of its own. These draperies which are so gracefully pictured are of light pink georgette. They are finished in points weighted with silk and silver ornaments and balls.

Beginning with an underslip of satin and finishing with a coatee of lace, or a mantel of crepe georgette, almost any woman may fashion a negligee suited to her own style and figure. She is not apt to finish it without bringing narrow ribbons into the play of lovely materials and she will not wear it without slippers that are dainty enough to rank in the same class as the negligee.

Julia Bottomley

Feminine Frills.

The coat tunic is a novelty.

Many wraps are in cape style.

Tapestry shopping bags are new.

Satin coats are heavily embroidered.

Fluted ribbons are used for trimming.

Stock collars are made of white satin.

THE KITCHEN CABINET

He is a capitalist—
Who cultivates contentment sweet,
And loves his work whate'er it be,
Loves quiet glens where waters meet
And friends and flow'rs and melody!
—J. H. Ayers.

SEASONABLE GOOD THINGS.

New dishes are being originated every day, because the housewives are putting more thought on what to eat.

Risotto.—Put two tablespoonfuls of olive oil into a saucepan, add two sliced onions, and a cupful of rice. Cook, stirring carefully with a fork 15 minutes, then add two cupfuls of stock, a quart of tomatoes put through a sieve, three tablespoonfuls of butter substitute, a half teaspoonful of salt, two tablespoonfuls of sugar, a few grains of cayenne, cook an hour at a low temperature, add a cupful of mushrooms cut in slices and sauted in butter. Serve hot with grated Parmesan cheese.

Potage Albert.—Soak a cupful of Lima beans over night in four cupfuls of water. In the morning add a cupful of string beans and cook together until the beans are soft. Add one potato and one tomato, cook until soft, remove and mash with enough olive oil to make a paste. Add to the bean mixture with salt and pepper to taste, bring to the boiling point and serve hot.

French Fried Cornmeal Mush.—Mix three-fourths of a cupful of cornmeal, a teaspoonful of salt, add it slowly to three cupfuls of boiling water. Stir and cook several hours in a fireless cooker or in a double boiler. Add two tablespoonfuls of grated cheese and a fourth of a teaspoonful of paprika, spread in a pan three-fourths of an inch thick. When cold and firm cut in strips and dip in sifted crumbs and then in egg beaten with two tablespoonfuls of cold water. Fry in deep fat and drain on brown paper.

Ohio Pudding.—Sift together one cupful each of flour, sugar, two teaspoonfuls of baking powder, a teaspoonful of salt and a teaspoonful of soda. To these ingredients add a cupful each of grated raw potato, grated carrot, currants and raisins. Mix well and put into buttered half-pound baking powder cans. Put the molds in a kettle and cook 20 minutes, then set away in the fireless cooker and leave three hours. One hour will be sufficient if cooked on the top of the range.

Ohio Sauce.—Cream a half cupful of sweet fat, a cupful of brown sugar, four tablespoonfuls of cream, two tablespoonfuls each of chopped pecans and dates and a half teaspoonful of lemon extract. Mix well and serve.

'Taint no use't all to complain,
Cause the sky's foretelling rain,
'Taint no use to growl an' fuss,
Only makes the wet seem wuss.

WAYS WITH CODFISH.

Codfish is such a wholesome, common and easily prepared fish that we should use it in many more combinations.

Fish Balls With Tomato Sauce.—Take one and a half cupfuls of flaked fish, three cupfuls of potatoes. Cook together until the potatoes are tender, then mash and beat very light, add one cupful of milk, a seasoning of salt and pepper, shape into balls and roll in beaten egg and sifted bread crumbs, then fry in hot fat. Drain and serve with half a cupful of strained tomato, three pepper corns, a bay leaf, stew and remove the seasoning, rub through a sieve and thicken with a tablespoonful each of flour and butter, creamed together, cook for five minutes, season and pour around the fish balls.

Baked Codfish With Cheese.—Take two cupfuls of flaked fish, one cupful of mashed potatoes, two eggs, three cupfuls of milk, a half cupful of sweet fat, a fourth of a cupful of grated cheese, and two milk crackers rolled. Mix all together, add the beaten egg and seasoning to taste, cover with well buttered crackers, and bake.

Cream of Codfish on Toast.—Take two cupfuls of shredded fish, simmer until tender. Take a cupful of rich, sour cream, salt and a little flour, cook until smooth, pour over well buttered toast after adding the fish to the sauce.

Mme. Begue's Codfish With Beans.—Take one-half pound of large white beans, one large onion, one pound of codfish, salt and pepper to taste. Cook the beans with the onion and seasoning until tender. Put four tablespoonfuls of butter in a saucepan, stir in a tablespoonful of flour, add the beans and fish with water, if needed, a sprinkling of parsley and cook until thoroughly heated.

Nellie Maxwell

Tanning Fish Skins.

A company has taken over an old tannery in Pittsburgh with the intention of operating it hereafter exclusively for the handling of fish skins. The company advises the bureau of fisheries that at the outset it will be able to handle 150 skins daily and that it is in the market for any shark skins two feet or more in length.

"There is one thing the smartest money-getter can't do."

"What's that?"

"Shave paper with an ink eraser."

LIFE'S LITTLE JESTS

HOW IT HAPPENED.

With the easy grace of those who are accustomed by long habit, we swung and swayed upon an East Cleveland street car. As we chatted pleasantly with our next strap neighbor, a man sitting near us arose and offered his seat to a lady. And then we commented to our n.-s. neighbor.

"I've been riding on this line for eight years," we said, "and I have never given up my seat to a lady."

"Then you have never had any manners," snubbed our friend, severely.

"Not so," we answered. "I have never had any seat."

How easily one is misunderstood in this cruel world!

Still With Us.

Wifey (reminiscently)—Oh! for the good old days, George.

Hubby—What old days, Susan?

Wifey—Why, the days of our grandparents, when there were so many brass knockers.

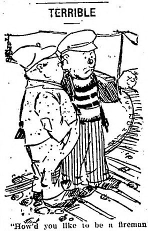
Hubby—H'm! Marie, there are plenty of knockers around now, and all of them seem to have abundance of brass.

No Light on the Subject.

"Who is the author of the saying: "Meeting the devil before day?" asks a correspondent of the Adams Enterprise, and the editor replies:

"Dunno. Sometimes we are under the impression that we said it ourself, after we had successfully dodged a well-aimed kerosene lamp, on a 3 a. m. stairway."

TERRIBLE



"How'd you like to be a fireman? They has a snap!"

"Yes; but not fer mine. I saw a fireman git soaked wid water wunst."

Another Look.

"I'll look for work," a man once said.
A job came round his way.
He gave one look and turned his head
And looked the other way.

Both Ways at Once.

"He talks miserably and yet he talks well."

"How can he do both?"

"Because he is a solicitor for an artesian well company."

Friends.

"A dog is man's best friend."

"Well," replied the prudent citizen, "considering the price of ham and eggs, a pig and a hen must be very comforting, even if they're not so sociable."

Their Good Point.

"There is one good thing, at least, to be said for burglars."

"What is that?"

"They are seldom lacking in enterprises."

A Precautionary Measure.

"Will you be true to me while I'm gone?"

"Of course—but don't be gone too long, will you, dear?"

Shakespeare on Dropstitch.

"Will you join a Shakespeare club?"

"For what purpose?"

"Oh, I s'pose the usual purpose. To knit."

Query.

"So you're a fisherman?"

"Yes, sir."

"What are your net earnings in a year?"—Florida Times-Union.

The Remedy.

"I don't know what was the matter with Elsie last night. When I spoke to her her eyes dropped and her face fell."

"Then I should think what the girl needed was a pick-me-up."

Appeal to a Dry Constituency.

"Did you ever make any temperance speeches?"

"Yes," replied Senator Sorghum.

"Did they help anybody?"

"I should say so. They helped me to get elected."

ARMY PAY ROLL IS NOW NEARLY A BILLION A YEAR

Facts and Figures About Sums Paid Various Grades of Officers and Enlisted Men.

HOW AND WHEN THEY GET IT

Wide Expansion of the Army Makes Task of Paying Off Intricate and Difficult—Is Quartermaster's Job—Precautions Taken to Insure Meeting Pay Roll Promptly.

Washington.—The actual pay roll of the fighting forces of the United States is now nearly $100,000,000 per month. This sum is disbursed by the pay officers of the army and navy in the form of checks or currency or by the treasury department in the form of family allotments as compensation for services rendered according to the scale of pay prescribed by law for the uniformed defenders of the nation.

This figure does not include "family allowances" which are paid by the government toward the support of the families of enlisted men, under specified conditions, nor does it consider any of the special compensatory features of the military and naval insurance act, under which $176,150,000 was appropriated.

For the purpose of informing the public accurately as to the system of pay in the army the following authorized statement has been issued by the committee on public information:

Army Pay Nearly Billion a Year.

The total pay of the United States army for the month of December was approximately $78,580,800.

Disbursements on account of the pay of officers and men of the army are now at the rate of about $950,000,000 per year.

These figures consider solely the pay disbursed by the quartermaster department and do not include family allowances or compensation for disability of soldiers, provided for by the military and naval insurance act and paid by the government through the war risk insurance bureau of the treasury department.

Following is a comprehensive statement of the system of pay of the army authorized by the quartermaster general:

The quartermaster general of the army, under the direction of the secretary of war, is charged with the duty of providing for the payment of the officers, enlisted men, female nurses, field clerks, and civilian clerks of the quartermaster corps on duty at places other than in the office of the quartermaster general. Due to the lack of office buildings necessary to take care of the increased number of employees required to carry on the business of the army at Washington, it has been necessary to lease many privately owned buildings for office purposes. The finance and accounting division of the office of the quartermaster general is charged with the details of providing funds, and inferior administration in connection with the payment of the army, and is now located in a large apartment house at the corner of Fifteenth and M streets NW.

Intricate and Difficult Task.

The intricate task of paying the officers and men of the United States army, made more difficult by the wide expansion of the past six months, is being satisfactorily accomplished. To prevent failure to meet the monthly compensation of every man in the service, no matter where he may be located, liberal sums are furnished the various disbursing quartermasters in order promptly to meet the army pay rolls with their extraordinary demands for funds.

The officers and enlisted men of the army are paid at the end of each month, or as soon thereafter as possible, by the disbursing officers of the quartermaster corps, in cash or by check, at their stations or in the field.

If on duty in France they are paid in French currency or by United States checks, as officers and men may elect.

Pay of Enlisted Men.

The pay of enlisted men depends on their grades, ratings, and length of service. From June 1, 1917, and continuing during the term of the war the pay of enlisted men is as follows:

Men receiving $30: All privates, the army entering grade.

Men receiving $33: First-class privates, men promoted to act in minor noncommissioned officer capacity.

Men receiving $36: Corporals, saddlers, mechanics, farriers and wagoners, and musicians of the third class.

Men receiving $38: All sergeant grades in the line, which include infantry, field, artillery, coast artillery and cavalry; cooks, horseshoers, band corporals and musicians of the second class.

Men receiving $44: Sergeants of the various corps of the engineers, ordnance, signal corps, quartermaster corps and medical department; band sergeants and musicians of the first class.

Men receiving $48: Battalion sergeant majors, squadron sergeant majors, sergeant majors (junior grade), sergeant buglers, master gunners and assistant band leaders of the line.

Men receiving $51: Regimental sergeant majors, regimental supply sergeants, sergeant majors (senior grade), quartermaster corps, ordnance sergeants, first sergeants, electrician sergeants of the first class, assistant engineers and battalion sergeant majors and battalion supply sergeants of the engineers.

Men receiving $56: Sergeants, first class, of the medical department.

Men receiving $71: Hospital sergeants, master engineers of the junior grade and engineers.

Men receiving $81: Quartermaster sergeants of the senior grade of the quartermaster corps, band leaders, master signal electricians, master electricians, master engineers of the senior grade and master hospital sergeants.

Assignment to Special Duties.

These are the established grades of the enlisted men, but they may variously be assigned to such special duties as chauffeurs, switchboard operators, cobblers, clerks, camoufleurs, sanitary inspectors, draftsmen, stevedores, accountants, plumbers and such other occupations and trades as are necessary to meet the requirements of army service.

In addition to the rates of pay for enlisted men heretofore mentioned, supplemental pay or allowances are made as follows:

(1) Increased pay is allowed for continuous service, computed under what is known as "enlistment period." An enlistment period ordinarily represents a period of three or four years, dependent upon the law in effect at date of enlistment. There are seven such periods, covering a period of service of 1 year to more than 18 years provided for, and the increases range from $3 to $24 per month, according to the grade and length of service. Men in the grade of private calling for $30 per month are increased $3 per month during the second enlistment period, an additional $3 during the third enlistment period, and $1 per month for each additional enlistment period to include the seventh enlistment period. Men above the $30 grade and up to and including the $38 grade are entitled to $3 per month additional pay for each enlistment period from the second to the seventh for each successive enlistment period. Men above the $38 grade are entitled to $4 per month additional pay for each enlistment period from the second to the seventh.

Some Additional Ratings.

(2) Enlisted men of the coast artillery, below grade of mess sergeant, are entitled to the following additional ratings, according to established individual qualifications: Casement electricians, observers of the first class, plotters and coxswains, $9 per month; chief planters, observers of second class, chief loaders, gun commanders and gun pointers, $7 per month; enlisted men of the field artillery—expert first-class gunners, $5 per month; first-class gunners, $3 per month; and second-class gunners, $2 per month; enlisted men of the cavalry, engineers and infantry—expert riflemen, $5 per month; sharpshooters, $3 per month; enlisted men of the medical department—surgical assistants, $5 per month; nurse (enlisted man), $3 per month, and dispensary assistant, $2 per month.

(3) Enlisted men of the signal corps, while on duties which require them to participate regularly in aero flights, assuming that they have rating of aviation mechanician, receive 50 per cent increase in their monthly pay.

Housing and Subsistence.

(4) All enlisted men, while on detached duty not in the field where there are no army quarters available, receive in addition to their pay $15 per month to cover the expense of housing and also a suitable allowance for subsistence and for heat and light.

(5) Enlisted men, if serving in a foreign country or beyond the continental limits of the United States (Porto Rico, Hawaii and Panama canal zone excepted) receive 20 per cent increase in pay computed on the base pay and service pay prevailing prior to June 1, 1917, when an act of congress increased, for the "term of the emergency," the pay of all enlisted men in amounts ranging from 50 per cent to 8 per cent.

(6) Enlisted men attached to the United States Military academy are entitled to the same pay and allowances as other enlisted men of the regular army of the same grade and additional compensation provided for performing certain duties upon detail therefor in orders.

ENTRANCE TO DUGOUT

His letter home may be composed under these difficult conditions and in a concealed "cranny" of this sort.

'SMILEAGE' BOOKS WILL CHEER THE SOLDIERS

Camp Devens, Ayer, Mass.—"Smileage books" for the soldiers is the latest device for making the man-in-khaki's life as cheerful as possible while at cantonment camps.

"Smileage books" are issued by authorities in charge of camp amusements and are guaranteed to contain 100 good times for any recruit fortunate enough to possess one, which will cost $5.

The Pay of Officers.

Officers of the army are paid according to rank held by them. A second lieutenant receives $141.67 initial pay per month; first lieutenant, $166.67; captain, $200; major, $250; lieutenant colonel, $291.67, and a colonel, $333.33, with an increase of 10 per cent known as longevity pay for each period of five years of service, provided that such increase shall not exceed 40 per cent.

The pay of a brigadier general is $6,000 per year; major general, $8,000; lieutenant general, $9,000, and a general, $10,000. These officers receive no increase for continuous service.

All officers are entitled to be furnished public quarters, with fuel and light, but if these cannot be provided the officers receive a commuted money value of the same. The allowance for quarters for a second lieutenant is two rooms, or $24 per month; for a first lieutenant, three rooms or commutation of $36 per month; a captain, four rooms or commutation of $48; major, five rooms or commutation of $60; lieutenant colonel, six rooms or commutation of $72; colonel, seven rooms or commutation of $84; brigadier general, eight rooms or commutation of $96; major general, nine rooms or commutation of $108; lieutenant general, ten rooms or commutation of $120; and a general, eleven rooms or commutation of $132. All receive a suitable allowance for heat and light, dependent upon the locality of their stations and the season. While on foreign service officers receive an increase of 10 per cent of their base pay and longevity pay.

Aerial Flight Increases.

Aviation officers of the signal corps, or officers attached to the signal corps, while on duty which requires them to participate regularly and frequently in aerial flights, are entitled to an increase in the pay of their grade, under their commissions, as follows: Aviation officers, 25 per cent; junior military aviators, 50 per cent; military aviators, 75 per cent. Each junior military aviator and each military aviator duly qualified and serving has the rank, pay and allowances of one grade higher than that held by them under their commissions, provided that the ranks under their commissions are not higher than that of captain.

For deeds of valor, recognized by acts of congress, officers and enlisted men receive certificates of merit which entitle them to an additional compensation of $2 per month.

Allowances at Retirement.

Enlisted men can apply for retirement after 30 years of service. They are retired on 75 per cent of the monthly pay drawn at the time of retirement, and $15.75 a month additional in lieu of allowances.

Officers are retired for disability or after sixty-four years of age, and receive 75 per cent of the pay of the grade held at date of retirement.

An enlisted man in active service has no necessary personal expenses except for barber and laundry. Uniforms, underclothing, shoes, hats, quarters, medical attendance and subsistence are supplied them at government expense. Such materials as tobacco, postage, confectionery and incidentals of individual taste may be purchased at the post exchange at cost.

Officers, while in hospital, are charged $1 per day for subsistence. They are not entitled to clothing or equipment and are required to subsist themselves, purchasing their supplies either from the quartermaster or through the ordinary channels of trade.

RETURNS AFTER TEN YEARS

Wanderer Comes Back to Old Home in Army Uniform and Then Leaves for France.

Chicago.—After ten years of wandering, away from all communication with his family, Howard Clarke, scion of one of the oldest and most distinguished Chicago families, returned to visit those he left behind for probably the last time. He returned in the uniform of a United States soldier. He is now Capt. Howard Clarke, and after a few days here, left to rejoin his regiment at a Pacific port, and his latest adventure will take him to the battlefields of France.

She Finds Money in Rat Hole.

Kansas City, Mo.—Mrs. Ralph Wildbauhm will buy a Liberty loan bond with $142 which she recovered from a rat hole recently through the efforts of Arthur Leppert, a patrolman. Mrs. Wildbauhm had placed the money in a hole in the wall of her home. Recently she decided to buy a bond with it, but when she went to get the money it was gone. The police were notified and Patrolman Leppert was sent to investigate. He heard a scratching noise in an adjoining room, investigated and found a rat hole in the floor. When the flooring was removed he found the rat's abode lined with currency, but all were there.

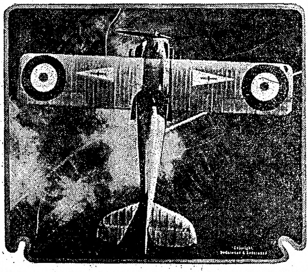
ITALIAN TROOPS RESTING AFTER THE BATTLE

Copyright, Underwood & Underwood

After a tremendous battle in which these Italian troops acquitted themselves with great glory, the men were so completely tired out that they threw themselves on the ground to snatch a brief rest. They are members of the famous Florence brigade.

FRENCH CHASER PLANE AFTER THE BOCHE



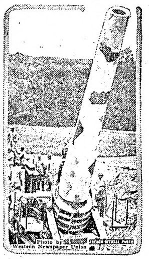
This remarkable photograph of a French chaser plane hunting the Boches at full speed high above the clouds is one of the wonder pictures of the war. The chaser plane was flying at an altitude of 3,000 meters, while another pilot flying above made the photograph. Though small clouds were passing under the chaser plane, the roads, fields and woods below are distinguishable.

AMERICAN AVIATORS GET GOLD EAGLES

Copyright, Underwood & Underwood

These two American officers had just been decorated with gold eagles at the Aero club of Paris when the photograph was taken. They are aviators in General Pershing's force.

NEW TYPE OF FRENCH GUN



This is one of the new and already famous French 400-millimeter guns mounted on a specially constructed railway car and well camouflaged. It is in position for firing.

STUDYING FOOD IN ENGLAND

Copyright, Underwood & Underwood

An American special mission is now in Great Britain studying the food situation there at first hand for Herbert Hoover, the federal food administrator. This British official photograph shows Edward F. Trefz of the American national chamber of commerce, who is a member of the mission, holding a kiddie while on a visit to the Poplar district of London, where the mission studied the manner of getting food to the needy.

THE DAIRY

SKIMMED MILK FOR CALVES

Since Most of Fat Has Been Removed in Cream Carbohydrates Needed to Make It Balanced.

Skimmed milk is a little richer in protein than whole milk, but lower in carbohydrates. Since most of the fat has been removed in the cream the skimmed milk will need carbohydrates to make it a balanced ration for calves.

A good plan is to replace a portion of the whole milk with skimmed milk, gradually increase the skimmed milk with some form of carbohydrates till all of the whole milk is replaced by skimmed milk. Fine ground meal is one of the best carbohydrate supplements to be fed with skimmed milk. Some feeders cook the meal, stir it in the skimmed milk and feed it to the calf. After the calf is two weeks old it will eat fine ground meal and if fed small quantities will assimilate it. Linseed meal is also used.

Care should be taken in feeding calves. They should be taught to drink from the pail as soon as possible. Nothing but clean vessels should be used and the milk should be clean and warm.

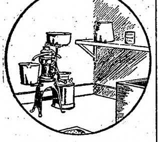
CLEAN UTENSILS ARE URGED

High Grade of Milk Cannot Be Obtained if Pails and Cans Are Not Thoroughly Washed.

(By E. H. FARRINGTON, Wisconsin Agricultural College.)

All efforts to supply the consumers with sweet, clean milk are useless if the milk pails, the cans, and other utensils are not thoroughly washed and scalded before milk is poured into them. Milk sours so quickly and it is so difficult to remove the sour odor from the utensils that these should be washed immediately after they are used.

(1). Milk pails and cans should be smooth, with all cracks and seams flushed with solder. Seamless pails and cans have been placed on the market.



Separator in Clean Room.

(2). When washing tinware, first rinse off the film of milk on the surface with cold water, then wash thoroughly with warm water and cleaning soda, using a brush, and finally rinse with scalding hot water and place in the sun or some place free from dust to dry.

(3) After scalding, do not wipe milk tinware with a cloth, but let the rinsing water be so hot that there is no further need of drying.

CHAPPED TEATS ARE VEXING

Where Cows Wade Around in Muddy Yards and Pastures, Teats Often Get Wet and Cold.

Sore teats of any kind are very unpleasant, both to the cow and the milker. A cow having sore teats of any kind does not stand still during milking. She keeps moving about and even kicking.

During spring chapped teats are common. The cows wade around in muddy yards and even in ponds in the pasture, the teats get wet and cold, and if no special attention is given to the cows, the teats frequently become very sore.

HIGH-PRICED FEED ANNOYING

Dairyman Depending on Profit From Cows for Living Must Know Just What He Is Doing.

Now that the cost of cow feed is soaring skyhigh and the dairyman is depending on the profit from his cows for his living it is a self-evident fact that he must know what he is thinking about. One thing is certain, the poor feeder to the poor cow is not in the race and the sooner he gets out the better, even if he must hire out to work for the man who knows how to do his own thinking.

RETAIN BULL UNTIL TESTED

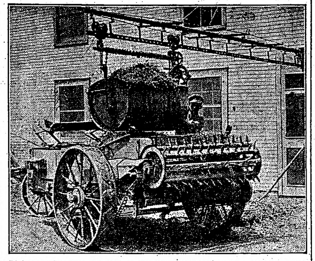
Not Good Policy to Sell to Butcher After Two Years' Service—May Prove to Be Valuable.

After a young or untried bull has been used two years he should not be sold to the butcher, because he may prove to be a bull of exceptional worth when his daughters freshen. Such a bull often can be lent or leased to a man with a grade herd for a couple of years until some of his heifers freshen. In this way he always is subject to recall in case he proves especially valuable.

AGRICULTURAL DEPARTMENT

This department of THE ELEVEN TOWNS is devoted to the interests of the agriculturists of Pennington and Marshall Counties. All the articles are by foremost authorities, including U. S. Government experts.

LIVE STOCK FARMING AS A MEANS OF MAINTAINING SOIL FERTILITY



Right Way to Care for Manure Produced on the Farm—Conserve the Plant Food Which It Contains to Increase the Fertility of the Soil.

(Prepared by the United States Department of Agriculture.)

No farming people have ever been able economically to maintain the fertility of their soils without the use of live stock. Farming without the use of manures is a waste of energy and results in the exhaustion of soils. The neglect in preserving and increasing the quantity of farm manures has been a great drain on the natural resources of the American farm, especially in the southern portion of the United States. The lack of intelligent care of the waste products and the convenient form of commercial fertilizers have jointly been responsible for the almost general neglect of farm manures.

Value of Fertilizers.

Commercial fertilizers have played and will continue to play a great part in the farm economy of the country. Their full value, however, cannot be obtained by their exclusive use. A much greater value can be had from them when used wisely in connection with manure and green crops. One of the principal reasons for the small value sometimes realized from manure of any kind is that it has not been properly handled and through exposure and neglect has lost a large percentage of its plant food. The chief difference between barnyard manure and other vegetable matter is that the process of passing through the animal has rendered the fertilizing elements of the former more available for absoption in plant growth. The best authorities tell us that from 75 to 90 per cent of the fertilizing value of a crop is left after passing through the animal. This being true and the elements being in a soluble form, we have some idea of why it is of the utmost importance to protect the manure supply from leaching by rains or from other sources of loss.

Loss by Leaching.

The Cornell University experiment station found that as much as 50 per cent of the plantfood constituents in manure was lost by leaching and unnecessary fermentation. The problem is how best and most economically to prevent this loss. The best plan where it is practicable is to haul out the manure regularly, spread it upon the land, and plow it under. The best results are usually obtained by turning under shallow. The next best plan is to keep the stock under sheds or in stables with sufficient litter to absorb all liquids. This treatment will not only take up moisture but the continual trampling of the animal will exclude all air, so that the accumulation may go on without injury to its quality until a convenient time to remove and spread it on the land. The litter or waste matter used for bedding not only serves its purpose in helping to preserve the manure, but adds considerably to it.

When neither of these plans can be advantageously used, a cheap shed conveniently located may be subsituted and all manure carried to it as removed. Care must be taken to prevent heating, which is especially liable to happen when horse manure predominates. This can be remedied by adding water when needed.

CAREFULLY LOOK OVER SEED

Corn Should Be Graded Before It Is Shelled to Secure Uniformity in Size and Shape.

(Prepared by the United States Department of Agriculture.)

Shelled corn is not easily graded and all seed corn should therefore be looked over carefully before the ears are shelled. The grading is done to secure uniformity of size and shape in each lot of kernels, so that they will be dropped evenly from the corn-planter when it is set for special lots of seed.

If the seed ears vary as to size of kernel they should be separated into two or three grades, according to the type of grain they bear. These grades should be shelled separately—always by hand and not by a mechanical sheller—and then tested in the corn planter. After finding the numbers on the planter plates which drop the kernels most uniformly, each lot should be numbered with corresponding figures. All this should be done when work is slack in the winter and before the spring rush begins.

Be sure there is enough for two years' planting. You may need it yourself if the first planting is drowned out; and there never was a time when there was not a demand for seed corn known to be good.

ARRANGING RATION FOR COWS

Three Things Should Be Borne in Mind—Protein, a Little Fat and to Supply Succulence.

The ration for the dry cow should be formulated with three things in mind, namely, to furnish a sufficient amount of protein to develop the fetus properly and allow a surplus for the needs of the body of the cow; to supply enough carbohydrates that the cow may lay on a little fat; and to supply succulence. Some kind of green feed is very essential in the ration for the cow at all times. It serves the purpose of maintaining the bowels in a loose condition, which is necessary to good digestion and assimilation of food.

DON'T DISTURB LAYING HENS

Undue Excitement in Poultry House Is Bound to Reduce Egg Yield of Young Fowls.

It pays to be quiet and careful in the houses containing laying hens, especially if they are pullets from the range which have just commenced to lay. Strangers that visit poultry plants should realize that undue excitement is bound to reduce the egg yield and make every effort not to frighten the birds by sudden movements. A strange child running through a poultry house will frighten the hens and seriously reduce the laying for that day.

GOOD FEEDS FOR DAIRY COWS

Those Who Can Obtain Fish Meal Should Give It Consideration in Arranging Rations.

(Prepared by the United States Department of Agriculture.)

Dairymen who can obtain fish meal, a by-product of the fish cannery, should give it consideration in making up the rations for their dairy cows. When used in a ration for milk production fish meal proved to be worth from 20 to 25 per cent more than cottonseed meal and had no ill effect upon the flavor of the milk, says the annual report of the bureau of animal industry, United States department of agriculture. Potato silage was found to be as palatable as corn silage and of equal feeding value; peanut meal from unhulled nuts was inferior to cottonseed meal, and 128 pounds of potato meal equaled 100 of cornmeal as a feed for dairy cows, according to experiments conducted by the bureau.

WINTER CARE FOR CHICKENS

Where Hens Are Compelled to Use Energy in Fighting Cold They Will Not Produce Eggs.

Keep the hens warm and comfortable, yet provide enough ventilation to keep the air pure, for a hen that must use her energy in fighting the cold cannot put the same energy into egg production.

FOR BETTER ROADS

IMPROVING THE BAD SPOTS

Certain Small Ruts That Are Usually Wet and Soft Determine Load Farmer Can Carry.

The worst holes in the road always determine the load the farmer can market. No stretch of roadway is uniformly good, because every road has certain small spots that are usually soft and wet. These spots cause more trouble than the rest of the road combined. How these spots are to be improved depends on the character of the soil, and the nature of the country. Many such spots owe their character to a soft subsoil, due to springs. Before these roads can be permanently improved they must be underdrained. If a tile is laid in these places there will usually be no trouble in the future. The surface of the road should then be filled with dirt and crowned, so any surface water may run off. If this is done there will be no trouble from subsurface water.

Many roadways that are closed in with shade trees are bad. If a goodly portion of the scrub timber along these roads be removed, the ground will dry out and no trouble result. If the character of the soil is soft and pliable, so that it will not pack and remain firm, new material should be applied to the surface. The best and cheapest material for improving roads is gravel. Where gravel beds are accessible a day's work with a team and wagon will improve any roadbed permanently. If the soil is very sandy an 8-inch application of clay to the surface will effect wonders. The road patrol should spend a considerable portion of its time in remedying the bad spots in the road.

ANSWER TO PRISON PROBLEM

New York and Other States Have Tried Experiment of Using Convicts to Improve Roads.

New York and many of the Southern and Western states have tried the experiment of using convicts to improve highways—and it has worked to perfection. The official organ of the New York state prisoners says that "no man of all the inmates who went outside last year had a word of fault to find with his treatment. All are anxious to join these camps again. The freedom of movement and the exercise shortens the time yet to do in a wonderful manner. Many states have found road work to be the answer to the prison problem. Colorado and California have rebuilt the better portion of their roads with prison labor, and besides feeding the inmates with an extra supply of food, it has also led to a lessening of time through provisions made by the farsighted legislators.

Convict Gang at Work.

WIDE TIRES IMPROVE ROADS

They Have Same Effect on Country Highway as Roller on Field—Also Pull Easier.

Wide tires build up roads and save horse labor. They have the same effect upon a country road as a roller on a plowed field. On the other hand, the narrow tire cuts up a road like a disk. It has been found by actual test in this matter that the wide-tired wagon pulls easier in nearly all cases than the narrow-tired wagon. In deep mud on a country road the wide-tired wagon pulls 6.2 per cent easier. On the country road with a thin surface of mud or deep dust, however, the narrow tires pull 4.9 per cent easier. In a cornfield the wide tires pull 30.5 per cent easier, in a dry alfalfa field 17.7 per cent easier, and on a dry country road 10.2 per cent easier.

Ontario Makes Good Roads.

The Province of Ontario has approximately 55,000 miles of roads. More than 43,000 miles have been treated and are in fairly good condition. About 20,000 miles are well graded earth roads; about 3,000 miles are surfaced with broken stone, and about 10,000 are surfaced with gravel.

All Roads Lead Home.

All roads lead to home. You are not at fault if they are not all good roads, but you are to blame if it's not a good home.

JOB PRINTING We can do the finest class of printing, and we can do that class just a little cheaper than the other fellow. Wedding invitations, letter heads, bill heads, sale bills, statements, dodgers, cards, etc., all receive the same careful treatment—just a little better than seems necessary. Prompt delivery always.

Let Us Be Your Waiter

We never tire of helping others when they ask for good job printing. We can tickle the most exacting typographic appetite. People who have partaken of our excellent service come back for a second serving! Our prices are the most reasonable, too, and you can always depend on us giving your orders the most prompt and careful attention. Call at this office and look over our samples.

GERMANY ALONE IN WAY OF PEACE

President Tells Congress German Militarists Are to Blame for Continuation of War.

CZERNIN CONCILIATORY

Executive Openly Invites Austria to Further Discussion of Peace With United States—Hertling Reply Unsatisfactory.

Washington, Feb. 12.—President Wilson has openly invited Austria to further discussion of peace with the United States.

In a remarkable address to Congress in joint session the President laid down the basis for such negotiations. Austria, he said, "seeing and conceding the essential principles involved and the necessity of candidly applying them, can respond to the purpose of peace as expressed by the United States with less embarrassment than could Germany."

President's Address.

Gentlemen of the Congress:—On the eighth of January I had the honor of addressing you on the objects of the war as our people conceive them. The prime minister of Great Britain had spoken in similar terms on the fifth of January.

To these addresses the German chancellor replied on the 24th, and Count Czernin for Austria on the same day. It is gratifying to have our desire so promptly realized that all exchanges of view in this great matter should be made in the hearing of all the world.

Calls Czernin's Speech Friendly.

Count Czernin's reply, which is directed chiefly to my own address on the eighth of January, is uttered in a very friendly tone.

He finds in my statement a sufficiently encouraging approach to the views of his own government to justify him in believing that it furnishes a basis for a more detailed discussion of purposes by the two governments. He is represented to have intimated that the views he was expressing had been communicated to me before hand, and that I was aware of them at the time he was uttering them; but in this I am sure he was misunderstood. I had received no intimation of what he intended to say. There was, of course, no reason why he should communicate with me. I am quite content to be one of his public audience.

Hertling Confusing.

"Count von Hertling's reply is, I must say, very vague and very confusing. It is full of equivocal phrases and leads it is not clear where. But is is certainly in a very different tone from that of Count Czernin and apparently of an opposite purpose. It confirms, I am sorry to say, rather than removes the unfortunate impression made by what he had learned of the conferences at Brest-Litovsk. His discussion and acceptance of our general principles lead him to no practical conclusions. He refuses to apply them to the substantiative items which must constitute the body of any final settlement. He is jealous of the international action and of international counsel.

"He accepts, he says, the principle of public diplomacy, but he appears to insist that it be confined, at any rate in this case, to generalities, and that the several particular questions of territory and sovereignty, the several questions upon whose settlement must depend the acceptance of peace by the 23 states now engaged in the war must be discussed and settled not in general council, but severally by the nations most immediately concerned by interest or neighborhood.

"He agrees that the seas should be free, but looks askance at any limitation to that freedom by international action in the interest of the common order. He would without reserve be glad to see economic barriers removed between nation and nation, for that could in no way impede the ambitions of the military party with whom he seems constrained to keep on terms. Neither does he raise objection to a limitation of armaments. That matter will be settled of itself, he thinks, by the economic conditions which must follow the war. But the German colonies, he demands, must be returned without debate.

German Peace Not Ours.

"He will discuss with no one but the representatives of Russia what disposition shall be made of the peoples and the lands of the Baltic provinces; with no one but the government of France the "conditions" under which French territory shall be evacuated; and only with Austria what shall be done with Poland. In the determination of all questions affecting the Balkan states he defers, as I understand him, to Austria and Turkey, and with regard to the agreement to be entered into concerning the non-Turkish people of the present Ottoman empire, to the Turkish authorities themselves. After a settlement all around, effected in this fashion, by individual barter and concession, he would have no objection, if I correctly interpret his statement, to a league of nations which would undertake to hold the new balance of power steady against external disturbance.

"It must be evident to everyone who understands what this war has wrought in the opinion and temper of the world, that no general peace, no peace worth the infinite sacrifices of these years of tragical suffering, can possibly be arrived at in any such fashion. The method the German chancellor proposes is the method of the Congress of Vienna. We cannot and will not return to that. What is at stake now is the peace of the world.

No Peace of Patches.

"What we are striving for is a new international order, based on broad and universal principles of right and justice—no mere peace of shreds and patches. It is possible that Count von Hertling does not see that, does not grasp it, is in fact living in his thought in a world dead and gone. Has he utterly forgotten the reichstag resolutions of the nineteenth of July or does he deliberately ignore them? They spoke of the conditions of a general peace, not of national aggrandizement or of arrangements between state and state. The peace of the world depends upon the just settlement of each of the several problems to which I adverted in my recent address to the Congress.

"I, of course, do not mean that the peace of the world depends upon the acceptance of any particular set of suggestions as to the way in which those problems are to be dealt with. I mean only that those problems each and all effect the whole world, that unless they are dealt with in a spirit of unselfishness and unbiased justice, with a view to the wishes, the natural connections, the racial aspirations, the security and the peace of mind of the peoples involved, no permanent peace will have been attained. They cannot be discussed separately or in corners. None of them constitutes a private or separate interest from which the opinion of the world may be shut out. Whatever affects the peace affects mankind, and nothing settled by military force, if settled wrong, is settled at all. It will presently have to be reopened.

All Nations in Judgment.

"Is Count von Hertling not aware that he is speaking in the court of mankind, that all the awakened nations of the world now sit in judgment on what every public man, of whatever nation, may say on the issues of a conflict which has spread to every region of the world? The reichstag resolutions of July themselves frankly accepted the decisions of that court. There shall be no annexations, no contributions, no punitive damages. Peoples are not to be handed about from one sovereignty to another by an international conference of an understanding between rivals and antagonists. National aspirations must be respected; peoples may now be dominated and be governed only by their own consent.

"Self-determination" is not a mere phrase. It is an imperative principle of action, which statesmen will henceforth ignore at their peril. We cannot have general peace for the asking. or by the mere arrangements of a peace conference. It cannot be pieced together out of individual understandings between powerful states.

"Ready to Be Shown."

"The United States has no desire to interfere in European affairs or to act as arbiter in European territorial disputes. She would disdain to take advantage of any internal weakness or disorder to impose her own will upon another people. She is quite ready to be shown that the settlements she has suggested are not the best or the most enduring. They are only her own provisional sketch of principles and of the way in which they should be applied. But she entered this war because she was made a partner, whether she would or not, in the sufferings and indignities inflicted by the military masters of Germany against the peace and security of mankind; and the conditions of peace will touch her as nearly as they will touch any other nation to which is entrusted a leading part in the maintenance of civilization. She cannot see her way to peace until the causes of this war are removed, its renewal rendered as nearly as may be impossible.

"This war had its roots in the disregard of the rights of small nations and of nationalities which lacked the union and the force to make good their claim to determine their own allegiances and their own forms of political life. Covenants must now be entered into which will render such things impossible for the future; and these covenants must be backed by the united force of all the nations that love justice and are willing to maintain it at any cost.

Foe Offer Not Peace.

"If territorial settlements and the political relations of great populations which have not the original organized power to resist, are to be determined by the contracts of the powerful governments which consider themselves most directly affected, as Count von Hertling proposes, why may not economic questions also? It has come about in the altered world in which we now find ourselves that justice and the rights of peoples affect the whole field of international dealing as much as access to raw materials and fair and equal conditions of trade. Count von Hertling wants the essential bases of commercial and industrial life to be safeguarded by common agreement and guarantee, but he cannot expect that to be conceded him if the other matters to be determined by the articles of peace are not handled in the same way as items in the final accounting. He cannot ask the benefit of common agreement in the one field without according it in the other.

"I take it for granted that he sees that separate peace and selfish compacts with regard to trade and the essential materials of manufacture would afford no foundation for peace. Neither, he may rest assured, will separate and selfish compacts with regard to provinces and peoples.

Czernin Sees Clearly.

"Count Czernin seems to see the fundamental elements of peace with clear eyes and does not seek to obscure them. He sees that an independent Poland, made up of all the indisputable Polish peoples who lie contiguous to one another, is a matter of general concern, and, of course, must be conceded; that Belgium must be evacuated and restored no matter what sacrifices and concessions that may involve, and that national aspirations must be satisfied, even within his own empire, in the common interest of Europe and mankind.

"If he is silent about questions which touch the interest and purpose of his allies more nearly than they touch those of Austria only it must of course be because he feels constrained, I suppose, to defer to Germany and Turkey in the circumstances. Seeing and conceding, as he does, the essential principles involved and the necessity of candidly applying them, he naturally feels that Austria can respond to the purpose of peace as expressed by the United States with less embarrassment than could Germany. He would probably have gone much farther had it not been for the embarrassments of Austria's alliances and of her dependency upon Germany.

"After all, the test of whether it is possible for either government to go any further in this comparison of views is simple and obvious. The principles to be applied are these:

"First, that each part of the final settlement must be based upon the essential justice of that particular case and upon such adjustments as are most likely to bring a peace that will be permanent.

"Second, that peoples and provinces are not to be bartered about from sovereignty to sovereignty as if they were mere chattels and pawns in a game, even the great game, now forever discredited, of balance of power; but that,

"Third, every territorial settlement involved in this war must be made
670—SPECIAL—THREE H A
in the interest and for the benefit of the populations concerned, and not as a part of any mere adjustment or compromise of claims amongst rival states, and,

"Fourth, that all well-defined national aspirations shall be accorded the utmost satisfaction that can be accorded them without introducing new or perpetuating old elements of discord and antagonism that would be likely in time to break the peace of Europe and consequently of the world.

Foundation for Peace.

"A general peace erected upon such foundations can be discussed. Until such a peace can be secured we have no choice but to go on. So far as we can judge, these principles that we regard as fundamental are already everywhere accepted as imperative except among the spokesmen of the military and annexationist party in Germany. If they have anywhere else been rejected, the objectors have not been sufficiently numerous or influential to make their voices audible. The tragical circumstance is that this one party in Germany is apparently willing and able to send millions of men to their death to prevent what all the world now sees to be just.

War of Emancipation.

"I would not be a true spokesman of the people of the United States if I did not say once more that we entered their war upon no small occasion, and that we can never turn back from a course chosen upon principle. Our resources are in part mobilized now, and we shall not pause until they are mobilized in their entirety. Our armies are rapidly going to the fighting front and will go more and more rapidly. Our whole strength will be put into this war of emancipation—emancipation from the threat and attempted mastery of selfish groups of autocratic rulers—whatever the difficulties and present partial delays.

"We are indomitable in our power of independent action, and in no circumstances consent to live in a world governed by intrigue and force. We believe that our own desire for a new international order under which reason and justice and the common interests of mankind shall prevail is the desire of enlightened men everywhere. Without that new order the world will be without peace and human life will lack tolerable conditions of existence and development. Having set our hand to the task of achieving it, we shall not turn back.

"I hope that it is not necessary for me to add that no word of what I have said is intended as a threat. That is not the temper of our people. I have spoken thus only that the whole world may know the true spirit of America—that men everywhere may know that our passion for justice and for selfgovernment is no mere passion of words, but a passion, which once set in action, must be satisfied. The power of the United States is a menace to no nation or people. It will never be used in aggression or for the aggrandizement of any selfish interest of our own. It springs out of freedom and is for the service of freedom."

American Taken for German Killed.

With the American Armies in France, Feb. 12.—An American private, mistaken for a Boche in the dark, was shot and killed by one of his own patrols, following the patrol encounter with the Germans. The private became separated from the patrol, which was seeking the bodies of those killed a short time before. Attempting to rejoin them, he was challenged by a sergeant. He suspected another ambuscade and failed to respond and was killed.

Kaiserism Blamed for Church Fire.

Sioux Falls, S. D., Feb. 12.—Fire which destroyed the St. Thomas Catholic church in Madison, is believed to have been started by a pro-German agent. Several persons living near the church heard two explosions and upon making an immediate investigation they found the interior of the edifice all ablaze. The flames spread so rapidly that it indicated kerosene or some other inflammable liquid had been poured around the interior before the match was applied.

No Immediate Offensive in Sight.

London, Feb. 12.—There is no indication of an immediate great German offensive on the West front, according to the correspondent of the Express. Indications are, he said, the present condition will last for at least a fortnight. From authoritative sources it can be stated, the correspondent declared, that the transfer of German troops from the East to the West front is not faster nor greater than anticipated. Franco-British forces are superior in rifles and guns.

DEATH LIST PUT AT 166 BY BRITISH

Report Four U. S. Officers And 143 Enlisted Men Lost On Tuscania.

CAPITAL STILL IN DARK

Admiralty Says That Bodies of 126 American Soldiers Have Been Recovered—Washington Figures Vary.

London, Feb. 9.—Revised figures indicate that the loss of life on the Tuscania probably was considerably in excess of earlier estimates of 101. It is now believed complete returns will show the number of dead to be nearer 200 than 100. As the list of Americans on board the Tuscania was lost when the vessel went down, it will be impossible to ascertain the names of those lost until the names of the survivors have been cabled to the United States.

An Irish Port, Feb. 9.—The bodies of 44 of the missing 101 victims of the Tuscania disaster have been washed up on the rocks 15 miles from the scene of the torpedoing. All were Americans and their bodies were mutilated beyond recognition. Although all the soldier victims wore tags, no identification numbers had been put on them because these Americans had not as yet been assigned to definite army units. Therefore there is no way to identify them and they will be buried in one grave.

London, Feb. 9.—The British admiralty has informed the Associated Press that latest figures available on the Tuscania, torpedoed and sunk by a German submarine, showed 2,235 persons had been saved and about 166 were missing, of whom 147 were American soldiers—four officers and 143 enlisted men.

The saved, it was added, included 113 American officers and 1,917 American men; 16 officers and 183 men of the crew, and six passengers.

The bodies of 126 American troops have been recovered.

Of 148 survivors landed on the Scottish coast, 134 belonged to the United States army, including seven officers. Of these, one officer and 25 men are remaining where they landed to attend to funeral arrangements for American dead.

Washington Figures Vary.

Washington, Feb. 9.—Seventy-two hours after the Tuscania was torpedoed and sunk the War department last night still was unable to relieve increasing anxiety of relatives of those on board by announcing the list of survivors.

Even an unofficial report on circumstances attending the sinking was lacking and official figures still failed to accord with press accounts of the number lost.

The War department has had nothing to change the report that 210 persons were missing, 113 of them being American soldiers.

Despite realization that the loss was remarkably small, considering the number carried by the liner, the revised report of the British admiralty was received here with bitter disappointment. Press dispatches Thursday night indicating that the dead all told might not exceed 100 had led to the hope that possibly not more than 50 of the soldiers had perished.

Washington, Feb. 8.—Carrying 2,179 American soldiers, the Cunard liner Tuscania has been torpedoed off the Irish coast, but late official reports said 2078 of the officers and men had been saved, indicating the loss of 101 lives. These reports suggested the list of rescued might prove even larger.

The troops were composed chiefly of detachments of Michigan and Wisconsin National guardsmen.

The Tuscania is a British vessel, and was under convoy of British warships.

Greater Loss First Reported.

A brief dispatch to the War department from London early in the evening announced the disaster and reported the landing of only 1,100 survivors and for more than two hours it was feared that probably 1,400 men, including members of the liner's crew, had gone down.

When a message came to the State department from the embassy at London later saying 1,912 of the Americans had been accounted for, the joy of officials almost swept away the distress occasioned by the earlier news.

The first 1,100 survivors were landed at Larne and Buncrana, two widely separated Irish ports, and this, coupled with the evident fact that rescue ships were quickly at hand gave rise to hope that nearly everybody on board the Tuscania except those injured by the explosion might have been saved.

AWAITING DEATH LIST ANXIETY GRIPS NATION

Washington, Feb. 9.—Hundreds of American homes are waiting anxiously for the names of nearly 150 fighting boys on the torpedoed Tuscania.

British and American wireless stations were searching the remotest points in Ireland and Scotland in the hope of locating further survivors from the ill-fated ship.

No attempt has been made by the War department to prepare a list of the lost or missing. Only the names of a few survivors have been received and indications are that names of survivors would continue to come in slowly as they are assembled in Ireland by representatives of the War, State and Navy departments.

List of Units Aboard.

Because of the nature of the military organizations carried by the ship the War department announced that it would be impossible to say definitely what troops were aboard until the list of survivors was received. Later, however, the adjutant general's office made the list public. It follows:

170th Engineer train; 107th Enginee train; 107th Military police; 107th Supply train; No. 100 Aero squadron; 158th Aaro Squadron; 213th Aero Squdron; Replacement detachments Nos. 1 and 2 of the 32nd division; Headquarters Detachment and Companies D, E, and F of the 20th Engineers; the 32nd division is composed of National guard of Michigan and Wisconsin. The division trained at Camp McArthur, Texas.

Thus, all the soldiers are former Wisconisn and Michigan guardsmen except those in the aero squadron, who probably were recruited from all parts of the country.

First Ship With Troops.

The Tuscania was the first ship carrying American troops to Europe to be sunk by German submarine, but the American transport Antilles was torpedoed and sunk in the war zone while returning to the United States from France and 14 soldiers were lost, with 156 other persons, including several members of the naval armed guard.

Ship Bound for England.

Since then, however, there has been no report of an attack on a ship carrying American troops to Europe.

Recently the Navy department has feared that the Germans would make a concentrated effort to intercept transports and the call of many of the submarines to their bases being interpreted as preliminary to a campaign.

The position of the Tuscania when she was sunk is taken to indicate that she was bound to England. Her sinking definitely discloses that British ships are being used to carry American troops abroad, supplementing American transport tonnage.

Story of Eyewitness.

London, Feb. 8.—Survivors of the Tuscania, United States transport ship, sunk by a torpedo from a German submarine, asserted that two torpedoes were fired. The first passed just astern of the vessel, while the second struck in the vicinity of No. 1 boiler.

The behavior of the greater part of the soldiers and members of the crew was splendid.

A few of them became excited, hindering the lowering of the boats. In some cases the entire crews were thrown out while the boats were being lowered. Other boats were let down hurriedly on men who were swimming around the liner. Many casualties were occasioned in this way.

Within Sight of Land.

The Tuscania, one of a convoy of troop and provision ships which after a long voyage across the Atlantic, was entering what until recently were considered comparatively safe waters, was within sight of land, which was just distinguished in the dusk of evening, when the torpedo hit it amidships.

The transport steamer took a heavy list, which made proper lowering of the boats impracticable. Many men jumped into the sea. Others were thrown into the water when the boats were lowered.

An eyewitness—a passenger on one of the vessels near the transport—said the captain of the ship saw the wake of the torpedo and diverted the course of his own steamer successfully.

The Tuscania was signalled: "Torpedo coming! Dodge!" The transport started to turn, but was caught broadside, not having had time to swerve into the clear. The Tuscania was hit a little astern of midships.

Finland Forces Route Red Guard.

Stockholm, Feb. 7.—General Mannerheim, commanding government forces in Finland that were organized to enforce the authority of the Finnish diet, has defeated the Finnish Red Guard and the Russians at Uleaborg and taken possession of the city. This is the most important victory yet scored by the White Guard, as Uleaborg was the chief military depot of the Russians in northern Finland and contained stores of military stores and artillery.

Beating U-Boats, Daniels Declares.

Washington, Feb. 8.—Secretary Daniels said the United States and the Allies were winning the fight against Germany's submarines. "We are having our ups and downs," he said, "but the fight is being won." The results of the anti-submarine campaign might be described as pendulum-like, Mr. Daniels said, with the return swing becoming shorter and shorter as the Allies gradually perfected their operations. The Secretary expressed optimism regarding the conditions.

WASH THE KIDNEYS!

All the blood in the body passes thru the kidneys every few minutes. This is why the kidneys play such an important role in health or disease. By some mysterious process the kidney selects what ought to come out of the blood and takes it out. If the kidneys are not good-workmen and become congested—poisons accumulate and we suffer from backache, headache, lumbago, rheumatism or gout. The urine is often cloudy, full of sediment; channels often get sore and sleep is disturbed at night. So it is that Dr. Pierce, of the Invalids' Hotel and Surgical Institute in Buffalo, N. Y., advises "Washing the Kidneys," by drinking six to eight glasses of water between meals and then if you want to take a harmless medicine that will clear the channels and cure the annoying symptoms, go to your druggist and get Anuric (double strength), for 60c. This "Anuric," which is so many times more potent than lithia—will drive out the uric acid poisons and bathe the kidneys and channels in a soothing liquid.

If you desire, write for free medical advice and send sample of water for free examination. Experience has taught Doctor Pierce that "Anuric" is a most powerful agent in dissolving uric acid, as hot water melts sugar.

Send Dr. Pierce 10c for trial package.

Keeps Us Hoping.

"Tomorrow never comes."

"Maybe that is just as well. Probably it wouldn't bring us anything."

"Cold In the Head"

is an acute attack of Nasal Catarrh. Persons who are subject to frequent "colds in the head" will find that the use of HALL'S CATARRH MEDICINE will build up the System, cleanse the Blood and render them less liable to colds. Repeated attacks of Acute Catarrh may lead to Chronic Catarrh.

HALL'S CATARRH MEDICINE is taken internally and acts through the Blood on the Mucous Surfaces of the System.

All Druggists 75c. Testimonials free. $100.00 for any case of catarrh that HALL'S CATARRH MEDICINE will not cure.

F. J. Cheney & Co., Toledo, Ohio.

SENSE OF GUILT IN ANIMALS

Proof That They Know When They Are Doing Wrong, and Seek to Evade Consequences.

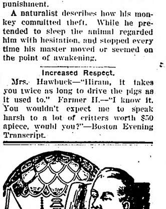
In military stables horses are known to have pretended to be lame in order to avoid going to a military exercise. A chimpanzee had been fed on cake when sick. After his recovery he often feigned coughing in order to procure dainties.

The cuckoo, as is well known, lays its eggs in another bird's nest, and, to make the deception surer, it takes away one of the other bird's eggs. Animals are conscious of their deceit, as is shown by the fact that they try to act secretly and noiselessly; they show a sense of guilt if detected; they take precautions in advance to arouse discovery; in some cases they manifest regret and repentance. Thus, bees which steal hesitate often before and after their exploits, as if they feared punishment.

A naturalist describes how his monkey committed theft. While he pretended to sleep the animal regarded him with hesitation, and stopped every time his master moved or seemed on the point of awakening.

Increased Respect.

Mrs. Hawbuck—"Hiram, it takes you twice as long to drive the pigs as it used to." Farmer H.—"I know it. You wouldn't expect me to speak harsh to a lot of critters worth $50 apiece, would you?"—Boston Evening Transcript.



Your comfortable, healthy, well-to-do neighbor uses

INSTANT POSTUM

instead of coffee.

Ever ask him the reason?

Might be worth while—especially if you are one of those with whom coffee doesn't agree.

CIGARETTES
LUCKY STRIKE

YOU COOK YOUR FOOD—WHY NOT YOUR TOBACCO?

YOU know what broiling does to steak, baking to a potato—and toasting to bread.

In each case flavor is brought out by cooking—by "toasting."

So you can imagine how toasting improves the flavor of the Burley tobacco used in the Lucky Strike Cigarette.

24 Tablets for 25c.
At any Drug Store

Explaining It.

"Money is so tight just now."

"I suppose that is why it is hard to get loose change."

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Any druggist can put this up or you can mix it at home at very little cost. Full directions for making and use come in each box of Barbo Compound. It will gradually darken streaked, faded gray hair, and make it soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off. Adv.

Lawyers would make good soldiers. Their charges would discourage the enemy.

Fiery Red Pimples.

A hot bath with Cuticura Soap followed by an application of Cuticura Ointment to distressing eczemas, etc., proves their wonderful properties. For free samples address "Cuticura, Dept. X, Boston." At druggists and by mail. Soap 25, Ointment 25 and 50.—Adv.

Conservation of space is a good idea—but a man doesn't have to locate a brewing-vat in his stomach.

160 ACRE FARMS IN WESTERN CANADA FREE

Easy to figure the Profits

Where in **Western Canada** you can buy at from **$15 to $30 per acre good farm land that will raise 20 to 45 bushels to the acre of $2 wheat**—its easy to figure the profits. Many Western Canadian farmers (scores of them from the U. S.) have paid for their land from a single crop. Such an opportunity for **100% profit** on labor and investment is worth investigation.

Canada extends to you a hearty invitation to settle on her

Free Homestead Lands of 160 Acres Each

or secure some of the low priced lands in **Manitoba, Saskatchewan or Alberta.** Think **what you can make** with wheat at **$2 a bushel** and land so easy to get. Wonderful yields also of **Oats, Barley and Flax. Mixed farming** and cattle raising.

The climate is healthful and agreeable; railway facilities excellent; good schools and churches convenient. Write for literature and particulars as to reduced railway rates to Supt. Immigration, Ottawa, Canada, or to

ACTIVITY GROWS ON WEST FRONT

Two Great Opposing Forces Poised, Watching Each Other For First Move.

TENSION IS TIGHTENING

Most Sanguinary Period of Entire War Approaching As Mild Weather Continues And Fields Dry Out.

With the British Army in France, Feb. 13. — Along the British-German front the tension is tightening as the extraordinarily bright, mild weather has continued to dry out the sodden fields, the two great armies have become more alert. The inertia of the day when the theater was held in the grip of snow and impassable mud has disappeared and the contending forces are poised, watching each other, like duelists, for the first move, which will mean that the most sanguinary period of the war has begun.

Something Bound to Happen.

Something seems bound to happen before another month has passed, if the present weather holds. Indeed, even now the ground is some sections is quite fit for fighting.

The enemy continues to make intense preparations for what has been advertised as the "great offensive." German troops and guns keep pouring into the Western front and there are indications that a few Austrian units are in Flanders. Certain areas back of the German front have been cleared for action and daily bodies of troops have been practicing attacks under the tutelage of experts. Prisoners say that leave for the soldiers was stopped January 20.

Silence Is Uncanny.

So far as actual fighting is concerned it is still confined to identification raids, air activity and occasional bursts of artillery. Along many miles of the front which the correspondent visited in the last two days, there is an ominous quiet. One may sit for hours on a vantage point so close to the German lines that the enemy can be seen working about, yet there are few sounds of strife.

The enemy either is playing possum or ignoring the military movements behind the British lines and the British themselves are sitting tight, saying little. The silence is uncanny, and it is portentous.

NO MORE HEATLESS MONDAYS

Better Conditions to Cause Calling Off of Order.

Washington, Feb. 13. — Indications are that Monday was the last of the heatless Mondays. Fuel Administrator Garfield expects to suspend the closing order at once in view of better weather and improved railroad traffic conditions.

Reports to the director general of railroads show that traffic conditions are improving rapidly despite floods in many parts of the country. Coal mines are receiving empty cars in larger numbers than for weeks past and loaded cars are moving to their destinations.

L. A. Snead, who has been in charge of distribution, has been named assistant to Dr. Garfield and will tour the country, conferring with local fuel committees and officials on arrangements to take care of domestic needs. Mr. Snead will inquire also into retail prices and will assist the local committees in arriving at a basis for fixing prices.

WOULD CUT AVIATORS' PAY

Senate Committee Gets Bill Recommended By Pershing.

Washington, Feb. 12.—On a report from General Pershing that aviation is not extra-hazardous service, Secretary Baker has submitted to the Senate military committee a bill to repeal all extra allowances in the aviation service, averaging 50 per cent.

"Flying duty is no more hazardous that duty with other combat troops and involves nothing like the hardships endured by troops which occupy trenches," said General Pershing. "Such laws are productive of improper balance in rank and pay which result in injustice to other arms and are no longer necessary in order to get personnel."

The measure submitteed by Secretary Baker also would create a new grade of "aviator" to be filled by specially qualified civilians paid $150 monthly.

Hold U. S. is Important.

Amsterdam, Feb. 12. — Sinking of the Tuscania was pointed to by the Berlin Mittag Zeitung in copies received here as proof that America will be unable to play a great practical part in the war. Allied capitals were said to be greatly disturbed. If Secretary of War N. D. Baker regards the sinking as a new German challenge, that paper continued, the future would provide many more such challenges. Sinking of the American transport was characterized by the Cologne Volks Zeitung as gratifying.

A KLONDIKE TO THE REAL FARMER

A Western Canada Crop Estimated at $12,000, Makes $19,000.

Messrs. Harris, formerly of Audubon, Iowa, wrote the "Audubon Advocate," expressing their satisfaction of things in Western Canada. They located at Makepeace, Alberta. They say there are those who make good, and those who fail. The former are those that land agents refer to when advertising their land. "But," continues the letter, "A great many of the farmers in this vicinity pay for their land with their first crop. A man near here bought a section of land in the year 1915 for $23 per acre. He broke 300 acres of the land during the summer of 1915. In the fall of 1916 he threshed 16,000 bushels of wheat, which paid for his land, all expenses and had a balance of $4,000. In the fall of 1917 he threshed nearly as much off the other half of the section. At the present time he would not take $50 per acre for his land.

"We have had five crops in Alberta. The two dry years (1914-1917) our wheat made 20 and 30 bushels to the acre respectively. In 1916 we raised 50 bushels of wheat to the acre on summer fallow. The best results are obtained by plowing or breaking in the summer, working it down in the fall so that it will retain the moisture. Thus farming one-half your ground each year.

"Persons owning land here and still living in the States should, if they don't feel themselves able to come up here and finance themselves until they could get their first crop, get some of their land broken and worked down in the fall before they come. The next spring they could come and put in the crop, fence and put up their buildings. This way they have to wait only one summer for their first crop.

"It is not advisable for a person to come here in the spring, break out land and put it in crop the first year because the moisture is not in the ground and a failure is almost certain unless it is an exceptionally wet year.

"One of the boys from that locality, Mr. Peder M. Jensen came to Alberta last spring. He bought a 30-60 Rumely Oil-Pull engine on the 8th day of June, 1917. After that date he broke 1,100 acres of prairie sod for which he received an average of $5.00 per acre.

"Mr. Hansen from your community, was up here last fall with several prospective land buyers from that neighborhood. At that time he inquired the value of the crop on the section we were farming. We told him that it would probably make in the neighborhood of $12,000. This same crop when sold brought nearly $19,000. The most of it being sold when prices were low for the year."—Advertisement.

The Reason.

"Why do they call that young fellow a sad sea dog?" "I guess it is because he is so ready with a waggish tale."

To Cure a Cold in One Day
Take LAXATIVE BROMO Quinine Tablets. It stops the Cough and Headache and works off the Cold. E. W. GROVE'S signature on each box. 30c.

The Main Thing.

"Don't take any notice of the cook, Maria." "I haven't dear, but she's just given it."

Win the War by Preparing the Land
Sowing the Seed and Producing Bigger Crops
Work in Joint Effort the Soil of the United States and Canada
CO-OPERATIVE FARMING IN MAN POWER NECESSARY TO WIN THE BATTLE FOR LIBERTY

The Food Controllers of the United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat are available to be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rests the burden of supply.

Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operation.

Canada's Wheat Production Last Year was 225,000,000 Bushels; the Demand From Canada Alone for 1918 is 400,000,000 Bushels

To secure this she must have assistance. She has the land but needs the men. The Government of the United States wants every man who can effectively help, to do farm work this year. It wants the land in the United States developed first of course; but it also wants to help Canada. Whenever we find a son we can spare to Canada's fields after ours are supplied, we want to direct him there.

Apply to our Employment Service, and we will tell you where you can best serve the combined interest.

Western Canada's help will be required not later than April 5th. Wages to competent help, $50.00 a month and up, board and lodging.

Those who respond to this appeal will get a warm welcome, good wages, good board and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had apply to: U. S. EMPLOYMENT SERVICE, DEPARTMENT OF LABOR

SPOHN'S DISTEMPER COMPOUND
COLT DISTEMPER
You can prevent this loathsome disease from running through your stable and cure all the colts suffering with it when you begin the treatment. No matter how young, SPOHN'S is safe to use on any colt. It is wonderful how it prevents all distempers, no matter how colts or horses at any age are "exposed." All good druggists and turf goods houses and manufacturers sell SPOHN'S at 50 cents and $1 a bottle; $5 and $10 a dozen.

Tired Nervous Mothers
Should Profit by the Experience of These Two Women

Buffalo, N. Y.—"I am the mother of four children, and for nearly three years I suffered from a female trouble with pains in my back and side, and a general weakness. I had professional attendance most of that time but did not seem to get well. As a last resort I decided to try Lydia E. Pinkham's Vegetable Compound which I had seen advertised in the newspapers, and in two weeks noticed a marked improvement. I continued its use and am now free from pain and able to do all my housework."—Mrs. B. B. Zielinska, 202 Weiss Street, Buffalo, N. Y.

Portland, Ind.—"I had a displacement and suffered so badly from it at times I could not be on my feet at all. I was all run down and so weak I could not do my housework, was nervous and could not lie down at night. I took treatments from a physician but they did not help me. My Aunt recommended Lydia E. Pinkham's Vegetable Compound. I tried it and now I am strong and well again and do my own work and I give Lydia E. Pinkham's Compound the credit."—Mrs. Josephine Kimble, 935 West Race Street, Portland, Ind.

The ELEVEN TOWNS

A. O. HALVORSON, Editor

Entered at the postoffice at Goodridge, Minn. as a second class mail matter.

After March first we shall be obliged to raise our price a little on advertising and job work. The prices on these commodities in this have not kept pace with the steadily advancing prices in other lines of business. To equalize the matter somewhat the above step is found necessary.

Do not forget to hand in your choice of name for this paper to replace "The Eleven Towns". The final selection will be made at the Mercantile Co. store Saturday evening, Feb. 16. A committee of five will choose a name from the ones submitted. Think hard. Get a good name. And be present when the selection is made.

Let us all pull together, push together, boost together, work together; for, whether we will or not, we must live together, die together, be buried, what is the difference between you and me? If you are better than I, I am no worse than you. We are all made from dust. If you don't believe it, shake yourself and see. And we shall be made into dust again. You can't help believing that no matter how much you dislike the idea. So what is the use to talk about your neighbor's faults as long as you have bigger ones yourself? Forgive and forget. Pull together, push together, boost together, work together.

Minnesota Commission Of Public Safety.

PART OF ORDER NO. 24.

An order prohibiting the introduction of intoxicating liquors into territory in the State of Minnesota in which by virtue of the provisions of any Indian treaty or the county option law of the state of Minnesota, the sale of intoxicating liquors is prohibited.

SECTION I.

No common carrier, nor any person, firm or corporation shall transport or accept for transportation, intoxicating liquors in any container whatsoever, into any county in the State of Minnesota or any part thereof, in which the sale of intoxicating liquors is now or may hereafter be prohibited by reason of the operation of the County Option law, so called, of the State of Minnesota, or by the provisions of any Indian Treaty; or deliver the same to any consignee or any other person at any point therein.

SECTION II

No person, firm or corporation shall deliver to any common carrier, or other person whomsoever, any intoxicating liquors in any container whatsoever for shipment or transportation into territory last above described; provided, however, the provisions of this Order shall not apply to or affect shipments of intoxicating liquors made to any duly licensed pharmacist or druggist carrying on business in said county to the extent necessary for the legitimate business of such pharmacist or druggist. Provided, however, that every druggist or pharmacist so receiving intoxicating liquors shall on the date the same is received, in writing, notify the Mayor or President of the Board of Trustees of the city or village in which his place of business is located, and the sheriff of the county, of the receipt by him of the same, stating the amount of each kind received and the name and post office address of his vendor.

MEMORANDUM.

The purpose of section II of the above Order is to prohibit dealers in intoxicating liquors, wholesalers and retailers, including brewers, from sending intoxicating liquors into dry territory. If they refrain from doing so, the territory will be dry. The effect of introducing intoxicating liquors into dry territory is to undermine the County Option law, and the will of the people expressed at the polls, pursuant to the provisions of that law. It is thought that no person engaged in the sale of intoxicating liquors will attempt to infringe the provisions of this Order, and particularly with the knowledge and information that detection of violation on his or its part will result in most drastic action by the Commission to compel respect for its Order.

No manufacturer or dealer in intoxicating liquors violating the provision of Section II of the above Order will have any right to complain if on detection he finds it necessary to seek a new location and a new field for his operations.

This Is Our Winter of Test

Serving food is a local problem for each community. Prices and definite rules for every one cannot be formulated. It is a duty for each one to eat only so much as is necessary to maintain the human body healthy and strong. This winter of 1918 is the period when is to be tested here in America whether our people are capable of voluntary individual sacrifice to save the world. That is the purpose of the organization of the United States Food Administration—by voluntary effort to provide the food that the world needs.

When you Build

Saturday Feb. 27th IS DE LAVAL

Service Day

At Our Store

For the benefit of all users of De Laval Cream Separators we have established a DE LAVAL SERVICE DAY to be held annually.

On these dates we shall be glad to have any De Laval user bring his separator to our store for a complete and careful inspection and adjustment, which will be made Free of Charge. Should any parts, due to usual wear, or accident need to be replaced, this will be done, the only charge being for the price of the new parts used.

The De Laval Service man, will be with us to have charge of this work. Bring in your Separator and receive the benefit of his advice on the care and operation of your machine, as well as the Free Service. It is our wish, and that of the De Laval Company, that every user of a De Laval Separator get the maximum of efficiency at the minimum of cost.

No expert is required to keep a De Laval in repair. A little care with the use of De Laval Separator Oil will keep it running satisfactory for years if adjustments are made when needed.

Remember the Date, Feb. 27th.
Have your machine in by 10:30 A. M.

Goodridge Commercial Club.

The Commercial Club is not dead is it? We hope not. It is a body that can accomplish an immeasurable amount of good, if it is kept in running order. It showed a sign of life last Friday night when it held a short meeting in the Farmers State Bank. The regular monthly meeting is scheduled for the last Thursday evening of the month. Why not meet up and help work for the welfare of Goodridge and vicinity The club is welcome to meet in the Winton-Nichols Lumber office and he is hoping that every live man in Goodridge is there Thursday evening Feb. 28 1918.

A FARMERS CLUB.

There has been a little talk about organizing a farmer's club around in the immediate vicinity of Goodridge. It seems to us a very wise move. If we can go by the experience of others such a club would solve a great many of the farmers' problems. These clubs are getting more and more numerous every day and if the farmers around here don't look out they will be a considerable distance behind those in other communities in this matter. The time is here now for instance, considerable corn and other grains are needed for seed. The question is can an individual do better buying than an organization? If not, the solution is—organize. A great many other things can be taken up by these clubs. The farmers have nothing to complain of as long as they do not use the opportunity they have of organizing. Individually they can do nothing, but organized they can do wonders.

Literary Meeting.

At the regular meeting of the Goodridge Literary Society last Thursday evening an excellent program was rendered consisting of the following numbers:

Song	Audience
Reading	Miss Lawrence Urdahl
Comic dialog	Interviewing Servant Girls
Recitation	Marshall Race
Song	Audience

During the business meeting which followed the program the society decided to again undertake the task of providing for a University Lyceum course for the season 1918-19. Stuart McLeod was chosen to solicit subscriptions for season tickets, the price of which was fixed at $1.25, a very reasonable figure considering that there will be four entertainments in the course. The course decided upon is the Community Course offered by the Minnesota University and consisting of Helene Burgesse, reader; Rubenstein, Russian lecturer; Columbia Ladies Quartet; and the Liberty Male Quartet. It is to be hoped that everybody avail them selves of the opportunity to be entertained and instructed by thes people next season. Let everybody subscribe for Lyceum Course season tickets.

Miss Lawrence Urdahl was elected secretary to fill the vacancy left by Miss Edna Lien.

The program for the next meeting, Feb. 28, is as follows:

Roll call answered by quotations.

Song	The children
Folk drill	The children
Song	Mixed quartette
Current Events	Sam Cloutier
Reading	Mrs. McDonald
Recitation	Miss Siefer
Song	Audiense

The perfect attendance in Miss Anderson's room for the month of Jan. were:-

Carl Mandt, Harry McDonald, Floyd Palmer, Lynton Palmer, Orris Seavey, Sherman Stephenson. Vivian Thoreson, Daniel Vaughan, Miles Goudy, Damond Goudy.

The perfect spellers were:-

Bennie Mandt. Hattie Bundhund.

The perfect attendance in Miss Murray's room for the month of Jan. were:-

Ida Anderson, Louise Besancon, Elvin Halvorson, Myrtle Iverson, Lizzie Johnson, Robert Johnson, Mabel Strand, Lloyd Ferdinandsen.

The perfect spellers in the eight grade are:-

Clenora Urdahl.

Alfred Tvedt visited school Monday afternoon, the 11th.

The Junior Literary gave their regular program last Friday afternoon The program was the following:-

Song	by school
Recitation	Louise Becansen
Reading	Lizzie Johnson
Song:-	by school

Story. Told and dramatized by primary children.

Recitation	Stuart Ferdinandsen
Song	by school

A business meeting was held afterwards. The following were elected officers:-

President	Alvin Halvorson
Secretary	Ida Anderson
Treasurer	Joseph Christianson

Program Committee—Geida Gilbertson, Marshall Race, Clara Ferdinandson.

The Social committee—Clenora Urdahl, Clara Ferdinandsen and Mabel Iverson.

The cooking class served lunch last Friday. The proceeds which were $7.35 went for the benefit of the Junior Red Cross.

The Social given at the schoolhouse Monday night for the benefit of the Junior Red Cross was a grand success.

Florence Halvorson has been absent from school for the past two weeks on account of illness.

The teachers went to Thief River Falls to take in the Non-Partisan League last Tuesday.

The Junior literary is raising money to buy a picture in remembrance of the literary. Me tinks dey bedder buy flag.

The rooms all had valentine boxes last Thursday. The children all enjoyed them.

Buddy Ferdinandsen and Percy Halvorson visited school valentine day.

Lizzie Johnson and Louise Besancon were promoted to 8th grade after christmas. Hurry up Dutchy.

Rural School Notes.

WAR RED CROSS WORK

To the teachers of Pennington county.

Dear Co-workers in the cause of Education—The headquarters for the Red Cross work for the Northwestern Division of which Frank T. Heffelfinger, Minneapolis, is chairman, has sent out an earnest appeal to the schools to enroll in the Junior Auxiliary Red Cross work.

The Red Cross organization consists of a Chapter in each county and the Chapter directs the organization of a Junior Auxiliary in each school. The Junior school committee for this county is composed of the following persons, all teachers in the county:

Supt. J. H. Hay, chairman, Thief River Falls.

Prof. W. R. Wicks, St. Hilaire.

Prof. A. O. Halvorson, Goodridge.

Miss Lilly Boehn, Hazel and the undersigned.

Under the slogan "Every School a Red Cross Auxiliary and a Center for National Service," the National office at Washington, of the Council of the Red Cross, has approved an urging of an intensive effort to enroll every public, private and parochial school in America as a Junior Red Cross Auxiliary during the period from Feb. 12 to February 22nd.

The time has come when the schools must help to shoulder the responsibility of the war by organising the boy's and girl's power as effectively as are now the boys in the trenches.

You, teachers of Pennington county, are therefore directed to organise your respective schools into a Junior Auxiliary under the auspices of the school committee of the Red Cross Chapter. The plan would be to organize by taking the enrollment of the school as the enrollment of the Auxiliary. The teacher assumes charge of the work as the chairman. She directs the work. A secretary and a treasurer are appointed. All the money collected from the Auxiliary, which must be a sum equal to 25c for each pupil enrolled, must be sent to the treasurer of the County Chapter, T. L. Melgaard, Thief River Falls. The money thus collected is to be used for the Auxiliary in the Red

Goodridge, - - - Minnesota

Cross work in the school or collecting the same. Materials are to be bought such as can be used by the pupils to make articles for the Red Cross. The finished articles are then sent thru the County Chapter to the Division headquarters.

Now, dear teachers, take hold of this work at once. The Government commands and we must obey. Plan some way of raising your quota for the county and help take Pennington county "Over the Top", on Feb. 22. An entertainment planned for Feb. 22, basket sociable for instance might help and it would give the community a desirable chance to participate.

Any amount of money raised above the quota for the school, 25c for each pupil, can be retained in the Auxiliary and be used only for Red Cross war work. Then make a full statement to the Chapter Treasurer, Mr. Melgaard and also report to this office as to the success of your work.

To the children of Pennington county Rural Schools:

Dear children—As you know this nation is now at war and our Uncle Sam is in sore distress, for he carries heavy burdens for you and me and for all men and women in the whole land. Our Uncle is surely a very dear old chap in thus looking after our well-being and if he does double up his fist it is because some nation or countries are trying to steal a move on us to do us harm, but the watchful eye of our Uncle Sam is upon them and we trust that our lives and your right as little citizens of this country shall not be taken away from us. But because our enemies are thus threatening us, therefore the dear old Uncle is in sore trouble and as we are the loyal children we are troubled to, and we must assist our Uncle in withstanding the attack upon our rights as citizens of this great country and as children of Uncle Sam. The venerable uncle is full of vigor and fighting forde. But strong as he may be, he is but one whereas of us school children, there are twenty-two million scattered all over this magnificent land given Uncle Sam and his children to protect. What can we not do for Uncle even as pupils in our common schools when we are united in purpose and action in the defense of our rights.

Now let me tell you dear children, that our Uncle Sam, that is, our country which we are proud to name the United States of America, of whom President Wilson is a this moment the great leader, is asking us to do a great deal to win this war, this fight for our rights and liberties.

Some one, probably a brother of yours, has been asked to do much and has now left your companionship and home, left father and mother to go to the front and is now doing [illegible] fight and suffering much hardship in order that we at home now and those millions of school children of the future in our country shall enjoy the sweet blessings of a free country. At some time too, some of the sisters in the neighborhood will find it their duty to go to the assistance of Uncle Sam in caring for the wounded and bleeding in the battle field Now, then, the question is what can we do, what can you do, pupils of Pennington county? This is what you can do, and which must be done in every school district in Pennington county before Feb. 2[illegible] inclusive:

1. To organize a Junior Red Cross Auxiliary.
2. To enroll therein every member of the school.
3. To pledge the support of each member of the school to do some Red Cross work for the help of the soldiers in the field.
4. To pay a fee, a sum of money, by the school to the Red Cross Fund equal to 25c for each enrolled member or pupil in the school. The money thus raised will go to buy material for the Junior Red Cross Auxiliary. None of this money goes to defray the expenses of the Fraternal organisation of the County Chapter organisation of the Red Cross.

The thing to do then, is first to organize at the very earliest moment. The teacher will be chairman of the Junior Auxiliary of the school, and direct all activities. Committees may be appointed to assist in the work.

Now, dear children, Columbia is grieving and in sorrow, our hearts feel sad for what has happened. Let us then be up and doing with a heart for any fate in this national crisis and let us show by the hearty support of this Red Cross movement that we are loyal subjects of Uncle Sam; that we feel for the men on the battlefront by doing "our bit" to help them in this hour of need. Let us, as Lincoln said in the Gettysburg speech "Rather be dedicated" to the fullest degree in the noble activities essential to win in this dreaded conflict the fight for a free government. I trust, in fact I know you will do your part.

Respectfully submitted,

E. A. MOSTUE,

Goodridge Commercial Club.

The Commercial Club is not dead is it? We hope not. It is a body that can accomplish an immeasurable amount of good, if it is kept in running order. It showed a sign of life last Friday night when it held a short meeting in the Farmers State Bank. The regular monthly meeting is scheduled for the last Thursday evening of the month. Why not meet up and help work for the welfare of Goodridge and vicinity. The club is welcome to meet in the Winton-Nichols Lumber office and is hoping that every live man in Goodridge is there Thursday evening Feb. [illegible], 1918.

FARMERS CLUB

There has been a little talk about organizing a farmer's club around the immediate vicinity of Goodridge. It seems to us a very wise move. If we can go by the experience of others such a club would solve a great many of the farmers' problems. These clubs are getting more and more numerous every day and if the farmers around here don't look out they will be a considerable distance behind those in other communities in this matter. The time is here now for instance, considerable corn and other grains are needed for [illegible] better [illegible] than an organization? If not, the solution is—organize. A great many other things can be taken up by these clubs. The farmers have nothing to complain of as long as they do not use the opportunity they have of organizing. Individually they can do nothing, but organized they can do wonders.

Literary Meeting.

At the regular meeting of the Goodridge Literary Society last Thursday evening an excellent program was rendered consisting of the following numbers:

Song	Audience
Reading	Miss Lawrence Urdahl
Comic dialog	Interviewing Servant Girls
Recitation	Marshall Race
Song	Audience

During the business meeting which followed the program the society decided to again undertake the task of providing for a University Lyceum course for the season 1918-19. Stuart McLeod was chosen to solicit subscriptions for season tickets, the price of which was fixed at $1.25, a very reasonable figure considering that there will be four entertainments in the course. The course decided upon is the Community Course offered by the Minnesota University and consisting of Helene Burgess, reader; Rubenstein, Russian lecturer; Columbia Ladies Quartet, and the Liberty Male Quartet. It is to be hoped that everybody avail themselves of the opportunity to be entertained and instructed by these people next season. Let everybody subscribe for Lyceum Course season tickets.

Miss Lawrence Urdahl was elected secretary to fill the vacancy left by Miss Edna Lien.

The program for the next meeting, Feb. 28, is as follows:

Roll call answered by quotations.	
Song	The children
Folk drill	The children
Song	Mixed quartette
Current Events	[illegible]
Reading	[illegible]
Recitation	[illegible]
Song	Audience

Clea[illegible]

INTENTIONAL DUPLICATE EXPOSURE

SUGGEST PEACE WITH AMERICA

Two German Newspapers See Chance To Split Allies By Treating With U. S.

PRAISE WILSON POLICY

President Admitted To Be Right In Many Points And At Variance With Allies—Would Continue Discussions.

Washington, Feb. 20.—The Neuste Nachrichten and the Muenchener Post, two of the largest newspapers in South Germany, interpret President Woodrow Wilson's address to congress last week, as showing a desire to continue public peace discussions. Editorials from issues of those papers of February 13 received here by cable and made public by the committee on public information, urge the statesmen of the Teuton powers to endeavor to come to an understanding with the United States.

The Neuste Nachrichten says:

"The President's speech shows a clear desire to continue the public discussion between Washington and Germany.

See Wilson Different.

"It is important to observe how greatly Wilson differs in tone and substance from the declarations of other Allied statesmen. Today it is easily understood why America is not politically represented at Versailles. It is because Wilson's present policy is not the policy of Clemenceau and Lloyd George. . .

"It should not be difficult for Hertling and Czernin, by defining more closely their former declarations, to come to an agreement in principle with Wilson. But the latter should also see the justice of applying this beautiful principle to the Allies.

"Altogether, Wilson shows himself as the only opponent with whom discussion is possible. Therefore, it is the duty of German statesmen to secure the greatest possible benefit from this discussion.

Admit President Right.

"If agreement with America can succeed before its war machine assumes irresistible momentum, the whole Ally combination would be unhinged."

"Wilson's reply to Hertling and Czernin shows the strong desire for a general peace," says the Muenchener Post. "It must be admitted that the President is entirely right in many points of his solemic against Hertling. The latter spoke, but formulated no positive program.

"The President pleases himself on the basis of the Reichstag resolution in July, and thus a general peace and reconciliation becomes possible. This newspaper expects the chancellor to build now a binding bridge to America."

PREVENTS LEAGUE MEETING

Deputy Sheriff Stops Gathering at Inland Town.

Blue Earth, Feb. 20.—An attempt to defy orders issued by County Attorney Henry J. Frundt that no meetings of the Nonpartisan league is permitted in Faribault county, was frustrated by Deputy Sheriff Fred Yost when he stopped a league rally at Walters. Tho hundred farmers had gathered to hear Joseph Gilbert, manager of the league, recently sentenced to serve three months in Jackson county jail.

Walters is in a remote part of the county, almost inaccessible by train, and only quick action by the sheriff in notifying his deputy prevented the meeting.

PASSES DEFICIENCY BILL

Billion Dollar Measure Goes Through Lower House.

Washington, Feb. 19.—The billion dollar urgent deficiency appropriation bill, carrying half a billion for the military establishment, and large sums for the navy and other branches of the government, has been passed by the House without a record vote.

With direct appropriations and authorizations for obligations during the rest of this fiscal year, the total of the measure is $1,107,220,000. It now goes to the Senate, where it will be given prompt consideration.

Central Powers Make Divisional Pact.

Amsterdam, Feb. 19.—An Austro-German agreement has been reached whereby "if action is necessary" against Russia, Germany's operations will be limited to the Russian frontiers, while the Austrians wil operate in Ukraine, according to dispatches from Vienna.

40 Negro Soldiers on Trial for Riot.

San Antonio, Feb. 19.—Forty enlisted men of the Twenty-fourth infantry, colored, are on trial before a courtmartial here on charges of murder and mutiny. It is the third courtmartial to be convened as result of the crimes committed at Houston the night of August 23 last, when 20 persons were shot to death and others were injured in a riot of the Third battalion of the Twenty-fourth infantry. At the first courtmartial 63 defendants were tried. Thirteen were found guilty and hanged.

FRENCH SOLDIERS SEARCHING THE EFFECTS OF GERMAN PRISONERS FOR POSSIBLE INFORMATION

Photograph shows French troopers examining the effects of a bunch of German prisoners for any military information they may contain.

TO LOWER COAL PRICE

Jobbers' Commission Will Be Eliminated On That Date.

Systematized Profiteering to Be Wiped Out—One Cost For Dealers Wherever They Buy.

Washington, Feb. 19.—As the result of a decision announced to eliminate jobbers' commissions after April 1, reduction in the retail prices of both anthracite and bituminous coal is expected by the fuel administration.

Under the new regulations retail dealers will obtain coal at the same price whether purchasing directly from the mine or through middlemen.

Jobbers now are permitted to add to the government price at the mine a commission of from 15 to 30 cents a ton, but the old practice will be resumed of making the jobbers look to the mine operators for compensation.

The mine prices will be increased slightly to provide for the operators' added expense, but it is announced the advance will not be squal to the commission now allowed the jobbers. The amount of the increase will be determined later.

Elimination of jobbers' commissions, the fuel administration announced, is necessary to wipe out a systematized form of profiteering which has increased the cost of fuel to the consumers.

"Under the system of allowing the jobber a specific guaranteed commission," the statement said, "it developed that it was possible for some operators to adopt the practice of establishing subsidiary companies solely to sell, thereby absorbing the jobbers' commissions."

T. R. HAS EIGHTH GRANDCHILD

Says He Is "Perfectly Delighted" At News of Arrival.

New York, Feb. 19.—Theodore Roosevelt, who is convalescing in a hospital here, said he was "perfectly delighted," when a long distance telephone message from Boston Monday, brought word of the birth of his eighth grandchild—a boy born to Captain and Mrs. Archie Roosevelt.

Captain Roosevelt, who has just been promoted to that rank, is with General Pershing's forces in France.

FOUR MORE TUSCANIA DEAD

Last List Includes That Many Not Previously Reported.

Washington, Feb. 19.—A list of 27 of the known Tuscania dead just made public contained four names not previously reported in the Associated Press list of American soldiers buried on the Scottish coast. They were Chauncey J. Davidson, Anaconda, Mont.; Thomas A. Llewellyn, Scottdale, Pa.; Clifford Norris, New London, Wis.; and Leigh A. Wright, Hillsdale, Mich.

Secretary Daniels' Son Promoted.

Philadelphia, Feb. 19.—The promotion of Josephus Daniels, son of the secretary of the navy, to a second lieutenantcy in the United States marine corps reserves, quartermaster's department, is announced here.

To Train Pigeons for Army.

Camp Dodge, Des Moines, Iowa, Feb. 18.—A consignment of 50 pigeons is expected here soon as part of the equipment for the division signal corps. The adoption of these birds as a means of communication is held of the highest importance by signal officers, according to Major C. L. Eastman. Division signal officer tests on the battle fronts have proved the transmission of messages by pigeons to be 97 per cent efficient. The birds are not susceptible to poison gas.

4,000 KILLED IN FIGHT IN RUSSIA

Dead And Wounded Fill Streets As Bolsheviki Take Kier, In Ukrania.

ODESSA IS THREATENED

Menaced By Roumanians Who Now Control Part of Bessarabia—Poles Defeat Bolsheviki at Bobruisk —Teutons Renew War.

Berlin, Feb. 20. — Operations have been resumed on the Russian front. The Germans have crossed the Dvina. This announcement is made by general headquarters.

Petrograd, Feb. 20.—After sanguinary fighting the Bolsheviki have captured Kiev, one of the principal cities of Ukrainia. The streets were filled with dead or wounded. While the fighting was at its height the city was bombaded by Bolsheviki aviators.

4,000 Dead, 7,000 Wounded.

The casualties at Kiev are estimated at 4,000 killed and 7,000 wounded.

In a battle at Odessa between the bolsheviki and the moderates hundreds were killed. The city was bombarded by warships.

New Battle Begun.

A battle was begun between the bolsheviki and a wing of the Cossack army of General Alexiev, former Russian commander-in-chief, which is advancing toward Kharkov in Ukrania, 420 miles southwest of Moscow. The bolsheviki are sending troops to crush this newest revolution, but reports received here indicate that the forces of Boris Savinkov who was a member of the Kerensky cabinet, are ready to join General Alexiev.

Bolsheviki Staff at Odessa.

The bolsheviki have established a staff at Odessa, from which point they are conducting the Ukranian and Roumanian campaigns.

Ensign Krylenko, the bolsheviki commander-in-chief, has decided to come to Petrograd to raise an army of 100,000 bolsheviki which he will command personally in operations against the Cossack army of General Alexiev.

OPPOSES WAR ON RUSSIANS

Austria Protests to Germany—Situation Held Serious.

London, Feb. 19.—Germany's declaration against the bolsheviki has caused a most serious situation between Germany and Austro-Hungary, the Copenhagen correspondent of the Exchange Telegraph wires. The Austrian press is protesting against a reopening of hostilities in which Austria has no desire to participate.

Robertson Accepts New Post.

London, Feb. 19.—General Sir William Robertson, who last week resigned as chief of staff, has accepted what is known as the Eastern command, that is, in eastern parts of the British isles.

Leading Artist Held Disloyal.

Philadelphia, Pa., Feb. 18.—Joseph Pennell, considered the leading black and white sketch artist in America, resigned from the Art club while proceedings were pending for his expulsion. So bitterly do the majority of officers and members feel about the whole matter that the University of Pennsylvania has been asked to refrain from giving Mr. Pennell a degree, and Secretary of the Navy Josephus Daniels has been requested to rescind a commission to make sketches of the navy in war.

RESUME WAR ON RUSSIA

Germans Renew Drive On Russia After Failure of Peace.

Object Is to Crush Slavs Following Failure of Peace Negotiations at Brest-Litovsk.

Stockholm, Feb. 20. — Throwing to the winds its protestations of friendship for Russia, Germany has resumed its war on that country.

Taking advantage of the disarming of the Russian troops, as provided in the agreement signed at the time of the armistice, which has ended, was agreed on, military leaders of the kaiser have begun the reinvasion of the Russian country.

Movements against Esthonia and Livonia have been started, and it is the intention, military experts agree, to press the invasion to the limit and to indulge in ruthless warfare until the Russians are completely crushed and unable to offer further defense to the plans of the kaiser.

Will Divide East Operations.

Along this line an agreement is said to have been reached by Austro-German chiefs that in the action against Russia operations of Germany will be limited to the Russian frontiers, while the Austrians will operate in Ukraine.

It is not believed, however, that serious attention will be paid to the agreement should German military leaders find stronger force than they are able to exert is necessary.

U. S. FIELD HOSPITAL BOMBED

German Aviator Fails to Hit Mark With Missiles.

With the American Army in France, Feb. 19.—An American field hospital within our lines was the target for a German airplane which flew over it and dropped several unusually heavy bombs. A number of sick and wounded officers and men were in the building. None of the missiles reached their mark, although the hospital patients were severely shaken by the explosions. American anti-aircraft guns engaged the enemy, but without success.

TO MAKE WHEAT PRICE $2.85

Amendment to Food Bill Introduced In Senate.

Washington, Feb. 19.—An amendment to the food bill to fix 1918 wheat at $2.65 a bushel instead of $2 as now authorized, has been introduced by Senator Thompson and referred to the agricultural committee. Amendments fixing the price at $2.50 were introduced recently by Senator Gore and another naming $2.75 was presented by Senator McCumber.

Commander Bagley Weds.

New York, Feb. 18.—Commander David Worth Bagley, U. S. N., who commanded the American destroyer Jacob Jones when it was torpedoed in European waters last December, and Miss Marie Louise Harrington of Calusa, Cal., were married at a hotel here. Among the guests were Secretary of the Navy Daniels and Mrs. Daniels, who came from Washington for the wedding. Commander Bagley is Mrs. Daniels' brother.

Many Germans Fail to Register.

Washington, Feb. 19.—Thousands of unnaturalized Germans failed to enroll themselves with police or postmasters during the registration period which closed last Wednesday, and are subject to internment, it was shown by preliminary reports on the registration reaching the Department of Justice. United States marshals and attorneys now are engaged in a careful study of the registration rolls and within a week will undertake action against those who neglected to report as ordered

MEN ORDERED BACK TO WORK

Shipyard Strike Called Off By Hutcheson When President Sends Reproof.

STRIKE WOULD AID FOE

Question Put Squarely To Union Chief By Executive With Result That Men Are Told To Return To Jobs.

New York, Feb. 19.—The shipyards strike at the port of New York and other eastern points has been called off by William L. Hutcheson, general president of the United Brotherhood of Carpenters and Joiners. Definite action was taken after Hutcheson had received a telegram from President Wilson, rebuking him with a query as to whether he stood ready to "co-operate or obstruct" the progress of the war.

Mr. Hutcheson immediately sent messages to all of the brotherhood representatives that could be reached last night, instructing them to send word out to the men to report at their places of work at once. Moore than 6,000 men out will return immediately at Mr. Hutcheson's order.

The message from the President deeply impressed the labor leaders here. They held a long conference at which all phases of the situation were discussed. The order to call off the strike was issued after it was decided to take up the adjustment of their differences with the shipyard employers directly with President Wilson.

The President's message to Hutcheson said:

Points Need of Ships.

"I have received your telegram of yesterday and am very glad to note the expression of your desire as a patriotic citizen to assist in carrying on the work by which we are trying to save America and men everywhere who work and are free.

"Taking advantage of that assurance, I feel it to be my duty to call your attention to the fact that the strike of the carpenters in the ship yards is in marked and painful contrast to the action of labor in other trades and places.

"Ships are absolutely necessary for the winning of this war. No one can strike a deadlier blow to the safety of the nation and of its forces on the other side than by interfering with or obstructing the shipbuilding program.

"All the other unions engaged in this indispensable work have agreed to abide by the decisions of the shipbuilding wage adjustment board. That board has dealt fairly with all who have resorted to it. I must say to you very frankly that it is your duty to leave to it the solution of your present difficulties with your employers, and to advise the men who you represent to return at once to work pending the decision.

"Will You Co-operate or Obstruct?"

"No body of men have the moral right under the present circumstances of the nation to strike until every method of adjustment has been tried to the limit. If you do not act upon this principle you are undoubtedly giving aid and comfort to the enemy, whatever may be your own conscious purpose.

"I do not see that anything will be gained by my seeing you personally until you have accepted and acted upon that principle. It is the duty of the government to see that the best possible conditions of labor are maintained, as it is also its duty to see to it that there is no lawless and conscienceless profiteering and that duty the government has accepted and will perform. Will you co-operate or will you obstruct?"

The message was signed by the President.

SAYS WHEATLESS WEEK NEAR

Oklahoman Predicts Their Coming to Senate Committee.

Washington, Feb. 19. — Wheatless weeks, instead of wheatless days, are imminent unless production is increased, the Senate agricultural committee was told by C. H. Hyde, representing the Oklahoma State Council of Defense, who said price fixing by the food administration should be extended to wheat substitutes. Meatless and wheatless days have tended to decrease production in Oklahoma, the reduction in the consumption having created a surplus, he said.

Canned Corn Condemned.

St. Louis, Feb. 18.—One hundred thousand cans of corn, shipped to St. Louis from Iowa, have been condemned as impure by the state food and drug inspector.

Roumania To Stay To End.

Chicago, Feb. 19.—Cut off from every friendly country except by wireless, Roumania will fight to the end, Dr. C. Angelescu, head of the Roumanian mission, which has reached here, declared. "The Bolsheviki now are making war on us, so Roumania now must fight two enemies—the Bolsheviki and Germany," said Dr. Angelescu. "We are cut off from every country—there are enemies on every side of us, but we will never give in. Roumania will fight to the end, no matter what the cost may be."

Lungs Are Weakened By
Hard Colds
HILL'S
CASCARA QUININE
BROMIDE
The old family remedy—in tablet form—safe, sure, easy to take. No opiates—no unpleasant after effects. Cures colds in 24 hours—Grip in 3 days. Money back if it fails. Get the genuine box with Red Top and Mr. Hill's picture on it 24 Tablets for 25c.

Getting the Facts.

A scouting airman returned one day with a bit of valuable information about the enemy which no one believed. He, therefore, flew back again and returned with his machine riddled with bullets.

"Yes, it's all right," he reported; "it was the Nth Regiment. You're such a lot of unbelieving beggars that I had to make sure. I just landed in a field and had a look at the number on their tunics. Had rather a job starting again, but they're rotten shots."

RECIPE FOR GRAY HAIR.
To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Any druggist can put this up or you can mix it at home at very little cost. Full directions for making and use come in each box of Barbo Compound. It will gradually darken streaked, faded gray hair, and make it soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off. Adv.

She Couldn't Deny It.

Mrs. Flatbush—I heard Bensonhurst say his wife didn't know what she was talking about. You can't say that about me.

Mr. Flatbush—Oh yes, I can.

"When did you ever hear me talk when I didn't know what I was talking about?"

"When you were asleep, dear."

AND NOW THEY ARE COOKING TOBACCO TO MAKE IT BETTER
For a good many years The American Tobacco Company have been conducting a series of experiments having as their object the improvement of smoking tobaccos.
And it is interesting to know that one of the greatest of their discoveries was one of the simplest, and that was, that cooking or toasting tobacco improved it in every way, just as cooking most foods improves them.
They took a real Burley tobacco, grown in this country; toasted it as you would toast bread; moistened it to replace the natural moisture driven off by toasting; made it into cigarettes, called them "LUCKY STRIKE, the toasted cigarette," and offered them to the public.
The result has been the greatest demand ever created for any tobacco product in a similar length of time.
The change produced by toasting is not only most wholesome, but the flavor is greatly improved, just as cooking improves meat, for example.—Adv.

Literary Decadence.

Auntie—Did you enjoy the book I sent you on your birthday?

The Kid—I haven't read much of it yet.

Auntie—Why not?

The Kid—'Cause ma said I'd have to wash my hands when I read it.

WOMEN SUFFERERS MAY NEED SWAMP-ROOT
Thousands upon thousands of women have kidney and bladder trouble and never suspect it.
Women's complaints often prove to be nothing else but kidney trouble, or the result of kidney or bladder disease.
If the kidneys are not in a healthy condition, they may cause the other organs to become diseased.
Pain in the back, headache, loss of ambition, nervousness, are often times symptoms of kidney trouble.
Don't delay starting treatment. Dr. Kilmer's Swamp-Root, a physician's prescription, obtained at any drug store, may be just the remedy needed to overcome such conditions.
Get a medium or large size bottle immediately from any drug store.
However, if you wish first to test this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Adv.

A Substitute.

"But, my dear sir," expostulated Lawyer Droan, "a robe adds to the dignity of a judge."

"So would a shroud!" snarled old Festus Pester.

Piles Cured in 6 to 14 Days
Druggists refund money if PAZO OINTMENT fails to cure Itching, Blind, Bleeding or Protruding Piles. First application gives relief. 50c.

Happiness comes only to those who try to make others happy.

Time is always represented by men. Women are calendar shy.

MURINE EYE REMEDY CO., CHICAGO

WINTRY SMILES

Mendacious Figures.

"Figures won't lie!" exclaimed the positive statistician.

"I assume from that remark that you are one of those accurate and superior persons who have not written '1917' instead of '1918.'"

Getting to Essentials.

"I think we have at last located the blame for the coal situation," began the explanatory statesman.

"I don't care anything about the blame just now," interrupted the ordinary citizen. "Have you located any coal?"

A Motorist's Impression.

"Do we want to encourage a system which will compel us to wear chains forever?" inquired the agitated citizen.

"But what are you going to do in this kind of a climate?" inquired Mr. Chuggins. "We can't go on skidding."

Unnatural Condition.

"I see in some big manufacturing place army orders for gloves are delayed."

"That's queer. Under any condition gloves should always be on hand."

Sometimes It Can't Be Done.

"'Early to bed and early to rise' is a good old motto."

"Well," replied Grannie Rilem, gloomily. "This daylight saving's all right, of course. But out our way somebody's simply got to stay up all night to tend the furnace."

Favorites.

"Do you have meatless days at your house?"

"Yes. Of course we have to make exceptions. Everybody goes without meat except Fido and the cook."

No Deprivation.

"Are you having any 'lightless nights' in Brindleburg?"

"Sure," replied the old resident. "Besides we don't need any lights in this town. We've only got one picture theater and every man, woman and child in the community could find the way to it blindfolded."

Maybe So.

"I wonder why hot soda won't go like cold soda."

"Not spectacular enough," suggested the druggist's friend. "It might go better if you could squirt steam into it from a fine nozzle."

Declares Cattlemen Facing Large Deficits—Government Alone Can Save Bankruptcy

Cattle feeding is a manufacturing business. The farm with its buildings and equipment is the plant. The steers' digestive apparatus is the machinery. Corn silage, cotton seed meal, straw, hay and fodder, the raw material to be converted into beef. So many pounds of corn, silage, cotton seed meal and forage passed through the machinery of a steer's digestion turns out 100 pounds of beef, the finished product, writes Wymond J. Beckett, in the Indianapolis Star.

The amount of feed, when properly combined, required for 100 pounds of gain, remains practically constant. The cost of feed known, the cost of 100 pounds of gain can be easily determined. This has been worked out at agricultural experiment stations, and on the farms of the country by actual demonstrations. Cost of beef is not absolute, but relative, depending wholly on the cost of feeds. The cost of 100 pounds of beef normally, bears a direct relations always to the cost of the feeds which enter into its production. Every business man understands that the cost of the raw material and the expense of operation determines the cost of production. These same items determine the cost of agricultural production. Then it should be comparatively easy to determine the cost of 100 pounds of beef and what it should sell for on the market to yield the farmer a reasonable profit for his labor and investment. Is the cattle feeder today getting even the cost price for his finished product? If not, why not?

Enemy of the Dog Figures High Cost of Keeping Pet

A dog hater in New Hampshire, stimulated by the campaign for food conservation, sharpened his pencil and this is what he figured:

One person in 20 keeps a dog; that's 5,000,000 dogs. It costs ten cents a day to feed a dog, or $36.50 a year for one, and $182,000,000 per annum for all of them. With flour at $15 a barrel, this sum would buy 12,166,000 barrels of flour. If loaded 12 barrels to each motortruck, 1,000,000 trucks would be required to load the flour, at one time, and they would make a procession 2,272 miles in length.

The figures seem to be all right and unquestionably impressive, but who can estimate the heart pangs and personal loss of 5,000,000 small boys if deprived of their dearest treasure?—[illegible] Magazine.

The Pumps of Lassigny

Red Cross Nobly Comes to the Assistance of Remaining Residents of Wrecked French Village

Lassigny was pounded to pieces in the two years that the Boche trenches lay just before it. It was a deserted village when the Germans retired last spring.

But there were cellars among the jagged bits of wall left standing, and here and there a corner of roof that the big guns had missed. A few families, which had crowded into the towns behind the line waiting their chance, moved forward into what they called their "homes," sleeping anywhere—often on damp straw.

The government sent in a trainload of wooden barracks, and the army commander sent in a group of boches to set them up. More refugees moved in. The Boches laboriously dug out the wells that other Boches had laboriously shoveled full of dirt and manure. Lassigny is a long village, struggling along the road from ——— to ———; and it had many wells in the days before the war. When the Germans left, they filled the wells so carefully that six months later the grass and weeds concealed every trace of what had one been village wells. Only the end of a ladder sticking out of the tall grass betrayed one well.

The stone walls of the wells were solid, and far down below the water was good—French chemists analyzed it after the Boche prisoners had, shovel-full by shovel-full, cleaned out the well-holes. But the wells are deep, and to haul up buckets of water by hand is a long hard task. There are no strong men in Lassigny these days; only the little children, and the old men and women—and the two brave nurses of the Union des Femmes de France.

So the word went back along the line, "Pumps for Lassigny!" There are no pumps to be had in the ruined region about Lassigny, fertile and busy as it once was; so the Red Cross delegate sent to Paris; and the Red Cross purchasing department there sent out a buyer to find pumps for Lassigny.

The town has its pumps now; and even the tiny bare-kneed tots can start the water flowing. And when the Red Cross man comes to town, the townfolk greet him with a smile. When he was last there, there was a knock at the door of the barracks where he was chatting with a French nurse and in came an old peasant woman, bearing her token of gratitude and friendship—a plateful of steaming hot baked apples, and a brown jugful of fresh water pumped from one of Lassigny's wells.

Save Natural Ice For Use in Summer—Saves Ammonia as Well as Conserving Coal

(Prepared by the United States Department of Agriculture.)

All who can possibly do so are urged by the United States department of agriculture to harvest a supply of natural ice this winter and store it for summer use. This is of vital importance at this time, for every ton gathered will help in the war-time conservation of ammonia which is necessary in the manufacture of ice.

Ammonia salts are regarded as an essential in the manufacture of certain fertilizers and the cost of fertilizers is dependent to some extent on the market value of ammonia. Of extreme significance at this time, however, is the fact that the most important chemicals used in making ammonium nitrate and other explosives are readily made from ammonia and every quart of America's already small supply of this substance that can be saved means more power to America's armies.

Thus the farmer is interested in the conservation of ammonia not only from a national standpoint, but because of his personal interests. Ammonia saved through harvesting of natural ice means more ammonia for fertilizers and more ammonia for ammunition. The man who harvests ice now and stores it in pits or ice houses, next summer may have the satisfaction of helping out his neighbor who depended on an ice plant.

In addition to the saving of ammonia, conservation of coal is to be effected through the harvesting of natural ice. American ice factories and refrigerating plants, according to figures of the United States fuel administration, use annually 15,000,000 tons of coal.

Wise and Otherwise.

Never judge a man's good or bad qualities by what his neighbors say about him.

Once in a while there is a man so good natured that he is nice to his wife's relatives.

What goes up must come down—as many an airplane chauffeur is discovering.

A shrewd man may be both wise and honest, but the chances are that he is neither.

If common sense will not teach a young man etiquette a book on the subject is of little use.

The Champion Wood Chopper.

A record in wood chopping is claimed by L. J. Haugen, fifty, who lives near Clinton, Ia. Up to the opening of the present lumbering season he chopped 6,207 cords. He is a Norwegian. During the summer he works for farmers about the county, but as soon as the first touches of winter are apparent, he shoulders his ax and starts for the timber lands. He figures his chopping career from the time he was twenty, since which he has averaged two cords a day during the chopping season.

Something to Think About.

The flood waters which go to waste annually in the great central valley of the United States and often cause great destruction of property, if impounded and employed in the development of electric power, would render the use of mineral coal unnecessary within the borders of the country. This statement has been made repeatedly by competent engineers.

Well Fixed.

"How are you fixed for coal at your house?"

"Fine. We've got a couple of shovelfuls in the bin and the promise of more in a week or two."

Winter Colds

By Dr. Samuel G. Dixon
Commissioner of Health of Pennsylvania

During the frigid weather, you want to keep well nourished. To do this, your meals should be taken with regularity, and you should take a moderate amount of exercise, not too near mealtime. No better form of exercise can be found than that of walking with a good brisk step and swinging of the arms. You should keep up a good circulation of blood that the digestive glands may secrete a healthful quantity of digestive fluids, and the food be prepared for and assimilated by the body.

No excesses should be indulged in, particularly the taking of alcoholic beverages. You should live in pure air night and day, but the very young and the very old should not be exposed to extremely low temperatures.

Careful observance of these suggestions will do much to prevent, and at least to some extent, help pull you through congestive or even infective colds, which are prevalent when the weather is so very changeable as it is in winter in our North Atlantic climate.

Try a New Way to Cook Potatoes—Just a Few of the Styles in This List

It is claimed that there are more than 100 ways to cook potatoes, from the primitive (and still probably the best) methods of boiling or baking with the skins on, to the most complex and seasoned dishes. Here are some of the ways known to the United States department of agriculture. Have you tried them all, or do you know about as many more?—Boiled, chips, lyonnaise, mashed, pan browned, salad, in chowders, baked, shoestrings, hashed brown, mashed fried, stuffed, in fish cakes, in light bread, plain fried, french fried, gauffre, souffle, riced, in hash, biscuits, saute, creamed, croquettes, au gratin, soups in stews, in meat pie crust.

Cash and Carry.

Quite providentially it happens that the doctrine of carrying home one's groceries promises to attain full growth at a time when capacious and decorative bags are not only fashionable, but almost necessary for housewives. It is evident, says the Spokane Spokesman Review, that there is intention of seeing that the buyer is paid in cash for carrying his own food home. Already dealers are lopping cent sand even nickels off the cost of things not delivered. A cent, for instance, goes thus with every loaf of bread. Cents and nickels grow rapidly to quarters, and quarters will buy war stamps that pay 4 per cent. It behooves us to look closely to such details.

Mexico Stops Dyes.

Dyeing material has been coming in considerable volume from Mexico during the past two years. However, the Mexican treasury department has announced a prohibition of the export of analine and coal tar dyes and natural artificial vegetable dyes. The difficulty caused by the new regulation, will be experienced chiefly by United States cloth manufacturers.

DADDY'S EVENING FAIRY TALE

BY MARY GRAHAM BONNER

THE SLEIGH-RIDE.

"A little boy and a little girl were driving through the country not long ago," commenced Daddy.

"Do you mean that Nick and I were the little boy and little girl?" asked Nancy.

"No," said Daddy, "the little boy's name was Ned; and the little girl's name was Nelly. They were really not driving, but sleigh-riding, and the bells were jingling on the horses' harnesses and on the front of their sleigh were big feathery decorations. They looked like feather dusters, the children thought, but they made the sleigh look very fine and smart.

"They drove along the white roads, for the snow was deep and not a scrap of real road showed itself. The fields were white, the bushes were covered with white, for only that morning there had been a slight snowstorm which had given an extra covering of snow to the whole country around.

"Sometimes they sang songs and sometimes they just looked about them. Everything was so beautiful and white and sparkling. How they loved it!

"After a time they passed a barn. Two horses were standing outside it, hitched to a big sleigh filled with apples and potatoes, which had been saved through the winter to be used when the supplies began to run short.

"The sleigh was going to take them to the big house not far away. When the two horses saw the horses that were pulling Ned and Nelly they bowed their heads as if to say, 'How-do-you-do, comrades.'

"And to the huge amusement of Ned and Nelly, their horses did the same. The children laughed aloud and the farmer called out, 'Do you want some nice red apples?' Of course they did, and not only did they have some, but their horses were given some apples, too, and once more they bowed.

They Tried to Soothe the Horse.

"'I have never seen such polite horses,' said Nelly.

"'I never have, either,' said Ned.

"They thanked the farmer and drove off. But before they had really started the farmer's two horses bowed once more, and the horses belonging to Ned and Nelly did the same.

"'What a funny time we have had,' said Ned.

"'Yes,' said Nelly, 'and it doesn't sound true. But those horses all certainly bowed politely at the right time. They bowed a how-do-you-do, a thank-you for the apples, and a good-by.'

"And this really was true," said Daddy. "But to continue with the rest of their drive. On their way home one of the horses got very much frightened, and in some way escaped from his harness and ran off. But as he got loose from the harness the sleigh upset, for he had pulled against the other horse and had landed the children in a ditch.

"For such a polite horse it was a dreadful thing to do, but he had suddenly noticed a sawmill and heard the noise and though he had heard it many times before, it had been some weeks since the last time, and for some reason he was thoroughly frightened.

"The children picked themselves up. They were not really hurt. And they tried to soothe the horse which had been left behind, for now he was afraid of the sudden and startling way things had happened.

"But he comforted the children, and the children comforted him. 'You'll have to take us back alone,' said Nelly.

"'Yes,' said Ned. 'I'll try to fix the harness and the sleigh.'

"But just at that moment the horse came running back, with the daddy of Ned and Nelly behind him in another sleigh. 'What has happened?' asked their Daddy, and at once, to his relief, he saw that they had not been really hurt at all.

"'The faithful old Prince,' said their Daddy, 'knew that something was wrong, and wouldn't wait until I brought him to just this road which he wanted to come.'

"The children explained to their Daddy what had happened, and they all decided that though Prince had become frightened, he would be more careful the next time. And he had certainly tried to make up for it by coming right back for them with their Daddy. And the other horse had remained with them. So they came to the conclusion that not only had they polite horses which bowed to their friends, but good, faithful and devoted ones."

A San Francisco man was sentenced to 30 minutes in jail for bootlegging. Perhaps that's an industry they don't want to discourage.

THE KITCHEN CABINET

From the maple a voice from the willow a sign,
From the marshes soft odors that bring
To the eyes that can see, to the ears that can hear
The news of the coming of spring.

WAYS WITH MEAT.

A dish which will take the place of meat and is most nourishing is Philadelphia scrapple. Take a cleaned pig's head and boil until the flesh slips easily from the bones. Remove all the bones and chop the meat. Set aside the liquor in which the head was cooked until cold, then take off the fat. Return the liquor to the heat and boil, add cornmeal to make a mush and cook until well done, then stir in the chopped meat and any seasonings desired. Some like a little sage with the pepper and salt. Pour the mush into a mold which will form nice-shaped slices and set away to become firm. Slice and fry for any meal. This makes a very popular Southern breakfast dish. One may use any bits of chopped meat, or pork scraps left from trying out pork rather than the pig's head if preferred.

Chopped Steak.—Put two pounds of round steak twice through the meat chopper, season with pepper and onion juice, form into a flat cake and place in a greased baking pan over a hot fire. Brown and then salt well the browned side and quickly brown the other. Set in a hot oven to finish cooking and serve with a brown sauce made from the liquor in the pan.

Leg of Mutton Cooked in Cider.—Buy the leg of mutton several days before using it. Wipe and rub with the following mixture of spices: A half teaspoonful of cinnamon, the same of allspice and cloves, pepper, nutmeg and ginger. Rub these into the meat well, making pockets to hold them under the skin in places. Let stand two days. When wanted to roast place in a large pan with four chopped onions and a cupful of seedless raisins. Pour over it two quarts of sweet cider and cover with oiled paper or another pan. Put into a hot oven and when the meat is well browned reduce the heat, basting and cooking slowly for two hours. Add salt a teaspoonful to the pound as it goes into the pan to roast. Be sure it is well rubbed in. Serve with the sauce boiled down until thick. Strain, remove the fat and turn into a sauceboat.

Eggs and "they says" are brittle; beware
For an egg once broken, and a "they say" once spoken,
Will never, no never, become whole by repair.

AN ONION A DAY.

The good old odoriferous bulb when it is digested and enjoyed should appear often (at least twice a week in some form) on our tables. The onion contains a richness of mineral matter and acids most healthful in keeping the body in condition. Steak smothered in onions is a dish well liked by most. Slice the onions and crisp them in cold water and dry quickly in a cloth, then drop them into a frying pan with a little hot suet; put in the steak and, cover it after both sides are well browned with the onions. Cover and let cook a few minutes and serve piping hot with the onions.

Onions on Toast.—Chop six onions fine, then boil them 20 minutes in a little salted water. Drain and add a tablespoonful of butter and serve on buttered toast in tiny mounds, the top of each garnished with a sprig of parsley.

Onions unpeeled, thrown into a bed of coals, covered and allowed to roast until tender, may be peeled without loss, seasoned with salt, pepper, cream or butter, and served, making a dish especially tasty.

Deviled Onions.—Mince six boiled onions and add to a thick white sauce, using a tablespoonful each of butter and flour with three-fourths of a cupful of milk; to this add the minced onion, the finely mashed yolks of two hard-cooked eggs, one tablespoonful of minced parsley and a seasoning of salt and pepper. A little lemon juice may also be added. Butter scallop shells or small ramekins, fill with the mixture, sprinkle with buttered crumbs, and brown.

Onions With Cheese.—This is a dish which will take the place of meat, as it is highly nutritious. Place a layer of cheese, finely minced, and a layer of rich white sauce in a baking dish; repeat until the dish is full, and cover with a thick layer of buttered crumbs. Bake until thoroughly hot. A rich cheese should be used, as the heating will often make an inferior cheese stringy.

Cabbage may be served in the same way.

Nellie Maxwell

Better Than an Alarm Clock.

Exe—"Why not have Bridget shut the kitchen door mornings? One can smell the breakfast all over the house." Mrs. Exe—"Shut the kitchen door? I guess not. The smell is all that gets the family up."—Boston Evening Transcript.

Our boys are defending this country on the high seas and on the land. Our own defense against a common enemy is to keep the system clean by ridding the body of the toxins, or poisons, which are bred in the intestines. When you feel tired, sleepy, headachy, when your breath is offensive, or pimples appear on the face and neck, it is time to recognize the danger and protect your bodily health by taking something for the liver such as Dr. Pierce's Pleasant Pellets. The machinery of the body needs to be oiled, kept in good condition, just as the guns or machinery of a ship. Why should a human person neglect his own machinery more than that of his automobile or his guns? Yet most people do neglect themselves. Their tongue has a dark brown color, skin sallow, breath bad, yet they fail to see that their machinery needs attention.

Dr. Pierce's Pleasant Pellets have been known for nearly half a century. They are made of May-apple, leaves of aloe and jalap, made into a tiny pellet and coated with sugar. They are standard and efficacious. You can obtain them at any drug store in vials for twenty-five cents. Ask for Dr. Pierce's Pleasant Pellets—and get no other!

Where He Was Struck.

"Where did the automobile strike you?" asked the judge of the colored complainant.

"Right 'long 'tween Fifty-six and Fifty-seven street, judge."

"I mean what part of your body was struck by the car?"

"Oh, de car didn' strike m' body, judge."

"But I thought the car struck you?"

"Dat's what it did, judge."

"But how could it strike you if it didn't strike your body?"

Catarrh Cannot Be Cured
by LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a local disease, greatly influenced by constitutional conditions. HALL'S CATARRH MEDICINE will cure catarrh. It is taken internally and acts through the Blood on the Mucous Surfaces of the System. HALL'S CATARRH MEDICINE is composed of some of the best tonics known, combined with some of the best blood purifiers. The perfect combination of the ingredients in HALL'S CATARRH MEDICINE is what produces such wonderful results in catarrhal conditions. Druggists 75c. Testimonials free.

Not a Source of Danger.

Because of the fact that there had been considerable sickness in the neighborhood, Jack was to play with no one but sister while out. Buddy came strolling up to where Jack was playing.

"You better go home and play," suggested sister to small Buddy.

"Oh, me ain't got nuthin'," replied Buddy.

Granite Valuable Fertilizer.

Granite contains nearly all food necessary for many plants. Therefore, freshly ground granite is a good fertilizer.

HEALTH RESTORED
Serious Kidney Trouble Was Removed by Doan's and Results Have Been Permanent.

"Kidney trouble put me in a bad way," says Thomas A. Knight, 624 N. Ninth St., East St. Louis, Ill. "It came on with pain across my back and the attacks kept getting worse until I had a spell that laid me up. Morphine was the only relief and I couldn't move without help. The kidney secretions were scanty, painful and filled with sediment.

"I was unable to leave the house, couldn't rest and became utterly exhausted. The only way I could take ease was by bolstering myself up with pillows. For three months I was in that awful condition and the doctor said I had gravel. Doan's Kidney Pills brought me back to good health and I have gained wonderfully in strength and weight."

Mr. Knight

Sworn to before me,
A. M. EGGMANN, Notary Public.

ALMOST THREE YEARS LATER, May 24, 1917, Mr. Knight said: "The cure Doan's brought me has been permanent."

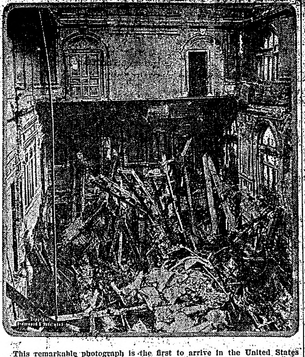
KREMLIN WRECKED BY THE BOLSHEVIKI



This remarkable photograph is the first to arrive in the United States showing the damage inflicted upon one of the buildings of the famous Kremlin in Moscow by the bolsheviki.

7 MILLION TO CONTRIBUTE TO THE COST OF WAR

Two and a Half Billion Dollars Will Be Collected Under War Revenue Act.

IS CALLED THE 'LIBERTY TAX'

Every Married Man or Head of a Family Having an Income of $2,000 a Year and Every Single Man Having an Income of $1,000 Must File a Return.

Washington.—Seven million taxpayers will contribute this year, in proportion to their income, to the cost of the war. The estimated revenue to be collected under the war revenue act of October 3, 1917, is $2,500,000,000, of which $666,000,000 is in individual income taxes. More than 6,000,000 persons who never before have paid an income tax will be assessed.

"Liberty tax" is the designation given the levy by Daniel C. Roper, commissioner of internal revenue. The title is an apt one, for the revenue to be derived under the war revenue act and the proceeds from the sale of the Liberty bonds are to be used for the same purpose, to feed, clothe and furnish with ammunition the American armies. The owner of a Liberty bond is entitled to feel a pride also in the possession of an income tax receipt.

Many persons shared in the prosperity of 1917. Merchants, farmers, business and professional men and employees were beneficiaries. To insure a continuance of prosperity each must assume a share of the common burden—a burden so distributed that every man is assessed according to his income. Better for the American people to pay to their own government a Liberty tax of $2,500,000,000 than a war indemnity to Germany of many times that amount.

Who Must File Returns.

Now is the time to file your income tax return.

Income tax forms may be had from collectors of internal revenue. These have been prepared in the simplest form possible and with a little care and attention taxpayers should be able to fill them out to the satisfaction of themselves and the government.

If married or the head of a family, and your net income for 1917 was $2,000 or more, you are required to file with the collector of internal revenue in the district in which you live a return of your income for the calendar year. If single and your income was $1,000 or more you are required to make such a return. These returns must be in the hands of collectors not later than March 1, 1918.

The normal rate of tax under the war revenue act of October 3, 1917, is 2 per cent on incomes above the amount of exemption, which is $2,000 in the case of married persons or heads of families and $1,000 in the case of single persons. The old income tax under the act of 1916 still is in effect, so that the total of your tax will be the sum of these taxes added together. Under the act of 1916 the normal rate of tax is 2 per cent on incomes of married persons in excess of $4,000 and on incomes of single persons in excess of $3,000.

For example, if you are married and your net income for 1917 was $5,000 you will be taxed $80. This is 2 per cent on the amount above the exemption of $2,000 under the act of 1917 and 2 per cent on the amount above the exemption of $4,000 under the act of 1916.

Exemption for Children.

If married or the head of a family you are allowed an additional exemption of $200 for each dependent child, if under eighteen years of age or incapable of self-support because defective. A taxpayer is considered to be the head of a family if he is supporting one or more persons closely connected with him by blood relationship, relationship by marriage, or if his duty to support such person is based on some moral or legal obligation.

Women as well as men are subject to the tax.

The combined net income of a married couple living together is assessed. If, for example, the husband earns $2,000 and the wife $1,000, they will have to pay a tax of $20, provided they have no children.

A widow, a woman living apart from her husband, or a maid is assessed on her net income above $1,000.

"Net income" means gross income, less certain deductions provided for by the act.

In arriving at your net income you are allowed to deduct from gross income all expenses actually paid during the year in the conduct of a business, trade or profession. These include the amounts paid by a farmer in preparing his land for a crop and the cultivation, harvesting and marketing of the crop, the cost of seed and fertilizer used, the amount expended for labor in caring for live stock and the cost of feed. The farmer may deduct also the amount paid for repairs to his barn or other farm buildings, but not the dwelling, and for repairs to farm fences, machinery, etc. The cost of materials for immediate use and of small tools which are used up in the course of a year or two, such as binding twine, pitchforks, spades, etc., is a deductable item, but not the cost of threshing machines, tractors and machinery of a more or less permanent character. Rent paid for a farm may be deducted.

Deductions Allowed.

A merchant may claim as deductions the amount expended for advertising, hire of clerks and other employees, cost of light, fuel, water, telephones, etc., used in his place of business, drayage and freight bills, the cost of operating delivery wagons or trucks and cost of their repair.

A physician may deduct the cost of medicines and medical supplies used by him in the practice of his profession; expenses paid in the operation and repair of an automobile used in professional calls, dues to medical societies and subscriptions to medical journals; expenses of attending medical conventions, rent paid for office rooms and the hire of office assistants, and cost of fuel, light, water, telephone, etc., used in office rooms. Amounts expended for books and surgical instruments are not allowable as a deduction.

This, in a general way, outlines the ordinary expenses incurred by a farmer, merchant or professional man, and the principles underlying these allowances are equally applicable in the case of any business, trade or profession. In short, all expenses connected directly and solely with an income-producing business, trade, profession or vocation are allowable deductions.

You may deduct also from gross income debts actually ascertained to be worthless and charged off within the year, and losses sustained in business or trade or from fires, storms or theft, if not compensated by insurance or otherwise. Reasonable allowance is made for the depreciation of property on account of wear and tear in the use of business. Depreciation of your residence is not allowed, but if you rent property to others, depreciation can be claimed.

Items to Be Included.

You are required to include under gross income the following items:

Salaries, wages, commissions or compensation of whatever kind for personal services.

All profits derived from business trade or commerce.

Profits from the sale of property, real or personal.

Rents.

Interest on notes, mortgages, deeds of trust or other securities issued by individuals, partnerships, etc.

Interest on bonds, mortgages, deeds of trust or similar obligations of corporations, joint stock companies or insurance companies.

Interest on bank deposits, including savings banks.

Income received from fiduciaries, that is, amounts received from incomes of estates, trusts, etc., through trustees, administrators or executors.

Dividends on stock, whether received as cash or stock. Only dividends paid out of earnings or profits accrued since March 1, 1913, are taxable.

Net partnership profits, whether divided and distributed or not.

Royalties from mines, oil and gas wells, patents, copyrights and franchises.

Heavy penalties are provided for delinquents. If you are late in filing your return you are subject to a fine of not less than $20 nor more than $1,000, and, in addition, 50 per cent of the amount of the tax due. For making false or fraudulent returns the penalty is a fine not exceeding $2,000 or not exceeding one year's imprisonment, or both, in the discretion of the court, and, in addition, 100 per cent of the tax evaded. For failing to pay tax when due, which is on June 15, 1918 the penalty is an assessment of 5 per cent of the amount unpaid, plus 1 per cent interest for each month during which it remains unpaid.

Government Keeps Check.

The man who thinks that failure to make proper returns might escape unnoticed is making a serious error. The government has a checking system by which it will be informed of delinquents.

The task of collecting the revenue to be derived under the war revenue act devolves upon the bureau of internal revenue. Revenue officers are visiting every county in the United States to assist taxpayers in making out their income tax returns. The date of their arrival and the location of their office may be ascertained by inquiry of collectors of internal revenue. These government experts will furnish you with return forms and answer any and all questions as to how they should be filled out. Their services are offered without cost. You should remember, however, that failure to see the official who visits your county does not relieve you of the duty imposed by law to file your income tax return within the time prescribed. The taxpayer must seek the government, not the government the taxpayer.

Every effort has been made to inform persons subject to the tax of their duty, and ignorance of the law will not be accepted as an excuse. Delinquents need expect no leniency.

If, on account of illness or absence from home, you are unable to render a return within the time prescribed, you may obtain an extension of thirty days by filing with the collector of internal revenue of your district a request therefore before March 1. In this you must state your reason why the return cannot be rendered within the time specified. Collectors are not authorized to grant extensions of more than thirty days, but this authority is granted the commissioner of internal revenue in meritorious cases. If such extension is desired the request should be addressed to Commissioner of Internal Revenue, Treasury Department, Washington, D. C.

Agent May Act for You.

You may appoint an agent to act for you if, by reason of illness or absence from home, you are unable personally to render your return. Your agent must make affidavit that he has sufficient knowledge to make return for you and must accept responsibility for and be willing to assume the penalties for a delinquent, false or fraudulent return.

The best advice that can be offered to taxpayers in connection with the filing of their income tax returns is: "Don't delay." By prompt action you are co-operating with your government in the greatest task it has ever undertaken, the defeat of German autocracy and the establishment of a world-wide and lasting peace. Every patriotic American will pay these Liberty taxes cheerfully and promptly. The man who seeks to evade them is not only dishonest, he is disloyal. When discovered, as he will be, he will be made to suffer the full consequences.

Get in line early. Remember it is cash now or kaiserism later. Whether you pay a tax of $10 on an income of $2,500 or $475,180 on an income of $1,000,000 you may rejoice in the knowledge that your dollars are helping to win the war.

WORKS FOR BANK 64 YEARS

Connecticut Man Believed to Be Oldest Bank Employee in the Country.

Derby, Conn.—William S. Browne, aged eighty, believed to be one of the oldest bank employees in the country both in age and in point of service, is still working at the Manufacturers' bank, where he has just celebrated the sixty-fourth anniversary of his employment by the institution. He went to work in the bank when he was in the local high school and has been employed under four cashiers, two presidents and innumerable directors.

Portable Homes for Army.

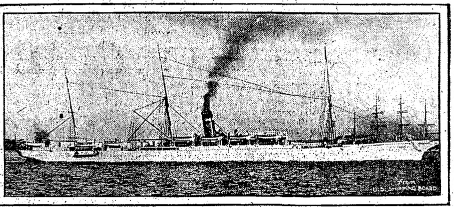
New York.—Hundreds of portable houses for the American troops in France are being built in this country. The houses are built in panels and shipped to Europe. They are bolted together over there.

WHERE UNCLE SAM'S SHARPSHOOTERS ARE BEING TRAINED

Photo by International Film Service

Above, scene in the beautiful little camp at Norcross, Ga., where selected men are learning to use the army rifle under the instruction of experts. Below, a view of the rifle range with the future sharpshooters at work.

TRANSPORT MEADE NOW AMERICAN TRAINING SHIP



Unique in war equipment is a national squadron of training ships now being formed by the United States shipping board, on which young Americans between the ages of seventeen and twenty-seven may learn the trade of seagoing preparatory to service in the new merchant marine. Heading the squadron is the ex-transport Meade, well known to American sailors as the former Atlantic liner City of Berlin.

YOUNG SWIFT A PRIVATE

Photo by Western Newspaper Union

Here is another instance to disprove the belief of some individuals that the wealthy young men of this country are unwilling to "do their bit" for the country. Louis Swift, Jr., son of the Chicago packing magnate, is now serving as a private in the army.

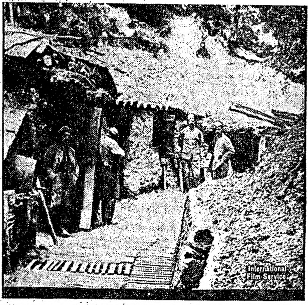
Sweden's Navy of Small Account.

Sweden's naval strength is not formidable. Of its 16 principal warships, some are 30 years old, and only three have a displacement of as much as 7,100 tons. These three are thoroughly modern, however, the Sverige's keel being laid down in 1912, while the Gustave V. and Drottning Vistoria, begun in 1915, had not been completed at the beginning of this year. Each has a main armament of four 11-inch guns and eight 6-inch rifles. Their speed is 22.5 knots. The auxiliary Swedish warships include eight destroyers, five torpedo gunboats of ancient lineage, 33 torpedo boats and 14 submarines. The active naval personnel is about 5,000 officers and men.—Marine Journal.

Relaxation Imperative.

There is nothing more commendable than a conscientious application to one's duty, whatever it may be, but we must all bear in mind that unless we have some kind of relaxation our work will most certainly suffer, and so will we. To be successful it is not necessary to think constantly of your work. The way to accomplish most things is to do them, not to think about doing them. But most of us do whatever we do, two or three, often a dozen times mentally.

INTRICATE FRENCH TRENCH AND DUGOUT



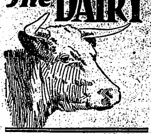
The French have constructed a remarkable dugout at this part of Alsace; it is modern and right up to date. It is beautifully situated and the old oaks of the country have not as yet been destroyed by the Hun. The trench has a floor and the dugout a tile roof—the last work in trench architecture.

REMOVE THE CAUSE, PREVENT ACCIDENTS

PICK UP EVERY NAIL
NAILS
Copyright, Underwood & Underwood

Keeping in mind the admonition, "Remove the cause and accidents will cease," the British soldiers in France obey the order to pick up all nails they find on the road and put them in boxes provided, for these nails puncture tires and injure the feet of horses.

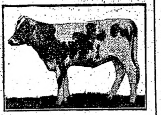
The DAIRY



BREEDING AGE FOR HEIFERS

Time Depends Largely on Development and Season of Year—Cool Season Is Favored.

The age at which heifers should freshen depends largely upon their development and the season when it is desired to have most of the cows freshen. Although the larger breeds do not mature at so early an age as the smaller ones, in most cases it is possible by liberal feeding to obtain sufficient growth so that heifers may profitably be bred to freshen at two years of age. It is seldom desirable for a heifer to freshen at an earlier age.



Splendid Dairy Heifer.

In deciding upon the time to breed, the size and development should be given greater consideration than the age, since it is important that the heifer have good growth by the time she freshens. However, if allowed to become too mature before breeding, especially in the case of animals that are heavily fed, there is sometimes difficulty in getting the heifers in calf.

It is undesirable to have cows freshen during the latter part of the summer, because their milk production will be seriously hindered by hot weather, flies, and dried-up pastures. Rather than have heifers freshen during the summer months it is advisable to postpone their breeding so that they will freshen during the cooler season.

ADDING VARIETY TO RATION

Feeding Alfalfa Hay Before Cattle Run on Pasture Is Especially Good in Avoiding Bloat.

(By R. H. WILLIAMS, Animal Husbandman, Arizona Experiment Station.)

Stockmen have proved to their own satisfaction that it pays to have some alfalfa hay before cattle run on alfalfa pasture. This is especially beneficial in avoiding bloat and adding variety to the ration. The animals seem to get tired of succulent feed and wish a variety. On this account it is always wise to have a feed rack either in the lane or in the field where the animals may receive the dry feed. Dairy cows especially will relish a few bites of the hay night and morning. It is a simple matter to keep this hay in the dry lot adjacent to the barn where the cows may eat before and after milking. Better gains will be made in the young stock and also cows will yield more milk and do better if allowed alfalfa hay while on pasture.

CAUSE OF DISEASED UDDERS

Bitter Taste and Rancid Smell in Milk Traced to One Cow in Herd—Cases of Sore Throat.

Dairymen have occasionally been puzzled by a bitter taste and rancid smell in milk, produced under sanitary conditions. It has been found that such conditions can arise from one cow in the herd with a diseased udder and a bacterium has been isolated as the immediate cause in the milk. The bacterium credited as the disturbing factor is said to belong to the group lactis aerogenes. On a farm in Wisconsin they found three cows affected with mastitis to which was traced the cause of 200 cases of severe sore throat among the persons using milk from the herd.

MUST RAISE DAIRY CALVES

To Increase Number of Cows It Is Advisable That Farmers Begin Raising Their Own.

If we are to increase the number of cows, as seems advisable, some farmers must raise calves of the dairy type. It is hoped that many farmers will decide to begin raising cows and producing dairy products. The first essential will be food for the family, then a surplus to sell, then soil fertility which will be possible where cows are kept.

AVOID FILTH IN CALF PENS

Important That Young Animal Have Clean Stall and Dry Bedding—Dirt Breeds Disease.

Many of the troubles that the calves of this country are heir to can be traced directly to unclean surroundings. The calf should have a clean, dry stall, clean pails from which to eat and clean, dry bedding all the time. Filth breeds disease more quickly in the calf pen than anywhere else.

AGRICULTURAL DEPARTMENT

This department of THE ELEVEN TOWNS is devoted to the interests of the agriculturists of Pennington and Marshall Counties. All the articles are by foremost authorities, including U. S. Government experts.

HOME GARDEN PLAN

Make Every Backyard Furnish Fresh Vegetables for the Family Table.

SANDY LOAM IS PREFERRED

As Attention Is Usually Given in Spare Moments, Locate as Near House at Possible—Drainage of Prime Importance.

(From the United States Department of ment of Agriculture.)

It is impossible to make an accurate estimate of the value of the vegetables which may be grown in home gardens in the South, but it is safe to say that a well-kept garden will yield a return eight or ten times as great as the return from an equal area devoted to cotton or to other general farm crops. Of even greater importance than the money value of the products of the garden is the satisfaction of having a bountiful supply of vegetables close at hand where they can be secured at a moment's notice.

Location of Garden.

In selecting the location for a home vegetable garden the question of proximity to the house should be given first consideration. As the work of caring for the garden is usually done in spare time, the location selected should be as near the house as possible. The slope and type of soil should be the next considerations. A slope to the south or southeast is usually preferable, because here the soil warms up early in the spring, which permits early planting and stimulates the early growth of crops. Practically any type of soil can be used for the garden, but a sandy loam is to be preferred.

Good drainage is of prime importance. The land should have sufficient fall to drain off surplus water during heavy rains, but the fall should not be so great as to wash the soil. If the land near the house is level, artificial drainage should be employed. Open ditches or tile drains will be satisfactory. On level land that is not artificially drained it is necessary to plant on ridges or in beds to prevent drowning the crops during wet weather. The ridges or beds should be as wide and flat as conditions will allow, for narrow, sharp ridges dry out quickly.

Arrangement of Garden.

The first consideration in planning the garden is the kind of cultivation to be given. Horse cultivation is recommended whenever possible, and where the work is to be done mainly by means of horse tools the garden should be long and narrow with the rows running the long way. The garden should have no paths across the rows, but turning spaces should be left at the ends. For hand cultivation the rows can be much closer together and may run across the garden. Straight lines should be followed, no matter what method of culture is used.

The size of the garden depends upon the number of persons to be supplied. One-fourth to one-half an acre is sufficient for an average family and should produce enough vegetables for use throughout the year. By close attention to the rotation of crops, the succession of crops, and interplanting, one-fourth of an acre may be made to supply a family of six. Where land is plentiful it is recommended that a sufficient area be set aside to allow part of the garden to be planted to a soil-improving crop each year.

The location of permanent crops, such as asparagus, rhubarb, and small fruits, should be carefully considered. These crops should be placed at one side, so that they will not be in the way when the garden is plowed.

Succession of Crops.

In planning the location of crops, consideration should be given to the matter of succession, in order that the land may be occupied as large a part of the time as possible. It is not advisable to have a second planting of the same crop or a closely related crop follow the first. Cabbage should not follow cauliflower, Brussels sprouts, mustard, or kale, for many of the same diseases and insects affect all of these crops. Tomatoes, eggplants and peppers should not follow each other. In some sections three or four crops can be grown on the same land each year, while in other sections two crops are all that can be grown to advantage. When a crop is harvested early in the season and it is not practicable to plant another vegetable for two or three months, the land may be planted to cowpeas or crimson clover.

Rotation of Crops.

Rotation of crops is as important in growing vegetables as in growing field crops, and the same principles can be applied. Crop rotation is important in checking diseases and insects and in keeping the soil in good condition. Where diseases are very severe, the same crop should not be planted continuously on the same area. Rotation of crops is one of the safeguards against soil infection. Land upon which a diseased crop has been grown should not be used for the same or a closely related crop oftener than once in three years. It is usually advisable to rotate crops in such a way that foliage crops (such as cabbage, kale, spinach, and mustard) follow root crops (Irish potatoes, beets, parsnips, carrots, etc.) or those grown for fruits (tomatoes, peppers, melons, etc.). This can be accomplished in a measure by changing the location of crops in the planting plan or by reversing the plan from year to year.

Preparation of Soil.

The soil that is to be used for vegetables should be thoroughly prepared before planting. A deep seedbed is desirable, and when an area that has never been plowed more than four inches deep must be used it should be deepened by gradually increasing the depth of plowing for a period of three or four years until the desired depth is attained.

Manures and Fertilizers.

The soil for vegetable growing should be rich and well supplied with humus. Barnyard or stable manure is the best fertilizer, because it furnishes both plantfood and humus. An application of 20 to 30 tons of manure to the acre is very satisfactory, and on some soils this application will need but little re-enforcing with commercial fertilizers. The manure should be applied far enough in advance of planting time to allow it to decay. Where coarse manure is used, it should be applied in the fall and turned under, but well-rotted manure should be applied after plowing and should be well mixed with the soil by harrowing. On many soils it is advisable to apply commercial fertilizer, especially phosphates, in addition to the manure.

Cultivation of Garden Crops.

Frequent shallow cultivation should be given garden crops. By keeping the surface of the soil stirred a dust mulch is formed, which prevents the loss of moisture through the pores in the soil and keeps down weeds.

The soil should be cultivated as soon as possible after a rain, to break the crust and prevent baking. Sandy soils may be cultivated when quite wet, but clay soils should not be stirred when sticky. Too much emphasis cannot be placed on the matter of thorough cultivation. If the work is properly done at the right time there will be little difficulty in controlling weeds.

In cultivating the garden, small-tooth cultivators should be used to prevent ridging or furrowing. A turn-plow or sweep should not be used for cultivation unless the land becomes so woody that cultivation will not do the work. Frequent cultivation kills the weeds between the rows before they become large, but hand work will be necessary to keep the soil stirred between the plants and to keep down weeds in the row.

ENORMOUS WASTE OF MANURE

Estimated That Farmers of Country Lose $200,000,000 Yearly—Much Could Be Saved.

It has been estimated by some authorities that the farmers of this country lose the enormous sum of $200,000,000 a year in waste of manure. A large portion of this loss, doubtless, could be saved, and the use of this plant food is greatly needed on many farms.

Every Plant a Weed.

Every plant is a weed that grows where not desired and some of our most valuable plants, among them the tomato and the white potato, were once considered weeds and of no value.

Skim Milk Helps Pigs.

Skim milk is of great assistance in growing and fattening pigs, particularly during the first few months.

Not Injurious to Sows.

Buttermilk and skim milk are not injurious to brood sows.

TEST ALL SEED FOR PURITY

Advice of Secretary of Department of Agriculture—Absolute Waste to Plant Weeds.

The secretary of the United States department of agriculture, states that "every farmer should test all seeds for purity and germination before planting." It is an absolute waste to plant dead seeds or seed which is badly mixed with noxious weeds.

Wasting Manure.

The farmer who allows the best part of his stable manure to leak out into the creek has little reason to complain of poor crops due to the scarcity of fertilizers.

Pasture for Farm Stock.

Pains should be taken to have a permanent pasture for cows, calves and other animals.

Troublesome to Hogs.

Kidney worms are a troublesome factor in hog raising, especially in the Southern states.

ROAD BUILDING

NATION-WIDE BOOST IS SEEN

All States of Union Have Availed Themselves of Opportunity Offered by Government.

(Prepared by the United States Department of Agriculture.)

That the better roads movement is receiving a nation-wide boost is shown by the fact that all the states of the Union have availed themselves of the opportunity of participating in the benefits of the federal aid road act, which appropriated $75,000,000 for the construction of post roads and $10,000,000 for forest roads, according to the report of the director of the office of public roads and rural engineering, United States department of agriculture. That the passage of the act has stimulated road building is shown by the fact that in 1916, there were approximately $41,000,000 of state funds expended for all highway purposes, and it is estimated that in the calendar year 1917, the aggregate expenditures of state funds for this purpose will be at least $60,000,000. A number of the states have made specific appropriations to meet federal aid dollar for dollar. Among these are New York, Illinois, Michigan, Rhode Island, Nevada, Iowa, Florida and Vermont.

BUILD ROAD CULVERTS RIGHT

Waste of Time and Money Unless Work Is Done on Approved Plan Under Competent Direction.

No culvert that is improperly built is safe or economical. On the contrary, it is a waste of money to spend it on such work unless the work is well done on an approved plan under competent direction. There must be calculation as to the volume of water the culverts are to carry off in rainy season and flood time, not in dry weather, and as to the durability of the material used in their construction. There can be no skimping on culverts or bridges or drainage without waste. It is better to have these three things permanent and adequate than to have an expensive form of road surfacing if a choice must be made. The man who built his house on shifting sand instead of solid rock has been regarded for centuries as the prince of fools.

Low Water Concrete Bridge.

AUTOMOBILE IS BIG FACTOR

Present War Has Found in Roads and Motor Cars Means of Moving Great Numbers of Men.

Two conditions of civic life emphasize the necessity for good roads. One is war. The Roman roads were built because Rome had vast armies to move. The present European war has kept thousands upon thousands of men busy in eastern Prussia and western Poland building roads in territories where before there were only swampy trails. Many of the roads in Belgium and northern France were built during previous wars, when vast armies must be moved quickly, so that the present war has found in roads and motorcars the means of moving great armies as never before. Good highways have made possible a rapid transportation of troops which is astonishing the entire world.

IMPORTANCE OF ROAD DRAGS

More to the Work Than Standing on Implement Holding Reins Over Team of Horses.

Perhaps the ease of dragging the road and the simplicity of the King road drag has been overemphasized. At any rate, there is more to road dragging than standing on a drag and holding the reins over a team of horses. And there is more to drag building than merely pinning together of the two slabs of a split log. On the other hand, almost any sort of driving down the road with the roughest possible pair of slabs, slapped together in any old way, will change the ordinary road for the better.

Concrete Culverts Best.

Concrete culverts are, without doubt, the best to use in point of durability and cost of maintenance. There are several reinforced and plain concrete pipes, manufactured in most states which make very satisfactory culverts.

Don't Disturb Sow.

After farrowing the sow should not be disturbed, and if she lies quietly for 10 or 12 hours, so much the better. When she wants anything she will go to the trough for it.

Goodridge Hotel and Restaurant.

Board by the day or week. Meals or lunches served at all hours. Good Rooms. Confectionery, Soft Drinks, Cigars, Pipes and Tobaccos

JOB PRINTING We can do the finest class of printing, and we can do that class just a little cheaper than the other fellow. Wedding invitations, letter heads, bill heads, sale bills, statements, dodgers, cards, etc., all receive the same careful treatment—just a little better than seems necessary. Prompt delivery always.

Let Us Be Your Waiter

We never tire of helping others when they ask for good job printing. We can tickle the most exacting typographic appetite. People who have partaken of our excellent service come back for a second serving. Our prices are the most reasonable, too, and you can always depend on us giving your orders the most prompt and careful attention. Call at this office and look over our samples.

Reindeer Special Milk Delivery

Frank Clements, Owner of Team, Comes to Rescue of Chicago Babies During Snow Blockade

Following the announcement that thousands of Chicago mothers were bewailing the fact that they had no milk for their infants as a result of the recent blizzards which filled all Chicago streets, making many impassable, "The Reindeer Man" ably played the part of the "Good Samaritan," and delivered milk to many homes and thus provided food for the hungry tots. The reindeer got about with almost as much ease as in normal times.

LAYING HENS NEED FRESH AIR

The first three months of the year are the months that demand efficient poultry house ventilation if the stock is to be healthy and if egg production is to be kept at a maximum, according to the poultry authorities at the New York state college of agriculture.

Proof of insufficient ventilation usually is found in damp or frosted walls, damp litter, close or impure air, flock, with consequent low winter egg production. The body of the hen constantly gives off moisture, and this accumulates unless there is enough movement of the air to carry it away. Dampness fosters colds, and when a cold is contracted, the body is too weak to resist the attack of a contagious disease such as roup.

It is stated further that the house should at no time be tightly closed. The exercise of judgment, and a few trials, will show how much to leave the windows open at night. Windows should be removable so that they can be taken out during the day, if it is not storming. Experience indicates that the birds will not suffer from the cold if they are not in a draft, if they are kept working, and if they are not overfed.

Plenty of air may best be had by tilting windows in at the top, as this will not let in the rain nor put drafts directly on the floor. There should be a wide board at each edge of the window to keep the rain out; a strip of wood, sash-plug, or nail on this strip will hold the window at any desired angle. Both upper and lower sash, where there are two, should be arranged in this way to get the best circulation.

Origin of the Ukulele.

There are 20,000 Portuguese in the Hawaiian islands, and it is charged that these people, and not the natives, are responsible for the ukulele. It has long been a matter of common knowledge that the instrument was introduced into the islands by a Portuguese, but that is not really the question of greatest moment. So long as the ukulele was confined to Hawaii it was almost as harmless as a banjo, the guitar, or the mandolin. Nobody then had a word to say against it. The point that needs to be celared up is: Where lies the responsibility for introducing it, not into Hawaii, but into the United States?—Christian Science Monitor.

Things Worth Knowing.

A new typewriter attachment feeds a fresh sheet of paper into the machine as the written one is removed.

About 23,000,000 knives and forks and 11,000,000 spoons have been supplied to the allies in France since the commencement of the war.

A new tea wagon has an electrical connection for keeping edibles as hot as may be desired.

A new fire hose nozzle is capable of many adjustments by which the efficiency of the stream is greatly increased.

Textile Tests to Ascertain If Cloth Is Adulterated or Misrepresented in Any Way

The laws of this country offer no protection to the purchaser of materials. Therefore to protect themselves, women should know a few practical tests to determine the content and value of materials. The object in making these tests is to discover if cloth is adulterated, artificially dressed or misrepresented in any way. The following tests from Extension Circular 41, Principles of Sewing, University of Missouri college of agriculture, Columbia, may be used in any home:

1. If the water is dropped on cotton and linen goods, the moisture spreads, the moisture spreads rapidly on linen but will remain unabsorbed on the cotton for some time. This is not always a safe test as cotton and linen are often heavily sized with dressing, which prevents the water from being absorbed.

2. A much safer test may be made by dropping glycerine on cotton and linen. Linen will become transparent, but cotton will not be affected.

3. Crushing cotton and linen materials in the hands will show the difference in the materials, as linen wrinkles more than cotton.

4. Cotton and wool mixtures when moistened wrinkle more than pure wool materials.

5. Material may be tested by pulling out threads and examining the ends. Cotton fibers are short with fuzzy ends, while linen fibers are long, with uneven ends, usually pointed. Wool fibers are short, kinky and stiff; fibers of reeled silk are long, straight and lustrous, while fibers of spun silk are short and easily broken.

6. Sizing may be discovered by rubbing the material between the hands to see if the dressing will come out. Washing will also remove dressing.

7. Each fiber has a characteristic burning test which may be easily distinguished.

a. Cotton burns quickly with flame.

b. Linen burns like cotton, but is not inflammable, as it has less oil in the fiber and less air in the woven cloth.

c. Wool burns slowly, giving off an odor like burnt feathers and leaves a gummy residue.

d. Silk burns more slowly and with less odor than wool. It leaves a crisp ash. Silk leaves more ash when weighted.

Bee Farmers Declare Honey Has the Food Value of Meat

A pound of honey or a pound of sirloin steak—which shall it be? That there is as much food value in one as in another has been proved at the bee farm at the University of Wisconsin.

To emphasize the importance of promoting beekeeping in Wisconsin as a profitable business pursuit, the university extends its endeavors to the beekeepers of the state, in addition to the instruction given the students in agriculture in classes.

Wisconsin annually produces about 1,500 tons of choice honey, but the beekeeping industry has not advanced to the point of recognition as a distinct specialized branch of agriculture, although much of the undeveloped land in Wisconsin and most of the present cultivated land is not occupied as bee pasture, a majority of it offers opportunity for excellent bee "locations."

Mother's Cook Book

Just being happy is a fine thing to do,
Looking on the bright side, rather than the blue;
Sad or sunny musing is largely in the choosing,
And just being happy is brave work and true.

Food for the Family.

To save meat we must use more poultry, rabbits, fish and other sea food as our army, the armies of our allies and the women and children "over there" must have food, and there can only be food enough if America provides it. If each person in the United States saved one pound of sugar a year it would make 50 train loads of 50 cars each, each car carrying 50,000 pounds of sugar; that would help some in supplying the demand for sugar, would it not? Let us not forget that a very small bit multiplied by a hundred million is enormous in result, that it leaves us stunned with its magnitude.

Baltimore Chicken.

Cut up the well cleaned chicken into serving size pieces, roll in highly seasoned flour and put into a hot frying pan with two or three tablespoonfuls of olive or any sweet corn oil, brown then finish cooking slowly either on the stove or in the oven. Serve with corn fritters.

Potato Soup.

Cut five medium sized potatoes in cubes, slice an onion and three pieces of the outside of celery together and mash with a potato masher, put through a sieve and add a cupful of thin white sauce, using a tablespoonful of flour and a tablespoonful of butter cooked together, then a cupful of milk and seasonings of salt and pepper. This makes enough for four servings.

War Biscuits.

Take five ounces each of oatmeal and white cornmeal; three ounces each of butter and sugar, one teaspoonful of baking powder, and one egg. Melt the butter and work in the dry ingredients, roll as thin as possible and make into biscuits. Bake in a slow oven until a light brown.

Bread Cake.

Take two cupfuls of flour, a half teaspoonful of salt, two and a half tablespoonfuls of sugar, eight teaspoonfuls of baking powder, a half cupful of milk, a fourth of a cupful of water, and two tablespoonfuls of butter. Spread over the top, two and a half tablespoonfuls of flour, five tablespoonfuls of sugar, a teaspoonful of cinnamon, and four tablespoonfuls of oleomargarine or other butter substitute. Mix the ingredients and sprinkle over the top as it goes into the oven.

Nellie Maxwell

Ten Rules for Householders To Obtain Greatest Heating Efficiency and to Save Coal

The efficiency with which the householder operates his heating plant depends mainly upon the type of furnace and the conditions under which it is installed and operated. In the interests of fuel conservation during the present extension division, co-operating with the state council of defense, puts out the following suggestion:

1. The base of the heater must be tight and must make an air-tight connection with the floor so that no air can leak into the ash pit.

2. The chimney and all connections into it must be tight. A burning match or candle held close to all joints will indicate leaks.

3. The chimney should be high enough. The top should be at least 2 feet above around surrounding objects.

4. The smoke pipe from the furnace to the chimney should be straight, short, and should grade up to the chimney.

5. The grates must not be warped, must move easily and should have no holes or broken places for unburned coal to drop through.

6. All basement piping, heater surfaces and smoke pipes should be covered with asbestos covering.

7. A shut-off damper should be provided in the smoke pipe to control the intensity of the chimney draft and a check draft damper is required in the smoke pipe beyond the shut-off damper.

8. There should be a lift or slide damper in the fire door and a draft damper in the ash pit door.

9. For highest efficiency, some type of automatic draft regulator such as a thermostat should be provided.

10. All doors and windows in the house should be as tight as possible.

I Will Be Worthy of It.

I may not reach the heights I seek,
My untried strength may fail me,
Or half way up the mountain peak
Fierce tempests may assail me.
But though that place I never gain,
Herein lies comfort for my pain.
I will be worthy of it.

I may not triumph in success,
Despite my earnest labor;
I may not grasp results that bless
The efforts of my neighbor—
But though my goal I never see,
This thought shall always dwell with me,
I will be worthy of it.

The golden glory of love's light
May never fall on my way.
My path may always lead through night
Like some deserted byway.
Though life's dearest joy I miss,
There lies a nameless strength in this—
I will be worthy of it.

—Ella Wheeler Wilcox.

DRIVING A JITNEY FROM NYACK TO TARRYTOWN AND BACK OVER HUDSON

The recent cold snap formed an ice path over the Hudson river so lasting and durable that Frederick Koenig, William J. Cannon and Frederick Listman were able to operate a jitney from Nyack to Tarrytown and back, taking passengers and delivering various kinds of goods. The ice was 16 inches thick.

MOST ANNOYING TROUBLES OF CAR

Constant Squeak Is One of First Symptoms of Neglect.

MOST DIFFICULT TO LOCATE

If Noise Comes Only When Brake Is Applied It Is Evidently in Brake Bands—Fault Also May Be Found in Springs.

"One of the most annoying troubles of an automobile is that constant squeak that cannot be located," says William H. Stewart, Jr., president of a prominent automobile school. "It is one of the symptoms of neglect, and it cries out to you every time the car sways or strikes a rough spot or turns a corner or starts or stops or seemingly does anything else. At every move there is a cry of protest, which is all the more maddening because you cannot locate it. If the squeak comes only when you apply the brakes it is evidently in the brake bands, but other squeaks are not so readily located.

May Be in Springs.

"The next likely place is in the springs and spring shackle bolts. The springs are habitually neglected and so run dry. In order to prevent this the leaves should be greased at least once a month. Jack up the frame to take the weight of the car off the springs. Spread the leaves apart, one by one, prying them open with a cold chisel or metal handled screwdriver driven by a medium-weight hammer. This will chip off some of the paint, but that is unavoidable. Then spread graphite grease between the leaves by means of a thin knife or a hack saw blade. As you cannot reach all the way to the center where the clips hold the springs firmly together, use cylinder oil mixed with a little flake graphite. If springs are badly rusted they should be removed and the rust filed off—a dirty job and a tedious one. They may then be properly greased before replacing.

"There is a special tool on the market which may be used to spread the spring leaves without jacking up the frame. It works as a double wedge and is very satisfactory.

Quick Method Suggested.

"If time presses use the following method: Wipe dirt off springs with waste and kerosene, using plenty of kerosene and guiding it down the sides so that it may run in between the leaves. This it does readily, as it is not repelled by the rust. Wipe off the surplus and then pour some medium-bodied cylinder oil over the springs, guiding it down the sides in the same manner. The oil alone would be repelled by the rust, but the kerosene has an affinity for it, thins it and it runs in fairly well. Stand on front spring hangers and rock car or do the same from each running board. This action will help spread the oil and so find the squeak if it is anywhere in the springs.

"Next turn your attention to the hood and mud guards. Raise each side of the hood and see if the strips of rawhide are in place. If they are worn through or missing they must be replaced. A little neatsfoot oil might be rubbed into them as an extra precaution. Close hood and see if metal touches metal at any place. A light touch of graphite grease should be applied here and there and particularly along the hood hinges and where the rod touches dash and radiator. Now shake the car again or try it out on a rough road.

KEEP BREATHING TUBE OPEN

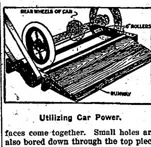
Hold Hand Over Screen While Engine Is Running to Ascertain if Air Is Puffed Out.

Make sure your breathing tube screen is not clogged. Hold your hand over it while the engine is running and see if air is puffed out. If not, investigate and clean out the obstruction. If allowed to remain it will put a harmful back pressure on the pistons, which will cut down the power of the engine.

AUTO USED AS POWER PLANT

Small Machinery May Be Operated Without Altering Car by Use of Rigging Shown.

An automobile may be utilized to furnish power for operating small machinery without altering the car in any way, by the use of the driving rigging shown. All that is necessary is to back the automobile up the slight incline, and leave the gears in mesh with the engine running The tires transmit the power to the 6-inch rollers, and they, in turn, to a belted drive pulley. The wooden rollers are 6 feet long. Each end is fitted with an axle, 1 foot long, sufficiently heavy to bear the weight of the automobile used. Two wooden bearing boxes are built of 3 foot pieces of 2 by 4 inch hard pine, bolted together and bored through the middle, for bearings, where the two faces come together. Small holes are also bored down through the top piece for lubrication. The rollers are assembled with ring washers against their ends and the bearing boxes are bolted together with two braces. The pulley on the projecting end of the driving axle is set with a setscrew.



Utilizing Car Power.

A slanting platform, as shown, makes it easy to back up the car on the rollers. The distance between the rollers depends on the diameter of the wheel of the car being used, but for general purposes a space of 18 inches between the two sets of bearings will give ample room for the average auto wheel to come well down between the rollers and insure good traction.—Popular Mechanics Magazine.

LESS TIRES USED IN WINTER

Motorist Does Not Let Out Air During Extremely Cold Weather and They Last Longer.

The winter season seems to strengthen the properly inflated tire.

Underinflation is responsible for a large percentage of tire expense. Most motorists think that during the summer months they should ride their tires at low pressure to prevent blow-outs. The decreasing of the pressure does not decrease the heating of the tire, but, rather increases it, as the side walls are subjected to a greater bending strain and friction between the layers of fabric generates heat. Due to this excessive flexing, the fabric cracks and loosens up to such an extent that the tire becomes weakened. The cracked and chafed fabric ruins the inner tube. During the winter season the motorist does not let the air out of his tires, as he does in the summer, but allows his tires to have a greater and more constant air pressure; hence, the percentage of tires consigned to the scrap heap is much less in winter than in summer.

KEEPING AUTO ENGINE WARM

Electric Device, Which Consumes One-Tenth of Kilowatt an Hour, Solves Problem.

The problem of keeping an automobile engine and radiator warm during the coldest nights, without the necessity of heating the entire garage, has been solved by an electric engine and radiator warmer, which is simply screwed into any lamp socket in the garage and placed down in the hood of the car between engine and radiator.

The body of the heater contains a rugged heating element which consumes one-tenth of a kilowatt—less than one cent an hour—and gives off just enough heat to keep the radiator from freezing and the engine from causing trouble. The hood of the car, however, should be blanketed in severe weather to hold in the heat. The heating element is inclosed in a black enameled metal shell, of a shape and size not unlike the ordinary dry cell, and perforated to allow for circulation of the heated air from within.

TO ALL WOMEN WHO ARE ILL

This Woman Recommends Lydia E. Pinkham's Vegetable Compound—Her Personal Experience.

McLean, Neb.—"I want to recommend Lydia E. Pinkham's Vegetable Compound to all women who suffer from any functional disturbance, as it has done me more good than all the doctor's medicine. Since taking it I have a fine healthy baby girl and have gained in health and strength. My husband and I both praise your medicine to all suffering women."—Mrs. JOHN KOPPELMANN, R. No. 1, McLean, Nebraska.

This famous root and herb remedy, Lydia E. Pinkham's Vegetable Compound, has been restoring women of America to health for more than forty years and it will well pay any woman who suffers from displacements, inflammation, ulceration, irregularities, backache, headaches, nervousness or "the blues" to give this successful remedy a trial.

For special suggestions in regard to your ailment write Lydia E. Pinkham Medicine Co., Lynn, Mass. The result of its long experience is at your service.

Really You Couldn't Blame Him.

"Mr. Uplate," said the lady, "it is now after ten o'clock. I really cannot keep the breakfast waiting for you so long every morning."

"Madam," replied the lazy lodger, with dignity, "if you think I am going to endanger my health by rising before the day is far enough advanced for me to tell whether I shall have to put on my winter flannels or my gauze underwear, you are entirely mistaken."

Why Bald So Young?

Dandruff and dry scalp usually the cause and Cuticura the remedy. Rub the Ointment into scalp. Follow with hot shampoo of Cuticura Soap. For free sample address, "Cuticura, Dept. X, Boston. At druggists and by mail. Soap 25, Ointment 25 and 50.—Adv.

For Safety's Sake.

Two brothers who live in an East Lancashire manufacturing town were noted for being exceptionally well served with nasal organs.

One of the ring spinners at the mill where they worked invited them to a wedding and promised to send a cab for them.

The cab duly arrived and the two brothers entered and planked themselves down, one in each window.

In order to create an impression during the drive to the wedding, the two brothers were looking out of the cab, one on either side, so that the people could see them.

All went well until the cab came to a rather narrow railway arch, which our travelers had to pass through. The cabman looked back to take his bearings, and, seeing the two brothers' noses sticking out of the windows on either side, shouted:

"Put them elbows in, please!"—Toronto Mail and Empire.

Terrible Loss.

"I cleaned out the cellar today, mum, and the man carried the heap of dirt in the dark corner out in his handcart."

"Good heavens, Nora, that was my last order of coal, and now he'll make a fortune selling it before we can catch up to him."

Ready for Fight.

Gloom—Yes, sir; money is trouble.

Bright—Well, if that's the case I'm always looking for trouble.

HOURS

A Baked Cereal Food

Different from the usual run of toasted or steam-cooked cereals,

Grape-Nuts

is baked in giant ovens—baked for nearly twenty hours under accurate conditions of heat, so that the whole wheat and malted barley flours may develop their full, rich sweetness.

You don't need sugar on Grape-Nuts.

"There's a Reason"

News of the State

Condensed for Busy Folks

Pipestone.—C. O. Anderson, a pioneer farmer of this county, was killed near Clear Lake, Iowa, when crushed to death beneath a loaded wagon.

St. Cloud.—About 150 men were enrolled at the opening of the two-day course in tractor study conducted by the International Harvester company here.

Walker.—Mrs. Scribner, who is the head of the girl's auxiliary of the Red Cross, has offered a prize to the girl turning in the most knitted work before March 1.

Bemidji.—J. R. Cotton, federal state director of the United States Public Service reserve, has appointed A. T. Wheelock of Bemidji as enrollment agent for the reserve.

St. Peter.—Gustave Shogren of this city received $375 from his son, now a seaman on a United States cruiser, to buy war saving stamps. Shogren enlisted in the navy last April.

Big Falls. — The Red Cross dance given here proved a financial success, the total receipts from sale of the tickets being $50 and from the lunch $20.20, making a total of $70.20.

Jackson.—No action has been taken yet on the warrant issued for the arrest of A. C. Townley, president of the Nonpartisan league, by Jackson county officials, on a charge of conspiracy to discourage enlistments.

Cass Lake—At an enthusiastic meeting here it was finally agreed to start work in connection with the erection of an armory. A building committee was appointed and stock will be sold at $25 a share.

Thief River Falls.—A gift of a $500 lot, one block from the new Northrup school in the north end of the city by ex-Mayor F. H. Campbell to the local chapter of the Red Cross has been announced. The officers of the chapter hope to realize even more than the value of the lot and have offered it for sale.

Minneapolis.—The resignation of O. M. Wassing has been accepted by the mayor. The mayor announced he had accepted the resignation of his secretary, who is waiting sentence for an offense against a 16-year-old girl, because circumstances demanded it. Wassing has held the secretary's office since the mayor took office.

Mankato.—The state board of the Minnesota Christian Endeavor society has designated Mankato as the place for holding the next annual meeting in June. Six or seven hundred delegates are expected to attend. Invitations to hold the meeting were also extended by Austin, Hastings, St. Paul, Crookston, Bemidji and Duluth.

Fergus Falls.—J. G. Durrell has received a letter from his son, Harvey Durrell, who is auditor of the National Bank of Cuba, in which he tells something of food scarcity in that island. In a previous letter he wrote that flour was selling at 40 cents a pound, which would be $40 per hundred, and the supply is now apparently exhausted.

Winona. — With the announcement that the federal fisheries bureau has asked the government to appropriate 20,000 for the opening of fish pockets along the Mississippi river between Minneapolis and Muscatine, Ia., came the official report of the transfer of D. C. Booth, superintendent of the Homer upper river station, to Spearfish, S. D. C. F. Fuller has been named his successor.

Minneapolis—A service flag with thirty-three stars, including one gold one, was unfurled at the patriotic program of the annual convention of the Minnesota Editorial association here. Speakers paid tribute to Walter H. Buckley, a corporal with the Rainbow division, who lost his life in France on Jan. 24. He was the son of Mr. and Mrs. J. C. Buckley of the Delano (Minn.) Eagle.

St. Paul.—Dr. J. C. Boehm, medical member of the exemption board of district No. 1, was removed from his position by orders from the state adjutant general's office. Adjutant General Rhinow said the charges against Dr. Boehm were disloyalty. There had been numerous complaints from Stearns county regarding the pro-kaiser attitude of Dr. Boehm, General Rhinow said, and they were forwarded to Washington. Later orders were received to remove Dr. Boehm.

St. Paul.—"Minnesota is slowly but surely climbing to the head of the list in the matter of securing recruits for the United States army," said Major John D. Yost, recruiting officer of the Minnesota district, recently in discussing recruiting activities in the state. During the month of January about 600 men were enlisted from this state for service in the regular army. Indications at the present time are that the month of February will produce an even greater number of men. Up to the middle of the month 350 men had been secured, and recruiting was quite active at all stations.

Minneapolis.—The following officers of the Minnesota Editorial association were elected at the annual convention here: President, A. O. Moreaux, Luverne Leader; first vice president, Asa M. Wallace, Sauk Center Herald; second vice president, J. M. Landy, Olivia Times; third vice president, H. A. Wheaton, Hokah Chief; secretary, James E. Casey, Jordan Independent; treasurer, H. C. Hotaling, Mapleton Enterprise; executive committee, Will Withe, Grey Eagle Gazette; Frank J. Meyst, manager Western Newspaper Union, Minneapolis; L. S. Whitcomb, Albert Lea Tribune.

Mora.—The first inheritance tax on record in the probate court of Kanabec county was determined by Judge Victorien on February 9 in the estate of Christian Bartel.

Elmore. — One hundred registered hogs, forming one of the choicest herds in this district, were burned in a fire which destroyed the farm buildings of Edward Hahl, near here.

Brainerd.—A farm bureau meeting at Nokay Club was addressed by L. H. Bugbee, president of the State Federation of Farmers' Clubs. The meeting was one of a series to be held in Crow Wing county.

Winona.—E. J. Gannon, conductor on the Northwestern railway for 50 years and one of the best known railroad men in Southern Minnesota and Western Wisconsin, has retired as a pensioner, it is announced here.

Aitkin.—Merchants of Aitkin, in an endeavor to follow government suggestions to conserve labor, reduce expense and handle merchandise at minimum cost to consumers have abandoned their delivery system.

St. Paul.—Governor Burnquist has accepted appointment to a place on the honorary board of state governors of the United States Junior Naval reserve, an organization engaged in training boys for the service, with national headquarters in New York city.

Bemidji.—George Kirk, former clerk of the water department of Bemidji, has been indicted by the grand jury in district court here for grand larceny. An alleged shortage of about $2,000 was reported by the public examiner on a recent audit of the city's books.

Bemidji. — The Dalton block, destroyed by fire more than a year ago, will be rebuilt and the contract for the new building, which will be a two-story brick structure, has been let to Edward Jackson of this city, construction to begin as soon as the weather permits.

Staples.—A cablegram was received here from Japan for Mrs. M. S. Montgomery announcing that her husband is seriously ill and is being sent home. Later another cablegram came requesting Mrs. Montgomery to meet her husband at Seattle, and she left for that place.

St. Peter.—The stores of this city will close at 6:30 on all nights except Saturday at the request of Fuel Administrator C. A. Benson. A petition was circulated among the storekeepers by a committee of the St. Peter Business Men's association and all agreed to the request.

Crookston.—Mrs. McVey and J. F. Sheppard of Aberdeen, S. D., who have been held here on the charge of kidnaping Helen Morrison, were released, the charge against them having been dismissed by Judge Gossman of municipal court. The custody of the child, however, was not given to Mrs. McVey.

Winona.—In spite of the war, the Bemidji state normal school will be built this year. The normal board, it is stated here, has approved plans and specifications submitted at the recent meeting, and has requested the state board of control to solicit bids. The legislautre appropriated $100,000 for this institution.

Wadena.—Secretary Nels Peterson of the Equity Co-operative Creamery association, has called a meeting of the farmers for Saturday, March 9, to hear the report of the committee appointed at the annual meeting of the creamery patrons to investigate and report on the advisability of establishing a dry milk factory in this city.

Bemidji. — Preparations for extensive fishing in Red lake, Cass lake, Leech lake and other lakes in the vicinity of Bena are being made by the state under the suprvision of S. A. Selvog, superintendent of the state owned fisheries which have been operated in the northern part of the state during the winter. So successful has been the operation of these fisheries in this vicinity that it has been decided to continue the work throughout the summer.

Crookston.—District Unit No. 4 of the Minnesota State Creamery and Cheese Factory Operators and Managers' association was reorganized here by Leonard Houske of Halstad, pure food inspector. District Unit No. 4 embraces Polk, Norman, Mahnomen and Red Lake counties. Albert Anderson of Erskine was elected president; Theodore Christianson, Red Lake Falls, vice president; N. C. Lundberg, Perley, secretary-treasurer, and W. E. Dennison, Beltrami, and Sever Lee, Crookston, directors.

St. Paul.—The beet sugar production of Minnesota's single beet sugar factory, located at Chaska, furnished sufficient sugar to provide more than 110,000 soldiers with a full sugar ration for one year, according to J. A. Brock of the sugar division of the United States food administration. He has been lecturing throughout the Western states on behalf of an increased sugar beet production and will conduct a series of meetings in Minnesota during the next few days for the purpose of pointing out to the Minnesota farmers the great part they can play in the winning of the war by increasing the production of sugar beets.

St. Paul.—The opening of a United States army aviation mechanics training school at St. Paul is announced by Major W. R. Weaver, who said that the school will have 3,000 men in training in a short time and within a few months three times that number is expected to be enrolled. The school, it is announced, will be an enlargement of the Dunwoody institute training school for aviators and aviator mechanics, which has proved not large enough to care for the number of men required. A corps of 60 instructors will be in charge of the school.

Fads And Fancies Of Fashion

WINNING THE DEBUTANTE'S SMILE.

It is silk and cotton for summer frocks, and here are two of them designed for the young girl, that will make her more than glad that she is alive in a silk and cotton summer. All the pretty, old-time gingham patterns have been interpreted in taffeta and voile and their inventors of long ago would be delighted with their elegance and daintiness in these fine-grained fabrics. Some of the new frocks in plaid or crossbar taffeta go to the length of copying apron styles

The pretty frock of corn-colored, crossbar taffeta shown at the left of the picture has the plainest and simplest of pleasant waists, made of plain corn-colored taffeta, with sleeves of georgette crepe. It has patch pockets ruffled across the top, that deign to remind us of the apron pockets, and an ingenious collar made just to suit the frock. This little model is satisfied with a plain, straight and narrow skirt, that turns neither to the right nor to the left, but pursues its way undisturbed by ruffle or tuck, to the ankles of its wearers. It proclaims the straight silhouette and leaves us guessing as to just where it fastens.

A pretty dress at the right is made of fine voile over a slip of silk. The skirt of voile is gathered at the waist line so that it has considerable fullness, but it is not draped. Just at the right it is split and cut at the bottom so that the voile falls in a cascade. The bodice is draped from the shoulders and bloused at the waistline. The popular chemisette is indispensable in a waist draped in this way, and appears less in filet lace over taffeta lace over taffeta silk. The sleeves are full and gathered into a little frill above the elbows. There is a soft ribbon girdle with long ends looped over at the front. It takes slender bead tassels to weigh the ends so that they will hang properly. A spray of small garden flowers is tucked into the girdle at the front, and their pretty, quaint suggestion is supplemented by the extra length of the skirt which reaches almost to the instep.

PETTICOATS CONFORM WITH SLENDER LINES.

Now is the time to dispose of all lingerie matters, simple or otherwise; for at this season of the year merchants make a concerted effort to show and sell new undergarments and the materials for making them. Petticoats and camisoles and their next of kin, princess slips, are the subjects under discussion here.

Shadow lace proves the best of assets when the time comes to design camisoles. It is wide enough to make the body of the camisole and the pointed or scalloped edge provides for graceful shape. Camisoles are made of it by adding a band of ribbon, or wide beading to the straight edge for the waistline, and banding the lace with narrow ribbon stitched on. Where the lace has large points, two of them at the front and two at the back form "V"-shaped lines here and under the arms, that are graceful. Ribbons, stitched to these scallops or points are extended into shoulder straps.

In princess slips the bodice is often cut in the shape described above and finished with a narrow hem. Below the hem valenciennes lace insertion is let in. Narrow skirts set onto the bodice with a narrow belt have a series of tucks edged with val lace running about them. They are usually made of flesh-colored crepe de chine. White batiste remains a favorite for petticoats and nothing supplants small tucks and fine narrow laces for trimming them, in the regard of refined women. But all petticoats must be made to conform to the slender silhouette; lines must be straight.

The reliable taffeta petticoat for daily wear is shown in the picture, finished with a scant, corded flounce hemmed at the bottom. Like everything else, it is most liked in plain styles.

Julia Bottomley

TREMENDOUS VALUE FOR 15c

The Pathfinder, Leading Weekly Magazine of Nation's Capital, Makes Remarkably Attractive Offer.

Washington, D. C. (Special)—People in every section of the country are hurrying to take advantage of the Pathfinder's wonderful offer to send that splendid illustrated review of the whole world thirteen weeks for 15 cents. It costs the editor a lot of money to do this, but he says it pays to invest in new friends, and that he will keep the offer open until the Pathfinder passes the 250,000 circulation mark, which will be in a few weeks. Fifteen cents mailed at once with your application to Pathfinder, 179 Douglas St., Washington, D. C., will keep the whole family informed, entertained, helped and inspired for the next three months.—Adv.

Tea Long Used in China.

Tea was used and cultivated in China as far back as the third century, A. D., but it was not until the twelfth century that it became known in Japan, when an abbot of a Buddhist monastry learned about it in China where its virtues were already well known. Obtaining seed, he planted some near Kyoto. In later years some of this was transplanted near Shizuoka, which vicinity has ever since been the center of the tea industry of Japan. It was not until about the seventeenth century that tea became generally known in Europe, when it was exploited by the Dutch East Indian company as a new article of commerce. The first tea sold in England brought $15 to $20 a pound.

To keep clean and healthy take Dr. Pierce's Pleasant Pellets. They regulate liver, bowels and stomach.—Adv.

Joke on Phrenologist.

A phrenologist, visiting a village, offered to examine anyone's bumps for a small sum.

A burly blacksmith's helper said he would have his bumps examined, and as he took his place, another man whispered in the phrenologist's ear, "He's very fond of veal."

At this hint the phrenologist nodded gratefully. He then read out the blacksmith's bumps, crediting him with all sorts of virtues, and finally he said, in a loud, positive voice, "Now I come to your diet. Gents, if there is one thing in the world our subject dotes on it is veal. Why—"

But the sentence was never finished. The blacksmith rose suddenly and knocked the phrenologist down. "What's it to do with you if I did steal a calf?" he cried.

Important to Mothers

Examine carefully every bottle of CASTORIA, that famous old remedy for infants and children, and see that it

Bears the Signature of Chas. H. Fletcher

In Use for Over 30 Years.

Children Cry for Fletcher's Castoria

Some Slam.

Patience—Have you seen Peggy lately?

Patrice—No; why?

"She's getting to look just like her grandmother."

"Mercy! She doesn't really look as old as that, does she?"

By holding her tongue a woman can keep her husband guessing.

Says Dodd's Kidney Pills, Wonderful Remedy

Mrs. Della Olson, of New London, Wis., like many others, knows after experiencing the use of Dodd's Kidney Pills that they are unexcelled. Here is what Mrs. Olson recently wrote us:

"I suffered with rheumatism for years. There was a gravel deposit in the urine and I had frequent headaches. I had dark circles around my eyes and was always tired. I bought a box of your Dodd's Kidney Pills and am glad I did, for I secured quick relief and think they are a wonderful remedy."

Mighty few people realize in time that kidney trouble is making its advances upon their health. They put off treatment—they say, "Oh, I'll be all right in a day or two." And the malady tightens its grip. Result: Bright's Disease, hospital treatment, doctors' bills—often death.

DODDS KIDNEY PILLS FOR

Insist on the name with three D's and enjoy freedom from kidney ills. At all druggists.

W. N. U., Minneapolis, No. 8–1918.

After the Honeymoon.

"You're not like yourself tonight, dear; you seem cold," said the young husband.

"Why not? We have no coal," said the sweet young thing.

"But we have love and affection for one another."

"Well, if you think you can cash some of that in for a couple of bags of coal, for gracious sakes go down to the coal man and try it!"

BOSCHEE'S GERMAN SYRUP

will quiet your cough, soothe the inflammation of a sore throat and lungs, stop irritation in the bronchial tubes, insuring a good night's rest, free from coughing and with easy expectoration in the morning. Made and sold in America for fifty-two years. A wonderful prescription, assisting Nature in building up your general health and throwing off the disease. Especially useful in lung trouble, asthma, croup, bronchitis, etc. For sale in all civilized countries.—Adv.

Golden Deed!

In a certain school, the lower grade pupils are asked to bring in all the "golden deed" stories possible. Later these are copied into a book and pictures which the children have brought are used for illustrations.

One little fellow in the primary grade brought the following, scribbled in his own hand:

"A girl didn't have no father and mother and a man married her to keep her up."—Indianapolis News.

The Quinine That Does Not Affect Head

Because of its tonic and laxative effect, Laxative Bromo Quinine can be taken by anyone without causing nervousness or ringing in the head. There is only one "Bromo Quinine." E. W. GROVE'S signature is on box. 30c.

Soft Soap in One Bar.

Jack—If I dared to love you any more than I ought—

Jill—Yes?

Jack—I wouldn't love you any more than I do now!"—"Business of Marquis of Queensberry," in the Jester.

Carnegie's wealth wouldn't begin to pay for enough hero medals if kissing were really dangerous.

Hull, England, in 1916, imported 9,130 tons of hemp.

Win the War by Preparing the Land

Sowing the Seed and Producing Bigger Crops

Work in Joint Effort the Soil of the United States and Canada

CO-OPERATIVE FARMING IN MAN POWER NECESSARY TO WIN THE BATTLE FOR LIBERTY

The Food Controllers of the United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat are available to be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rests the burden of supply.

Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operation.

Canada's Wheat Production Last Year was 225,000,000 Bushels; the Demand From Canada Alone for 1918 is 400,000,000 Bushels

To secure this she must have assistance. She has the land but needs the men. The Government of the United States wants every man who can effectively help, to do farm work this year. It wants the land in the United States developed first of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there.

Apply to our Employment Service, and we will tell you where you can best serve the combined interests.

Western Canada's help will be required not later than April 5th. Wages to competent help, $50.00 a month and up, board and lodging.

Those who respond to this appeal will get a warm welcome, good wages, good board and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had apply to: U. S. EMPLOYMENT SERVICE, DEPARTMENT OF LABOR

As Age Advances the Liver Requires occasional slight stimulation.

Small Pill, Small Dose, Small Price But Great in its Good Work

CARTER'S LITTLE LIVER PILLS correct CONSTIPATION

COMMUNITY SPIRIT.

What is it? It is a dangerous sicknesss Dont catch it. You might get the ice path to your heart broken open and your frozen better self thawed out. Keep away from those who have this spirit or you might discover that there are other people in this world beside yourself and that some of them, at least are not so very far below you. Do not go to any of there gatherings where this spirit manifests itself; it might bury its poisonous faugs in your spotless body. Do not do anything to help your community along; it might come back at you and do you some good, and that would be too bad. Do not contribute anything to improve your community in any way what so ever; it might become a better place to live and that would be a great calamity. Do not forget to kick. Do not forget to tell others how bad your neighbors are; you help your neighbor so much in this way. He sees his faults then of course and can correct them. Do not forget to kick on high taxes. You have nothing to say in fixing them of course. Someboby over in Africa does that, and then, of course, you never get anything in return for your tax money. Yot have no good roads, no good schools, no good government. Somebody else gets all the money or the good out of It. Do not do anything to help matters if that can be done; but kick, kick, kick till you die.

THE NEW NAME.

The new name for this paper was decided upon last Saturday evening at the Mercantile store. The committee that made the selection consisted of the following members: Mesdames Vaughan and Thoresen, and Messrs. H. A. Halversen, Ferdinandsan, and Stuart McLeod. A long list of excellent names had been submitted and it was rather disfiult to decide which was best. After duly considering each one the committee finally selected the name "The Goodridge Banner" as the most suitable. It will be a difficult name to live up to, but with the cooperation of the community it can in some measure be done. We hope that everybody will take kindly to the change and boost for the "Banner". We shall appreciate it and return the favor to the best of our ability. There is one thing we shall do and that is boost. There will not be much complaining in the columns of the "Banner". If at any time we criticise, we shall try to do it constructively and not destructively.

We desire to express our thanks to all who sumitted names for the paper. Over thirty different names were suggested and many handed in the same name, so that more than fifty slips were counted. All this shows how interested the people are in their home paper.

We likewise desire to thank the committee selecting the name for their assistance and prudence in making such a splendid choice. Thanks also to those who showed their interest by being present when the selection was made. The name finally chosen had been submitted by both Miss Tereca Giefer and Mr. Theo Gilbertson. The lucky winner was chosen by lot. It fell to Miss Giefer, who will be the recipient of a year's subscription to "The Goodridge Banner".

The Lutheran Church in America is at the present time, from Feb. 18—26 conducting a campaign to raise $750,000 for work among Lutheran soldiers etc. in the army. The sum of $150,000 will be raised by the Lutherans in Minnesota. Rev. I. T. Aastad of Thief River Falls is chairman of the Pennington Co. committee. Each pastor is appointed manager in his congregations. In Goodridge Revs. Tangseth of the Norwegian and Schultz of the German Lutheran Church will manage the campaign. They are authorized to appoint assistants as they may find necessary. This is a meritorious work and should meet with great success.

Star Notes

Hubert Jacobson is spending a few days attending to business matters at the county seat, and visiting over Sunday at the home of his uncle, Tom Jacobson, north of Thief River Falls.

Mrs. H. O. Tommerdahl has been on the sick list for some time past, suffering with rheumatism.

Halvor Syverson recently returned from the lumber woods. He came to have his trousers patched which had been put afire while burning brush near the camp. Undaunted he starts for the "brush" to make it fly all the more.

The East Star Ladies Aid meets with Mrs. Bertine T. Hovet next Wed. Feb. 13th.

Iver Iverson arrived from the Bemidji lumber region first [illegible] preparatory to answering his call to meet before the draft board examining physician.

Peter Sunsdahl hauled a load of hay to Oklee Saturday, with the "Sea Bucks" Belle and Minnie.

Miss Wold visited at her home near Kratka Saturday and Sunday.

Mrs. Tho. Nelson returned Monday morning from Thief River Falls where she went last Wednesday to see her daughter, Gladys, who was taken down with an attack of appendicitis and submitted to an operation last Thursday. She stood the operation well and is now rapidly recovering.

Figures Time of Falling Stone.

The time a stone would require to fall the 4,000 miles to the center of the earth has been calculated for the Paris Academy of Sciences, by M Sauger. Considering the influence of the varying density of the earth, he finds the time would be 19 minutes 1 seconds, but if the mean density is assumed to be the condition, the time would be 75 seconds greater.

RUSSIA TO RECLAIM DESERT

Good Pasture Lands Are Destroyed at the Rate of One Hundred Thousand Acres a Year.

The shifting sands of Astrakhan and the measures taken by the Russian government to deal with this problem form the subject of a memoir by J. G. Firstov, published in Petrograd, observes the Scientific American. Ten million acres of the province in question are covered with shifting sands formed during the nineteenth century and subsequently. These sands have been spreading at the rate of 100,000 acres a year, the result being the transformation of good pasture land into a barren waste. The principal cause is over grazing; flocks and herds are kept so long in one place as to result in the complete destruction of the turf. Poor agricultural methods are also responsible. About the beginning of the present century the government took measures of control and reclamation, and between 1904 and 1909 an area of about 46,000 acres was brought under cultivation. In 1913 a special service was ordered to deal with the question. The province was put under the charge of a chief forestry officer and divided into six districts, in each of which a subordinate official was appointed to superintend the work. At the time of writing good progress has been made in planting soil binders and growing herbaceous crops, but it was still problematical whether the province was adapted to the establishment of forests.

When you Build

Wednesday Feb. 27th IS DE LAVAL Service Day At Our Store

For the benefit of all users of De Laval Cream Separators we have established a DE LAVAL SERVICE DAY to be held annually.

On these dates we shall be glad to have any De Laval user bring his separator to our store for a thorough and careful inspection and adjustment, which will be made Free of Charge. Should any parts, due to usual wear, or accident need to be replaced, this will be done, the only charge being for the price of the new parts used.

The De Laval Service man, will be with us to have charge of this work. Bring in your Separator and receive the benefit of his advice on the care and operation of your machine, as well as the Free Service. It is our wish, and that of the De Laval Company, that every user of a De Laval Separator get the maximum of efficiency at the minnimum of cost.

No expert is required to keep a De Laval in repair. A little care with the use of De Laval Separator Oil will keep it running satisfactory for years if adjustments are made when needed.

Remember the Date, Feb. 27th.
Have your machine in by 10:30 A. M.

The province was put under the charge of a chief forestry officer and divided into six districts, in each of which a subordinate official was appointed to superintend the work. At the time of writing good progress has been made in planting soil binders and growing herbaceous crops, but it was still problematical whether the province was adapted to the establishment of forests.

When you Build

Wednesday Feb. 27th
IS
DE LAVAL
Service Day
At Our Store

For the benefit of all users of De Laval Cream Separators we have established a DE LAVAL SERVICE DAY to be held annually.

On these dates we shall be glad to have any De Laval user bring his separator to our store for a free and careful inspection and adjustment, which will be made Free of Charge. Should any parts, due to usual wear, or accident need to be replaced, this will be done, the only charge being for the price of the new parts used.

The De Laval Service man, will be with us to have charge of this work. Bring in your Separator and receive the benefit of his advice on the care and operation of your machine, as well as the Free Service. It is our wish, and that of the De Laval Company, that every user of the De Laval Separator get the maximum of efficiency at the minimum of cost.

No expert is required to keep a De Laval in repair. A little care with the use of De Laval Separator Oil will keep it running satisfactory for years if adjustments are made when needed.

Remember the Date, Feb. 27th.
Have your machine in by 10:30 A. M.

To Fix Wheat Price at $2.75 per Bushel.

Washington, Feb. 20.—A minimum price of $2.75 a bushel for No. 1 Northern wheat at the interior primary markets is provided in a bill introduced in the House today by Representative Halvor Steenerson of Minnesota. The measure which applies to this year's crop, further provides that the price for all other wheat shall be based upon its milling value as compared to No. 1 Northern.

Regarding his bill, Mr. Steenerson said in a prepared statement:

"The grain grades established by the Department of Agriculture are so numerous and strict they are almost impossible of application.

"If we had an open, competitive market, wheat would, of course, to a great extent, sell upon its milling value regardless of what grades some learned professor might place upon it.

"The present food control act contemplated fixing all prices under the Federal standards, and my bill changes this, so that there is only one standard, No. 1 Northern, and all other wheat is to be sold at the milling value, as compared with the milling value of No. 1 Northern.

"Under the present system, where there is dockage consisting of other grains or separate seeds, the farmer gets no pay for them, although they may be worth almost as much as wheat. Take a carload of 1000 bushels of wheat, with 5 per cent, or fifty bushels, of barley, the farmer would under the present system, lose all the barley, although it may be worth $1.50 a bushel to the man who separates it from the wheat, or $75 loss on the car. Nearly all separable weed and other seeds are worth from $35 to $40 a ton, and the farmer has to pay the freight to the terminal and then give away this valuable by-product.

"My bill proposes that the value of the wheat shall be based upon its milling qualities, and that the dockage, less cost of separation shall be added. The passage of my bill would be a quick remedy for all the grievances we are suffering, and would give us time to rewrite the grain inspection law upon more practical lines in time to be used after the war ceases and price control ends."

RED CROSS NOTES.

The ladies present to do Red Cross Work Friday afternoon Feb. 15 were Mesdames, Ferdinandsen, McDonald A. O. Halvorson, B. Johnson, Thoreson, Seavey, M. Olson, Josephenson, Vaughan, and Misses Gulrud, Anderson Giefer, Murray. The girls of the cooking class served a lunch, the proceeds of which went to the Junior Red Cross. A great many availed themselves of the opportunity to get a good lunch and at the same time to help a good cause along.

Every Friday afternoon has been set off as Red Cross work day and all interested are requested to be present and help. If you are knitting a sweater or something else, bring your work with you and spend the after noon in agreeable company.

The ladies of the Goodridge A. R. C. have [illegible] articles as follows during the month of Feb.: Mrs. A O. Halvorson, 1 sweater; Mrs. Bennie Johnson, 1 sweater; Miss Grette Gulrud 1 sweater; Anna Haugen, 1 sweater; Gunhild Haugen, 1 sweater; Mrs. Carl Christianson, 1 sweater and 1 pair wristlets; Mrs. G. Gunderson, 1 pair wristlets; Mrs. Martin Olson, 1 pair of socks.

Last Thursday they met in the schoolhouse to sew bandages and feurty of these were completed. The following ladies were present: Mrs. Ferdinandsen, Thoreson, Vaughan McDonald.

Friday afternoon Mrs. Shaw and Mrs. Melgaard met with the ladies at Mrs. McDonald's residence to teach them to make different kinds of bandages needed. The following took the instructions; Mesdames Thoreson, Vaughan, and Ferdinandsen.

Friday forenoon Mrs. Shaw and Mrs. Melgaard from Thief River Falls were at High Landing and organized a Red Cross Auxilliary. A membership of thirty was obtained at the first meeting. This angurs well for an active auxilliary at High Landing.

The following have lately joined the Goodridge branch:

Anton Knutson, H. R. Leslin, Wm. Bisbing, Mrs. Bisbing, and Mrs. John Kusmak.

Don't Forget The Commercial Club meeting to-night!

A meeting will be held in the school house Friday evening March 1 1918 for the purpose of organising a community Club, men and women, county and village folk, are invited to be present. Come and show your spirit. Mr. Ross P. white, County Agricultural Agent will be there to lead the meeting. He will deliver the address of the evening. He is a good speaker and is well worth hearing.

Ross P. White, county agent was in Goodridge and the immediate vicinity last Thursday interviewing the farmers and business men concerning the advisability of organing a community club in this neighborhood. He met with a great deal of encouragement. Prospects is good for a live club of that nature.

Joe Greenfield instructed the band boys here Thurday evening.

AND STILL THERE ARE SLACKERS!!

INTENTIONAL DUPLICATE EXPOSURE

SAYS PACKERS GAINED BY LEAK

Counsel Charges Meat Men Exploited Advance Knowledge of Hoover Appointment.

EMPLOYES GET PLANS

Heney Declares Six Men Secured Positions to Head Off Any Action by Administration Detrimental to Packers.

Chicago, Feb. 27.—Advance information on the appointment of Herbert C. Hoover as food administrator was obtained and Chicago packers used their influence in Washington to obtain places for employes and "friends" on the food administration, it was charged before Joseph E. Davies, chairman of the Federal Trade commission, in the government's investigation of the packing industry.

Francis J. Heney, special counsel for the commission, read a collection of private letters read to and from Louis F. Swift, head of Swift & Co.; Arthur Meeker of Armour & Co.; Thomas E. Wilson of Wilson & Co., and other big packers. The letters were seized in Heney's raid on the correspondence files of the packers.

Had Knowledge In Advance.

Mr. Heney said that the letters proved that the packers knew of the appointment of Mr. Hoover before the public was apprised of the eventh; that they had "inside" information that Joseph P. Cotton, a New York attorney, would be appointed head of the meat and livestock section of the food administration bureau even before official Washington was advised of it, and had confidential information on the attitude of the food administration before it was announced to the public and acted accordingly.

Mr. Heney said that at least six men who drew salaries from the packing companies and their subsidiaries were holding important posts in the Food administration. These men, he indicated, were placed in the Food administration for no other purpose than to head off any action which would be detrimental to the packers.

Every Appointee Discussed.

Virtually all of the letters read by Mr. Heney indicated the packers watched with deepest concern the evolution of the Food administration. Telegrams between the different large packers, sent over private wires maintained by them, showed that practically every appointee to the different departments of the Food administration was discussed by the packers with conjecture as to his attitude toward their concerns.

Names of two of the men who hold posts on the Food administration while drawing salaries from the packers were given out by Mr. Heney. They are E. O. Heyl, first assistant head of the department on the coordination of purchases, and W. F. Priebe, chief of the division of poultry and eggs and perishable markets. Mr. Heney said that Mr. Heyl is paid a salary by Libby, McNeil & Libby Co., a subsidiary of Swift & Co., while Priebe is head of the W. F. Priebe & Co., subsidiary of Swift & Co.

Mr. Heney further charged that while the packers were publicly opposed to the practice of reselling foodstuffs they themselves violated the rule.

PLAN TO RESTORE MONARCHY

Germany Favors Former Empress Alexandria, is Report.

London, Feb. 26.—Germany plans to restore the monarchy in Russia, according to a telegram to the Morning Post. It says the Grand Duke of Hesse has been appointed the commander in the Riga section of the German front.

"His sister," the dispatch adds, "the former Empress Alexander, as the guardian of her son, the former tsarevitch, is the favorite German candidate for the throne."

The former emperor will not accept the throne from German hands. The Bolsheviki have provided a form of government which the Russians alone understand—pure despotism. They have paved the way for the return of the monarchy.

More Earthquakes In Guatemala.

San Salvador, Republic of Salvador, Feb. 26.—Telegraphic communications with the interior of Guatemala is interrupted as a result of earthquake shocks of an extremely violent character.

To Be Tried On Spy Charge.

Aberdeen, Feb. 26.—N. W. Stehly, wealthy Hecla merchant, will have a hearing before a United States commissioner on a charge of having violated the espionage act by seditious utterances. Stehly is a native American, his father, of German birth, having fought in the Union army during the Civil war. Stehly has been engaged in the hardware, furniture and undertaking business at Hecla for 23 years and is a prominent resident of the county. He furnished a cash bond of $5,000.

WAR TO DEATH, REPLY

Allies To Fight Harder To End World Menace.

Prussian War Lords Unmasked by Attitude Toward Russia is Administration View.

Washington, Feb. 27.—The answer of the Allies to the Teutonic conquerors of Russia will be war to the death if we may judge from the temper of President Wilson and his advisers since the announcement of the arrogant and humiliating peace terms which Berlin has exacted of the Bolsheviki government.

War Lords Unmasked.

The Prussian war lords, in the opinion of the administration, have been unmasked by their attitude toward Russia. They are now confessedly bent on conquest, and strengthened by success, and encouraged by an appeased civil population, they now may be expected to turn toward the west with a view to securing their conquest of Belgium and northern France.

Just Beginning For Allies.

For the Allies the war is just beginning. Only the defeat of Germany on the field of battle can now "make the world safe for democracy," and secure the United States from the peril of insatiable German power.

If the Allies win, Germany will be compelled to disgorge the Russian provinces, retire from Belgium and northern France and reconstitute Serbia and Rumania. If Germany wins, she will be the greatest power in continental Europe and will grow greater, with the probable future absorption of Russian territory.

PREDICTS GERMAN REVOLT

Reichstag Member Greeted With Cheers and Jeers.

Amsterdam, Feb. 26.—A revolution in Germany was predicted by Dr. Cohn, Independent Socialist deputy, in an address to the Reichstag, the Volks Zeitung of Cologne says.

"It is not correct to say that the people of Russia's Baltic province are longing for German rule," he declared.

"The treaty with Ukraine is not the first step toward general peace. I see the day coming when revolution will reach Germany, and the people will take the fate of their rulers into their own hands."

The Independent Socialists cheered the speaker. From other parts of the house came shouts of "traitor."

There are numerous indications in Germany of a very systematic campaign to promote a new general strike, says a Berlin dispatch to the Wezer Zeitung of Bremen.

AMERICANS TAKE GERMANS

Capture Twenty-two and Machine Gun in Raid.

With the American Army in France, Feb. 26.—An American patrol in the Chemin des Dames sector in conjunction with a French patrol has penetrated a few hundred yards into the German lines and captured two German officers, 20 men and one machine gun.

There was some sharp fighting and a number of the enemy were killed and wounded. There were no American casualties. The news quickly spread along the American front, and developed a keen, competitive spirit among the men.

ALLENBY CAPTURES JERICHO

Ancient City in Palestine Falls Into Hands of British.

London, Feb. 25.—An official dispatch from General E. H. H. Allenby says: "Australian mounted troops entered Jericho at 8:20 a. m. Friday, establishing themselves on a line between Jericho and Wadi Anja."

Wadi Auja is a small tributary of the river Jordan, which runs about five miles north of Jericho.

15 MICHIGAN MINERS BURIED

Shaft Is Filled With Quicksand And Water.

Iron River, Mich., Feb. 25.—Fifteen miners are dead in the Amasa Porter mine, owned by the Judson Mining company, 14 miles from here.

Their names are unobtainable, as the bodies are under 50 feet of quicksand and water, which poured in on them when a bulkhead broke.

French Senator Had German Money.

New York, Feb. 26.—Further disclosures in the investigation conducted here into the activities in America of Bolo Pasha, under sentence of death in France for treason, have been made public, indicating that Charles Tumbert, the French senator, who was arrested subsequent to Bolo Pasha's conviction in Paris, had German money amounting to $170,000 on deposit in this country.

Calls Kaiser Hypocrite.

Amsterdam, Feb. 26.—According to a dispatch from Vienna to the Lokal Anzeiger of Berlin, Deputy Daszinski, leader of the Galician Socialists and member of the Austrian parliament, said in addressing the lower house that the declared right of self-determination of the people has become "an untruth and a hypocrisy on the lips of the ministers of Kaiser Wilhelm." He asked, sarcastically, that the contract with the Ukrainians would be kept, not by the Ukrainians, but by General von Linsenan.

PRICE OF PEACE HEAVY ON SLAVS

Demands of Germany Are Met By Bolsheviki In Surrender To Teuton Might.

PROPAGANDA TO STOP

Vast Regions of Valuable Territory Are Relinquished And Russ Army Must Be Immediately Disbanded.

London, Feb. 26.—General Brujevitch has been appointed successor to Ensign Krylenka as commander in chief of the Russian armies, according to a Berlin dispatch forwarded from Amsterdam by the Central News Agency. General Brujevitch, according to the message, has been proclaimed dictator and has ordered the Russian troops to fight to the last. Brujevitch was formerly chief of staff to Ensign Krylenko.

Face of Europe Changed.

London, Feb. 26.—Russia's acceptance of Germany's peace terms changes the face of Europe.

It cuts from Russia 381,000 square miles of territory, 50,000,000 population, and shoves her back from the Baltic, leaving her helpless and impotent in Germany's power, economically and physically.

The press had not yet time to comprehend the full meaning of the situation. The headlines contained such words as "tragic, dismembered, humiliating, impotent."

"Disarmed and Helpless."

The Post says there is "no other hypothesis but treachery." "She is disarmed and helpless," says the Chronicle.

A message from Petrograd says the executive committee of the pan-soviets agreed to accept the German peace terms by a vote of 126 to 85, with 26 not voting.

"Their knees are on our chest and our position is hopeless," said Nikolai Lenine, Bolsheviki premier.

Foe Terms Made Public.

London, Feb. 26.—Following receipt of an official wireless from Petrograd the German peace terms to which Russia has declared its "willingness to accede," have been made public. They were:

The state of war will be declared at an end by Russia and Germany.

The regions west of the line indicated by the Russian delegation at Brest-Litovsk are no longer under the territorial protection of Russia. From the region of Dvinsk, this line is advanced to the eastern frontier of Courland.

Livonia and Esthonia will be immediately cleared of Russians and German police will occupy them until the security of the inhabitants is guaranteed by constitutions. Political prisoners will be immediately released. Russia renounces every claim to intervene in the affairs of these regions. Germany and Austria will define their fate in agreement with the populations. Germany, after the Russian demobilization is complete, will evacuate these regions to the eastern line.

Conclude Peace With Ukrainia.

Russia will conclude a peace with Ukrainia. The Russians will evacuate Finland and Ukrainia immediately.

Russia will do all that is possible to secure for Turkey a return of her eastern Anatolian frontiers, recognizing annulment of the Turkish capitulation.

The Russian army shall be completely demobilized, including newly formed divisions.

Russian warships in the Black, Baltic and Arctic seas shall immediately be sent into Russian harbors until a general peace is concluded, or shall be disarmed. This includes the Allied warships in Russian waters. Resumption of merchant navigation in the Black and Baltic seas shall be withdrawn and the Arctic shall be blockaded by mines until the general peace is signed.

Treaty to Be Re-established.

The Russo-German commercial treaty of 1904 shall be re-established with certain exceptions and immediate negotiations shall be opened for a new treaty.

Indemnification shall be made for the expense of maintaining prisoners of war.

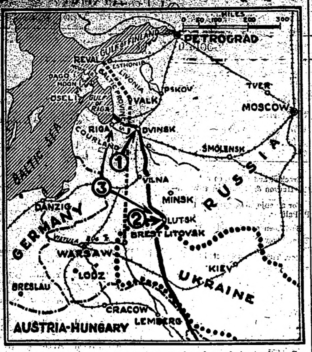
Russia shall promise to halt governmental and private propaganda designed to stir up agitation against the Central empires.

These terms must be accepted within 48 hours. Russian delegates must go to Brest-Litovsk immediately and sign the articles within three days. These must be ratified within a fortnight.

Hunt Originators of Camp Rumors.

Washington, Feb. 21. — Three soldiers, believed responsible for spreading in Passaic, N. J., stories of men freezing to death at Camp McClelland, will be courtmartialed if they can be located. According to information reaching the surgeon general's office, the men, home on leave, spread the story at Red Cross headquarters that 16 soldiers had been frozen. The same story was whispered about elsewhere in New Jersey and in Washington city, drawing from General Morton a strong denial of its truth.

NEW RUSSIAN INVASION BY GERMANS



The dotted line shows the approximate boundary of the territory Germany was reported to have demanded in the peace proposal made to Russia at the Brest-Litovsk conference. 1—Where the northern advance was made by the Germans across the Dvina river in the occupation of Dvinsk. 2—Where the southern German advance was begun in the occupation of the Russian fortress town of Lutsk. 3—Later reports from Berlin stated that the Germans were advancing on the Russian front along the entire line from Riga to Lutsk. This front is approximately 400 miles long.

101 LOST ON RED CROSS STEAMER

Perish When Florizel, From Halifax to New York, Hits Rock in Storm.

FOE AGENTS BLAMED

Believed to Have Tampered With Compass Causing Pilot to Lose Bearings— Rescuers Brave Seas Despite Several Early Failures.

St. Johns, N. F., Feb. 27.—When the Red Cross liner Florizel piled on the rocks at Broad Cove, near Cape Race, 43 persons escaped death and were saved by the coasting steamer Prospero. This information came in a wireless message from the Prospero to John Crosbie, minister of shipping. The rescue ship reported she embarked the survivors safely.

101 Believed Dead.

Three rescue ships brought the first batch of survivors to port and others are on the way. Among the survivors are five saloon and seven steerage passengers.

One hundred and one persons have perished, from among the passengers and crew of the ship, according to word reaching here. This places the death list higher than statements made by the owning company—the Red Cross line—which stated that 136 were aboard the Florizel.

Wrecked Through Treachery.

It is believed the steamer was wrecked through German treachery.

Scenes of indescribable heroism in the face of odds which seemed insurmountable took place as hardy New Foundland seamen stoically donned life belts, piled into puny dories and battled with the mountainous waves of the angry Atlantic.

Boat after boat was launched in the gray light of dawn by men who had left rescue ships to add another tale of heroism to the romantic stories of bravery which go hand in hand with records of shipping in this vicinity.

RUMANIA STARTS PEACE MOVE

Enters Into Formal Negotiations With Central Powers.

London, Feb. 26.—Roumania, cut off from her Allies through the disaffection of Russia, at last has entered into formal peace negotiations with the Central Powers, according to advices reaching London.

Those past masters in Teutonic allied politics, Von Kuehlmann and Czernin, respectively the German and Austrian foreign ministers, and Radoslavoff, the Bulgarian premier, are treating with M. Averesco, the Roumanian premier, at a point near Bucharest.

Doubtless, as were the terms imposed on Russia, the peace conditions that will be offered Roumania will be hard ones.

600 Medical Officers Dropped.

Washington, Feb. 25.—In line with its reorganization on a greater efficiency basis the surgeon genral of the army has released from service more than 600 medical officers. These men were found either to be physically deficient or unfitted for the work they were performing—and a few resigned. In connection with the orders for greater efficiency it developed that scores of General Pershing's army, passed by medical officers before leaving for France, had been found physically unfit.

CONDEMN LA FOLLETTE

Solon Is Denounced by Senate of His Own State.

Bitter Attack Made on Senator by by Resolution Passed by 26 to 3 Vote.

Madison, Wis., Feb. 27.—The state senate has passed, by a vote of 26 to 3, the loyalty resolution, including an amendment condemning Senator La Follette for his attitude toward the war.

Critics of the Wisconsin senator attacking his attitude read into the record La Follette's St. Paul speech and editorials printed in his magazine.

Denounce His Speeches.

"The people of the state of Wisconsin always have stood and always will stand squarely behind the present war to a successful end. We condemn Senator Robert M. La Follette and all others who have failed to see the righteousness of our Nation's cause, and have failed to support our government, in matters vital to the winning of th ewar.

"And we denounce any attitude or utterances of theirs which has tended to incite sedition among the people of our country, and to injure Wisconsin's fair name before the free peoples of the earth."

Speaker Says "Traitor."

Bitter attacks were made in the upper house on La Follette.

State Senotors Witter, Bennett and Hanson led in the attacks. They were in answer to Senator Huber's vindication of La Follette Saturday.

"I consider La Follette a traitor, and all languages coold be exhausted in an effort to find fitting words to denounce him," declared Senator Hanson.

"Every man who is against the government of the United States in the present world crisis regards La Follette as a patron saint. He has sustained President Wilson the same way that Judas sustained Christ,' Senator Bennett said.

ASSAILS BOLSHEVIKI IN U. S.

Sen. McCumber Denounces Surrender to Germany.

Washington, Feb. 26.—Denouncing the Bolsheviki surrender to Germany, Senator McCumber, Republican, of North Dakota, told the Senate that a "Bolsheviki" sentiment in America was of no less danger to the cause of democracy against autocracy. Profiteers, labor slackers and government officials who fail to stand against them were assailed by the senator in vigorous terms.

QUAKE KILLS 10,000

Amoy, China, Feb. 26.—Nearly 10,000 persons lost their lives as a result of the recent earthquake in the Amoy Hinterland, according to the latest reports from Swatow.

To Care for Effects of Dead.

Washington, Feb. 25.—Instructions as to the disposal of personal effects removed from the bodies of enemy dead are contained in a general order issued by the War department. Comanders of divisions, separate brigades and smaller independent units are ordered to collect all personal effects removed from each body in a separate package, the articles to be carefully listed and marked with the name, rank and organization of the individual. These packages are to be forwarded to the adjutant general.

TELLS CHANCES FOR AGREEMENT

Hertling Says Germany Accepts Wilson's Four Principles as Basis for Peace Parley.

ONE CONDITION MADE

Declares All Peoples Must Endorse Offer and That Goal of World Arbitration Court Has Not Been Reached.

Amsterdam, Feb. 27.—The imperial German chancellor, Count von Hertling, speaking before the Reichstag, made this declaration.

"I can fundamentally agree with the four principles, which in President Wilson's view must be applied in a mutual exchange of views, and thus declare with President Wilson that a general peace can be discussed on such a basis.

"Only one reserve need be made in this connection: These principles must not only be proposed by the President of the United States, but also must actually be recognized by all states and peoples."

"But this goal has not yet been reached. There is still no court of arbitration established by all the nations for the preservation of peace in the name of justice. When President Wilson incidentally says that the German chancellor is speaking to the tribunal of the entire world, I must decline this tribunal as prejudiced, joyfully as I would greet it, if an impartial court of arbitration existed and gladly as I would co-operate to realize such ideals.

"Unfortunately, however, there is no trace of similar statements on the part of the leading powers of the Entente. England's war aims are still thoroughly imperialistic and she wants to impose on the world a peace according to Englanad's good pleasure.

Challenges Britain's Claim.

"The world is longing for peace," the chancellor said, "but the governments of the enemy countries again are inflaming the passion for war. There are, however, other voices to be heard in England; it is to be hoped these voices will multiply.

"The world now stands before a final decision. Either our enemies will decide to conclude peace—they know on what conditions we are ready to begin a discussion—or they will continue the insanity by their criminal war of conquest."

He continued: "Our people will hold out further, but the blood of the fallen, the agonies of the mutilated and the distress and sufferings of peoples will fall on the heads of those who insistently refuse to listen to the voice of reason and humanity."

The Four Principles.

The four principles outlined by President Wilson in his address of February 11, referred to by Count von Hertling, the German chancellor, in his speech before the Reichstag, are:

"First, that each part of the final settlement must be based upon the essential justice of that particular case and upon such adjustments as are most likely to bring a peace that will be permanent.

"Second, that peoples and provinces are not to be bartered about from sovereignty to sovereignty as if they were mere chattels and pawns in the game, even the great game, now forever discredited, of balance of power; but that,

"Third, every territorial settlement involved in this war must be made in the interest and for the benefit of the population concerned, and not as a part of any mere adjustment or compromise of claims amongst rival states, and,

"Fourth, that all well defined national aspirations shall be accorded the utmost satisfaction that can be accorded them without introducing new or perpetrating old elements of discord and antagonism, and that would be likely in time to break the peace of Europe and consequently the peace of the world.

"A genral peace erected upon such foundations can be discussed. Until such a peace can be secured we have no choice but to go on. So far as we can judge, these principles that we regard as fundamental are already everywhere accepted as imperative, except among the spokesmen of the military annexationist party in Germany."

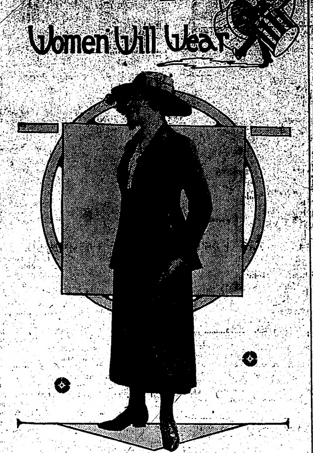
$1,000,000 Given to McGill.

Montreal, Feb. 26. — The Carnegie corporation has presented McGill university with $1,000,000 in recognition of the institution's devoted service and sacrifice toward Canada's part in the war.

Line Official Lost With Ship.

New York, Feb. 26.—John Shannon Munn, a director of the Red Cross line, and his 3-year-old daughter Betty were among those lost in the wreck of the steamer Florizel, which went on the rocks, as indicated by the following dispatch received here by C. W. Bowring from his brother in St. Johns: "Saw Captain Martin, who said he saw Jack washed off the dock shortly after the ship grounded. Betty and nurse must have drowned instantly. Ship breaking up and cargo is washing ashore."

What Well Dressed Women Will Wear



CONSIDER THE TAILORED SUIT FOR SPRING.

The time has come—it is here this minute—to consider the tailored suit for spring. It is an agreeable duty because the season has in store some happy surprises for us in novel trimming ideas and in ingenious combinations of cloth and silk. Designers have been asked to conserve wool and have responded in a way to reflect honor on themselves by furnishing models that use little cloth but are so cleverly designed, with such attention to good lines and so much originality in finish, that we may give thanks for the necessity which mothered such fine inventions. Make up your mind to have a sprightly suit for spring; because this year's suit has characteristics all its own.

Among them are to be mentioned the introduction of vests which are made of silk, brocade, crepe, pique and of plain fabrics handsomely embroidered. Somewhere at the front—the sides of the coat may barely meet, or just fail to, they are held together by one or two link buttons. In other models fronts are cut away like a man's dress coat leaving an expanse of handsome waist coat to entice the eye. White cloth collars and cuffs, with collars lengthened into revers are another feature that add to the attractiveness of spring suits and they belong to an attractive class which includes suits with collars, revers and cuffs of figured or plain silk.

Narrow braid and small buttons appear in coats not otherwise decorated, but ingenious cutting redeems the plainest suits from being uninteresting. A suit of this character is shown in the picture, of serge bound with silk braid. Its lines are trim and graceful, the coat original in cut and of medium length; many are shorter and few longer. The fronts just meet at the waistline fastening with a link button there.

Skirts might be disposed of very briefly by describing them merely as plain. They do not indulge themselves in plaits or folds or tucks or anything that will take up material not absolutely needed and they are from one and a half to two yards wide.

Aprons have always been interesting; they are of so many kinds and proclaim so plainly that they are intended for real use in substantial activities or are merely decorative and trivial. But times have changed with aprons, and now the most wear-resisting and useful of them are required to look well, to possess style as well as strength. Necessity and patriotism have given the apron a boost, and now we have "service aprons" and "bungalow aprons," shapely and neat, worn by women who are doing things for themselves and others which others used to do for them.

Some of the bungalow aprons made of plain percale or chambray in all the light colors, pink, lavender, tan, maize, blue, green and rose, with collars and cuffs of flowered cretonnes, ought to be rechristened, they are so gay and pretty. They deserve to be called bungalow frocks at least—and perhaps that is exactly what they are.

A service apron for every-day house wear is shown in the picture, made of plaid percale with plain white cuffs and collars. It has long sleeves. Many of the good-looking aprons for housework are made of plain percale or chambray, with plaid collars, pockets, cuffs and belts. Usually the sleeves are three-quarter length. They are designed to be easily laundered, and there are many good patterns for making them, if one has the time. But they are to be had ready made at such moderate prices that it is a question whether there is any economy in doing the work at home or not. It depends upon the time one has to spare and what can best be done with it.

Julia Bottomley

WHEN YOU MAKE APRONS.

The KITCHEN CABINET

One of our students of diet tells us that one-third of the food taken into the body is used, the other two-thirds we eat at our peril.

MEATS TO EAT.

We have meats to eat and meats to ship these days. The meats to eat must be confined to those which will not ship and we need fear no hardship, for they offer a goodly variety. Sweetbreads, for instance, are perishable as well as liver, kidneys, fish and fowl.

Fried Sweetbreads.—Parboil and remove all the unedible portions, and when cold, split in halves and cut in pieces the size of a large oyster, wipe dry and dip in beaten egg, then in cracker crumbs and fry in hot fat. Season well and serve with parsley as a garnish.

Larded Sweetbreads.—Trim two sweetbreads, parboil in water with a tablespoonful of vinegar added, then chill in cold water. Dry them and lard with fine strips of bacon. Put a slice of bacon in a saucepan, a chopped onion, a chopped carrot, spice and herbs, with salt, and a small quantity of stock. Cook down until the stock has all evaporated, then brown the sweetbreads and serve.

Baked Sweetbreads With Peas.—Trim two pairs of sweetbreads and parboil 15 minutes, lard them, dredge with seasoned flour, add stock or water to cover the bottom of the baking pan, and bake 40 minutes, basting often. When nearly done add a tablespoonful of flour to a tablespoonful of bubbling-hot butter and mix well; add a cupful of highly seasoned stock or milk with seasonings, then a cupful of green peas drained from their liquor.

Sweetbread Salad.—Cooked sweetbreads finely minced and combined with peas, celery, a few chopped pickles and olives with a handful of nuts and a good salad dressing make a most tasty and popular salad.

Sweetbreads cooked and served in a rich seasoned white sauce, served in timbale or patty shells make a luncheon dish suitable when entertaining. In many markets sweetbreads are reasonable in price, but when too costly the delicate meat will have to be denied to those with flat pocketbooks.

Sweetbreads are rather tasteless, so need a highly seasoned sauce and a touch of garlic or onion.

SOME GOOD DISHES.

A dessert which is not at all common, but which is most tasty is the following: Cut up one orange or a tangerine, add two chopped apples, sprinkle lightly with sugar. When serving mix and arrange a slice of lemon jelly thickened with grapenuts on the top of each. Serve with sugar and cream.

Lemon jelly, grapenuts and a few chopped walnuts is another combination which may be molded and sliced; then serve with whipped cream or cut in cubes and serve in sherbet cups with a little ice cream for garnish.

Tomatoes Scalloped With Green Peas.—Take half as many crumbs as tomatoes. For a cupful of crumbs mix a fourth of a cupful of any sweet fat melted. Fry a slice of onion and half of a shredded green pepper in a little of the fat and arrange in layers in a baking dish, leaving the crumbs on top. Bake twenty minutes and serve hot.

Stuffed Tomatoes.—Take small-sized tomatoes, fill with the following mixture: Boiled rice, chopped nuts and a seasoning of salt and pepper with a little fried onion. Fill the tomatoes and bake slowly one hour. Serve with a sauce from the pan which has been slightly thickened with flour. The centers of the tomatoes may be used in a salad or in various ways which will occur to the cook.

Cabbage With Meat.—To eke out a small amount of meat and make a satisfying meal shred half a cabbage, crisp it by letting it stand an hour in cold water, then drop into rapidly boiling water and cook for twenty minutes; drain and press out the liquor. Put into a baking pan, a layer of the cabbage then a layer of any chopped meat, place a few pieces of tomato, the firmer pieces taken from the can, over the meat, season well with salt and pepper and repeat, leaving a layer of tomatoes on top. Cover with buttered bread crumbs and bake in a moderate oven for one hour. Any cold left-over cabbage may be used in this way.

Dried peas, which have been quickly dried when they were tender and sweet, make a most delicious addition to the menu. Soak, then cook until soft and use as a vegetable or soup, or in combination with other foods.

Nellie Maxwell

Six Society Women Sworn as Cops.

Hoboken, N. J.—Six society women here have been sworn into service as policewomen to serve without pay. Their special duty will be to keep young girls, accompanied by soldiers and sailors, off the streets at night. The girls will be turned over to their parents.

One Reserve.

"What will the country do if the food supply gives out here?"

"Well, there are the Sandwich islands."

PROPER CARE OF BATTERY ON CAR

Must Be Kept Charged and Prevented From Freezing.

TWO THINGS OF IMPORTANCE

Equipment Standing Idle for Any Length of Time Loses Its Charge—Reading Is Indicated by the Hydrometer.

(F. E. ANDREWS, Colorado Agricultural College, Fort Collins, Colo.)

Many automobile owners do not realize the importance and necessity of giving their starting and lighting batteries proper attention in the winter. The battery is a delicate piece of apparatus, and if mistreated, will very quickly depreciate.

Two things are of prime importance: the battery should be kept fully charged, and it should not be allowed to freeze. A battery, when standing idle for any length of time, gradually loses its charge. Therefore if the car is not run regularly during the winter, in order to keep the battery fully charged the engine should be run at regular periods to charge, or else the battery should be charged from an outside source of current. This should be done every two or three weeks.

Charge Easily Read.

The state of charge can be easily read from a specific gravity hydrometer syringe, which can be purchased for about a dollar from an auto supply dealer. A reading of from 1,250 to 1,300 indicates full charge. The reading is indicated by the number on the hydrometer at the level of the liquid.

If the battery is fully charged, it is not apt to freeze when the temperature is above zero, Fahrenheit. It is best, however, to take the battery from the car and into the house in extremely cold weather.

External Charging.

External charging can be done from an electric lamp socket if the current is direct, by the use of a resistance to limit the current going into the battery. If the current is alternating, a rectifier must be used to make it direct. Small lamp socket rectifiers are now made quite reasonably.

KEEP SPARE TIRES COVERED

Manufacturer Takes Pains to Wrap It Thoroughly for Protection From Light and Air.

A cover for the spare tire is something more than a bit of decoration. You will notice that the careful tire manufacturer takes pains to wrap the new tire thoroughly. This is to protect it from light and air. The action of sun and storm on the spare tire hardens the rubber and injures it so that its mileage will be less when it is put in service. A well-fitted cover is an economy and will more than pay for itself by protecting your tire investment.

WHEELS WITH LOOSE SPOKES

Squeaking Noise Which Is Quite Annoying May Be Eliminated by Any Wheelwright.

Wooden wheels with loose spokes emit a squeaking sound which is intensely annoying. The noise will be more distinct when the car is being driven around a corner. Sometimes this looseness may be obviated by replacing one or more spokes, or it may be cured by forcing small wooden wedges between the spokes and the hub. A wheelwright can do the job in a few minutes.

NEW DEVICE FOR HEADLIGHT

Motorist, With Can of Paint, Should Be Able to Fix Lights to Suit Laws of Any State.

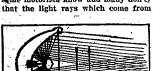
The Illinois law requiring the dimming of headlights on approaching another vehicle does little more than make a formality of what has long been a custom. More drastic laws in other states, however, bid fair to get the Chicago motorist into trouble if he tours far afield without due preparation.

Many headlight devices have been approved for use in these states, but the simplest suggestion for complying with the most of the varying regulations seems to be that suggested by Macey F. Deming, who framed the law now in effect in New York.

Mr. Deming says five minutes spent in painting your light bulbs will give a motorist an effective nonglare device in any state. For New York he describes the method as follows:

"Paint the right side of the light bulbs green and at the tip of each bulb make a circle of green paint one-half the diameter of the bulb. The paint should cover the right of the bulbs, looking with the car, for an arc of 150 degrees."

Painting the right side of the bulbs is prescribed because the New York law limits the amount of light that many be directed to the left of the car. The reason for this is the fact (which some motorists know and many don't) that the light rays which come from the right side of a bulb strike the reflector and are thrown to the left-hand side of the road—and, of course, vice versa, as indicated in the diagram.



Reflection of Light.

Keeping this in mind, and remembering that to limit the light thrown upward one must paint the lower side of the bulbs, the motorist with a can of paint should be able to adapt his headlights to almost any state law.

GAUGE DOES NOT REGISTER

Trouble May Be Caused by Leaky Pump and Is Put Into Action by Priming Feed Line.

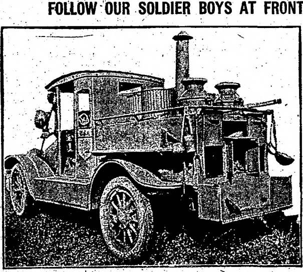
In cars equipped with oil pressure gauges and a piston type oil pump the owner often is at a loss to know why the gauge does not register, knowing that there is sufficient oil in the engine. This trouble may be caused by a leaky pump. It may be put into action in many cases by priming. In doing this disconnect the oil line back of the gauge and while the engine is running slowly squirt oil into the feed line by means of an oil can. Continue doing this until oil is squirted back through the feed line, after which the line should be connected.

USING GASOLINE IN WINTER

Average Car Shows Tendency to Consume More During Cold Weather Than in Summer Months.

It is the common experience of motorists that the average car shows a marked tendency to use more gasoline in winter weather than during the warm months. A cold engine prevents the proper vaporization of the fuel and necessitates a very rich mixture. Cost of operation is thus excessive during the starting and warming-up processes. The problem is to shorten or eliminate this period of costly operation by heating up the engine fast, as an engine will work as well, winter or summer, after it is heated up to the even-running temperature.

PRACTICAL AUTOMOBILE KITCHEN TO FOLLOW OUR SOLDIER BOYS AT FRONT



TRAVELING KITCHEN, RUN BY MOTOR POWER.

Feeding our soldiers is an important matter, and the problems it presents have interested many of our inventors. The traveling kitchen, run by motor power, is a very natural product of the times. There are several types.

The kitchen with its big kettles, large enough to cook food for two hundred and fifty men at one operation, is mounted upon an automobile truck, which can also carry reserve supplies to feed two hundred and fifty additional men.

For the chauffeur a protected cab is provided in front and the cook may attend to his work in the kitchen even while the truck is moving from place to place, by standing upon a step in the rear. To prevent his being jolted off on rough roads a hand rail has been provided to which he can hold.—Popular Science Monthly.

DADDY'S EVENING FAIRY TALE

By MARY GRAHAM BONNER

MR. SUN'S ENGAGEMENT.

"Hello," said the King of the Clouds, as Mr. Sun got up one morning.

"I Am a Bit Tired," Admitted Mr. Sun.

"Don't you want to sleep a little longer this morning?" asked the King of the Clouds.

"I would like to," said Mr. Sun, "but I have an engagement."

"Nonsense," said the King of the Clouds, "don't pay any attention to engagements. Really, you should think of yourself. You look so tired out."

"I am a bit tired," admitted Mr. Sun.

"Then do rest," begged the King of the Clouds.

"I really shouldn't," Mr. Sun said.

"You work too much anyway," said the King of the Clouds. "Let me look after your duties this morning. If you feel rested by afternoon, get up, but if not, just stay still all day long. I don't mind a bit."

"You couldn't look after my duties," said Mr. Sun. "We don't do things the same way. We do things quite the opposite way."

"Well," said the King of the Clouds, "give folks a little change once in a while. Don't spoil them."

"But today is different," said Mr. Sun. "It's good of you to offer to do my work for me, but I really can't rest today."

"Why not?" asked the King of the Clouds. "My army of raindrops are so anxious to go down to the earth. They want to play on the snow down there. And the Mist grandchildren, with their old Nurse Fog, want to go down too. They're longing for some fun, and they haven't been down in such ages.

"Do let them, Mr. Sun. They enjoy the snow, too, you know."

"They can't enjoy it," said Mr. Sun, "when they try their very best to wash it away."

"They do enjoy it!" exclaimed the King of the Clouds. "And they prove it by trying to wash it away."

"I don't see that at all," said Mr. Sun.

"You're a pretty bright old fellow," said the King of the Clouds, "and you know almost everything, but somehow your old friend Cloud King knows something you don't once in a while."

"That's right," admitted the Sun. "Besides, I don't feel so very bright this morning."

"Just as I said," answered the King of the Clouds. "You need more sleep. Even the bright Mr. Sun must rest once in a while."

"Of course I must," said Mr. Sun, "but today isn't the right day. That's the whole trouble. But do tell me how you can explain that the Raindrops and Mist grandchildren like the snow when they try to wash it away."

"I can explain it easily," said the King of the Clouds. "The Raindrops and Mist grandchildren and old Nurse Fog try to wash away the snow because they like it so much they want to take it with them. They never can, poor dears, but they always try."

"I never thought of that," said Mr. Sun.

You need more rest to brighten up," pleaded the King of the Clouds once again.

Down on the earth the people were wondering if it were going to rain. The weather man had said the day would be fair, and yet it looked so much like rain. And Mr. Sun had come out only very faintly, and only once or twice.

The Mist Grandchildren and Old Nurse Fog.

It had been cloudy most of the morning. "Come and work for me tomorrow, Cloud King," said Mr. Sun. "I want to rest, but I must keep my engagement."

"All right," said the Cloud King a little crossly. "But you aren't feeling like it today."

Mr. Sun began to shine. He didn't feel much like it, but he did his best, for he had promised that he would shine this day. The children were giving a great big sleigh ride, and he knew that if he refused to come and let the King of the Clouds take his place, the children would have to stay home.

So, though he felt tired and couldn't shine as hard as he usually did, the children had their sleigh ride, for the rain didn't spoil their fun as they had feared.

And Mr. Sun was so thankful he had kept his engagement!

As You Go Along.

Whether we are thinking of a pleasure to enjoy, or a kindness to bestow, we must take it as we go along. The people who are always planning for a good time in the distant future, overlooking the little joys that start up at their feet, are as foolish as those who are putting off helpfulness till by and by. Help others and enjoy yourself as you go along.—Girl's Companion.

SAVES THOUSANDS OF LIVES

Water-Borne Disease Practically Banished From Western Front—Medical Corps Keeps Close Supervision Over Food Furnished Troops.

London.—Chlorine gas, which the Germans brought into the field of battle as a means of poisoning their opponents, is now largely used for purifying the water supply of the British army. That is one of the strange antitheses of this war. Socrates in prison, noting the pleasure which he had when the fetters were taken off his legs, speculated as to how pain and pleasure, though opposite, were so closely linked that the one seemed always to follow on the heels of the other. In the same way what is poisonous in one use is a means of wholesomeness in another, and divine providence turns even to good what wickedness designed for evil. The Germans rarely get a chance to kill anyone with chlorine gas now, but chlorine gas is daily in the British lines making water wholesome and safe.

Saves Thousands of Lives.

The effort to secure pure water for the British armies in the field makes one of the fine stories of the war. It has saved very many thousands of lives by practically banishing water-borne disease from our principal front. At the outset of the war the British Royal Army Medical Corps declared in its mind all water supplies to be suspect. They were held guilty of infection until they were proved to be innocent. A "fool proof" system of making unwholesome water safe by chlorination was designed. Then all that remained to be done was to provide the machinery and chemicals and to safeguard against carelessness. The first was a matter of supplies, the second of discipline. Both were equal to the demand made upon them, and on every front now the general rule is that the men are drinking safe water.

Chloride of lime was at first the standby for water purification. It is efficacious, but water chlorinated with it is not very nice. Now chlorine gas has taken its place at big water supply points. It is just as efficacious and it does not taste the water to the same extent. A simple test, in which a noncommissioned officer of every unit is trained, tells how much chlorination water will need to make it safe. If very heavy chlorination is needed, the water after treatment can be dechlorinated and is left pure. The unit's water cart with its trained sanitary orderly has all the means of making water wholesome. But the system is followed where possible of purifying a main supply and issuing from that. In case of small isolated bodies of men, means of water purification are provided in the shape of tablets of acid sulphate of soda. All the old troublesome water purifying schemes, such as candle-filters, which used to be constantly breaking down, have been scrapped. Water precaution now is simple as well as effective.

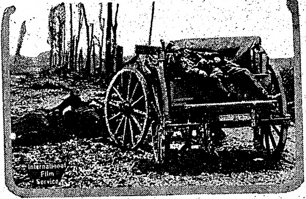
Food is as carefully looked after by the British Royal Army Medical Corps as water. Food has to be not only pure but appetizing and scientific. If the food is not pure it causes sickness. If it is not appetizing it causes discontent. If it is not scientific, has not its proper proportion of proteins and fats and carbohydrates, it does not keep up the strength of the fighting men.

Has Scientific Basis.

Probably Thomas Atkins has no suspicion that the very generous ration he enjoys has a scientific basis carefully calculated in calories; that there is a distinct change made in his summer and his winter ration, and that scientists look up isothermal tables and so on when he goes to a fighting area to decide what his food should be. But that is so. There are summer food scales. There is a ration for the French front and another for the Italian front and another for Salonica. Yet another for Mesopotamia and another for southwestern Africa. Some people are accustomed to talk as though the Germans had all the science and were the only people who took the food chemist into council. The truth is that the British have as much science but a good deal more humaneness, and part of the humaneness is to keep the scientific calculations in the background.

In regard to cooking, the Royal Army Medical Corps confess to an inferiority in British skill. As compared with the French, we are a nation of bad cooks. The most strenuous efforts are being made, and have been made for a long time, to raise the standard of army cooking. It is very much better now than at the start of the war, but it still will not stand well in comparison with the general French skill in combining economy with savory results. But the cooking is better and will yet be better; and when the British army come marching home it will have the knowledge to raise greatly the standard of domestic comfort in Great Britain. Thus again, pleasure will follow pain and the evils of war bring good in their train.

THE GRIM HARVEST OF WAR



In the midst of the desolation of war in northern France lie a German transport driver and his team, killed by a single high explosive shell.

FISHERWOMEN ARE HEROINES IN WAR

One of Them Saves Sailor From Torpedoed Vessel Under Fire of U-Boat.

BRAVE DEEDS OF CIVILIANS

Telephone Operators Get Medals for Heroism Displayed While Plants Are Destroyed—Stick to Posts Amid Bursting Bombs.

London.—Heroism in civil life has come to be almost commonplace in an empire torn by the bitter world struggle, but shining instances are noted by the government and reward given. Nearly 400 medals for self-sacrifice in time of danger have just been distributed in England. As many women as men appear on the lists. Many of them are telephone girls, who have earned the admiration of all London by their fearlessness in sticking to their posts in the face of imminent danger from exploding bombs hurled from German Zeppelins and airplanes. Some of those who are now wearing medals are Lilian Ada Bostock, Florence Steggel, Mabel Eleanor Clarke, Florence Marie Cass, Ethel E. Hickey and Bertha Florence Ester. These girls have been pictured in the illustrated papers of London and have received gifts from citizens. They are of the same type as the New York telephone girls. They are ready to do their work no matter how many bombs are falling about them.

New Grace Darling.

And Great Britain has a new Grace Darling upon whom to shower its homage. Ella Trout has gained the new distinction. She has a medal from the government and no one begrudges her one bit of her honor. She is a fisherwoman. She rowed into the vortex of a sinking ship which just had been torpedoed and rescued a sailor who was clinging to a lifeboat. A submarine was in the immediate vicinity and already had shelled other lifeboats. The woman was a mile away, accompanied only by a ten-year-old boy. She rowed straight for one boat filled with sailors, which was shattered and sunk as she drew near it, and when there was none left there to be saved, changed her course and picked up a sailor in another boat. She now is one of the national heroines. She still is a fisherwoman.

Frederick Higham, a special constable, has received a medal. He swam to an airship that had fallen into the sea and brought two airmen ashore. Doris Hirst, another telephone operator, has reason to be proud. She has received a medal. She works in a munitions factory. She remained at her post, summoning aid and performing other invaluable service while the factory was virtually destroyed around her. The police had advised everyone to leave, but she refused until she had put through certain calls which she believed were necessary for the safety of the neighboring buildings.

THRIFT STAMPS WORN AS BEAUTY SPOTS BY GIRLS

Seattle, Wash.—Thrift stamps as beauty spots are popular with Seattle girls. Unlike other beauty spots thrift stamps are not taxed and draw interest all the time.

Miss Eva Henderson is the first Seattle girl to start the fad here. She generally wears her thrift stamp pasted at an angle on her forehead. Beauty spots come under the general head of "cosmetics," and Uncle Sam collects a tax of 50 per cent on cosmetics. But the thrift stamp even as a beauty spot cannot be taxed.

SEND CRACK AIRMAN

Adjutant Soulier to Demonstrate Morane Plane.

French Aviator Selected by War Department Officials to Come Here as Instructor.

Paris.—Adjutant Soulier of the French army, who shot down seven German airplanes in the shortest space of time of any aviator, has been selected by the undersecretary of aviation to go to the United States to demonstrate the newest and fastest flying machine in the world—the Morane monoplane.

Robert Morane of the Morane-Saulier works, who has created this development of his "parasol" type. Originally intended to send as demonstrator Sublieutenant Jean Navarre, who was tied with Guynemer, each having 12 German machines to his credit, in the spring of 1916, when he was wounded, and who has since been declared insane, following his running down a number of policemen in his automobile last winter.

The French authorities have refused to permit Navarre to leave the country, on the ground that although he is generally regarded as rational now, he might exhibit further tendencies to insanity which might be embarrassing to the authorities in the United States because of his grade and decorations in the French army. Navarre has always been considered by experts as the aviator possessing the best technique in the service.

Soulier, who is only twenty years old, went to Flanders in May last with a crack French escadrille. He was fixing the newest model two-gun S. P. A. D. and by the end of June, when he was wounded, he had destroyed seven enemy machines. The Morane which he will demonstrate has been tried out by Raoul Givas Lufberry, the American "ace," who is highly pleased with its performance. It has shattered all speed and climbing records, but can only be driven by the most skilled pilots.

POLL TAXES FOR WAR WORK

Salvation Army Will Collect Refund at Wichita for Use of Troops Abroad.

Wichita, Kan.—Some weeks ago the Kansas supreme court ruled that certain cities did not have to collect a poll tax. Wichita is one of them.

Then the Salvation Army officers here conceived a bright idea.

"Why not ask the men for their poll tax, and use the money in furthering the war work overseas of the army?" they asked.

Now accredited solicitors of the Salvation Army are collecting the poll tax receipts of business men and others. They will present them to the city officials when the refund is made.

DAY-OLD SON SAVES DADDY

Soldier Overstays Leave When Heir Doesn't Arrive on Time and Is Arrested for Desertion.

Denver, Colo.—John Pershfield, Jr., aged one day, saved Private John Pershfield, Sr., of Company G, One Hundred and Fifty-seventh infantry, from being court-martialed on a charge of desertion from Uncle Sam's forces.

Private Pershfield secured a furlough from Camp Kearney, Linda Vista, Cal., where his company is training, to visit his home in Denver. When he failed to return to camp at the expiration of the leave, Col. Patrick Hamrock, commanding officer, wired Denver authorities to arrest Pershfield as a "deserter from the army."

The charge was changed to "absent without leave" when local authorities notified Hamrock that Pershfield, Jr., failed to arrive as soon as expected, so the soldier-daddy overstayed his leave waiting for Mr. Stork to put in an appearance.

WORLD'S BIGGEST REGIMENT NEEDS 6,000 MORE MEN

Second "Lumberjacks" Will Have 10,500 Men When Recruited to Full Strength.

WILL CUT TIMBER IN FRANCE

Loggers, Sawmill Workers, Road Builders and Laborers Familiar With Road Work Are Wanted—Officers of Regiment Are Expert Lumbermen and Foresters.

JOHN L. COBB, JR.

Kit Inspection, Preparatory to Going Across.

Washington.—A nation-wide effort is being made by the forest service to assist the war department in securing six thousand men needed to complete the second "lumberjack regiment," or the Twentieth engineers (forest) as it is officially known. When recruited to full strength the unit will comprise 10,500 men and will be the largest regiment in the world. Of the men needed now, three thousand should be loggers, sawmill workers and men experienced in building and operating logging railroads, and the remaining three thousand should be trained road builders and laborers familiar with road work.

The regiment will cut from the French forests the immense amounts of trench and bridge timbers, crossties, lumber for cantonments and bunkhouses, and fuel, which our armies and those of the allies will need. A similar unit, known as the "First Lumberjack regiment," or the Tenth engineers (forest), was organized in the summer and has been hard at work in the woods for some time.

Canadians Started It.

The idea of the "Lumberjack regiments" is not original with this country. Early in the war Canadian forestry battalions were sent across to help manufacture the needed lumber and timber products, while last spring soon after the United States entered the struggle ten sawmill units were equipped by lumbermen of New England for service in Great Britain.

Not many people think of France as having much timber. Indeed the extent of the French forests cannot compare with our own. But there is more timber than is generally known. The French have found that it pays to grow a crop of trees on poor, rocky steep land, just as it pays to grow a crop of wheat on the better soils. They have practiced forestry for generations and instead of slashing their timber indiscriminately they handle their holdings with great care and are very loath to cut more than is produced each year by growth. They were consequently unwilling to turn a lot of "woods butchers" into their highly prized forests.

Men of the Second "Lumberjack" Washing Dishes After Meal.

Col. James A. Woodruff of the engineer corps was chosen by the war department to lead the Tenth engineers; Col. W. A. Mitchell to lead the Twentieth, while most of the officers under them are expert lumbermen and foresters. Calls for skilled lumberjacks and sawmill men to enlist were sent out broadcast through the land and they came out of the far places of the land to join the new units. As those who could prove themselves adept in some form of lumbering were accepted each man was listed for the particular job with which he was most familiar.

Most of Them Lumberjacks.

By far the larger part of the recruits were lumberjacks, men who had been raised in the woods and knew every trick of the trade. Others were graduates of forest schools who had had enough actual woods experience in addition to their technical training to qualify for a place. In the ranks of the Tenth are men from Yale, Harvard, and Cornell, the Universities of Michigan, Wisconsin and Minnesota. In fact, practically every prominent college in the country is represented and the men are working as axmen, teamsters, sawyers, woodchoppers, and the like, as though they had been bred to it and had never done anything else. Many well-known college athletes are included. Jack Hansen, of the University of Minnesota football team; "Eddie" Frey, the Cornell Intercollegiate champion two-miler, and George Kephart, coxswain of the Cornell crew, are among the best known.

Sons of rich men are "high privates in the rear ranks," shoulder to shoulder with those who have grown up in the logging camps. Most of these men are members of families long engaged in the lumber business and gave up important positions, at no little sacrifice, to do their bit to help down the Hun.

Given Course of Training.

The recruits were assembled at the American university, D. C., training camp and put through a course of sprouts to acquaint them with military drill and harden them for the work on the other side. As Major DuBois, formerly head of the forest service in California, said, it was "duck soup for most of them." Hardened to out-of-door life under all kinds of weather conditions, familiar with rifle and revolver, and accustomed to carrying heavy packs for long distances, the men were quick to take hold. After a couple of weeks' drill they looked like veterans, and were ready for the big adventure.

As soon as the Tenth vacated the training camp, organization of the Twentieth began. Six of the ten battalions have already been formed and several have already been sent forward to take up their work on the other side. In order to disturb labor conditions in the lumber industry as little as possible, it was decided that qualified registrants under the selective draft law who have not been ordered to hold themselves in readiness for duty may be "inducted" into the regiment. Applicants for induction should write the Forester at Washington, D. C., give their age, a full statement of experience and the names of former employers.

The type of men in the Twentieth is the same as that of the Tenth. Husky, hard-handed, big-boned fellows, who can hold their own anywhere, their officers say they can lick their weight in wild cats any old day and can "log" as many sawmills as there are to cut the lumber.

Go Fully Equipped.

Like the Tenth, they will take with them everything needed to produce lumber, from the "stump to the car," as the trade phrase goes. Axes, crosscut saws, harness, canthooks, horses, rubbers, cookstoves, complete sawmills, two-ton trucks, grindstones, and all the other thousand and one articles found in a well equipped lumber camp are included in their equipment.

Their work will be behind the firing line. They will probably not fight unless the Hun springs a surprise so complete that it becomes necessary to call on all hands. But every stroke of an axe and every cut of a saw is going to count just as much as a shell, and if lumber will help win the war, those 10,000 huskies will more than do their share.

THEATER IS ONE TEUTON WEAPON

Elaborate System of Using Performers to Circulate German Propaganda.

PAY SALARIES OF SINGERS

Paris Sees Benefit of Gayety, Refusing to Close Amusements to Save Fuel—Germans Flood Neutral Countries.

Paris.—Attention has been attracted to the use the Germans make of the theater as a vehicle of propaganda by a recent suggestion that the Paris theaters be closed to save fuel. Fortunately this short-sighted policy has not been adopted. It would have added to the war-worn atmosphere of the capital without accomplishing any good results. But the agitation has served the purpose of revealing that the allies have made no organized attempt to keep alive in neutral countries interest in their language, their ideals, their literature, through their theaters and music, while the Germans have overlooked no opportunity.

It is not saying too much to insist that never has the theaters been so necessary as now to public life. For today, more than ever, men—soldiers or civilians—need the relief from the strain of war afforded by a relapse into the realm of fantasy, a visit to the unreal world.

Used in German Propaganda.

That it is a mistake to look upon the theater only as a place of amusement is amply demonstrated by the Germans, who have made of it a weapon. Their actors, their singers, their musicians have never been busier at home and abroad as since the beginning of the war. In neutral countries, Switzerland, for instance, from the day of mobilization, the German actors appearing in Swiss theaters were relieved from the call to arms.

Since then, in the German-Swiss cantons there has been a positive avalanche of theatrical troupes and of choral and instrumental associations sent from Berlin, Vienna, Munich, Leipzig, Mannheim, Meiningen, having as conductors men like Max Reinhardt, the two Strausses, Weingartner, Nikish, etc. This in addition to numerous German picture shows and dress exhibits with free refreshments, concerts and the procession of pretty models. For all these entertainments free tickets are distributed by the hundreds. The expense of renting halls, advertising in the papers and by posters is borne by subsidies. The Germans don't expect to make any money. On the contrary, they spend much more than the receipts. The word goes out to "paper the house." In Berlin Max Reinhardt was told:

"Spend without counting the cost; when you get back we'll settle the bill."

When the theaters are empty it makes no difference, the tour continues. All official Germans and their compatriots in neutral cities are obliged by military order to go to these performances each night. When the troupe plays its farewell performance the ranking German diplomat or consular representative in each city gives a large banquet, where, so as to make the neutral better understand the meaning of "kultur," champagne is given to him.

Teutons Pay Singers' Salaries.

A German consul sent for the directors of the music halls of the town where he is stationed and told them that whenever they engaged German singers or "turns" they would have to pay them only $1 a day, and the rest of their salary, he said, no matter how large, would be assumed by the German authorities.

That is the reason why, in the music halls of the big neutral city in question, you hear nothing spoken but German.

This striking illustration of the thoroughness of the German propaganda which expends millions for musical and theatrical performances is in striking contrast to the do-nothing policy of the allies in this respect. That is why Switzerland asks: "Does France scorn us, or is she broken spirited?"

In Russia the Germans have established theaters at Petrograd, Moscow, Riga, Mitau, Libau, Zoppot, Revel and Odessa.

Emperor William and his satellites thoroughly understand the political influence of the theater.

From another point of view, any attempt to close the Paris theaters for economy in fuel or lighting would seem shortsighted. For the theater in the cities takes the place of country gatherings, where several families benefit by the same light and fire. Similarly the thousands of persons—audiences, artists and employers—gathered each evening in places of amusement are warmed and lighted in a mass by an amount of coal much less than all these people would have consumed in the same time had they remained at home. To have closed the theaters would have meant increasing the sadness of Paris, the throwing out of work of 100,000 persons, who would have to be fed and supported in some other way, besides antagonizing 43 labor unions. As a high military authority said:

"It would have given to France the aspect of a vanquished nation."

DAIRY

KEEPING COWS IN OPEN SHED

During Extreme Cold Animals Went Off in Milk Flow Rapidly—Result of Test Given.

For three years the Pennsylvania station has kept one lot of cows in an open shed and another lot in a typical dairy barn. In the open shed the temperature ranged from zero to about 40 degrees, while in the barn it was kept at 40 to 50 degrees most of the time. During unusually cold weather, the open-shed cows went off in their milk flow much more rapidly than the cows kept in the barn, but they also responded more quickly to the return of warm weather than the cows in the barn.

On the average, the cows in the barn decreased in their milk flow about 2.6 pounds per week, as compared with 3.5 pounds per week for the cows in the open shed. The cows in the barn gave 2.66 pounds of milk for each therm of energy above that required for maintenance, whereas the outdoor cows returned only 2.44 pounds of milk for each therm above that required for maintenance. The outdoor cows kept cleaner, but required more bedding.

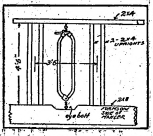
COW STANCHIONS AND STALLS

Old Style Rigid Device Still in Use in Many Dairies—Swinging Frames Are Best.

(By W. D. NICHOLLS, Kentucky Agricultural Experiment Station.)

Many patent stanchions and stalls have been placed upon the market and some of these possess points of merit. The principal objection to them is their expensiveness.

The old style rigid stanchion is still used in many dairies. One would expect this stanchion to be uncomfortable to the cow resulting in a lower milk yield. However, the experience of a large number of users of such stanchions indicates that little or no bad effects result from their use, but undoubtedly swinging stanchions are more comfortable, and are to be preferred. Such stanchions without the iron framework can be purchased for about $1.35 each and can be hung in a home-constructed wooden frame with entirely satisfactory results and at low cost.



Steel Swinging Stanchion.

TRY TO KEEP COWS GAINING

Mistake to Think Animals Give Maximum Amount of Milk Immediately After Freshening.

Ordinarily most farmers expect their cows to give their greatest milk flow immediately after freshening, and from that time on to gradually decrease. This is not as it should be, however, for it is the experience of many good feeders that a cow can be made to increase in milk flow from the time she calves until a month or more afterward when she is at her maximum production. It requires careful feeding and close attention to do this, however. The cow's general condition must be watched and she must be fed accordingly. There is many a cow that is now only an indifferent milk producer that might have a better record to her credit if she were given better feed and care.

BEST TIME TO HAVE CALVES

During October and November Cows Give Largest Flow and Prices for Products Are High.

The best time to have cows calve is in October and November, as they will then give the largest flow when prices for milk products are highest, and they are nearly dry when hot weather comes. To calve at this time cows must be bred between December and February 20.

WATER WARMED BY A HEATER

Cow Cannot Produce Her Best If Forced to Drink Ice Cold Water During Cold Weather.

Cows will not produce their best if they are forced to drink ice water or water near the freezing point. Water should either be drawn fresh from the well each day or be warmed by a tank heater.

Most Profit in Thick Cream.

Why send thin cream to market when a smaller amount of thick cream will bring just as much, leave more skim milk for the calves and cost less to ship?

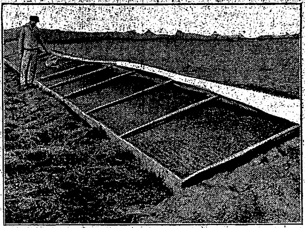
Comfortable Barns Best.

Comfortable barns keep dairy cows warm far more cheaply than high priced feed.

AGRICULTURAL DEPARTMENT

This department of THE ELEVEN TOWNS is devoted to the interests of the agriculturists of Pennington and Marshall Counties. All the articles are by foremost authorities, including U. S. Government experts.

STARTING PLANTS OF CERTAIN CROPS BEFORE DANGER OF FROST HAS PASSED



Cold Frame With Cloth Cover, Suitable for Growing Plants Not Requiring Warmth of a Hotbed.

(Prepared by the United States Department of Agriculture.)

In most sections of the South it is desirable to start plants of certain crops before the danger of frost has passed. The simplest method of starting a limited number of plants is by means of a shallow box in a south window of the dwelling. After the plants appear, the box should be turned each day, to prevent the plants drawing toward the light. A more satisfactory method of starting plants is by means of hotbeds or cold frames. A hotbed 6 feet by 6 feet will be large enough for the average-sized garden and can be constructed rather cheaply. In the colder regions of the South some form of heat should be supplied. Fresh manure from the horse stable will be found satisfactory for this purpose. Turn the manure two or three times before placing it in the bed, in order to make it uniform in composition and mechanical condition. Make the excavation for the bed about 18 inches deep and put in 15 to 18 inches of fresh manure, packing it well by trampling. Arrange a frame over the manure, so the slope will be to the south. Place 4 or 5 inches of good garden loam over the manure and cover the frame with a hotbed sash or heavy canvas, preferably the former. The manure will heat quite rapidly for the first few days. During that time ventilate the bed frequently, to allow the gases to escape and to lower the temperature. The seeds should not be planted until the temperature goes down to 80 degress or 85 degrees F. After the seeds have been planted, close attention should be given to the watering and ventilation of the bed. The soil should never be allowed to dry out, but it should not be kept water-soaked. Moisture is necessary for the germination of the seed and for the growth of the plants, but an excess of moisture should be avoided, as it stimulates the development of diseases, especially damping-off. Water should be applied early enough in the day to allow the plants to dry before night. Ventilate the beds during the heated portion of the day, but cover them in time to insure their warming up enough to prevent chilling the plants during the night.

In the lower South, cold frames may be used instead of hotbeds, and canvas or cotton cloth covers instead of glass. The illustration shows a type of frame commonly used in the warmer section of the South for starting plants.

Transplanting.

For the best results, plants started in boxes, hotbeds, or cold frames should be transplanted when they reach a height of 1 to 2 inches. Transplanting tends to produce uniform, stocky plants with a well-developed root system. The seedlings may be transplanted to boxes or to the hotbed or cold frame, to stand about 2 inches apart each way. Some growers transplant twice before setting in the open ground. Fig. 5 shows two celery plants from the same seeding. The one at the left was transplanted, while that at the right was allowed to remain in the seedbed until time for planting in the garden.

Hardening Off.

Plants growing in a house, hotbed, or cold frame should be hardened off before they are transplanted to the garden. This can be accomplished by ventilation and exposure to outdoor conditions during the day in good weather. If the plants are in a hotbed or cold frame, the covers may be removed during the day when the weather is good and replaced toward nightfall. After danger of frosts is past the covers may be left off at night. By the time the plants are large enough to be transplanted to the garden they should be thoroughly accustomed to outdoor conditions. Such plants usually withstand the transfer to the garden with little check and few losses.

Setting Plants in the Open Ground.

Before taking the plants from the bed it should be thoroughly watered and the water allowed to soak into the ground. This will insure a portion of the soil adhering to the roots and will prevent serious wilting or the checking of growth. Take up the plants with a trowel or spade and pack them in boxes or baskets in which to carry them to the field.

The land should be in good condition and everything should be ready for quick operation when planting time arrives. Mark off the rows or dig the holes for the plants just before planting to prevent the drying of the soil. If possible, set the plants on a cloudy day or just before nightfall. When the soil is very dry it is advisable to use a little water in the hole. The water should be applied when the hole is partially filled with soil, and the moist earth should then be covered with dry soil to prevent baking. Plants should be set a trifle deeper in the garden than they were in the plant bed. Pack the soil thoroughly around the plants, so as to avoid air spaces.

PLAN INCREASED EGG YIELD

Use of Trap Nest and Selection of Well-Defined Laying Hens Will Prove Profitable.

If all of our poultrymen would trapnest their hens for two or three years and keep nothing but well-defined laying strains of hens, the egg yield of the country would be doubled and the feed bills for the poultry greatly reduced. A slip-shod method of half-way keeping hens and "hunting the eggs" in every nook and corner will not pay with feed at any price.

FIELD PEA AS FORAGE CROP

Well Adapted to Northern Portion of United States for Spring and Summer Growth.

(From the United States Department of Agriculture.)

One of the first crops to be planted in the spring—and in some cases one of the best—is the field pea known in some localities as the Canadian field pea. It deserves even wider use than has been given it according to a recent publication, Farmers' Bulletin 690, entitled "The Field Pea as a Forage Crop," published by the U. S. department of agriculture.

Since the field pea requires a cool temperature during its growth, it is well adapted for spring and summer growth in the northern portion of the United States and in the comparatively high altitudes of the Rocky Mountain region, and for winter growth in the lower South. It is useful on the farm as a rotation crop for hay, grain, silage or green manure, and the peas may be used in the green state as a vegetable like garden peas.

SMUT STILL IS WORTHLESS

It Deteriorates Grain It Grows in and Make It Sell for Less Money—Use Formaldehyde.

Don't plant seed grain that is inoculated with smut. Grains are high-priced, but smut is still worthless—it is not only worthless but deteriorates the grain it grows in and makes it sell for less money. Use formaldehyde or anything else that you prefer, but don't plant smutty seed.

Value of Sulky Plow.

An average day's work with a two-horse walking plow is a little less than one and three-quarters acres, while an average day's work for a three-horse sulky plow is between two and two and a half acres.

Save All Brood Sows.

Save the brood sows. Feed them, breed them; and increase production. Fed plenty of pork, our soldiers will be fit for the fight and strengthened to endure the stress and rigors of their march to victory.

GOOD ROADS

CAUSE OF MUDDY HIGHWAYS

Water Which Flows From Fields to Roads Is Expensive to Public—Forbidden by Statute.

Muddy roads due to water which flows over the surface of land along a highway into the side ditches are expensive to the public. No railroad will tolerate a wet roadbed longer than is necessary to carry out the drainage work to dry the earth. But persons whose convenience depends in no small measure on the roads passing by their property rarely do anything to check the injury they are working to themselves and their neighbors in the manner mentioned.

The Colorado highway commission has called attention to a statute which makes it a misdemeanor in that state to allow water to flow on a road and has issued the following notice on the subject: "From the fields along a highway the waste or excess water is allowed to run directly to the road ditch, and if, as is often the case, the road ditch is obstructed, this water gets over the road, making a muddy road, which under the traffic soon becomes impassable. This can be prevented by running a ditch, (a single furrow may answer,) along the fence line and discharging the water into a road culvert at a point where it will drain away. This condition also emphasizes the necessity of keeping all the road culverts open and ready to carry water."

MANY GOOD ROADS SURFACED

Massachusetts Leads With Percentage of 47.6—Oklahoma Brings Up in the Rear.

Massachusetts has the greatest percentage, 47.6, of her roads surfaced. Then come Indiana with 42.5 per cent, New Jersey with 40.5, Ohio with 36.5, Rhode Island with 34.5, Kentucky with 32.2, New York with 22.7, Connecticut with 23.2 and California with 20.2. Indiana and Kentucky hold their prominent positions on account of extensive use of gravel, and it is misleading to class gravel roads suitable for light travel with the expensive types of construction used for surfacing in Connecticut. The figures refer to all kinds of surfacing and are not restricted to what are called permanent pavements. The smallest percentage of surfacing has been done in Oklahoma, where 99.3 per cent of the roads are dirt. Other states with low percentages of surfacing are South Dakota with 8 per cent, Iowa with 1, Kansas with 1.3, North Dakota with 1.6 and Nebraska with 1.7. The excellent maintenance of many of the dirt roads of Iowa makes riding and hauling over them easy, except during the spring or after continuous rains.—Nashville Tennessean.

Concrete Road in Massachusetts.

WATER CARRIED TO DITCHES

This Can Be Done by Giving Proper Crown or Cross Slope to Road—Soils Differ.

Water falling on the road should be carried to the side ditches by giving a proper crown or cross slope to the road. Make your road to shed water. The slope should vary with different soils. For a loamy soil a crown of about one inch per foot is considered proper; on a clay soil an inch and a half to two inches. The side slopes of ditches should be much greater. The longitudinal slope or grade will also somewhat determine the crown. On a steep grade it is necessary to give a greater crown to keep the water from running down the traveled roadway and washing gullies.

Wide Tires in Favor.

Wide tires for the benefit of the public highways are being indorsed quite generally by both vehicle users and the manufacturers of farm wagons and implements.

To Prevent Eroding.

The outlet ends of the culvert should be riprapped to prevent eroding away on the road on the lower side of the grade.

Enemy of Earth Roads.

Water is the natural enemy of earth roads and must be kept out of them, off of them, and away from them.

Road Drag Is Enough.

If a dirt road is properly built, the road drag will keep it in good condition.

JOB PRINTING We can do the finest class of printing, and we can do that class just a little cheaper than the other fellow. Wedding invitations, letter heads, bill heads, sale bills, statements, dodgers, cards, etc., all receive the same careful treatment—just a little better than seems necessary. Prompt delivery always.

Let Us Be Your Waiter

We never tire of helping others when they ask for good job printing. We can tickle the most exacting typographic appetite. People who have partaken of our excellent service come back for a second serving. Our prices are the most reasonable, too, and you can always depend on us giving your orders the most prompt and careful attention. Call at this office and look over our samples.

PRICE OF WHEAT FIXED BY WILSON

Makes Figure For Northwest Farmers, $2.17 Per Bushel, Same As Last Year.

PROCLAMATION ISSUED

President Declares Guaranteed Price Assures Farmer of Reasonable Profit Even if War Should End Within the Year.

Washington, Feb. 25. — President Wilson has issued a proclamation fixing the price for the coming season's wheat yield. The price is $2.17 per bushel at Minneapolis and $2.20 at Chicago, and is for No. 1 northern spring.

President Makes Statement.

In a statement accompanying his proclamation, the President said:

"Under the food control act of August 10, 1917, it is my duty to announce a guaranteed price for wheat of the 1918 harvest. I am, therefore, issuing a proclamation setting the price at the principal interior primary markets. It makes no essential alteration in the present guaranty. It is a continuation of the present price of wheat with some adjustments arising from the designation of additional terminal marketing points.

"This guaranteed price assures the farmer of a reasonable profit even if the war should end within the year and the large stores of grain in those sections of the world that are now cut off from transporation should again come into competition with his products. To increase the price of wheat above the present figure or to agitate any increase of price would have the effect of very seriously hampering the large operations of the nation and of the country's Allies by causing the wheat of last year's crop to be withheld from the market. It would, however, dislocate the present wage levels that have been established after much anxious discussion and would, therefore, create an industrial unrest which would be harmful to every industry in the country.

"I know the spirit of our farmers and have not the least doubt as to the loyalty with which they will accept the present decision. The fall wheat planting, which furnishes two-thirds of our wheat production, took place with no other assurance than this. The farmers' confidence was demonstrated by the fact that they planted an acreage larger than the record of any preceding year, larger by two million acres than the second largest record year, and seven million acres more than the average for the five years before the outbreak of the European war.

"It seems not to be generally understood why wheat is picked out for price determination and only wheat, among the cereals. The answer is that while normal distribution of all our farm products has been subject to great disturbances during the last three years because of war conditions, only two commodities, namely, wheat and sugar, have been so seriously affected as to require governmental intervention.

Must Prevent Speculation.

"The disturbances which affect these products, and others in a less degree, arise from the fact that all of the overseas shipping in the world is now under government control and that the government is obliged to assign tonnage to each commodity that enters into commercial overseas traffic. It has, consequently, been necessary to establish single agencies for the purchase of the food supplies which must go abroad. The purchase of wheat in the United States for foreign use is of so great volume in comparison with the available domestic supply that the price of wheat has been materially disturbed and it became necessary, in order to protect both the producer and the consumer, to prevent speculation. It was necessary, therefore, for the government to exercise a measure of direct supervision as far as possible to control purchases of wheat and the processes of its exportation. This supervision necessarily amounted to price fixing, and I, therefore, thought it fair and wise that there should be a price stated that should be at once liberal and equitable.

Farmer Relied Upon.

"Those peculiar circumstances governing the handling and consumption of wheat put the farmer at the very center of war service. Next to the soldier himself he is serving the country and the world and serving it in a way which is absolutely fundamental to his own future safety and prosperity. He sees this and can be relied upon as the soldier can.

"The farmer is also contributing men to the army, and I am keenly alive to the sacrifices involved. Out of 13,800,000 men engaged in farm industries, 205,000 have been drafted, or about 1.48 per cent of the whole number. In addition to these there have been volunteers, and the farmers have lost a considerable number of laborers because the wages paid in industrial pursuits drew them away. In order to relieve the farming industry as far as possible from further drains of labor the new draft regulations have been drawn with a view to taking from the farms an even smaller proportion of men, and it is my hope that the local exemption boards will make the new classifications with a view of lightening the load upon the farms to utmost extent.

Marketing to Be Facilitated.

"The federal railway administration is co-operating in the most active, intelligent and efficient way with the food administration to remove the difficulties of transportation and of the active movement of the crops. Their marketing is to be facilitated and the farmers given the opportunity to realize promptly upon their stocks.

"The department of agriculture and the food administration will continue to co-operate as heretofore to assist the farmers in every way possible. All questions of production, of the marketing of farm products, of conservation in the course of production, and of agricultural labor and farm problems generally, will be handled by the department of agriculture; while all questions of distribution of food supplies to the Allies and of conservation in consumption will be handled by the food administration, but the chief reliance is upon the farmer himself, and I am sure that that reliance will be justified by the results. The chief thing to be kept clearly in mind is that regulations of this sort are only a part of the great general plan of mobilization into which every element in the nation enters in this war as in no other. The business of war touches everybody. It is a stern business, a co-operative business, a business of energy and sacrifice, a business of service in the largest and best and most stirring sense of that great work."

Proclamation Given.

After this explanatory preamble comes the proclamation proper, which reads as follows:

"Now, therefore, I, Woodrow Wilson, president of the United States, by virtue of the powers conferred upon me by said act of congress, and especially by Section 14 thereof, do hereby find that an emergency exists requiring stimulating of the production of wheat, and that it is essential that the producers of wheat produced within the United States shall have the benefits of the guaranty provided for in said section; and, in order to make effective the guaranty by congress for the crop of 1918 and to assure such producers a reasonable profit, I do hereby determine and fix, and give public notice of reasonable guaranteed prices for No. 1 northern spring wheat and its equivalent at the respective principal primary markets, as follows, to wit:

Prices at Different Points.

Minneapolis, $2.17; Chicago, $2.20; Omaha, $2.15; Kansas City, $2.15; St. Louis, $2.18; Duluth, $2.17; New York, $2.28; Philadelphia, $2.27; Baltimore, $2.27; Newport News, $2.27; Charleston, S. C., $2.27; Portland, Ore., $2.05; Seattle, $2.05; San Francisco, $2.10; Los Angeles, $2.10; Galveston, $2.20; New Orleans, $2.20; Salt Lake City, $2.00; Great Falls, Mont., $2.00; Spokane, Wash., $2.00; Pocatello, Ida., $2.00; Fort Worth, Tex., $2.09; Oklahoma City, Okla., $2.05; Wichita, Kan., $2.08.

Reasonable Profit Assured.

"And that the guaranteed price for other grades established under the United States grain standards by the act approved August 11, 1916, based on said price for No. 1 northern spring wheat at the respective principal primary markets, above mentioned, will assure the producers of wheat produced in the United States a reasonable profit, the guaranteed prices in the principal primary markets above mentioned being fixed by adopting No. 1 northern spring wheat for its equivalent at the principal interior markets, as the basis.

"For the purpose of such guaranty only, I hereby fix the guaranteed prices at the respective principal primary markets above mentioned for the following grades of wheat, to wit: No. 1 northern spring; No. 1 hard winter; No. 1 red winter; No. 1 durum; No. 1 hard white. The guaranteed prices at the respective primary markets aforesaid of all other grades of wheat established under the United States grain standard act approved August 11, 1916, shall be based on the above guaranteed prices and bear just relation thereto.

Prices Guaranteed by U. S.

"The sums thus determined and fixed are guaranteed by the government of the United States at the respective principal primary markets of the United States above mentioned, to every producer of wheat of any grade so obtained under the United States grain standard act; upon the condition that said wheat is harvested in the United States during the year 1918, and offered for sale before the 1st day of June, 1919, to such agent or employe of the United States, or other persons as may be hereafter designated, at any of the above mentioned cities, which are, for the purpose of this act, hereby declared to be the principal primary markets of the United States, and provided that such producer complies with all regulations which may be hereafter promulgated in regard to said guaranty by the president of the United States.

"In witness whereof, I have hereunto set my hand and caused the seal of the United States to be fixed.

"Done in the District of Columbia, this 21st day of February, in the year of our Lord 1918, and of the independence of the United States of America 142.

"WOODROW WILSON,

"By the President:

"ROBERT LANSING,

"Secretary of State."

ASK BIG ACREAGE OF SPRING WHEAT

Government Calls on Farmer to Increase Food Supply.

SOUTH SHOULD FEED ITSELF

Agricultural Program for 1918 Urges Necessity for Producing Large Supply of Foods and Feedstuff to Feed America and Its Allies.

Washington, D. C.—The planting of an increased acreage to spring wheat and the production of an increased supply of other food products and of live stock, especially hogs, is recommended in a supplementary food production program issued by the United States department of agriculture.

This program re-emphasizes and amplifies the food-production program for 1918 issued by the department in August, 1917, and other suggestions made in the fall and the first of this year regarding increased pork production and increased production of foodstuffs in the South. Taken in connection with the recommendations previously made, it suggests in full the proposals which the department thinks it desirable to offer with a view to secure enough meat and dairy products, cereals, sugar and other staple and perishable foods, wool and cotton for the nation, its armies, and the allies. It gives suggestions for the approaching spring operations, based upon the latest available information as to the condition of the fall-planted crops of winter wheat and rye and as to the number of meat and dairy animals reported for 1917. They represent the best thought of the specialists of the department who have had the benefit of advice from agricultural leaders throughout the country.

Our Best Efforts Required.

"Notwithstanding an increased production of staple crops in the United States in 1917, there is need for more food," the program states. "Taking into account our own needs, the needs of the nations associated with us in this war, and the needs of friendly neutral nations, our best efforts will be required to provide enough food in 1918. Whether the war continues or not, the demands on this country, because of the increasing population and the needs of Europe will be great. An especially strong demand will be made on this country for meats and live stock. In 1917, notwithstanding the many difficulties encountered, the farmers planted the largest acreages in the history of the nation, harvested record crops of most things except wheat, and succeeded in greatly increasing the number of live stock."

"The situation is such that chief emphasis should be given to the production of the great staple food products, with special stress on wheat and hogs, the leading war foods."

The South is urged to provide food for its own people and feed for its live stock and then to plant as much cotton as can well be cultivated and harvested. To raisers of hogs and beef animals the world need for meats and fats is made clear. Farmers are urged to join with the men on the ranges in providing sheep whose wool is needed to equip soldiers.

The program discusses the farm labor problem, points out the lines of effort for relief, and outlines the activities of the federal and state agencies to furnish assistance.

Spring Wheat.

In dealing with the question of spring wheat, the program states:

The acreage of spring wheat should be increased in order to make certain that we shall have an adequate supply of wheat for our own uses and to meet the needs of the allies.

"While the area of winter wheat sown in 1917 was the largest on record, the condition of the crop, as reported on December 1, was the lowest ever recorded, indicating a probable production of only 540,000,000 bushels. Whether the actual production will be greater or less than the estimate will depend upon conditions prevailing between now and the time of harvest. If there were planted to spring wheat in the United States this year an acreage equal to the sum of the record planting in each spring wheat state within the last ten years, there would be sown approximately 23,300,000 acres. If there should be planted an acreage equal to the sum of the record planting for each state within the last five years there would be sown approximately 21,000,000 acres. The record planting for any year was 20,381,000, in 1911. The acreage for 1917 was 18,511,000.

"The department of agriculture has carefully studied all these records and other data in connection with the present war conditions and needs, and believes that it will be possible this year to secure an acreage in excess of the record acreage which was planted in 1911. It is believed that increased acreage can be secured in states and sections where spring wheat production is known to be reasonably promising, and that such increases can be made without upsetting farm plans.

It is hoped that many farmers, especially in the northern part of the corn belt, will find it possible to plant five to ten acres additional in wheat. In some cases they will plant more. In a number of states in the eastern and central portions of the country where spring wheat has not been grown in recent years, the crop is now being re-established and it is recommended that this movement be encouraged.

To a small extent the acreage in oats, if necessary, could be reduced in the interest of wheat. Likewise, a very small portion of the acreage which normally would be planted to corn in the northern part of the corn belt might be sown to spring wheat.

If the acreage of spring wheat indicated for some of the states cannot be planted, the barley acreage, which is known to grow better in some localities, might be increased. The use of barley for food is increasing in this country and it is a welcome food in Europe.

Summary of Other Recommendations.

Following is a summary of other important recommendations regarding cereals, meat, poultry, and perishables.

Hogs. The number of hogs should be increased by at least 15 per cent during the year 1918.

Sugar. Effort should be made to maintain the acreage of sugar cane and sugar beets, and to increase these areas in so far as these crops are well established or are necessary to sound agricultural practice.

Production of satisfactory substitutes for sugar, including sorghum, corn and cane sirup, maple products and honey can and should be increased.

Dairy Products. The supply of dairy products should be maintained to meet the needs of this country and to help supply the increasing demands of the allies.

Poultry. Poultry production should be increased greatly, especially in back yards and on farms where waste material is available and the purchase of expensive grains and other material is not required.

Corn. An acreage of corn approximately equal to that of 1917 should be planted, with possible slight reductions in certain sections to free areas for spring wheat.

Oats, Barley, Rice, Buckwheat and Flaxseed. The area in oats should be maintained, especially in regions and on soils which are not so well adapted to other grains, but with a small reduction to provide for increasing the wheat acreage. Barley production should be increased in regions where it grows best, especially in the northern edge of the corn belt and in sections north and west of the belt; and rice, buckwheat and flaxseed production should be maintained and, if possible, increased.

Potatoes. The normal acreage of Irish and sweet potatoes should be maintained in 1918, notwithstanding the large crops in 1917.

Hay, Forage and Pastures. Wherever feasible, the area devoted to hay, forage and silage crops should be increased and these products should be used to a greater extent in place of grains and other concentrates.

Beef Animals. The number of beef animals should be maintained and, in areas where it is clearly the best range and farm practice, should be increased.

Beans, Peas and Peanuts. The production of beans and peas should be increased in regions to which they are adapted, because of their high food value, keeping qualities, and availability for domestic or export trade. Soy beans and peanuts should be increased in order to supplement beans and peas as human food, as a source of much needed oil, and as animal feeds.

Perishables. (a) Market gardens near large consuming centers should be increased so as to meet, as nearly as possible, the needs of the community, and in order to obviate the necessity of transporting such products from distant points.

It is important to do all that is possible to relieve the strain upon transportation facilities.

(b) The planting of home gardens, especially for family needs and for preserving food for future use, again should be emphasized.

(c) The commercial production of perishables generally should be increased above normal wherever it is reasonably clear that transportation and marketing facilities will be available.

What Was in Him.

"Children," said the teacher while instructing the class in composition, "you should not attempt any flights of fancy, but simply be yourselves and write what is in you. Do not imitate any other person's writings or draw inspiration from outside sources."

As a result of this advice Johnny Wise turned in the following composition:

"We should not attempt any flites of fancy, but rite what is in us. In me thare is my stummick, lungs, hart, liver, two apples, one piece of pie, one stick lemon candy and my dinner."—Baltimore Bulletin.

U. S. Aviators Set New Marks.

San Antonio, Tex., Feb. 25. — All previous records for total number of flying hours were broken at Kelly field when a total of 882 flying hours was attained. This was secured with 135 ships, this being an average of eight hours of flying per ship. This is the highest record made by any school in the country. All altitude records were broken the past week at Kelly field when Maj. H. D. S. Burwell, officer in charge of flying, went up 18,000 feet.

California Bean Crop Commandeered.

San Francisco, Cal., Feb. 25.—The white bean crop of California, amounting to approximately 30,000,000 pounds, has been commandeered by the United States army and will be put under military guard, according to announcement by H. Clay Miller, Pacific coast representative of the division of co-ordination of purchases, United States food administration. The government will pay approximately $4,000,000 for the crop, Miller announced.

Reached His Capacity.

The first floor of the home was reached at the rear by climbing a flight of stairs. One evening the family came from town with a good many parcels, which the father, mother and son, Eugene, proceeded to carry into the house, Eugene going up the steps first. As they neared the top step the father said, forgetting momentarily that the youngster's arms were full, too, "Open the screen door, son," to which the youngster replied: "I can't pa[illegible] I'm all used."

True Gospel of Work.

Work is the glory and delight of life, and the only acceptable excuse for being in this world, and the object of all practical investigations of the principle of fatigue and recovery is to find out, not what is the least possible amount of work that a human being can get along on, but what is the greatest amount that he can do without decreasing his working capacity. Such is the gospel of work, which those who are not of the elect may regard as hard doctrine.—Exchange.

OLD SORES, ULCERS AND ECZEMA VANISH

Good, Old, Reliable Peterson's Ointment Stops Itching Instantly.

"Had 51 ulcers on my legs. Doctors wanted to cut off leg. Peterson's Ointment cured me."—Wm. J. Nichols, 40 Wilder St., Rochester, N. Y.

Get a large box for 30 cents at any druggist, says Peterson, and money back if it doesn't help you at once. Always keep Peterson's Ointment in the house. Fine for burns, scalds, bruises, and the surest remedy for skin diseases, pimples, itching eczema and piles the world has ever known.

"Peterson's Ointment is the best for bleeding and itching piles I have ever found."—Major Charles E. Whitney, Vineyard Haven, Mass.

"Peterson's Ointment has given great satisfaction for Salt Rheum."—Mrs. J. L. Weiss, Cuylerville, N. Y.

All druggists sell it, recommend it. Adv.

Testing a Bee's Speed.

An experiment was once made to see how fast a bee could fly. The hive was attached to the roof of a train which attained a speed of 30 miles an hour before the bee was left behind.

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Any druggist can put this up or you can mix it at home at very little cost. Full directions for making and use come in each box of Barbo Compound. It will gradually darken streaked, faded gray hair, and make it soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off. Adv.

Household Candor.

"Is that picture one of the old masters?"

"I believe so," replied Mr. Cumrox. "But we had it varnished and framed in a way that makes it look almost as good as new."

Catarrh Cannot Be Cured

by LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a local disease, greatly influenced by constitutional conditions. HALL'S CATARRH MEDICINE will cure catarrh. It is taken internally and acts through the Blood on the Mucous Surfaces of the System. HALL'S CATARRH MEDICINE is composed of some of the best tonics known, combined with some of the best blood purifiers. The perfect combination of the ingredients in HALL'S CATARRH MEDICINE is what produces such wonderful results in catarrhal conditions. Druggists 75c. Testimonials free.

His Drawback.

"This writer has a great deal of rude strength." "Then how can he succeed in polite literature?"

No Older Than Your Face.

Is true in most cases. Then keep your face fair and young with Cuticura Soap and touches of Cuticura Ointment as needed. For free samples address, "Cuticura, Dept. X, Boston." Sold by druggists and by mail. Soap 25, Ointment 25 and 50.—Adv.

What It Means.

Getting back to the "simple life" means giving up the simpleton life.—Houston Post.

A matchless story is a novel that ends without a wedding.

American Women No Slackers

We can well be proud of our American girls and women. In France and England women are taking up the work of men resolutely, and have shown their ability to do almost all kinds of work. When it becomes necessary women will show their worth in countless shops, stores, factories and offices. No one hears them complain of their hard work. These are the days when American men have cause to respect, love and honor their mothers, wives and sisters. If a woman is borne down by the weakness and sufferings of womankind, she should be helped by a herbal tonic made with glycerin which has had such uniform success during the past half century. She should be *well*, instead of sick and suffering; *healthy and vigorous*, instead of worn-out and weak; bright eyes, clear skin, rosy cheeks—you wouldn't think it was the same woman, and it's all due to the use of a few bottles of Dr. Pierce's Favorite Prescription. All druggists. Tablets or liquid. Tablets, 60c.

What this medicine has done for thousands of delicate women, it will do for you. If you're over-worked and debilitated, it will build you up—if you're borne down with the chronic aches, pains and weaknesses peculiar to your sex, it relieves and cures. It regulates and promotes the proper functions of womanhood. This old and tried Prescription of Dr. Pierce's invigorates the system, purifies the blood, improves digestion, and restores health, flesh and strength. Consult the specialist at Dr. Pierce's Invalids' Hotel, Buffalo, N. Y., for free confidential medical advice or for free book on Women's diseases.—Adv.

That Any Time.

Soubrette—What are you going to do when you're old?

Ingenue—Be a chorus girl, I suppose.

Scientific Aspect.

"Do you believe in sanitary kisses?" "Certainly not." "What's in 'em for the germs of affection?"

Are Your Livestock and Poultry Free From Lice?

Don't use a liquid insecticide in cold weather. It is dangerous — Use Dr. David Roberts' DIOLICE and Poultry Louse Powder. Effective dry powders that are inexpensive and easy to apply, 60c and 35c. Read the Practical Home Veterinarian. Send for free booklet on Abortion in Cows. If no dealer in your town, write

Dr. David Roberts' Vet. Co., 100 Grand Avenue, Waukesha, Wis.

WESTERN CANADA LAND

Are you coming to Canada to farm? I have 50,000 acres of prairie land near the railway, suitable for wheat and mixed farming. Price $16 to $25 per acre. Also a number of improved farms at $30 to $60 per acre.

W. H. FLETCHER, Old Phoenix Bldg., Saskatoon, Canada

TYPHOID is no more necessary than Smallpox. Army experience has demonstrated the almost miraculous efficacy, and harmlessness, of Antityphoid Vaccination.

Be vaccinated NOW by your physician, you and your family. It is more vital than house insurance.

Ask your physician, druggist, or send for "Have you had Typhoid?" telling of Typhoid Vaccine, results from use, and danger from Typhoid Carriers.

GREAT DRIVE FOR SHIPYARD HELP

Call for 250,000 Volunteers to Aid in Speeding the New Merchant Fleet.

TO BE READY WHEN CALLED

Reserve Organization Formed to Complete Gigantic Program to Win War—Good Pay and Living Conditions.

The United States Shipyard Volunteers of the Public Service Reserve, a reserve organization of American mechanics, skilled workers in many lines of trade, has been formed to bring to completion the gigantic shipbuilding program necessary to win the war. Two hundred and fifty thousand workmen are to be enrolled and they will stand ready, when called to go to the shipyards and speed America's merchant fleet to completion.

An appeal for volunteers has been made by the department of labor, the council of national defense, the shipping board, the 20,000 four-minute men, governors of the various states, organized labor and business men. The aim is to fill all the present and future needs of the goverament's shipyards.

Pay of volunteers will be in accordance with the prevailing wage in the shipyards at the time they are called. Construction of houses for the workers is being pushed with energy, and the necessary homes will be ready when the men are called.

Preliminaries Are Arranged.

All preliminary work, such as the building of shipyards and shipways, construction of housing facilities, preparation and transportation of material, and the training of workmen, is being rushed to completion. Thus the organization of the shipyard volunteers is being hastened with energy and enthusiasm.

Volunteers are requested to go to the nearest enrollment agent of the public service reserve or state council of defense and sign up. Should there be no enrolling agent in the vicinity, they are asked to write to Edward N. Hurley, chairman of the United States shipping board, Washington.

Cards are issued to all applicants, bearing statements of the purpose of the shipyard volunteers, classifying them according to trades and asking signers to respond when called. Buttons will be given to volunteers bearing the inscription, "U. S. Shipyard Volunteers." This button is to be an honorary recognition of the wearer's willingness to sacrifice personal desires for public need. In addition, the worker will receive a certificate signed by Chairman Hurley, which reads:

> "This is to certify (name of volunteer) of (city, state), has enrolled in the United States Shipyard Volunteers of Public Service Reserve to aid the nation in its imperative needs for merchant ships with which to overcome the submarine menace and maintain our forces at the front."

Quota of Each State.

Each state has been assigned a quota, based upon the population and industries. The quota is as follows:

Maine	2,972	New Jersey	11,348
New Hamp.	1,638	Pennsylvania	32,771
Vermont	1,390	Ohio	19,802
Massachusetts	14,821	Indiana	10,847
Rhode Island	2,355	Illinois	23,662
Connecticut	4,786	Michigan	11,734
New York	39,526	Wisconsin	9,611
Minnesota	8,762	Alabama	8,994
Iowa	8,531	Mississippi	7,488
Missouri	11,812	Arkansas	6,022
North Dakota	2,584	Louisiana	7,064
South Dakota	2,393	Oklahoma	8,492
Nebraska	4,400	Texas	17,023
Kansas	6,330	Montana	1,583
Delaware	811	Idaho	1,621
Maryland	6,250	Wyoming	618
Dist. of Col.	1,390	Colorado	3,320
Virginia	8,453	New Mexico	1,428
West Virginia	5,327	Arizona	888
N. Carolina	9,264	Utah	1,660
S. Carolina	6,253	Nevada	886
Georgia	11,001	Washington	6,906
Florida	3,435	Oregon	3,264
Kentucky	8,260	California	11,310
Tennessee	7,952		

Trades Needed in Shipbuilding.

The department of labor has provided the following list showing the kind of trades most needed in shipbuilding, and a special appeal is addressed to men in those occupations to enroll in the United States Shipyard volunteers:

Acetylene and electrical welders, asbestos workers, blacksmiths, anglesmiths, drop-forge men, flange turners, furnace men, boilermakers, riveters, reamers, carpenters, ship carpenters, dock builders, chippers and calkers, electrical workers, electricians, wiremen, crane operators, foundry workers, laborers (all kinds), loftsmen, template makers, machinists and machine hands (all sorts), helpers, painters, plumbers and pipe fitters, sheet metal workers, coppersmiths, shipfitters, structural iron workers, erectors, bolters up, cementers and crane men.

Life's Inspirations.

There is no greater joy than the feeling that some act of ours has inspired another to be brave and strong. One of the beautiful things about right doing is that it is an inspiration to others. No life is a real success which has not scattered inspiration along the way.

Just Human Nature.

Another reason why a man is a man is because he would rather lose $50 in a speculation than 50 cents through a hole in his pocket.—Dallas News.

News of the State

Condensed for Busy Folks

Brainerd.—America lodge, Degree of Honor, initiated a class of 17 members, the work being done by the degree staff.

Mankato.—Miss Edith M. Vollmer of Sleepy Eye, who attended school in Mankato, died at one of the local hospitals, aged 23 years.

Brainerd. — Clara B. Bender, past grand president of the Degree of Honor, was present when America lodge of the order initiated 17 members.

Winona. — The employment of an agent for the Winona County Farm bureau, organized here under the federal aid proposition, was authorized by the county board.

Mankato. — The school of the Sisters of Notra Dame of this city has been bequeathed three valuable city lots by the will of the late Miss Nellie Thomson, a former resident of Mankato.

St. Peter.—Plans were discussed at the annual meeting of the directors of Gustavus Adolphus college for the opening of a Bible Institute and Chautauqua at the college during the summer vacation.

Cambridge. — The funeral of Irvin Barnum, Spencer Brook farmer, who was found shot to death in his home, having apparently taken his life with a shotgun while despondent, was held from the Spencer Brooks Swedish church.

Breckenridge. — Fire destroyed all the business places on Main street between the First National bank and the Wilkin hotel, including the postoffice, Pasko's drug store, Winkle's jewelry store, Walz Sisters' store and a new bakery.

Silver Lake. — The Silver Lake branch of the National Bohemian alliance in resolutions adopted at their monthly meeting have gone on record as opposed to the holding of National Nonpartisan league meetings in McLeod county.

Duluth.—The annual convention of the Minnesota State Surveyors and Engineers association was brought to a close with the election of officers. C. H. West of St. Cloud, last year's vice president, was selected to head the organization this year.

Pipestone.—An old spinning wheel, stored for sentimental reasons in the attic of the home of George Stenberg, a farmer living near here, has been brought out and is doing its bit toward winning the present war, even as it did in the War of the Revolution.

Akeley.—Government Indian agents here destroyed 475 gallons of cider which was found to contain 7 per cent alcohol. The cider was found, following a report by the suprintendent of schools that children in the grades had been intoxicated. No arrests have been made.

St. Paul.—More than 7,000,000 trout fry which now fill the state fish hatcheries at St. Paul, Glenwood and Detroit, will be distributed in Minnesota waters at once to make room for approximately 213,000,000 pike eggs which are to be hatched during May and then distributed.

Bemidji.—A working model of the "Kansas," the ship on which 25 Bemidji boys are stationed, is now being made by members of the crew and will, in the near future, be presented to the local Commercial club, according to James K. Givan and Carroll Hill, who have been home on a furlough.

Thief River Falls.—The men who departed from here for the National army training camp at Camp Dodge were guests at the largest dancing party ever held here. When the men entrained they were escorted to the railway station by the entire population of the city, added to by a large number of persons from the surrounding country.

Wheaton.—Red Cross workers here declare they still have to hear of a better knitter than Mrs. William Nordin. Mrs. Nordin is 70 years old and does all the housework for herself and son. Since the war began she has knitted 28 pairs of socks, 26 sweaters, 8 pairs of wristlets and 3 mufflers, which Wheaton workers claim comes pretty near being a national record.

St. Paul.—With only 23,433 deaths reported in 1917 among its 2,312,445 people, Minnesota is living up to its reputation as one of the most healthful states in the Union. The 1917 mortality rate of 10.12, or slightly more than one death in each 100 of the population, during the year, is regarded as a record showing, because, while an identical rate was previously recorded, it was several years ago, when the average age of the state was lower. The showing is excelled only by those in a few Western states, newly settled by young generations. The Minnesota rate last year was 11.40, and it placed the state far down in the list of mortality tables.

Hector. — Two social events have placed the Hector Red Cross auxiliary on a sound financial basis. The first of these, a home talent play, produced during the holidays, netted $172. A hard time social followed, including the auction of a quilt, a kangaroo court, lunch stands and other features. A trifle over $340 was netted at this event.

Minneapolis. — S. P. Stetler, 78 years old, a Minnesota pioneer, died at the home of his son, L. A. Stetler, 4314 Humboldt avenue north. He came to Lake City in 1866, and had lived in Minneapolis since 1886.

Fergus Falls.—Aslak [illegible] Teisberg, who died in this city recently, bequeathed a fortune of $30,000 to institutions connected with the Norwegian Evangelical Lutheran Church of America.

Crookston.—T. B. Degman, superintendent of this division of the Great Northern, has been transferred to Seattle. The vacancy is filled by L. M. Davis of Grand Forks, former trainmaster of that city.

Hawley.—Six horses were burned to death when the barns of the Felton consolidated school were destroyed by fire. Six large carryalls, used for taking the children to and from school, also were destroyed.

Cloquet.—The horse donated to the Red Cross by Al Prevost, now in the National army camp at Camp Dodge, now belongs to William Peterson of this city, the sum of $600 being realized for the society from the sale of the animal.

Bemidji. — Fully a thousand registered delegates and several hundred visitors will have to be entertained by the people of Bemidji June 13 to 16, when the 60th state convention of the Minnesota Sunday School association is to be held in this city.

Bemidji. — The Bemidji Military band has been officially designated as Eleventh Battalion band of the Home Guard by an order issued by Major Loring of Crookston. The band will take part in the summer encampment at the Red Lake Indian reservation July 4 to 7.

Lewiston.—The National Nonpartisan league meeting here was delayed eight hours because of breaking of a large bottle of formaldehyde in the hall a short time before the meeting was to have been called to order. Just how the bottle came to be in the hall and how it happened to be broken has not been determined.

St. Cloud. — The Court of Honor lodge held a county convention here and elected the following officers: County chancellor, Mrs. Nick Branch; county recorder, Mrs. Catherine George; county treasurer, Mrs. David Alexander. P. J. Seberger was elected as delegate to the state convention, with Carl Koch as alternate.

St. Paul.—Plans for the main building of the woman's state reformatory, Shakopee, were finally approved at a conference between the state board of control, state architect and the board of women visitors. The structure will include the administration offices and will cost about $100,000. Bids on the building contracts probably will be received next month. Work will be pushed to completion.

Hutchinson. — August Mueller of Lester Prairie entered a plea of guilty to the charge of blackmail and was sentenced to an indeterminate term in the St. Cloud reformatory by District Judge C. M. Tifft. Peter Feltmann, farmer, living near here, found a note demanding that $2,000 be left in his rural mail box if he desired to escape arrest because of the alleged fact he had a German flag is his possession. Mueller confessed writing the note.

St. Paul.—An agreement has been reached between Secretary of War Newton D. Baker and Judge Advocate General Enoch W. Crowder for a course of action which will relieve the men of the Second Minnesota artillery from personal draft under the selective service law. This agreement provides the regiment shall be designated for federal service, but will not be called into service, nor will any promise be made or any date set for their being called.

St. Peter.—Nicollet county's draft quota, which left for Camp Dodge, contains 26 farmers, 3 teamsters, 3 carpenter, 2 teachers, 1 telegrapher, 2 nurses, 2 clerks, 1 dentist, 1 painter, 1 printer, 2 brakemen, 2 machinists, 1 road boss, 1 linotypist, 1 bookbinder, 1 chauffeur, 1 miner, 1 undertaker. The St. Peter Business Men's association gave a banquet for them at the armory and I company acted as as escort to the train.

St. Paul.—More than half the 23,433 deaths in Minnesota reported in 1917, or exactly 12,650, were from preventable diseases. Tuberculosis led all other diseases in the class, and cancer and pneumonia, tied in second position, were charged with 1,900 fatalities each. January led other months last year with 2,491 deaths, and August with 1,559 deaths was last on the list. More than 2,000 deaths occurred during each of the first five months of the year, and June with 1,880 led the remaining months.

St. Paul.—Charged with being disloyal, Judge J. F. Martin, Mantorville, of the Dodge county probate court, has been suspended by Governor Burnquist pending an investigation. J. M. F. Cooper, also of Mantorville, was appointed acting judge. Judge Martin is accused of publicly stating his opinion that the war is all wrong and that the President is insincere, and otherwise being disloyal and discouraging enlistments. The complaint on which his permanent removal is asked is signed by eight Dodge county citizens and was filed with the State Public Safety commission.

St. Paul. — The Minnesota Retail Hardware association held its convention in St. Paul. Officers elected for the ensuing year are: President, O. V. Hanson, Rochester; vice president, H. E. Thielman, St. Cloud; secretary, H. O. Roberts Minneapolis; treasurer, H. C. Hertz, St. Paul.

Bemidji.—The validity of the Indian treaty affecting Northern Minnesota was upheld by the United States district court of appeals at St. Louis in the appeal of J. O. Harris of this city, convicted by the federal court in Duluth on a charge of introducing liquor into this dry territory.

Win the War by Preparing the Land
Sowing the Seed and Producing Bigger Crops
Work in Joint Effort the Soil of the United States and Canada

CO-OPERATIVE FARMING IN MAN POWER NECESSARY TO WIN THE BATTLE FOR LIBERTY

The Food Controllers of the United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat are available to be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rests the burden of supply.

Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operation.

Canada's Wheat Production Last Year was 225,000,000 Bushels; the Demand From Canada Alone for 1918 is 400,000,000 Bushels

To secure this she must have assistance. She has the land but needs the men. The Government of the United States wants every man who can effectively help, to do farm work this year. It wants the land in the United States developed first of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there.

Apply to our Employment Service, and we will tell you where you can best serve the combined interests.

Western Canada's help will be required not later than April 5th. Wages to competent help, $50.00 a month and up, board and lodging.

Those who respond to this appeal will get a warm welcome, good wages, good board and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had apply to: **U. S. EMPLOYMENT SERVICE, DEPARTMENT OF LABOR**

SPOHN'S DISTEMPER COMPOUND

STRANGLES

Or Distemper in stallions, brood mares, colts and all others is most destructive. The germ causing the disease must be removed from the body of the animal. To prevent the trouble the same must be done.

SPOHN'S COMPOUND

Will do both—cure the sick and prevent those "exposed" from having the disease. 60 cents and $1 a bottle; $5 and $10 the dozen. All druggists, harness houses, or manufacturers.

SPOHN MEDICAL CO., Manufacturers, Goshen, Ind., U.S.A.

Good nature that can survive an encounter with a grouch is most to be admired.

In 1869 there were in France 10,743 miles of railroad track; in 1912 there were 31,646 miles.

Conservation.

He—Will you meet me this afternoon for a little chat, dear?

She—No, Harold; this is one of my meatless days.

Dr. Pierce's Pellets are best for liver, bowels and stomach. One little Pellet for a laxative, three for a cathartic. Ad.

The Presbyterian board of foreign missions has 1,353 missionaries on its rolls.

Certain-teed Roofing

The most efficient roof

for factories, warehouses, office buildings, hotels, stores, garages, barns, out-buildings, etc. Made in shingle form for residences.

Certain-teed is weather-proof, clean, sanitary and fire-retarding. It is not affected by fumes or gases, and does not rust or corrode. Neither does it melt under the hot sun. Because it is lighter than other types of roofs, it requires less to support it.

Certain-teed is economical. Its first cost is low. It is inexpensive to lay, and it costs practically nothing to maintain. Guaranteed 5, 10 or 15 years, according to thickness.

There are many roll roofings, but there is only one *Certain-teed*. Remember the name by its meaning—Certainty of quality and Guaranteed satisfaction.

For sale by best dealers, everywhere.

CERTAIN-TEED PRODUCTS CORPORATION

Manufacturers of Certain-teed Roofing—Paints—Varnishes

160 ACRE FARMS IN WESTERN CANADA FREE

Scenes of Prosperity

Are Common in Western Canada

The thousands of U. S. farmers who have accepted Canada's generous offer to settle on homesteads or buy farm land in her provinces have been well repaid by bountiful crops of wheat and other grains.

Where you can buy **good farm land at $15 to $30 per acre—get $2 a bushel for wheat and raise 20 to 45 bushels to the acre** you are bound to make money—that's what you can do in Western Canada.

In the provinces of Manitoba, Saskatchewan or Alberta you can get a

HOMESTEAD OF 160 ACRES FREE

and other land at very low prices.

During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to the acre. Wonderful crops also of **Oats, Barley, and Flax. Mixed Farming** is as profitable an industry as grain raising. Good schools, churches; markets convenient, climate excellent. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Can., or to

The ELEVEN TOWNS
A. O. HALVORSON, Editor

Entered at the postoffice at Goodridge, Minn. as a second class mail matter.

Revs. Tungseth and Shultz have just finished the drive in the neighborhood to raise their quota of the $750,000 War Fund of the Lutheran Churches in America. They report very good success, which was to be expected and which is very encouraging. Let us stand back of our boys.

We are not advocating bloodshed when we say this, but we are in war and must realize it.

Fie upon him who now refuses support to our boys. He is not worthy of enjoying citizenship in this country. The Lutheran Church is as loyal as any church body and more than proves it by this praiseworthy undertakig which they have just finished. It is no more than right that those of us who adhere to the Luthern faith should stand back of our church in this matter and thus at the same time stand back of our government.

TO OUR FRIENDS.

Let those who are behind with their subscription remember that we need the money to bring our paper up to where it ought to be. Send it in without waiting for a statement. Get your friend and neighbor to subscribe. Not a family in eastern Pennington but ought to keep this paper. Push a good thing along. It will pay you to boost a booster.

Our space is limited at the present time, as long as we print only two pages at home. In the near future we hope to arrange for printing four pages, which will give us plenty of room. We must ask our correspondents not to get weary and quit, if they do not see their notes in the paper. Keep right at it and we shall insert what we have room for. We get so much matter from higher authorities that must be printed that we do not get room for all we like to. We are trying to get the paper out on time, so we can not receive any stuff for printing later than Wednesday morning. We ask our correspondents and advertisers kindly to remember this.

MADE-IN-GERMANY LIES CIRCULATED IN CANADA

Canada is also having trouble with Made-in-Germany lies calculated to hinder Canadian food conservation, according to an official statement received from the Canadian food controller by the United States food administration.

The stories bothering Canada are of the same general character as those the United States food administrator recently denounced in this country, such as the ridiculous salt and blueing famine fakes and the report that the government would seize housewives' stocks of home canned goods.

The Canadian food controller estimates that when the people listen to and pass on such stories, each one has the power of destruction that lies in a battalion of soldiers.

"Stories without even a vestige of foundation have been scattered broadcast," said the Canadian statement. "Nor have they come to life casually. They have started simultaneously in different parts of the country and in each instance have been calculated to arouse public indignation.

"They are insidious, subtle, persistent. Bit by bit they dissipate public trust, the great essential in the work of food control.

"It lies with every individual to forbear from criticism; to refrain from passing on the vagrant and harmful story, and thus the more effectively to co-operate in work which is going to mean more than the majority of people yet realize."

THE UNITED STATES FOOD ADMINISTRATION SAYS:

There is no royal road to food conservation. We can only accomplish this by the voluntary action of our whole people, each element in proportion to its means. It is a matter of equality of burden; a matter of minute saving and substitution at every point in the 20,000,000 kitchens, on the 20,000,000 dinner tables, and in the 2,000,000 manufacturing, wholesale and retail establishments of the country.

THE TORCH OF LIBERTY

War Savings Stamps

Get the Habit of Saving

IN Thrift Stamps and War Savings Stamps, the United States Government offers you the greatest opportunity to save which any government has offered to its people. Like Liberty Bonds, War Savings Stamps have behind them the entire resources of the Government and people of the United States. They have the additional advantage that they steadily increase in value, and this increase is guaranteed by the Government. These stamps are issued in two denominations, the 25 cent Thrift Stamp and the $5.00 War Savings Stamp.

A "Thrift Card" is furnished to all purchasers of 25 cent stamps. This card has spaces for 16 stamps. When all the spaces have been filled the Thrift Card may be exchanged for a $5.00 stamp at post offices, banks or other authorized agencies by adding 12 cents in cash prior to February 1, 1918, and 1 cent additional each month thereafter.

If you prefer, you may buy a $5.00 stamp outright. These were on sale January 31, 1918, for $4.12. They automatically increase in value a cent a month every month thereafter until January 1, 1923, when the United States will pay $5.00 at any post office or at the Treasury in Washington for each stamp affixed to a War Savings Certificate.

When you purchase a $5 stamp, you receive an engraved folder known as a "War Savings Certificate," which bears your name and can be cashed only by you. This certificate contains 20 spaces. If these are all filled with War Savings Stamps before January 31, 1918, the cost to you will be $82.40, and on January 1, 1923, the Government will pay you $100—a net profit of $17.60. This is based on an interest rate of 4 per cent compounded quarterly from January 2, 1918.

If you hold a War-Savings Certificate and find it necessary to cash it before maturity, you may at any time after January 2, 1918, upon giving 10 days' written notice to any money-order post office receive for each stamp affixed to your certificate the amount paid therefor plus 1 cent for each calendar month after the month of purchase of each stamp. A registered certificate may be redeemed, however, only at the post office where registered.

You cannot lose and are certain to gain. You are buying the safest security in the world in the most convenient form in which the security of a great Government has ever been offered to its people.

Why You Should Buy Them

Your country needs every penny every man, woman and child can save, in order to feed, clothe, and arm the soldiers and sailors of America to win this war in defense of American honor and democracy.

A Country worth fighting for is a Country worth saving for.

To save money is to save life.

Buy War Savings Stamps at post offices, banks, trust companies, or other authorized agencies and strike a blow for your Country.

VOLUME XIII. No. 10 GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, THURSDAY, MARCH 7, 1918. $1.50 PER YEAR

MINNESOTA HISTORICAL SOCIETY

Market Reports.

Goodridge, Minn.

Corrected every Wednesday.

Wheat	2.02
Oats	.81
Barley	1.35
Flax	3.43
Rye	2.00
Butter	.40
Eggs	.40
Vivo Flour	$5 50
Mascot Flour	5.50

POULTRY MUST PRODUCE A SURPLUS.

With the great shortage of breeding stock in the larger farm animals, it will be impossible to keep the production of "red meats" at normal for the present, but poultry is an exception which must be taken advantage of. While in Minnesota, poultry flocks have been reduced from 29 to 30 percent below normal, on account of high prices of feed, it is still possible to increase the chicken crop above the normal mark this year and it is our patriotic duty to do so. Not only is it our duty to produce all the poultry we can consistently handle, but we are reasonably assured that the Government will see to it that those who comply with the urgent requests of Uncle Sam to increase production, will be taken care of as regards reasonable profits on the same.

WHERE WE MUST LOOK FOR INCREASE.

There are just two sources from whence we can look for increased production of poultry and eggs: The farm and the back lot. Most of the farm flocks are smaller than usual, but the hen is the most prolific of all farm animals and greatly increased production is still possible. She will gather a large portion of her feed during the summer and save grain bills.

Back lot poultry however has been produced at one-fourth its capacity: therefore a great possibility in that line is open to the town and city dweller.

That the people will respond to the emergency call for greater production of poultry is evident from the interest taken everywhere.

Pennington County Should Speed-up on Fire prevention as Fire Loss is Growing.

The fire loss in Pennington County last year was $21,860 from 17 fires. This is an increase over the preceding year of $10,410 wilh 2 more fires, Geo. H. Nettelton, Chief Asst. State Fire Marshal.

While it is probably true that many of these fires were of such nature that they occurred despite precautions taken, still nothing should be overlooked at this time to keep down this loss.

The state and federal governments are doing their utmost to conserve resourcesand fire losses are coming to be distinguished as a menace that every citizen should guard against especially during war times.

TO WHOM IT MAY CONCERN

This is to advise those who are interested that the firm of C. GOODRIDGE

The most progressive and the [illegible] town in northern Minnesota.

DRY FORCES TO BE ORGANIZED

There are six things to be accomplished by the dry forces of Minnesota during the next twelve months, as the management of the Anti-Saloon League of the state sees it. The bringing to pass of these six things was begun several years ago, but completion of them is now to be sought, an official statement of the league says.

First, there will be the thorough organization of the dry forces for a winning fight. This organization is now in progress and has been completed in many counties.

Second, the carrying of the amendment to the state constitution, providing statewide prohibition, which will be voted on at the November election. The desired majority is 50,000.

Third, there must be elected a dry Senate and House, for the ratification of the nationwide Prohibition Amendment to the Federal constitution.

Fourth, in the mind of the drys, it is desirable to have passed a law providing proper penalties for violation of the dry Amendment to the state constitution.

Fifth, on the program is the enactment of a blind pig that will make enforcement simple, direct and effective.

In the sixth place, there must be insistence on law enforcement.

Can these things be accomplished? The League believes they can, and points to legislative achievements in the past as indicative of what may be realized in the future. These are the things which make up the record of three years:

Passage of a Roadhouse Bill abolisking all country saloons.

A County Option bill was passed permitting counties to abolish saloons. Under this law 47 counties have gone dry. Hennepin county cast 30,000 dry votes.

The Indian Treaty enforcement and Local option have made 13 counties dry.

Duluth, with 90,000 inhabitants voted dry twice, the second time by an increased majority. This closed 165 saloons. Approximately 1050 saloons have been ousted in the State.

All leading wet candidates for the State and National offices were eliminated at the primary elections in 1916.

The 1917 Legislature killed without mercy every wet measure introduced abolished the State inebriate asylum considering that it was no longer needed; refused to submit other constitutional amendments that might confer the voters in handling the dry amendment promptly passed a law abolishing wholesale distributing houses in rural districts; killed an effort to reduce the size of municipalities so that saloons could be restored in rural localities; killed the Nimocks Bill, granting clubs the right to sell liquor to members and their friends; passed the resolution submitting Statewide Prohibition to a vote of the people.

In its 1918 campaign the League will have mere than usual support from the National League organization.

T. Tharaldsen of Thief River Falls organizer for the Non-Partisan League spent last Friday and Saturday in this vicinity securing members for the League.

Word has reached us that on Feb. 2 a baby boy was born to Mr. and Mrs Fred Peterson of Calloway, Minn.

Rural School Notes

The High School Board Examination will be held throughout the Pennington County Rural schools on March 21st and 22nd. The State program is not out yet, but the examinations will presumably begin at 8 o'clock A.M. on those days. For the reason that the State only furnishes a limited number of sets of questions 27 in all certain schools most conveniently located have to be grouped together for the purpose of the examination. The schools will meet as follows: Dist. no. 37, 148, 166 Lilly B. Hoard, Krstka conductor; Dist. No. 56, 46, Mrs. Hilda Sande, Erie, conductor; Dist's. No. 219, 25 Esther Kellbary, Thief River Falls, conductor; Dist's No. 135, 2, Sophie Nelson, Thief River Falls; Dist's. No. 69, 99, Highberg, Wylie, conductor; 30, 28, Anna Adolph, Thief River Falls conductor; 12, 154, Anna Moengen, St. Hilaire, conductor; Dist's No. 11, 31, Esther Tandberg, Thief River Falls.

Not grouped—

Dist. 4, Margaret J. McCrum, Thief River Falls, Dist. 64 Alice Thompson, Thief River Falls, 29, Emma Tandberg, Thief River Falls, 147 Nellie Nelson Thief River Falls, 133 A. O. Brevik St. Hilaire, 178 Mabel Satre, St. Hilaire, 54 Agnes Elg, St. Hilaire, 149 E E. Anderson, St. Hilaire, Mrs. Bert N. Thorstad, St. Hilaire, 8 con. A. O Halvorson Goodridge, 70 Anna Paulson Goodridge, 57 Louise Furstnau Erie 50 Alfred Hermanson Erie, 59 Alma I Sether Erie, 52 Gertrude I Olson Rhoda, 39 Emma Hanke, Sunbeam, 35 Elva Bartlett Plummer, 37 C. S. McReynolds Highlanding.

Subjects will be taken in the following order:

Thursday March 21st:

Spelling

8th grade composition and Grammar covered in one examination.

American History.

Friday, March 22nd:

Arithmetic

Geography

The next Examination will begin Friday May 24th.

Respectfully submitted,
E A. Mostue.

THE COMMUNITY CLUB.

A Community Club for Goodridge and vicinity was organized last Friday evening. The meeting was held in the schoolhouse and was fairly well attended. Mr. Ross P. White, our county agent, was the speaker of the evening. His subject was "cooperation". He showed the difference between real and apparent cooperation, giving the principles which guide the successful operation of the former citing as an instance the great success which the Danish farmers have met with in their co-operative enterprises. In passing he dwelt briefly upon the reasons why we are at war and showed the necessity of cooperating with the government in the present crisis. After Mr. White's speech the organization was affected. A constitution was adopted and officers were elected. Stuart McLeod was elected president, Sam Rouze, vice president, Carl Christianson secretary & treasurer. The membership fee was placed at one dollar for the head of each family. Immediately after the meeting the officers got together and arranged for an illustrated lecture on potatoes and potato raising to be given at the schoolhouse Friday evening March 15th at eight o'clock P. M.

M. E. Swanson of Thief River Falls, distributor of the famous Elgin Six and agent for the Stetson Oil Co. products, spent last Saturday in Goodridge. We acknowledge a pleasent call and the receipt of the price for a years subscription to The Eleven Towns.

Star Notes

(Too late for last week).

Ole Hovet is visiting with his brother Tollef for a few weeks.

Oscar Thoreson and his nephew Stephen Thoreson of Erie were business callers in S. E. Star Saturday.

Henry A. Dahlen transacted business at Goodridge Saturday.

Mr. and Mrs. Ole Tharaldson entertained a host of their friends Sunday of last week.

Here is really a "water famine" in these tracts nowadays. Many of the ranchers are obliged to haul water for their stock from sources far away.

H. K. Bjorneras, Pete Kolstrand and the Anderson Brothers hauled baled hay to the market at Goodridge last week.

Ingvald Syverson and Peter Sunsdahl were in town last part of the week on a shopping trip, and among other things bought some snuff.

The Ole Burstad family has visitors from Plummer.

Ole Larson and Henry Bye marketed a large supply of butter at Goodridge on Saturday.

Mrs. Ole Sunsdahl of Erie, visited at the Vake home Sunday.

Miss Wold visited at Eckwall's Friday.

Joseph K. Enebo was a business caller at the Iverson farmstead Saturday.

A number of East Star residents attended the surprise party given in honor of Christ Vad family west of Erie on Saturday evening. They were the recipients of a fine set of dishes.

Mr. and Mrs. Theodore Hyland of Erie were pleasant callers in S. E. Star Sunday, and incidentally "Ted" narrated that his neighbor Mr. E. A. Tanner had the good luck of bagging a wolf on his way home from town Friday.

THE PRINTRES NIGHT OUT.

This bill bearing the signature of "Will Quit Work" has been going the rounds of the press and purports to be a Missouri auction sale, giving evidence of what queer combinations can be made by a printer who is suffering from the effects of a night out and badly mixes his type. The bill announcing the sale includes the following:

Twenty-five good cows, broke to work; 41 head of cultivators, coming in soon; 10 head shoveling boars, with scoop by side; 9 piano mares; 20 rec canvass belting; better than new: DeLaval cow with ice cream attachment, McCormick binder in foal; Poland China bobsled due to farrow in April; 14 head of chickens with grass seed attachment, in good working order 5 billy goats good as new; 70 bushels capacity; many other articles too numerous to mention which I expect to get at night between now and the date of this sale. Grygla Eagle.

A caucus for the purpose of putting up a ticket for the village election next Tuesday will be held in the Goodridge Hall, Friday evening, March 8 at 8 o. clock sharp.

The High Landing Branch of The Red Cross will hold an auction sale on March 16, at 8 p. m. in the schoolhouse one half mile west of High Landing Everyone is invited to come and bring anything, no matter how small, which they wish to donate to the Red Cross. These donations will be sold at auction. You have something which you do not use that your neighber needs. A lunch will be served after the auction at 25cts a plate Come and do your bit.

A NATIONAL DUTY.

The Treasury of the United States has a great deal of money to raise and it can not be raised by bankers alone says Secretary McAdoo. The banks of this country can not alone sustain America's needs in this war and extend to our allies the essential aid which they must have to continue the war.

The rich of this country cannot do it alone: the men of this country can not do it alone; the women of this country can not do it alone; but all of us, the people of the United States, disregarding partisanship, forgetting selfish interests, thinking only of the supremacy of right and determined to vindicate the majesty of American ideals and secure the safety of America and civilization, can do the great and splendid work which God has called upon us to do.

RED CROSS NOTES.

Last Friday afternoon a large number of ladies were present to do surgical dressings work. The increased attendance is very encouraging, However a still better showing could and should be made. The need is great, if we only realize it. The excuse that many have that they are too busy or do not like the work becomes very flimsy to say the least, when we consider the fact that those for whom the work is done give not only their time, but their comfort, their health, and, in many cases, their lives for the great cause. As Mr. White put it in his talk to the Community Club the same evening: Will the boys in the trenches be proud of what we do? In fact, are we proud of it ourselves? The names of those present follow: The Mesdames Schultz, Edseth, Tvedt, Otte Gulrud, Ferdinandson, H. Halvorson, Thoreson, Palmer, Yohn, McDonald, Vaughan, B. Johnson, A. O Halvorson, Payne, McLeod Bundhund, and the Misses Greta Gulrud, Mabel Tweeten, Anderson, Giefer, and Murray. Thirty six bandages were completed.

A report of the last month's activities follows:-

130 bandages, 4 pair wristlets, 3 pair socks, 4 knitted washcloths, 5 sweaters

The branch now has 119 members. There are still a few who have not yet become members. These ought to wake up to the situation and join.

Collecting cancelled postage stamps for the Red Cross should not be undertaken or aided. The stamps are of no use to the society, says the headquarters.

BRITISH GOVERNMENT HELPS PAY FOR BREA

There has been much misund standing about the bread program England. It is true that the English man buys a loaf of bread for less th an American can, but it is poss bread, and the British government paying $200,000,000 a year toward th cost of it.

All the grain grown in Great Br ain is taken over by the governme at an arbitrary price and the importe wheat purchased on the markets the prevailing market price. This turned over to the mills by the gover ment at a price that allows the ad terated war bread loaf of four poun to sell at 18 cents, the two pound lo at 9 cents and the one pound loaf at cents.

In France, under conditions so what similar, but with a larger e traction, the four pound loaf sells 16 cents.

Eggs	.40
Vivo Flour	$5 50
Mascot Flour	5.50

POULTRY MUST PRODUCE A SURPLUS.

With the great shortage of breeding stock in the larger farm animals, it will be impossible to keep the production of "red meats" at normal for the present, but poultry is an exception which must be taken advantage of. While in Minnesota, poultry flocks have been reduced from 29 to 30 percent below normal, on account of high prices of feed, it is still possible to increase the chicken crop above the normal mark this year and it is our patriotic duty to do so. Not only is it our duty to produce all the poultry we can consistently handle, but we are reasonably assured that the Government will see to it that those who comply with the urgent requests of Uncle Sam to increase production, will be taken care of as regards reasonable profits on the same.

WHERE WE MUST LOOK FOR INCREASE.

There are just two sources from whence we can look for increased production of poultry and eggs: The farm and the back lot. Most of the farm flocks are smaller than usual, but the hen is the most prolific of all farm animals and greatly increased production is still possible. She will gather a large portion of her feed during the summer and save grain bills.

Back lot poultry however has been produced at one-fourth its capacity, therefore a great possibility in that line is open to the town and city dweller.

That the people will respond to the emergency call for greater production of poultry is evident from the interest taken everywhere.

Pennington County Should Speed-up on Fire prevention as Fire Loss is Growing.

The fire loss in Pennington County last year was $21,860 from 17 fires. This is an increase over the preceding year of $10,410 with 2 more fires, Geo. H. Nettelton, Chief Asst. State Fire Marshal.

While it is probably true that many of these fires were of such nature that they occurred despite precautions taken, still nothing should be overlooked at this time to keep down this loss.

The state and federal governments are doing their utmost to conserve resources and fire losses are coming to be distinguished as a menace that every citizen should guard against especially during war times.

TO WHOM IT MAY CONCERN

This is to advise those who are interested that the firm of C. Gustafson & Son of Thief River Falls has the exclusive right to sell Avery tractors, threshing machines, and plows in the territory tributary to Thief River Falls, Germantown, and Esplee, Minn. They are our only representatives in this territory.

INTENTIONAL DUPLICATE EXPOSURE

JAPAN ASKED TO INVADE SIBERIA

British, French and Italian Ambassadors Request Safeguarding of Allied Interests.

UNITED STATES SILENT

No Opposition to Plan is Expected From America, However—Act, Then Talk, Is Probable Program.

London, March 6.—According to the Daily Mail, the British, French and Italian ambassadors in Tokio have been instructed to jointly ask Japan to take the necessary steps to safeguard Allied interests in Siberia.

The newspapers added that the American ambassador was not expected to join the request, but that no disturbing conclusions are to be drawn from this fact, as no American opposition is expected.

Act, Then Talk, Believed Plan.

Washington, March 5.—Military action by Japan in eastern Siberia to check German influence and to protect war stores at Vladivostok is believed here to be imminent.

The United States has not yet expressed its views on the proposed step, but it was said in diplomatic quarters that the Japanese probably would move quickly to meet emergency conditions, leaving to the pending diplomatic exchanges development of an understanding with America and all the Allies upon the scope and purposes of the enterprise.

While it has no direct bearing upon the situation in Asiatic Russia, the news which came to the Swedish legation that Germany has given notice of her intention to occupy the whole of Finland will tend to hasten an agreement upon Japan's plans.

Indicates German Arms, View.

The German explanation to the Swedish foreign office, which has protested against the proceeding that the occupation is to restore order and without intent to take permanent possession, is regarded as a very clear indication of what the Teutons may undertake in any part of Russia now that the Bolsheviki have been forced to accept their onerous peace demands.

Officials and diplomats here profess ignorance of what preparations have been made by Japan for the operations about to be undertaken. As a matter of course, secrecy has bene observed and a strict censorship in regard to the Siberian question is in force at Tokio. Possibly the next word to come out of Japan on the subject will be an announcement of something accomplished.

Other Powers Couldn't Aid.

It has been stated in official quarters that it is no concern of the Allies, nor of America, how Japan goes about the task, once the question of policy is settled. If the decision is reached to give Japan a free hand in eastern Siberia, it is now conceded [illegible] is in position to tender her any substantial aid, owing to the lack of available forces.

In a diplomatic way the situation has remained unchanged since the middle of last week. The State department has not indicated to the Japanese government what may be its view of the new situation created by the signing of peace articles by the Bolsheviki.

The statement made recently by Viscount Matono that Japan had a working agreement with the Allies and America in regard to this question, it is said, has been taken too literally. Officials say that the viscount probably meant there is a sympathetic agreement on the subject.

ARGENTINA READY TO AID

Belief Prevails That Nation Will Help Allies.

Buenos Aires, March 6.—Obviously officially inspired articles in the newspapers here indicate that Argentina is on the eve of a radical change of front as regards the world war. These articles, however, do not make clear whether a rupture with Germany is to be brought or whether Argentina's efforts will be confined principally to the purchase and shipping of supplies to the Allies.

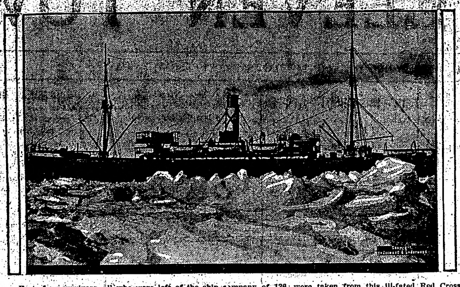
The general belief is that any change on the part of Argentina will be an economic and not a political one.

The newspapers argue that Argentina can not aid the Allies with men, but that she can do so with supplies. The government now is treating with American and British diplomats for a treaty covering meat shipments similar to the recently signed cereal convention.

1917 Fire Losses Heavy.

Trenton, N. J., March 5.—Losses from fire aggregated $230,000,000 in 1917, and were larger than in any previous year, except one, 1906, in the nation's history, according to a communication received by the New Jersey Council of Defense from the Council of National Defense. The San Francisco earthquake and conflagration occurred in 1906. The rapidity with which fire losses are mounting is emphasized by the statement that the 1917 damage exceeded by $30,000,000 that of previous years.

RED CROSS LINER FLORIZEL WRECKED ON THE REEFS NORTH OF CAPE RACE, N. F.



Forty-four survivors, all who were left of the ship company of 136, were taken from this ill-fated Red Cross liner Florizel, which struck a reef north of Cape Race, N. F., during a terrific blizzard. The survivors were taken off by the crew of the Prospero, which was sent by the government to the scene with special life-saving apparatus. Of the rescued, 17 were passengers; only two of the 12 women and none of the four children were saved. The Florizel is shown here as an ice breaker in New York harbor. The vessel has a steel prow, backed by concrete, and during the recent cold spell it broke ice in the lower bay and opened traffic to coal barges.

SHELL SLAYS SAMMIES

Foe Makes Direct Hit With Fatal Results.

Missle Strikes Half-Ruined House Where Americans Were Sheltered.

With the Amreican Army in France, March 5.—Shell fragments, when the Germans scored a direct hit on a half-ruined house in a village just behind the American lines killed several American soldiers and wounded several.

American patrols were sent out in the night to bring in and bury the dead, including Germans—lying in the barbed wire in No Man's land, victims of the battle resulting from the German raid.

Germans Claim Success.

Amsterdam, March 4.—Complete success in the attacks made upon the American troops along the French front is claimed in the German simiofficial supplementary war report relating to the fighting from March 1 to 3.

FOURTH CAMPS FOR OFFICERS

To Be Opened in May, But Locations Not Yet Decided.

Washington, March 5.—The fourth group of officers' training camps will open early in May, it has been learned. Only men from the ranks of the army will be accepted.

The number to be trained has not yet been decided, nor the location of camps. It is probable, however, that 20,000 men will receive instructions in 20 divisional camps.

The problem of supplying enough officers for all the branches of the service is pressing. The demands of such branches as aviation, ordnance, signal corps and others have been such that scores of officers have been transferred almost daily to fill up those services.

SOCIALISTS CHEER WILSON

Indorse War As Result of Teuton Russian Invasion.

New York, March 4.—The first tangible evidence of a revulsion in feeling toward pro-German pacifism among radicals in America as the result of the Prussian invasion of Russia was manifested at a great gathering of socialists here.

The audience cheered the war and Woodrow Wilson and adopted almost unanimously a demand that all socialists of America unite in support of the war as the only practicable means of saving ideals of democracy from Teutonic obliteration.

GEN. CRUSE IS EXONERATED

Employer Says Army Had Notice of His Employment.

Chicago, March 5.—Henry H. Lippert and his son, Ralph H. Lippert, manufacturers' agents arrested for alleged payments to Brigadier General Cruse, U. S. A., retired, in connection with aid in army contracts, have been released on $10,000 bonds each.

The elder Lippert absolved General Cruse of wrongdoing although he admitted he paid General Cruse $300 a month to take care of the Lippert interests in Washington.

Suspect Taken in Alien Plot.

Salt Lake City, Utah, March 5.—A plot to release the German aliens at the war prison barracks at Fort Douglas and to destroy public buildings in Salt Lake City, has been revealed, the police believe, through the arrest of Frank Dimok, alias Peterson, a German subject, at the police station. The arrest was effected when Dimok applied for his registration card. In Dimok's possession were found a secret code, a map of Salt Lake City, with arrows pointing toward Fort Douglas and the capitol.

FRENCH PIERCE GERMAN'S LINE

Surprise Attack Brings Gain of One-Third Mile Over One Mile Front.

150 TEUTONS TAKEN

Enemy Begins Heavy Bombardment of British Around Lens—Americans Are Let Alone for Present.

Paris, March 5.—The French carried out a surprise attack east of the Meuse at the Colonne trenches and penetrated as far as the fourth German line on a front of nearly four-fifths of a mile and to a depth of more than a third of a mile, the war office announces. The French captured more than 150 prisoners.

No More Attacks on Americans.

Since Sunday the Germans have left the Americans in comparative peace in their sector near Toul. Probably finding that their attempted forays were too costly, they have failed to launch further attacks, and even have cut down materially their artillery fire and gas shell bombardments. Again, the American gunners have worked havoc among the Germans by heavily shelling a large cantonment where troops were assembling.

Near Warneton, southeast of Ypres, the Australians have carried out a big raid against enemy positions, killing at least 50 of the German defenders, destroying dugouts and bringing in prisoners.

Around Lens the Germans have begun a rather intensive bombardment against the British troops besieging the great coal center.

THIRD LIBERTY LOAN DATE SET FOR APRIL 6

Campaign to Open on Anniversary of America's Entry Into War.

Washington, March 4.—The third Liberty loan will open April 6, the first anniversary of the United States' entry into the war. There will be a campaign of three or four weeks.

In announcing the date Secretary McAdoo said the amount of the loan, the interest rate, and other features, such as convertibility of bonds of previous issues, maturity and terms of payment, are yet to be determined, and that new regulations will be necessary before the plans can be completed.

Seed Wheat Assured At Fair Price For Farmers

Minneapolis, March 5.—Northwest farmers will get all the seed wheat they need and there will be no famine prices, Frank L. Carey, head of the Minneapolis office of the Food Administration Grain corporation, says in a statement outlining conditions.

Minotto Not to Be Deported.

Washington, March 4.—Evidence against James Minotto, charged with being a German agent, has been turned over to the Department of Justice by Assistant Secretary of Labor Louis F. Post, who ruled that it was insufficient grounds for deportation. Minotto, who is the son-in-law of Louis F. Swift of Swift & Co., Chicago, will remain under a $50,000 bond and the deportation warrant will be maintained until Attorney General Gregory decides whether or not he can issue a separate warrant for his arrest.

GERMAN PEACE SIGNED

Revised Russian Treaty Benefits Turkey.

Bolsheviki Claim Further Delay Would Mean More Serious Conditions—Hasten to Affix Signatures.

Berlin, March 5.—The Germans in their advance through Russia have captured, according to the official communication from General headquarters, 6,800 officers and 57,000 men, 2,400 guns, 5,000 machine guns, thousands of motor vehicles, 800 locomotives and thousands of railroad trucks.

Treaty Is Signed.

London, March 5.—According to an official statement from Berlin Russia has bowed to the Teutonic allies. The Bolsheviki commissioners sent to Brest-Litovsk have signed the treaty of peace presented by the Germans. The statement adds that military movements in East Russia have now ceased.

At the same time reports from Poland by the way of Amsterdam, say Leon Trotzky, the Bolsheviki foreign minister, did not return to the peace conference at Brest-Litovsk because Germany objected to his continuance as a Russian delegate. It is stated that Trotzky's resignation will be forthcoming as a result.

$500,000,000 FOR AIRCRAFT

Huge Sum Asked of Congress by War Secretary.

Washington, March 5.—Further appropriations of $450,000,000 for the army aircraft program in addition to 3640,000,000 already authorized is asked of Congress by the War department.

The War department informed the Senate military committee that more than $640,000,000 already had been spent and $200,000,000 more is immediately needed. General Pershing frequently makes requests in conection with aviation work, for which no funds are immediately available.

The request promises to give impetus to the inquiry by the Senate military committee into the aircraft program.

DRIVE FURTHER IN PALESTINE

British Advance 3,000 Yards on Twelve Mile Front.

London, March 5.—British troops, operating north of Jerusalem in Palestine, have made an advance along a front of 12 miles to a maximum depth of 3,000 yards, astride and west of the Jerusalem-Nabulus road, the war office announces.

In the month of January, says an official statement just issued, the Germans dropped 1,482 bombs in the area occupied by British troops in France. In the same period British aviators dropped 7,653 bombs in the enemy area.

TEUTON TROOPS TO FINLAND

London, Mach 5.—Germany is sending troops to Finland, says an official statement issued at Stockholm, Reuter's correspondent at the Swedish capital reports. The Aland Islands will be used as a temporary base of operations, the statement adds.

399 Added to U. S. Merchant Marine.

Washington, March 4.—The growing American merchant marine was increased by 399 seagoing vessels in the last six months of 1917, government officials say, or an average of more than two a day. Many of the vessels were built in the United States having been under construction for foreign accounts and taken over by the American government. Others were interned German ships, but the large steamers like the Vaterla which was commandeered by the navy, are not included in the total.

TUESDAYS ONLY MEATLESS DAYS

Ban on Beef and Pork Is Raised, Except One Day Each Week, To Save On Wheat.

NEED MORE OF LATTER

Allies Make Increased Demand for Foodstuffs and Change is Expected to Curtail Consumption of Cereal.

Washington, March 5.—The food administration announces a temporary suspension of the meatless meal and of the special restrictions against the use of pork on Saturdays, as a readjustment of its food conservation program. Increased meat production and the necessity for still greater saving in wheat, it is declared, make the change advisable.

Since all restrictions on consumption of mutton and lamb had been lifted previously the administration now asks the public for the time being to deny itself only beef and pork on one day a week—Tuesday.

Increased meat consumption, officials believe will itself curtail the use of wheat and for the present there is no intention to add to the restrictions already in force against the use of flour.

More Wheat Needed.

In a statement Food Administrator Hoover said:

"The Allies have made further and increased demands for foodstuffs, these enlarged demands being caused to some degree by shortage in arrivals from the Argentine. It is, therefore, necessary to urge a still further reduction in the consumption of bread and breadstuffs generally, if we are to meet our export necessities.

"Experience shows that the consumption of breadstuffs is intimately associated with the consumption of meat. For various reasons our supplies of meat for the next two or three months are considerably enlarged and we can supply the Allies with all of the meat products which transportation facilities render possible and at the same time somewhat increase our own consumption. In these circumstances, the administration considers it wise to relax the voluntary restrictions on meat consumption to some extent with a view to further decreasing bread consumption.

Tuesday Still Meatless.

"So long as the present conditions continue the only special restrictions we ask are the beefless and porkless Tuesday.

"The meatless meal and the porkless Saturday are no longer asked."

ROOSEVELT MAY BE DEAF

Physicians Fear Hearing in One Ear Is Gone.

New York, March 5.—Col. Theodore Roosevelt, who has been a patient at Roosevelt hospital, will leave the hospital and take up quarters in a hotel, where it is expected he will remain for several days, and then, if his convalescence continues, he will go to his home in Oyster Bay.

At the hospital fear was expressed that he may be permanently deaf in his left ear.

Col. Roosevelt has expressed his determination to fill speaking engagements in Maine on March 28, and his physicians say they believe he will be able to do so, providing he exercises due caution.

THREE COUNTRIES MAY TURN

Norway, Spain and Argentina May Come Out Against Kaiser.

Washington, March 5.—Norway as well as Spain and Argentina, within a very short time, may be definitely aligned against Germany.

Advices which have reached Washington during the last few days were summed up into this probability when they were compared side by side. High officials admit that this contingency is full of the greatest importance in the political conduct of the war.

SEED LOAN BILL NOT DEAD

Washington, March 4.—The Bacr bill providing $50,000,000 for the purchase of feed and seed for farmers on credit will be reconsidered by the House agricultural committee.

The bill was rejected by the committee, but strong pressure upon Chairman Lever now seems to assure a favorable report. Mr. Lever cast the deciding vote against the bill.

Profiteers to Lose U. S. Posters.

Minneapolis, March 4.—Food administration posters will be removed from stores found charging excessive prices for food, it is announced by A. D. Wison, federal food administrator for Minnesota. This will be done under instructions from Washington, which require also that the name of the offending merchant be reported to Washington headquarters for further action. Agents under Mr. Wilson are checking up merchants in Minnesota to get the names of those not displaying the food administration posters.

LYNDON SMITH IS DEAD

Attorney General of Minnesota Passes Away.

Had Been Stricken With Paralysis, and Never Regained Consciousness.

St. Paul, March 5.—Lyndon A. Smith, attorney general of Minnesota, died at 1 a. m. Tuesday at his residence at the Marlborough apartments, St. Paul. He was 63 years old.

Mr. Smith suffered a stroke of paralysis just a week ago and never regained complete consciousness. His fatal illness came suddenly, following several months of excellent health.

Lyndon A. Smith

He was stricken after he had reached his home at the close of the day's work.

His death closes a life-long career spent in public service, more than a quarter of a century of which was spent in Minnesota. Previous to that he had been in the service of the federal government.

Attorney-General Six Years.

Mr. Smith had been attorney-general a little more than six years. He was appointed to the office by Governor Eberhart, January 1, 1912, to fill a vacancy caused by the resignation of George T. Simpson. At that time he had been assistant attorney-general for three years. From 1899 to 1903, he had served as lieutenant-governor of the state.

Mr. Smith's illness, at first regarded by his physicians as probably fatal, assumed a less serious aspect later on, and the progress he seemed to be making from day to day gave rise to hopes that he would recover. He appeared to improve up to Sunday when he suffered a sudden relapse, and it became evident that the end was near.

TO STOP VOTING BY ALIENS

Punishment Urged by Hennepin Judge—Draft Opponent Hit.

Minneapolis, March 5.—Alien voting in Minnesota elections must stop and aliens who have exercised the elective franchise must be punished, according to the seriousness of their offense as shown by evidence, District Judge Daniel Fish has just told the new Hennepin County grand jury in his charge.

Judge Fish also told the grand jury to put an effective stop to opposition to the draft and to such attacks on the government as will hinder the prosecution of the war.

Minnesota aliens who have refused to register as directed by the Minnesota Public Safety commission should be interned for the period of the war, State Auditor J. A. O. Preus contends. He already has the names of a number said to have failed to register.

PRISON TWINE PRICE FIXED

Farmers Expected to Save $400,000 Despite Advance.

St. Paul, March 4.—Minnesota state prison binder twine prices of from 21 cents to 26 cents a pound, compared with 13 to 15 cents last season, have been fixed by the state board of control at a conference with Warden C. S. Reed. Despite the increase in prices it is estimated the prison twine output of 18,800,000 pounds will mean a 1918 saving of $400,000 to Minnesota farmers on the basis of government fixed maximum prices.

Chairman Ralph W. Wheelock of the board of control said prison twine last season was sold at times at prices 6 cents below the market quotations on raw material, and nearly 7 cents below prices of private manufacturers.

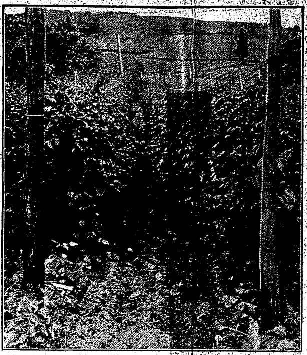
Republicans Win Mayoralties.

Portland, Me., March 5.—Republican mayors were elected in seven of the nine cities which voted in this state Monday.

Must Entertain Soldiers.

Washington, March 5.—Representative Miller, of Minnesota, who visited the battle fronts in France last year, told the House that the United States must make provision for the entertainment of its soldiers when on leave from the trenches. France and Great Britain, he said, have recognized the necessity of allowing their soldiers to go home whenever requirements will permit, and added that because they can make frequent visits home they are more contented than the Canadians, Australians and others.

IMPORTANT SYSTEMS OF CULTURE USED IN GROWING GOOD CROP OF RASPBERRIES



FIELD OF SEVEN-YEAR-OLD EMPIRE RED RASPBERRIES.

(Prepared by the United States Department of Agriculture.)

Three systems of culture are used in growing raspberries, the hill, the linear, and the hedge systems. The term "hill system" is restricted to that method of tillage in which the horse cultivator is used on all sides of each plant. When the cultivator is run in only one direction and only the plants originally set are allowed to fruit, the term "linear system" is used. If some of the suckers which come from the roots of red raspberries are left to form a solid row and the cultivator is run in one direction only, the term "hedge system" is employed.

The distance between the rows in each of these systems should be determined by economy in the cost of cultivation and in the use of land. Where the area of land available for planting is not limited, usually it will be found most desirable to make the spaces between the rows wide enough to allow the use of two-horse implements in cultivation. Where the area of land is limited, the rows may be placed closer together and one-horse implements used.

Planting Distances.

Under the hill system of culture the plants usually are set about five feet apart each way. This, however, allows the use of one-horse cultivators only. This is used to some extent in New York and other states in raising red raspberries. It has the advantage of requiring less handwork in keeping out grass and weeds, as the cultivator can be run in both directions; and the berries can be more easily harvested from fields under this system.

If the hedge or linear system is used, the horse cultivator can be run in one direction only and more hoeing is necessary. Under these systems the red varieties usually should be set from 2 to 3 feet apart in rows which are 6 to 8 feet distant. In the eastern United States 6 feet is the most common and desirable distance between the rows for the shorter caned varieties, such as the Ruby and Marlboro, and 7 and 8 feet for the tall-caned varieties, like the Cuthbert. To use two horses in a plantation the rows must be at least 8 feet apart. In the Pacific northwest, where the canes grow very tall, the planting distance for red raspberries is usually 2½ by 7 or 8 feet. In parts of Colorado and other states where irrigation and winter protection are necessary, the plants are usually set in rows which are 7 feet apart.

System for Black Variety.

Black raspberries are nearly always grown under the linear system, and in the United States east of the Rocky mountains they should be planted in rows 8 feet distant and 3 or 4 feet apart in the row. In Oregon and Washington they should be planted in rows 7 or 8 feet distant and from 3 to 6 feet apart in the row, depending upon the vigor of the growth in the particular locality.

The purple varieties also are grown under the linear system and should be planted 4 or 5 feet apart in rows which are 7 or 8 feet distant. The Columbian and other purple varieties of equal vigor should be at least 5 feet apart in the row, but the Royal may be set 4 feet apart.

If the plants are checked in both directions when set in accordance with either the hedge or linear system, and are 3 or 4 feet apart in the row, it is possible to run a one-horse cultivator both ways for the first year. This will save much work and reduce the first year's expense.

In some sections, two plants of red raspberries are set together. This insures the grower against misses, and a larger crop is secured when the plantation is one year old. It will cost nearly $20 more per acre to buy and set the extra plants, but in some sections the additional yield will make it profitable. However, if care is taken in setting, one plant in each place is usually sufficient.

Setting the Plants.

Before planting, the tops of the plants of all types should be cut back to 6 inches or less in height. To make it easy to handle the plants and to indicate the rows after setting, 4 to 6 inches of the cane should be left. If a garden patch is being planted, it is better to cut the canes back to within a few inches of the leader buds. The plants should be set slightly deeper than they formerly grew. Sometimes it is well to set red raspberries as much as 8 inches deeper than they grew, in order to protect them from drought. Black and purple raspberry plants should be set not more than an inch or two deeper than they formerly stood, as there is danger of smothering the tips.

PRESERVATION OF SOFT CORN

Farmers Should Work It Over, Remove Any Damaged Ears and Put in Ventilators.

(Prepared by the United States Department of Agriculture.)

Soft corn which has been stored in large cribs during cold and freezing weather without specially improvised ventilators, is practically certain to get out of condition as soon as the weather warms up in the spring. To preserve such corn farmers should work it over, remove any damaged ears, and put in ventilators.

The best way to dispose of soft corn is to feed on the farm all that can be consumed to advantage, but don't waste it.

The concentration of shelled corn in country elevators during the next few months is practically certain to lead to disaster unless it can be transported to feeding centers or to terminals for drying before what is popularly known as the germinating season.

Whenever practicable the drying temperature should be lowered and the time of drying increased, to prevent excessive breakage.

All old corn should be carefully saved for seed, as the bulk of the present crop in the northern states will be unfit for planting.

Do not delay the securing of suitable seed.

Do not plant any corn without first knowing its germination.

NECESSARY TO SAVE MANURE

Sometimes Overlooked by Small Farmer Who Is Just Starting in Live Stock Business.

Save manure. The necessity for this is sometimes forgotten by the small farmer who is just starting in the business of live stock production. Fertilizer is scarce, high in price, and hard to get for any reasons. Therefore, the more manure saved to apply to the land the less need for fertilizer.

FARM REFLECTIONS

When the average man wants to quit is the time to get interested in horse production.

Gumption is ability to put the grease where the squeak is. Are you onto your job?

Stock raisers should agree as to what breed best fits their locality, and then stick to that breed.

Rats in the grain bin are almost as destructive as a bull in a china shop. A rat-proof granary is a national bulwark these days. Don't neglect it.

Many county fairs are apparently run in the interest of the fakir rather than of the farmer. A general overhauling is in order if they are to serve efficiently the object for which they were established.

Feeding Corn Alone.

Corn, when fed alone to young pigs, produces relatively slow gains at a high feed cost.

Avoid Damp Litter.

Litter that is damp and dirty may cause sickness in the flock.

GOOD ROADS

FAME FROM ITS GOOD ROADS

Improved Streets, Smooth and Dustless Highways Around Philadelphia Advertises City.

Good streets and smooth, dustless country roads, have been a means of advertising and giving added importance to Philadelphia, not only throughout the United States and Canada, but abroad, according to William H. Connell, chief of the bureau of highways, Philadelphia Inquirer states.

Highway experts from scores of American and European cities, as well as engineers representing practically every state in this country, have studied the progress made by Philadelphia in dealing with one of the greatest of municipal problems, that of road construction and maintenance, and have requested information regarding the specifications used, the processes followed and other data pertaining to the work as carried on in this city, Chief Connell said.

Improved Road Near Philadelphia.

Within the limits of the city, motorists, most critical of road users, can travel for more than 150 miles by diverse routes, without experiencing the slightest difficulty because of poor roads or dusty ones, the head of the highway bureau asserted. Visiting tourists, impressed by this fact, have heralded the reputation of Philadelphia as the city of good roads throughout the country, he said. The improvement, in many instances, has been made at comparatively little expense by means of surface treatments, varied to meet the demands of the occasion, he pointed out.

GROWTH OF IMPROVED ROADS

Inventions, Discoveries and Public Improvements Come When There Is Strong Demand.

The history of good roads affords a striking example of the fact that inventions, discoveries and public improvements take place only when there is an insistent demand for them. In early times, when each family lived largely to itself, there was little commerce in the articles produced on the farm and consequently little need for transportation. As large cities developed the demand for roads on which products might be easily transported grew.

Two of the most recent causes for the improvement of roads have been pleasure vehicles. Twenty-five years ago the bicycle began to come into common use and the cyclists made a vigorous demand for roads on which they might ride. Unfortunately, however, paths for bicycles were constructed in many places in lieu of improved roads. The invention of the automobile, however, has meant a real step toward better roads.

GET GOOD HIGHWAY SYSTEM

Not Difficult Problem If County or Township Is Willing to Use Common Sense.

How to get a good road system is not a difficult problem, if a county or township is willing to be guided by common sense. The first step is to employ a competent highway engineer. He will make a study of traffic conditions, ascertain where the main market lines with a type of surfacing material that will be less expensive than that required on the main market lines, and yet will at the same time meet all traffic requirements on the feeder lines. The main lines, if built of concrete, will be permanent and cost less to maintain.

How to Place Culvert.

Where a culvert is placed in a road on a hillside to take care of the drainage collected in an uphill ditch, it should be placed across the road pointing in the direction of the flow of the steepest grade.

Changing Milk for Calf.

The time to change the calf from whole milk to skim milk depends upon the development of the calf. If it is healthy it may be changed to skim milk at the end of the second week, but the third week would be better.

ARMY MOTOR TRANSPORT TAKING ON GAS EN ROUTE TO ATLANTIC COAST

The photograph given herewith shows one of the army motortrucks, making up the motor train which carried munitions and supplies from Detroit to the Atlantic coast, replenishing its fuel supply "somewhere in Pennsylvania."

The new freight service was inaugurated by the quartermaster's department to relieve railroad congestion. The tank car is one of the two that accompanied the train.

TERRIFIC STRAIN PLACED ON TIRES

Many People Who Buy Cars Are Ignorant of This Subject.

ECONOMY TOPIC MOST VITAL

Adding One Mile for Each Tire to Enormous Mileage Piled Up Each by Great Number of Cars, Would Save Big Fortune.

When motor cars were rare, tire mileage costs made little difference. But now, when men are buying cars as they would a suit of clothes or a pair of shoes—when our annual car bill is more than $1,000,000,000, and for tire about $333,000,000—tire economy is a matter of great concern.

About 4,000,000 cars are now registered in this country, wearing 16,000,000 tires. Adding only one mile for each tire to the enormous mileage piled up each day by these cars would save a handsome fortune for the motorists of the country.

Much Mileage Lost.

A. E. Hertzig, manager of a big tire and rubber concern, in commenting on the various kinds of abuse innocently inflicted upon motor tires, preventing them from attaining their alloted three score and ten, declares that much of this mileage is lost through the fabric breaks caused by hitting stones imbedded in the road.

"So many people are now buying cars who know comparatively little about cars or tires that it is not surprising that merciless abuse is heaped upon them," he says. "Hardly one motorist in 100 appreciates the terrific strain placed on tires when traveling at high speed over ordinary roads. Your tires may withstand a shock equal to ten tons weight while running at a speed of 25 miles an hour over country roads, and a little later you have a blowout while running over a perfectly smooth street.

Cause of Blowout.

"This is what happened. The terrific impact of the tire and the stone imbedded in the road did not visibly affect the exterior of the tire. Had you looked it over you could not have found a mark. But on the inside of the tire a break in the tire fabric was started when the blow strained it beyond its limit of stretching strength. Perhaps only one layer of fabric was injured. The other layers soon followed suit and the blowout resulted.

"It is common practice for car owners to bump front wheels against the curbstone when parking their cars, especially if the brakes do not hold properly. Many drivers make no pretense of slowing up for street car tracks or bridge approaches. There is much fraternizing with ruts and stones in the road. All these make for fabric breaks, which rob the tire of many miles that were built into it at the factory.

TAKE ALL CORNERS SLOWLY

Autoist Should Round Turns Slowly and With Caution—Clutch Should Be Released.

One reason for side slipping may be found in the fact that some drivers take corners at a fast rate of speed. Allowing that the pavement is slippery, the autoist should round turns slowly and with caution. The clutch should be released if there is a tendency for the car to slip.

When this takes place, very frequently the rear tires will lose their lateral grip on the road surface. Motorists should never steer a machine sharply from a curb when the surface is wet.

The reason for this is simple, in that the grip of the wheels on the road is insufficient to overcome the centrifugal effect and the result is the rear of the car is forced toward the curbing. Sometimes a sudden speeding up of the motor will overcome the tendency to skid.

CARE FOR STORAGE BATTERY

During Winter Season It Should Be Kept Fully Charged to Stand Low Temperature.

The storage battery should be kept fully charged during the winter, according to E. V. Collins, instructor in steam and gas engineering in the agricultural college.

"The charged battery," said Mr. Collins, "will stand very low temperatures while a discharged battery will freeze at 20 degrees above zero. Freezing will burst jars, and as a result the battery must be rebuilt.

"In cold weather the starting battery is especially likely to become discharged. The engine is difficult to crank because the oil is cold. It must also be cranked longer each time it is started because the gasoline does not vaporize readily in cold weather. Long trips are few and the charging periods are shorter. The lights which are needed earlier in the evening help in discharging the battery.

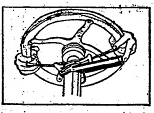
"The battery should be tested with a hydrometer at intervals of two weeks or less. If it is found to be discharged, it should be charged as soon as possible either by driving the car or from an outside source.

"The conditions under which cars operate vary, and there are so many starting systems, that no set rules can be given for the care of the storage battery. If the starter turns the engine with difficulty, the motor should be cranked by hand when starting on a cold morning. The engine may be made to start more easily by priming it through the priming cups or by pulling the choker when it is stopped. The lights should be turned on only when necessary and in many cases the dimmers may be used to save the current."

HORN BUTTON IS CONVENIENT

Device Arranged So That There Is No Trouble in Sounding Alarm Whenever Necessary.

When you want to blow the horn in a hurry, and you have one hand on the transmission lever and the other one on the steering wheel, you are strictly up against it without a recently patented horn button. It consists of an elongated cylinder which is clamped to the steering column, directly under the wheel. The push button that controls the horn circuit is at the outer end of the cylinder, and the driver can reach it with one finger of his left hand without removing that hand from the wheel. The device can be used with success on most makes of cars.



Button Placed Under Finger.

RUINOUS ABUSE OF BATTERY

Most Common Fault Is in Letting It Go Dry—Good Plan to Have Generator Tested.

The most common and ruinous abuse of the battery is to let it go dry. The battery loses water even under normal conditions, partly through slow evaporation, but chiefly through decomposition into its constituent gases, oxygen and hydrogen, by excessive charging. If your battery demands water filling more frequently than it should, or if the battery links heat to a temperature warmer than that of the hand, have your generator inspected and tested and the charging rate reduced.

Auto Alarm Whistle.

An automobile alarm whistle to be connected to the cylinders of a car can be made to utilize the full force of their explosions when desired.

Controlling Devices.

Two complete sets of controlling devices feature a new automobile designed for instruction purposes.

DAIRY FACTS

JERSEY IS HEAVY PRODUCER

Milk Scales and Butterfat Test Determine Whether Cow Is Proving Profitable or Not.

The milk scales and the butterfat test tell the story of whether a cow is producing or not. Jerseys have been making and breaking records for production with great rapidity during the past year. More cows are now being tested than ever have been in the past, and the individual and average production is higher than in other years.

In May, three years ago, a list of Jersey cows on yearly test that were producing over 50 pounds of butterfat per month was published for the purpose of keeping breeders informed as to the month-by-month production of cows on test. There were 132 cows in the first list. Three years later, May, 1917, saw 487 cows in the 50-pound list. This means that 487 Jersey cows on test were producing at the rate of more than 50 pounds of butterfat, or 60 pounds of butter in that month. At present 500 Jersey cows on test are producing at the rate of 600 pounds of butterfat, or 750 pounds of butter per year.

Jersey Cow of Merit.

TREATMENT OF KICKING COW

Care and Patience Will Effect Cure If Right Methods Are Used—Two Ways of Tying.

Care and patience will cure the kicking cow if the proper methods are employed. One method is to pass a rope or strap with a loop in one end of it around the body of the cow and draw it tight. The cow will usually jump at first, but when she finds she cannot get out of the rope she will stand still. If this method causes the cow to give bloody milk, place the rope or strap behind the udder, and draw it tight as before.

Another method is to hobble the cow by passing the rope around each leg behind the udder, and tying just above the hocks. This method is a dangerous one, however, for the person tying the rope. After these methods have been repeated a few times the cow will stand quietly to be milked.

DAIRY IS A FIXED INDUSTRY

Where That Feeling Exists There Is Disposition to Raise Heifers or Baby Beef.

The farm dairy is becoming more of a fixed industry, and where this feeling exists there is a disposition to raise the calves—the heifers for the dairy or to be sold for dairy purposes, and the better calves will generally be fed into some form of baby beef as the feed and circumstances suggest.

WARM WATER MUCH CHEAPER

Otherwise Cow Must Burn High-Priced Corn and Other Feeds for That Purpose.

If the cows are forced to drink cold water they must warm the water in their bodies. This requires food in the form of corn and other feeds. It is much cheaper to warm the water with wood or coal than to allow the cow to burn high-priced fuel in her body for this purpose.

SHORTHORNS GOOD FOR MILK

There Are Some That Are Excellent Producers, but They Are Not of the Beef Type.

A back-to-the-lander wants to know about the Shorthorns as milk producers. There are some dairy Shorthorns that are excellent milk and butter animals. But one can no more make a dairy animal of the beef type Shorthorn than make a trotter out of a Belgium horse.

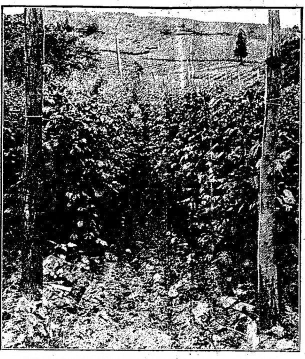
Raise More Calves.

The farmer and dairyman who expects to continue in the business will find it to his interest to raise a number of calves each year to replace older cattle that have been disposed of.

Bedding Doubly Useful.

Use sufficient straw for bedding to make the animals comfortable and to absorb the liquid excrement. Nearly half the plantfood elements in animal manure occurs in the urine.

IMPORTANT SYSTEMS OF CULTURE USED IN GROWING GOOD CROP OF RASPBERRIES



FIELD OF SEVEN-YEAR-OLD EMPIRE RED RASPBERRIES.

(Prepared by the United States Department of Agriculture.)

Three systems of culture are used in growing raspberries, the hill, the linear, and the hedge systems. The term "hill system" is restricted to that method of tillage in which the horse cultivator is used on all sides of each plant. When the cultivator is run in only one direction and only the plants originally set are allowed to fruit, the term "linear system" is used. If some of the suckers which come from the roots of red raspberries are left to form a solid row and the cultivator is run in one direction only, the term "hedge system" is employed.

The distance between the rows in each of these systems should be determined by economy in the cost of cultivation and in the use of land. Where the area of land available for planting is not limited, usually it will be found most desirable to make the spaces between the rows wide enough to allow the use of two-horse implements in cultivation. Where the area of land is limited, the rows may be placed closer together and one-horse implements used.

Planting Distances.

Under the hill system of culture the plants usually are set about five feet apart each way. This, however, allows the use of one-horse cultivators only. This is used to some extent in New York and other states in raising red raspberries. It has the advantage of requiring less handwork in keeping out grass and weeds, as the cultivator can be run in both directions; and the berries can be more easily harvested from fields under this system.

If the hedge or linear system is used, the horse cultivator can be run in one direction only and more hoeing is necessary. Under these systems the red varieties usually should be set from 2 to 3 feet apart in rows which are 6 to 8 feet distant. In the eastern United States 6 feet is the most common and desirable distance between the rows for the shorter caned varieties, such as the Ruby and Marlboro, and 7 and 8 feet for the tall-caned varieties, like the Cuthbert. To use two horses in a plantation the rows must be at least 8 feet apart. In the Pacific northwest, where the canes grow very tall, the planting distance for red raspberries is usually 2½ by 7 or 8 feet. In parts of Colorado and other states where irrigation and winter protection are necessary, the plants are usually set in rows which are 7 feet apart.

System for Black Variety.

Black raspberries are nearly always grown under the linear system, and in the United States east of the Rocky mountains they should be planted in rows 8 feet distant and 3 or 4 feet apart in the row. In Oregon and Washington they should be planted in rows 7 or 8 feet distant and from 3 to 6 feet apart in the row, depending upon the vigor of the growth in the particular locality.

The purple varieties also are grown under the linear system and should be planted 4 or 5 feet apart in rows which are 7 or 8 feet distant. The Columbian and other purple varieties of equal vigor should be at least 5 feet apart in the row, but the Royal may be set 4 feet apart.

If the plants are checked in both directions when set in accordance with either the hedge or linear system, and are 3 or 4 feet apart in the row, it is possible to run a one-horse cultivator both ways for the first year. This will save much work and reduce the first year's expense.

In some sections, two plants of red raspberries are set together. This insures the grower against misses, and a larger crop is secured when the plantation is one year old. It will cost nearly $20 more per acre to buy and set the extra plants, but in some sections the additional yield will make it profitable. However, if care is taken in setting, one plant in each place is usually sufficient.

Setting the Plants.

Before planting, the tops of the plants of all types should be cut back to 6 inches or less in height. To make it easy to handle the plants and to indicate the rows after setting, 4 to 6 inches of the cane should be left. If a garden patch is being planted, it is better to cut the canes back to within a few inches of the leader buds. The plants should be set slightly deeper than they formerly grew. Sometimes it is well to set red raspberries as much as 3 inches deeper than they grew, in order to protect them from drought. Black and purple raspberry plants should be set not more than an inch or two deeper than they formerly stood, as there is danger of smothering the tips.

PRESERVATION OF SOFT CORN

Farmers Should Work It Over, Remove Any Damaged Ears and Put in Ventilators.

(Prepared by the United States Department of Agriculture.)

Soft corn which has been stored in large cribs during cold and freezing weather, without specially improvised ventilators, is practically certain to get out of condition as soon as the weather warms up in the spring. To preserve such corn farmers should work it over, remove any damaged ears, and put in ventilators.

The best way to dispose of soft corn is to feed on the farm all that can be consumed to advantage, but don't waste it.

The concentration of shelled corn in country elevators during the next few months is practically certain to lead to disaster unless it can be transported to feeding centers or to terminals for drying before what is popularly known as the germinating season.

Whenever practicable the drying temperature should be lowered and the time of drying increased, to prevent excessive breakage.

All old corn should be carefully saved for seed, as the bulk of the present crop in the northern states will be unfit for planting.

Do not delay the securing of suitable seed.

Do not plant any corn without first knowing its germination.

NECESSARY TO SAVE MANURE

Sometimes Overlooked by Small Farmer Who Is Just Starting in Live Stock Business.

Save manure. The necessity for this is sometimes forgotten by the small farmer who is just starting in the business of live stock production. Fertilizer is scarce, high in price, and hard to get for any reasons. Therefore, the more manure saved to apply to the land the less need for fertilizer.

FARM REFLECTIONS

When the average man wants to quit is the time to get interested in horse production.

Gumption is ability to put the grease where the squeak is. Are you onto your job?

Stock raisers should agree as to what breed best fits their locality, and then stick to that breed.

Rats in the grain bin are almost as destructive as a bull in a china shop. A rat-proof granary is a national bulwark these days. Don't neglect it.

Many county fairs are apparently run in the interest of the faker rather than of the farmer. A general overhauling is in order if they are to serve efficiently the object for which they were established.

Feeding Corn Alone.

Corn, when fed alone to young pigs, produces relatively slow gains at a high feed cost.

Avoid Damp Litter.

Litter that is damp and dirty may cause sickness in the flock.

GOOD ROADS

FAME FROM ITS GOOD ROADS

Improved Streets, Smooth and Dustless Highways Around Philadelphia Advertises City.

Good streets and smooth, dustless country roads, have been a means of advertising and giving added importance to Philadelphia, not only throughout the United States and Canada, but abroad, according to William H. Connell, chief of the bureau of highways, Philadelphia Inquirer states.

Highway experts from scores of American and European cities, as well as engineers representing practically every state in this country, have studied the progress made by Philadelphia in dealing with one of the greatest of municipal problems, that of road construction and maintenance, and have requested information regarding the specifications used, the processes followed and other data pertaining to the work as carried on in this city, Chief Connell said.

Improved Road Near Philadelphia.

Within the limits of the city, motorists, most critical of road users, can travel for more than 150 miles by diverse routes, without experiencing the slightest difficulty because of poor roads or dusty ones, the head of the highway bureau asserted. Visiting tourists, impressed by this fact, have heralded the reputation of Philadelphia as the city of good roads throughout the country, he said. The improvement, in many instances, has been made at comparatively little expense by means of surface treatments, varied to meet the demands of the occasion, he pointed out.

GROWTH OF IMPROVED ROADS

Inventions, Discoveries and Public Improvements Come When There Is Strong Demand.

The history of good roads affords a striking example of the fact that inventions, discoveries and public improvements take place only when there is an insistent demand for them. In early times, when each family lived largely to itself, there was little commerce in the articles produced on the farm and consequently little need for transportation. As large cities developed the demand for roads on which products might be easily transported grew.

Two of the most recent causes for the improvement of roads have been pleasure vehicles. Twenty-five years ago the bicycle began to come into common use and the cyclists made a vigorous demand for roads on which they might ride. Unfortunately, however, paths for bicycles were constructed in many places in lieu of improved roads. The invention of the automobile, however, has meant a real step toward better roads.

GET GOOD HIGHWAY SYSTEM

Not Difficult Problem if County or Township Is Willing to Use Common Sense.

How to get a good road system is not a difficult problem, if a county or township is willing to be guided by common sense. The first step is to employ a competent highway engineer. He will make a study of traffic conditions, ascertain where the main market lines with a type of surfacing material that will be less expensive than that required on the main market lines, and yet will at the same time meet all traffic requirements on the feeder lines. The main lines, if built of concrete, will be permanent and cost less to maintain.

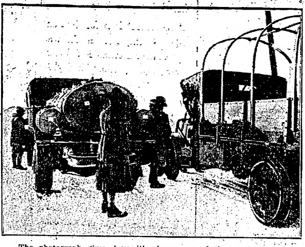
How to Place Culvert.

Where a culvert is placed in a road on a hillside to take care of the drainage collected in an uphill ditch, it should be placed across the road pointing in the direction of the flow of the steepest grade.

Changing Milk for Calf.

The time to change the calf from whole milk to skim milk depends upon the development of the calf. If it is healthy it may be changed to skim milk at the end of the second week, but the third week would be better.

ARMY MOTOR TRANSPORT TAKING ON GAS EN ROUTE TO ATLANTIC COAST



The photograph given herewith shows one of the army motortrucks, making up the motor train which carried munitions and supplies from Detroit to the Atlantic coast, replenishing its fuel supply "somewhere in Pennsylvania."

The new freight service was inaugurated by the quartermaster's department to relieve railroad congestion. The tank car is one of the two that accompanied the train.

TERRIFIC STRAIN PLACED ON TIRES

Many People Who Buy Cars Are Ignorant of This Subject.

ECONOMY TOPIC MOST VITAL

Adding One Mile for Each Tire to Enormous Mileage Piled Up Each by Great Number of Cars, Would Save Big Fortune.

When motor cars were rare, tire mileage costs made little difference. But now, when men are buying cars as they would a suit of clothes or a pair of shoes—when our annual car bill is more than $1,000,000,000, and for tire about $333,000,000—tire economy is a matter of great concern.

About 4,000,000 cars are now registered in this country, wearing 16,000,000 tires. Adding only one mile for each tire to the enormous mileage piled up each day by these cars would save a handsome fortune for the motorists of the country.

Much Mileage Lost.

A. E. Hertzig, manager of a big tire and rubber concern, in commenting on the various kinds of abuse innocently inflicted upon motor tires, preventing them from attaining their alloted three score and ten, declares that much of this mileage is lost through the fabric breaks caused by hitting stones imbedded in the road.

"So many people are now buying cars who know comparatively little about cars or tires that it is not surprising that merciless abuse is heaped upon them," he says. "Hardly one motorist in 100 appreciates the terrific strain placed on tires when traveling at high speed over ordinary roads. Your tires may withstand a shock equal to ten tons weight while running at a speed of 25 miles an hour over country roads, and a little later you have a blowout while running over a perfectly smooth street.

Cause of Blowout.

"This is what happened. The terrific impact of the tire and the stone imbedded in the road did not visibly affect the exterior of the tire. Had you looked it over you could not have found a mark. But on the inside of the tire a break in the tire fabric was started when the blow strained it beyond its limit of stretching strength. Perhaps only one layer of fabric was injured. The other layers soon followed suit and the blowout resulted.

"It is common practice for car owners to bump front wheels against the curbstone when parking their cars, especially if the brakes do not hold properly. Many drivers make no pretense of slowing up for street car tracks or bridge approaches. There is much fraternizing with ruts and stones in the road. All these make for fabric breaks, which rob the tire of many miles that were built into it at the factory.

TAKE ALL CORNERS SLOWLY

Autoist Should Round Turns Slowly and With Caution—Clutch Should Be Released.

One reason for side slipping may be found in the fact that some drivers take corners at a fast rate of speed. Allowing that the pavement is slippery, the autoist should round turns slowly and with caution. The clutch should be released if there is a tendency for the car to slip.

When this takes place, very frequently the rear tires will lose their lateral grip on the road surface. Motorists should never steer a machine sharply from a curb when the surface is wet.

The reason for this is simple, in that the grip of the wheels on the road is insufficient to overcome the centrifugal effect, and the result is the rear of the car is forced toward the curbing. Sometimes a sudden speeding up of the motor will overcome the tendency to skid.

CARE FOR STORAGE BATTERY

During Winter Season It Should Be Kept Fully Charged to Stand Low Temperature.

The storage battery should be kept fully charged during the winter, according to E. V. Collins, instructor in steam and gas engineering in the agricultural college.

"The charged battery," said Mr. Collins, "will stand very low temperatures while a discharged battery will freeze at 20 degrees above zero. Freezing will burst jars, and as a result the battery must be rebuilt.

"In cold weather the starting battery is especially likely to become discharged. The engine is difficult to crank because the oil is cold. It must also be cranked longer each time it is started because the gasoline does not vaporize readily in cold weather. Long trips are few and the charging periods are shorter. The lights which are needed earlier in the evening help in discharging the battery.

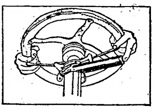
"The battery should be tested with a hydrometer at intervals of two weeks or less. If it is found to be discharged, it should be charged as soon as possible either by driving the car or from an outside source.

"The conditions under which cars operate vary, and there are so many starting systems, that no set rules can be given for the care of the storage battery. If the starter turns the engine with difficulty, the motor should be cranked by hand when starting on a cold morning. The engine may be made to start more easily by priming it through the priming cups or by pulling the choker when it is stopped. The lights should be turned on only when necessary and in many cases the dimmers may be used to save the current."

HORN BUTTON IS CONVENIENT

Device Arranged So That There Is No Trouble in Sounding Alarm Whenever Necessary.

When you want to blow the horn in a hurry, and you have one hand on the transmission lever and the other one on the steering wheel, you are strictly up against it without a recently patented horn button. It consists of an elongated cylinder which is clamped to the steering column, directly under the wheel. The push button that controls the horn circuit is at the outer end of the cylinder, and the driver can reach it with one finger of his left hand without removing that hand from the wheel. The device can be used with success on most makes of cars.



Button Placed Under Finger.

RUINOUS ABUSE OF BATTERY

Most Common Fault Is in Letting It Go Dry—Good Plan to Have Generator Tested.

The most common and ruinous abuse of the battery is to let it go dry. The battery loses water even under normal conditions, partly through slow evaporation, but chiefly through decomposition into its constituent gases, oxygen and hydrogen, by excessive charging. If your battery demands water filling more frequently than it should, or if the battery links heat to a temperature warmer than that of the hand, have your generator inspected and tested and the charging rate reduced.

Auto Alarm Whistle.

An automobile alarm whistle to be connected to the cylinders of a car can be made to utilize the full force of their explosions when desired.

Controlling Devices.

Two complete sets of controlling devices feature a new automobile designed for instruction purposes.

DAIRY FACTS

JERSEY IS HEAVY PRODUCER

Milk Scales and Butterfat Test Determine Whether Cow Is Proving Profitable or Not.

The milk scales and the butterfat test tell the story of whether a cow is producing or not. Jerseys have been making and breaking records for production with great rapidity during the past year. More cows are now being tested than ever have been in the past, and the individual and average production is higher than in other years.

In May, three years ago, a list of Jersey cows on yearly test that were producing over 50 pounds of butterfat per month was published for the purpose of keeping breeders informed as to the month-by-month production of cows on test. There were 132 cows in the first list. Three years later, May, 1917, saw 487 cows in the 50-pound list. This means that 487 Jersey cows on test were producing at the rate of more than 50 pounds of butterfat, or 60 pounds of butter in that month. At present 500 Jersey cows on test are producing at the rate of 600 pounds of butterfat, or 750 pounds of butter per year.

The farmer and dairyman who expects to continue in the business will find it to his interest to raise a number of calves each year to replace older cattle that have been disposed of.

Bedding Doubly Useful.

Use sufficient straw for bedding to make the animals comfortable and to absorb the liquid excrement. Nearly half the plantfood elements in animal manure occurs in the urine.

INTENTIONAL DUPLICATE EXPOSURE

War Savings Stamps

IT isn't so much the amount of money you save as it is getting into the habit of saving a definite amount regularly. The best way to learn to save is not only to promise yourself that you will do it regularly but promise some one else, your wife, your parent, your husband, or your teacher, that you will not let a first of the month or first of the week go by without saving.

The Habit of Thrift Will Help Win The War

The United States Government needs money to equip our armies and to fight for democracy. Your Government—the richest in the world—is willing to pay interest for your money now. Uncle Sam offers you $5.00 War Savings Stamps for $4.13 in February, and one cent additional each month thereafter.

A Thrift Card is furnished to all purchasers of 25 cents Thrift Stamps. When all the spaces have been filled, the Thrift Card may be exchanged for $5.00 War Savings Stamps at any post office or bank. You should start saving a certain amount regularly. Outline your program. Start at once by going to your post office and getting your first War Savings Stamp or Thrift Card. And stick to it. As you treasure your right to live in this nation of freedom, do not miss a single day on which you have determined to save.

Buy War Savings Stamps and Thrift Stamps (25 cents) at any bank or post office.

U. S. FOOD ADMINISTRATION

THIS IS THE PLEDGE

"As a donation to the Red Cross Chapter of……………………………………the undersigned hereby agrees to plant and care for…………acres of ground on my farm in…………………………township during the season of 1918 and deliver the crop in…………………when requested to do so by the Red Cross.

(Signed)……………………………

The ELEVEN TOWNS

A. O. HALVORSON, Editor

Entered at the postoffice at Goodridge, Minn. as a second class mail matter.

A movement is on foot in Pennington County to swell the war fund of the American Red Cross. Some people possibly think that now we were just about ready with contributing to this cause, but the end of the war is evidently far off yet, and as long as that lasts, the soldiers in the trenches and in the training camps need the supplies which the Red Cross furnishes. The Red Cross must, therefore, keep on with the good work and it needs our support to do it. And the longer the war continues the more we must be prepared to assist. We must yet sacrifice; if it can be called sacrifice to give out of our abundance. We must give more than we ever did. And we will give freely and cheerfully. The movement now set on foot has in mind particularly the farmers. They are asked to give, not money; but what will become money's worth next fall. This plan has been tried before and it works well. In fact, many in Pennington County have already promised their cooperation. It consists in nothing more nor less than that the farmers promise to give the crop from a piece of land from one fourth of an acre up to one acre in extent. Are you in line? Can you spare the crop from a small piece of land for your country? If so, fill out the pledge card on the front page and send it to Mr. Scott Laird, secretary of the Pennington Co. Chapter of A. R. C., Thief River Falls, Minn.

War Savings Stamps

COMING

C. G. MUGG, Optomoric Specialist

of Grand Forks, N. D., uses the daylight or natural method in fitting glasses, no drugs, dark rooms or machines—natural conditions only, in broad daylight. YOU see the benefit of the glass before ordering. YOU take no chance, your own vision tells YOU. By this method no operator can look wise and say $15.00 and get it before YOU see the benefit of the glasses YOU are supposed to wear. No one can judge just as well as yourself just how YOU see out of your own eyes. Drugs, dark rooms etc., create unnatural visual conditions that may effect the results and cause an imperfect glass. C. G. Mugg is licensed in N. D. and Minn. and has traveled in the Northwest for 22 years. A lot of cash is not always necessary. Prices are reasonable. Consultation is free but examination is not always so.

Ante-War prices have not been changed by C. G. Mugg, but after January 1918, $1.00 will be added for examination. Consultation is Free.

Call and see the daylight specialist, he will be at

Goodridge, Saturday March 23rd.

FACE the FACTS

LET us face the facts. The war situation is critical. Unless the Allies fight as they never yet have fought, defeat threatens. Hungry men cannot fight at their best; nor hungry nations. France, England, and Italy are going hungry unless we feed them.

Wheat Savings—They must have wheat. It is the best food to fight on. It is the easiest to ship. We alone can spare it to them. By saving just a little—less than a quarter of what we ate last year—we can support those who are fighting our battles. And we can do it without stinting ourselves. We have only to substitute another food just as good.

The Corn of Plenty—Corn is that food. There's a surplus of it. Providence has been generous in the hour of our need. It has given us corn in such bounty as was never known before. Tons of corn. Trainloads of corn. Five hundred million bushels over and above our regular needs. All we have to do is to learn to appreciate it. Was ever patriotic duty made so easy? And so clear?

America's Own Food—Corn! It is the true American food. The Indians, hardiest of races, lived on it. Our forefathers adopted the diet and conquered a continent. For a great section of our country it has blong een the staff of life. How well the South fought on it, history tells. Now it can help America win a world war.

Learn Something—Corn! It isn't one food. It's a dozen. It's a cereal. It's a vegetable. It's a bread. It's a dessert. It's nutritious; more food value in it, dollar for dollar, than meat or eggs or most other vegetables. It's good to eat; how good you don't know until you've had corn-bread properly cooked. Best of all, it's plentiful and it's patriotic.

Corn's Infinite Variety—How much do you know about corn? About how good it is? About the many delicious ways of cooking it? And what you miss by not knowing more about it? Here are a few of its uses:

There are at least fifty ways to use corn meal to make good dishes for dinner, supper, lunch or breakfast. Here are some suggestions:

HOT BREADS	DESSERTS
Boston brown bread.	Corn-meal molasses cake.
Hoecake.	Apple corn bread.
Muffins.	Dumplings.
Biscuits.	Gingerbread.
Griddle cakes.	Fruit gems.
Waffles.	

HEARTY DISHES

Corn-meal croquettes. Corn-meal fish balls.

Meat and corn-meal dumplings.

Italian polenta. Tamales.

The recipes are in Farmers' Bulletin 565, "Corn Meal as a Food and Ways of Using It," free from the Department of Agriculture.

USSIA TO RECLAIM DESERT

ood Pasture Lands Are Destroyed at the Rate of One Hundred Thousand Acres a Year.

The shifting sands of Astrakhan and he measures taken by the Russian overnment to deal with this problem orm the subject of a memoir by J. . Firstov, published in Petrograd, observes the Scientific American. Ten [illegible] acres of the province in ques-ion are covered with shifting sands ormed during the nineteenth century and subsequently. These sands have een spreading at the rate of 100,000 cres a year, the result being the transformation of good pasture land into a arren waste. The principal cause is over grazing; flocks and herds are kept so long in one place as to result in the complete destruction of the turf. Poor agricultural methods are also responsible. About the beginning of the present century the government took measures of control and reclamation, and between 1904 and 1909 an area of about 46,000 acres was brought under cultivation. In 1913 a special service was ordered to deal with the question. The province was put under the charge of a chief forestry officer and divided into six districts, in each of which a subordinate official was appointed to superintend the work. At the time of writing good progress has been made in planting soil binders and growing herbaceous crops, but it was still problematical whether the province was adapted to the establishment of forests.

MAKING MEATLESS DAYS PERMANENT.

In the meatless menu there is a fertile field for developing new and nourishing dishes, according to E. H. Niles, writing in the Hotel Gazette, who believes that the present shortage of meat and fats will not end with the coming of peace, but may grow more acute and continue for five or six years, thus making it worth while to develop menus of grain, vegetables and fish on a more or less permanent basis. Meat can be replaced by cereals and other protein foods, or may be served in very small portions as a flavoring for other food. In making up meatless menus this author finds the American Creole and southern cuisine a broad field for investigation.

NEED BIG HERDS

Europe's Meat Supply Must Come From America.

Warring Nations Have Depleted Live Stock at Enormous Rate, Even Killing Dairy Cattle For Food.

American stock breeders are being asked to conserve their flocks and herds in order to meet Europe's tremendous demands for meats during the war and probably for many years afterward.

The United States food administration reports that American stock raisers have shown a disposition to co-operate with the government in increasing the nation's supply of live stock.

Germany today is probably better supplied with live stock than any other European nation. When the German armies made their big advance into France and then retreated virtually all the cattle in the invaded territory — approximately 1,800,000 head—were driven behind the German lines.

But in England—where 2,400,000 acres of pasture lands have been turned into grain fields—the cattle herds are decreasing rapidly. One of the reasons apparently is the declining maximum price scale adopted by the English as follows: For September, $17.76 per 100 pounds; October, $17.28; November and December, $16.08; January, $14.40. The effect of these prices was to drive beef animals on the market as soon as possible.

In France the number of cattle as well as the quality have shown an enormous decline during the war. Where France had 14,807,000 head of cattle in 1913, she now has only 12,341,000, a decrease of 16.6 per cent. And France is today producing only one gallon of milk compared to two and one-half gallons before the war.

Denmark and Holland have been forced to sacrifice dairy herds for beef because of the lack of necessary feed.

Close study of the European meat situation has convinced the Food Administration that the future problem of America lies largely in the production of meat producing animals and dairy products rather than in the production of cereals for export when the war will have ceased.

CORN WILL WIN DEMOCRACY'S WAR

America's Greatest Cereal Crop Is Now Moving to Market.

MAINSTAY IN NATION'S CRISIS.

Surplus Wheat of the United States Has Been Sent to Famine Threatened Europe.

America's great corn crop, exceeding 3,000,000,000 bushels, will save the world's food situation, officials of the United States food administration believe.

Corn is the nation's best food cereal, housewives are beginning to realize. It contains all the elements needed to keep the body in a state of health and when used according to the scores of tried recipes, especially when combined with an added portion of oil or fat, will sustain life indefinitely. Indian warriors in colonial days lived on parched corn alone for many days at a time, and at Valley Forge parched corn was at times the sole ration of the Continental soldiers.

Owing to transportation difficulties caused by the war the corn crop moved more slowly to market this year than ever before. Now, however, the cereal is reaching the millers and consumers. In the meantime the nation's surplus wheat has been sent to Europe.

Today there are approximately 30 bushels of corn for every American. This quantity is greater by five bushels than in former years.

Corn has become the nation's mainstay in the crisis of war.

Just as this cereal saved the first American colonists from famine on many occasions, just as it served as a staple food during the War of the Revolution and during the Civil War, King Corn has again come to the front in the nation's battle with autocracy.

Corn meal is finding greatly increased use in the making of ordinary white bread. Hundreds of housewives and many of the larger bakers are mixing 20 per cent. corn meal with wheat flour to make leavened bread. This kind of a mixture is worked and baked in the same recipes and with the same methods that apply to straight wheat bread.

Corn bread—using corn meal entirely—is gaining a greater popularity than ever before. Housewives are coming to realize that every pound of wheat saved in America means a pound of wheat released for shipment to the nations with which America is associated in the war.

There are a score of corn products that today possess unusual importance for Americans. Corn syrup for sweetening corn cakes and buckwheat cakes and for use in the kitchen instead of granulated sugar is one of the leading products made from corn.

Corn oil, excellent for frying and for every other purpose filled by salad oils, is appearing on the market in large quantities. It comes from the germ of the corn.

This Is Our Winter of Test

SERVING food is a local problem for each community. Prices and definite rules for every one cannot be formulated. It is a duty for each one to eat only so much as is necessary to maintain the human body healthy and strong. This winter of 1918 is the period when it is to be tested here in America whether our people are capable of voluntary individual sacrifice to save the world. That is the purpose of the organization of the United States Food Administration—by voluntary effort to provide the food that the world needs.

To drive a tank, handle the guns, and sweep over the enemy trenches, takes strong nerves, good rich blood, a good stomach, liver and kidneys. When the time comes, the man with red blood in his veins "is up and at it." He has iron nerves for hardships—an interest in his work grips him. That's the way you feel when you have taken a blood and nerve tonic, made up of Blood root, Golden Seal root, Stone root, Cherry bark, and rolled into a sugar-coated tablet and sold in sixty-cent vials by almost all druggists for past fifty years as Dr. Pierce's Golden Medical Discovery. This tonic, in liquid or tablet form, is just what you need this spring to give you vim, vigor and vitality. At the fag end of a hard winter, no wonder you feel "run-down," blue, out of sorts. Try this "Medical Discovery" of Dr. Pierce's. Don't wait! To-day is the day to begin! A little "pep," and you laugh and live.

The best means to oil the machinery of the body, put tone into the liver, kidneys and circulatory system, is to first practice a good house-cleaning. I know of nothing better as a laxative than a vegetable pill made up of May-apple, leaves of aloe and jalap. This is commonly sold by all druggists as Dr. Pierce's Pleasant Pellets, and should be taken at least once a week to clear the twenty-five feet of intestines. You will thus clean the system—expel the poisons and keep *well*. *Now* is the time to clean house. Give yourself a spring house cleaning.—Adv.

KIDNEY TROUBLE NOT EASILY RECOGNIZED

Applicants for Insurance Often Rejected

An examining physician for one of the prominent life insurance companies, in an interview of the subject, made the astonishing statement that one reason why so many applicants for insurance are rejected is because kidney trouble is so common to the American people, and the large majority of those whose applications are declined do not even suspect that they have the disease.

Judging from reports from druggists who are constantly in direct touch with the public, there is one preparation that has been very successful in overcoming these conditions. The mild and healing influence of Dr. Kilmer's Swamp-Root is soon realized. It stands the highest for its remarkable record of success.

We find that Swamp-Root is strictly an herbal compound and we would advise our readers who feel in need of such a remedy to give it a trial. It is on sale at all drug stores in bottles of two sizes, medium and large.

However, if you wish first to test this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Adv.

Great Advantage.

"Young Bryam reads his own poems very effectively."

"Well, you see, he understands them."

In Holland a municipal gas plant is extracting illuminating gas from a peat and coal mixture.

Catarrh Cannot Be Cured
by LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a local disease, greatly influenced by constitutional conditions. HALL'S CATARRH MEDICINE will cure catarrh. It is taken internally and acts through the Blood on the Mucous Surfaces of the System. HALL'S CATARRH MEDICINE is composed of some of the best tonics known, combined with some of the best blood purifiers. The perfect combination of the ingredients in HALL'S CATARRH MEDICINE is what produces such wonderful results in catarrhal conditions.

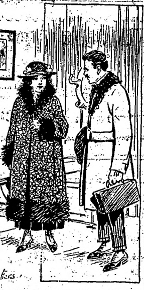
The Greater Need

By VINCENT G. PERRY.

(Copyright, 1918, by the McClure Newspaper Syndicate.)

Helen Paterson collected her books and packed them neatly into her club bag. She wasn't coming back to the little village school that had grown so familiar to her and become a part of her life, and the thought of leaving it and the pupils who had won a place in her heart pained her. It was not because of inefficiency that she had not been re-engaged for another term, for the pupils had advanced with remarkable strides under her tutorage, but because she was a woman and Doctor Arnold didn't approve of a woman teacher for so large a school, and on the school board Doctor Arnold's word was law.

The doctor remembered when he was a boy and what a time they led the schoolmasters. That was when the "spare the rod and spoil the child" rule was rigidly enforced. A woman teacher wouldn't have had any control over the school in those days and he couldn't see how things could possibly be different now. He was the only doctor in the village and was kept so busy he hadn't an opportunity to visit the school and see how Helen's plan of love and sympathy for each pupil worked out. True, his little motherless daughter, Annette, spoke in glowing terms of Miss Paterson, but then she was only a very small child and couldn't have any real conception of how the school was disciplined. He had met the teacher once or twice and remembered her but vaguely, a slip of a girl that looked as if she would faint if her pupils became unruly.



Offered to Drive Helen to the Station.

Before she caught the train home Helen had a call to make. One of her favorite pupils had been ill for some time and rumor had it that the child had diphtheria. For the safety of the other pupils she had not visited him before, but there was no harm in calling now, she thought. The little lad, Ned Hackins, a bright little wisp, was dying, and she was just in time.

After it was all over and the doctor was leaving, he offered to drive Helen to the station. She felt a little bitterness toward him, knowing he was responsible for the change in her school, but she noticed that he looked worried and upset. Perhaps the impregnable Doctor Arnold was human after all, she thought. Something was troubling him—his conscience over his treatment of her, perhaps. She would give him a chance to right himself at any rate so she accepted his offer.

"I am afraid my own little girl is coming down with the same thing," he remarked in a worried tone after they had talked over the sad scene they had just left. "She is in bed now. If she has diphtheria it will go hard with her. Just at the holiday season I am afraid I won't be able to get a nurse from the city, and none of the villagers will touch a contagious case. Little Ned would have recovered if he had had proper nursing."

"We have time to stop off and see her now," Helen said. "I wouldn't leave knowing Annette was in danger."

Little Annette was in grave danger, Helen saw that at once. "I am going to stay right here," she told the doctor. "I would never forgive myself if I went home and left Annette without some capable hand to care for her. I know she will be better with me than with anyone else; she knows me so well and we are such great friends."

The doctor was too grateful to make even a pretense of refusal. It was a big sacrifice for Helen to give up her Christmas holiday, but she hardly thought of that. Despite her careful nursing and the doctor's skill little Annette's case became critical.

"To save her I should be with her all my time, but with so much sickness in the village and not another doctor within twenty miles I can't conscientiously devote all my time to Annette, even though she is my own," the doctor said to Helen after a particularly trying night.

Helen was beginning to see the real side of the doctor's character. He was still in his early thirties, but his responsibilities in the village had aged him before his [illegible]ue self was reflected in [illegible] his child and his devotion [illegible]

"I think I can help you," she said. "My brother is a graduate doctor and has just finished his hospital training. He will be able to handle your practice while you put all your time on this case. I will wire him to come right down tonight and I know he will do it."

"You're an angel," was all the doctor could say as he grasped her hand.

As Helen promised, her brother arrived, and Doctor Arnold was pleased with his appearance and knowledge of his work. He worked over his child for days until the crisis was passed. Helen waited on his every wish, and between them they won the hard fight.

After Annette passed the danger zone and was well on the way to convalescence the doctor broke down. Helen had seen it coming for days. Even his iron will and wonderful constitution could not stand a siege like he had had. He had been overworked before Annette's illness and had not slept three hours a day while she was in danger. Helen knew all he needed was rest to brain and body and she saw that he got it. When he was well enough to stand it she read to him. Her soothing voice worked wonders. In a very short time he was able to sit up, but was not anxious to recover entirely.

"I don't know what I could have done without you, or what I am going to do when you are gone," he told Helen when she suggested that both her patients were well enough to do without her. "If there is anything I can do to repay you I hope you won't delay asking me."

"If you will use your influence to secure my school back again for me? There is a new teacher there and I hear the children are not getting along very well with him. We got along so well together and I love them, every one. Please, Doctor—they need me and I need them." She was almost sobbing.

"You are needed somewhere else, too, very much. A little motherless girl and an old, grouchy doctor need you. Miss Paterson—Helen, don't think me selfish when I say their need is the greater—when I ask you to fill this need—become my wife?" The doctor was speaking with an effort.

"I have been thinking of that need, too, Doctor, the need of the little motherless girl and the dearest, kindest, bravest father that ever lived, and I decided weeks ago that if they felt it, too, and he really wanted me I wouldn't say no," Helen answered softly.

Development of Steamships.

In 1543 Blasco de Garay, a sea captain of Spain, exhibited in the harbor of Barcelona, in the presence of Charles V. and his court, a steamboat capable of a speed of three miles an hour. For nearly 200 years Blasco de Garay's invention was lost sight of, and not till the end of the eighteenth century was the subject taken up again. European scientists became interested, and the result was the construction of a steamboat on the River Saone by Marquis de Joffrey in 1759. In 1788 Patrick Miller of Scotland built a steamboat. It succeeded so well that a larger one was built in 1789, when seven miles an hour were made. Eventually Robert Fulton built the Clermont, which made its trial trip in 1808.

Cardinal Business Rules.

There are three cardinal rules to follow in any business, but they are the very foundation of success in the gift shop:

Originality, attractiveness, courtesy—these three are absolutely essential to the success of such an undertaking, be it on large or small scale. Your shop must have something that marks it as different.

All of your gifts cannot be unique; but you can have some specialty that is odd, some drawing card that will make your shop stand out from other shops. It must be attractive to attract and the service must be of the right kind if custom is to be caught and retained.

Camouflage Rats.

The principle of setting a thief to catch a thief has been worked out for the purpose of rat-catching. An inventor has patented a rat of metal composition with a very sharp spike at the end of its nose. One puts a piece of cheese on the spike, most attractive to any real rat that happens to come along. The real rat innocently approaches, hopeful of getting a nibble. But the sharp spike is attached to a trigger and a spring. When the real rat touches the cheese the trigger is sprung and the unfortunate rodent is impaled.

Only Singular Number.

Lucinda was testing the devotion of Erastus.

"S'pose it is night and we are in a deep, black woods. There comes a bo'er constricter a-wriggling through the grass; and a wildcat a-boundin' through the bushes; an' a lion roarin' an' makin' for us a mile a minute. What are we a-gonna do?"

"There ain't gonna be no 'we.'"—Christian Register.

Junk Dealers Agree to Help.

Dealers in waste material who handle annually an output of $1,000,000,000 have pledged their co-operation with Uncle Sam in utilizing the country's by-products for military purposes. The metals division of the National Association of Waste Materials Dealers, at a meeting held in New York recently, named a special committee to confer with the war industries board at Washington on the subject.

WHAT CAN WE ✚ DO?

A shortage of trained nurses confronts the Red Cross and young high school and college women must save the day for the organization in this dilemma. Even though these young women have no expectation of following nursing as a life vocation they may benefit themselves and show their willingness to help when help is badly needed by qualifying to do Red Cross work. The time spent in the nurses' training schools of the country, and in actual nursing, will prove a lifelong asset—broaden the vision and sympathies and make better and less anxious mothers of the girls who undertake such training.

We are to discontinue the knitting of trench caps because the government is to include a trench cap in every man's equipment. And furthermore, we are asked to use the yarn for socks and more socks. The hand-knitted varieties are most satisfactory and even when the upper part is made by machine the stitches may be taken up on needles of the correct size, and the foot knitted by hand.

About Supplies.

Every Red Cross worker in the central division is to be congratulated on the very handsome total of articles shipped during the month of January. Can we make it 4,000,000 for the month of February?

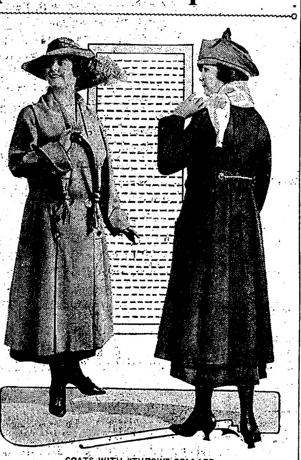
FANCIES : OF : FASHION



COATS WITH "THROW" COLLARS.

Gauntlet cuffs and "throw" or scarf collars are among the small innovations in coat styles that distinguish them from preceding seasons. Another almost universal feature of new coats is some sort of definition at the waistline which may be either above or below the normal waistline and is oftenmost above. Nevertheless, many of the new coats achieve an almost straight silhouette. Bearing these three peculiarities in mind, it will not be at all hard to acquire an up-to-date coat, for spring styles show no radical departures from those of the winter.

Although the throw is merely a supplement to the spring coat for wear on keen, chilly days, it may be made a style note full of charm. There is a knack in wearing it which all lies in adjusting it becomingly. Each of the two coats illustrated here is provided with a throw and one of them is further favored with one phase of the gauntlet cuff. Both are of wool velour, which has proved itself an ideal fabric for coats.

The model at the left is in beige color. It has straight panels down the front and a rather wide girdle set in about the sides and back, defining a long waistline. The skirt of the coat is shirred to the belt with scant fullness. The sleeves are roomy and finished with ample cuffs that are embellished with small buttons. There is a long, rolling shawl collar which may be fastened over the throat. The scarf hangs to the waistline and ends in large, soft tassels. It amounts to an ornament and is pictured with the throat uncovered and the ends hanging at each side of the coat.

The coat at the left resorts to small box plaits in the back to provide the required fullness in its skirt. It chooses the high waistline and a scarf in white with tasseled ends in dark taupe like the coat in color.

Julia Bottomley

NEW FASHIONS

Rippling skirt sections are tabooed by some of the smartest modistes.

Gray handkerchief linen is used for some of the most distinctive of French hand made blouses.

Cat stitching in heavy silk is in some cases replacing fil tire work on blouses, since it involves less time and labor and is almost as effective.

A novel edging introduced by Lanvin on some of her blouses, is made of tiny seam beading, cut in half and applied by hand.

Colored pique is used for collars and cuffs on lingerie blouses for spring.

Heavily embroidered front panels are used on some of the hand made lingerie things.

Blazer stripes are reported as returning to favor in England for sweaters.

Most of the best bandeau brassieres are now fitted with a shaped diaphragm band.

Old-Fashioned Frocks.

Frocks of organdie in combinations that harken back to the fifties give an inkling to what may be expected this season, and illustrated in a model seen of gray organdie, the skirt fulled slightly into the waist is banded at the foot with self color and finished at the top with cord and narrow knife plaiting of pale yellow. The quaint tight-fitting waist, modified by modern influence, depends upon knife plaitings and cording to trim. A good looking brown and white plaid gingham dress is combined with white organdie and set off with a brown suede belt, which carries it above the rank of the commonplace.

Blouses Without Sleeves.

Pumpkin yellow handkerchief linen is developed into a mannish tucked front, sleeveless blouse to wear with a navy suit, the jacket of which is short and boxlike.

Name ....

Says Dodd's Kidney Pills, Wonderful Remedy

Mrs. Della Olson, of New London, Wis. like many others, knows after experiencing the use of Dodd's Kidney Pills that they are unexcelled. Here is what Mrs Olson recently wrote us:

"I suffered with rheumatism for years There was a gravel deposit in the urine and I had frequent headaches. I had dark circles around my eyes and was always tired. I bought a box of your Dodd's Kidney Pills and am glad I did, for I secured quick relief and think they are a wonderful remedy."

Mighty few people realize in time that kidney-trouble is making its advances upon their health. They put off treatment—they say, "Oh, I'll be all right in a day or two." And the malady tightens its grip Result: Bright's Disease, hospital treatment, doctors' bills—often death.

DODDS KIDNEY PILLS
Insist on the name with three D's and enjoy freedom from kidney ills. At all druggists.

In Holland a municipal gas plant is extracting illuminating gas from a peat and coal mixture.

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Any druggist can put this up or you can mix it at home at very little cost. Full directions for making and use come in each box of Barbo Compound. It will gradually darken streaked, faded gray hair, and make it soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off. Adv.

Optimistic Thought.

A BAD COUGH
is risky to neglect. Take it in hand, and safeguard your health by promptly taking
PISO'S

To drive a tank, handle the guns, and sweep over the enemy trenches, takes strong nerves, good rich blood, a good stomach, liver and kidneys. When the time comes, the man with red blood in his veins "is up and at it." He has iron nerves for hardships—an interest in his work grips him. That's the way you feel when you have taken a blood and nerve tonic, made up of Blood root, Golden Seal root, Stone root, Cherry bark, and rolled into a sugar-coated tablet and sold in sixty-cent vials by almost all druggists for past fifty years as Dr. Pierce's Golden Medical Discovery. This tonic, in liquid or tablet form, is just what you need this spring to give you vim, vigor and vitality. At the fag end of a hard winter, no wonder you feel "run-down," blue, out of sorts. Try this "Medical Discovery" of Dr. Pierce's. Don't wait! To-day is the day to begin! A little "pep," and you laugh and live.

The best means to oil the machinery of the body, put tone into the liver, kidneys and circulatory system, is to first practice a good house-cleaning. I know of nothing better as a laxative than a vegetable pill made up of May-apple, leaves of aloe and jalap. This is commonly sold by all druggists as Dr. Pierce's Pleasant Pellets, and should be taken at least once a week to clear the twenty-five feet of intestines. You will thus clean the system—expel the poisons and keep *well*. *Now* is the time to clean house. Give yourself a spring house cleaning.—Adv.

KIDNEY TROUBLE NOT EASILY RECOGNIZED

Applicants for Insurance Often Rejected

An examining physician for one of the prominent life insurance companies, in an interview of the subject, made the astonishing statement that one reason why so many applicants for insurance are rejected is because kidney trouble is so common to the American people, and the large majority of those whose applications are declined do not even suspect that they have the disease.

Judging from reports from druggists who are constantly in direct touch with the public, there is one preparation that has been very successful in overcoming these conditions. The mild and healing influence of Dr. Kilmer's Swamp-Root is soon realized. It stands the highest for its remarkable record of success.

We find that Swamp-Root is strictly an herbal compound and we would advise our readers who feel in need of such a remedy to give it a trial. It is on sale at all drug stores in bottles of two sizes, medium and large.

However, if you wish first to test this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Adv.

Great Advantage.

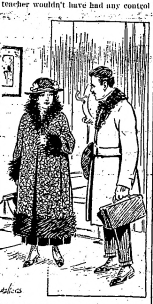
The Greater Need

By VINCENT G. PERRY

(Copyright, 1918, by the McClure Newspaper Syndicate.)

Helen Paterson collected her books and packed them neatly into her club bag. She wasn't coming back to the little village school that had grown so familiar to her and become a part of her life, and the thought of leaving it and the pupils who had won a place in her heart pained her. It was not because of inefficiency that she had not been re-engaged for another term, for the pupils had advanced with remarkable strides under her tutorage, but because she was a woman and Doctor Arnold didn't approve of a woman teacher for so large a school, and on the school board Doctor Arnold's word was law.

The doctor remembered when he was a boy and what a time they led the schoolmasters. That was when the "spare the rod and spoil the child" rule was rigidly enforced. A woman teacher wouldn't have had any control over the school in those days and he couldn't see how things could possibly be different now. He was the only doctor in the village and was kept so busy he hadn't an opportunity to visit the school and see how Helen's plan of love and sympathy for each pupil worked out. True, his little motherless daughter, Annette, spoke in glowing terms of Miss Paterson, but then she was only a very small child and couldn't have any real conception of how the school was disciplined. He had met the teacher once or twice and remembered her but vaguely, a slip of a girl that looked as if she would faint if her pupils became unruly.



Offered to Drive Helen to the Station.

Before she caught the train home Helen had a call to make. One of her favorite pupils had been ill for some time and rumor had it that the child had diphtheria. For the safety of the other pupils she had not visited him before, but there was no harm in calling now, she thought. The little lad, Ned Hockins, a bright little wisp, was dying, and she was just in time.

After it was all over and the doctor was leaving, he offered to drive Helen to the station. She felt a little bitterness toward him, knowing he was responsible for the change in her school, but she noticed that he looked worried and upset. Perhaps the impregnable Doctor Arnold was human after all, she thought. Something was troubling him—his conscience over his treatment of her, perhaps. She would give him a chance to right himself at any rate so she accepted his offer.

"I am afraid my own little girl is coming down with the same thing," he remarked in a worried tone after they had talked over the sad scene they had just left. "She is in bed now. If she has diphtheria it will go hard with her. Just at the holiday season I am afraid I won't be able to get a nurse from the city, and none of the villagers will touch a contagious case. Little Ned would have recovered if he had had proper nursing."

"We have time to stop off and see her now," Helen said. "I wouldn't leave knowing Annette was in danger."

Little Annette was in grave danger, Helen saw that at once. "I am going to stay right here," she told the doctor. "I would never forgive myself if I went home and left Annette without some capable hand to care for her. I know she will be better with me than with anyone else; she knows me so well and we are such great friends."

The doctor was too grateful to make even a pretense of refusal. It was a big sacrifice for Helen to give up her Christmas holiday, but she hardly thought of that. Despite her careful nursing and the doctor's skill little Annette's case became critical.

"To save her I should be with her all my time, but with so much sickness in the village and not another doctor within twenty miles I can't conscientiously devote all my time to Annette, even though she is my own," the doctor said to Helen after a particularly trying night.

Helen was beginning to see the real side of the doctor's character. He was still in his early thirties, but his responsibilities in the village had aged him before his time. His true self was reflected in his love for his child and his devotion to duty.

"I think I can help you," she said. "My brother is a graduate doctor and has just finished his hospital training. He will be able to handle your practice while you put all your time on this case. I will wire him to come right down tonight and I know he will do it."

"You're an angel," was all the doctor could say as he grasped her hand.

As Helen promised, her brother arrived, and Doctor Arnold was pleased with his appearance and knowledge of his work. He worked over his child for days until the crisis was passed. Helen waited on his every wish, and between them they won the hard fight.

After Annette passed the danger zone and was well on the way to convalescence the doctor broke down. Helen had seen it coming for days. Even his iron will and wonderful constitution could not stand a siege like he had had. He had been overworked before Annette's illness and had not slept three hours a day while she was in danger. Helen knew all he needed was rest to brain and body and she saw that he got it. When he was well enough to stand it she read to him. Her soothing voice worked wonders. In a very short time he was able to sit up, but was not anxious to recover entirely.

"I don't know what I could have done without you, or what I am going to do when you are gone," he told Helen when she suggested that both her patients were well enough to do without her. "If there is anything I can do to repay you I hope you won't delay asking me."

"If you will use your influence to secure my school back again for me? There is a new teacher there and I hear the children are not getting along very well with him. We got along so well together and I love them, every one. Please, Doctor—they need me and I need them." She was almost sobbing.

"You are needed somewhere else, too, very much. A little motherless girl and an old, grouchy doctor need you. Miss Paterson—Helen, don't think me selfish when I say their need is the greater—when I ask you to fill this need—become my wife?" The doctor was speaking with an effort.

"I have been thinking of that need, too, Doctor, the need of the little motherless girl and the dearest, kindest, bravest father that ever lived, and I decided weeks ago that if they felt it, too, and he really wanted me I wouldn't say no," Helen answered softly.

Development of Steamships.

In 1543 Blasco de Garay, a sea captain of Spain, exhibited in the harbor of Barcelona, in the presence of Charles V. and his court, a steamboat capable of a speed of three miles an hour. For nearly 200 years Blasco de Garay's invention was lost sight of, and not till the end of the eighteenth century was the subject taken up again. European scientists became interested, and the result was the construction of a steamboat on the River Saone by Marquis de Joffrey in 1759. In 1788 Patrick Miller of Scotland built a steamboat. It succeeded so well that a larger one was built in 1789, when seven miles an hour were made. Eventually Robert Fulton built the Clermont, which made its trial trip in 1808.

Cardinal Business Rules.

There are three cardinal rules to follow in any business, but they are the very foundation of success in the gift shop:

Originality, attractiveness, courtesy—these three are absolutely essential to the success of such an undertaking, be it on large or small scale. Your shop must have something that marks it as different.

All of your gifts cannot be unique, but you can have some specialty that is odd, some drawing card that will make your shop stand out from other shops. It must be attractive to attract and the service must be of the right kind if custom is to be caught and retained.

Camouflage Rats.

The principle of setting a thief to catch a thief has been worked out for the purpose of rat-catching. An inventor has patented a rat of metal composition with a very sharp spike at the end of its nose. One puts a piece of cheese on the spike, most attractive to any real rat that happens to come along. The real rat innocently approaches, hopeful of getting a nibble. But the sharp spike is attached to a trigger and a spring. When the real rat touches the cheese the trigger is sprung and the unfortunate rodent is impaled.

Only Singular Number.

Lucinda was testing the devotion of Erastus.

"S'pose it is night and we are in a deep, black woods. There comes a bo'er constricter a-wriggling through the grass; and a wildcat a-boundin' through the bushes; an' a lion roarin' an' makin' for us a mile a minute. What are we a-gonna do?"

"There ain't gonna be no 'we.'"—Christian Register.

Junk Dealers Agree to Help.

Dealers in waste material who handle annually an output of $1,000,000,000 have pledged their co-operation with Uncle Sam in utilizing the country's by-products for military purposes. The metals division of the National Association of Waste Materials Dealers, at a meeting held in New York recently, named a special committee to confer with the war industries board at Washington on the subject.

WHAT CAN WE ✚ DO?

A shortage of trained nurses confronts the Red Cross and young high school and college women must save the day for the organization in this dilemma. Even though these young women have no expectation of following nursing as a life vocation they may benefit themselves and show their willingness to help when help is badly needed by qualifying to do Red Cross work. The time spent in the nurses' training schools of the country, and in actual nursing, will prove a lifelong asset—broaden the vision and sympathies and make better and less anxious mothers of the girls who undertake such training.

We are to discontinue the knitting of trench caps because the government is to include a trench cap in every man's equipment. And furthermore, we are asked to use the yarn for socks and more socks. The hand-knitted varieties are most satisfactory and even when the upper part is made by machine the stitches may be taken up on needles of the correct size, and the foot knitted by hand.

About Supplies.

Every Red Cross worker in the central division is to be congratulated on the very handsome total of articles shipped during the month of January. Can we make it 4,000,000 for the month of February?

COATS WITH "THROW" COLLARS.

Gauntlet cuffs and "throw" or scarf collars are among the small innovations in coat styles that distinguish them from preceding seasons. Another almost universal feature of new coats is some sort of definition at the waistline which may be either above or below the normal waistline and is oftenmost above. Nevertheless, many of the new coats achieve an almost straight silhouette. Bearing these three peculiarities in mind, it will not be at all hard to acquire an up-to-date coat, for spring styles show no radical departures from those of the winter.

Although the throw is merely a supplement to the spring coat for wear on keen, chilly days, it may be made a style note full of charm. There is a knack in wearing it which all lies in adjusting it becomingly. Each of the two coats illustrated here is provided with a throw and one of them is further favored with one phase of the gauntlet cuff. Both are of wool velour, which has proved itself an ideal fabric for coats.

The model at the left is in beige color. It has straight panels down the front and a rather wide girdle set in about the sides and back, defining a long waistline. The skirt of the coat is shirred to the belt with scant fullness. The sleeves are roomy and finished with ample cuffs that are embellished with small buttons. There is a long, rolling shawl collar which may be fastened over the throat. The scarf hangs to the waistline and ends in large, soft tassels. It amounts to an ornament and is pictured with the throat uncovered and the ends hanging at each side of the coat.

The coat at the left resorts to small box plaits in the back to provide the required fullness in its skirt. It chooses the high waistline and a scarf in white with tasseled ends in dark taupe like the coat in color.

Julia Bottomley

NEW FASHIONS

Rippling skirt sections are tabooed by some of the smartest modistes.

Gray handkerchief linen is used for some of the most distinctive of French hand made blouses.

Cat stitching in heavy silk is in some cases replacing fill tire work on blouses, since it involves less time and labor and is almost as effective.

A novel edging, introduced by Lanvin on some of her blouses, is made of tiny seam beading, cut in half and applied by hand.

Colored pique is used for collars and cuffs on lingerie blouses for spring.

Heavily embroidered front panels are used on some of the hand made lingerie things.

Blazer stripes are reported as returning to favor in England for sweaters.

Most of the best bandeau brassieres are now fitted with a shaped diaphragm band.

Old-Fashioned Frocks.

Frocks of organdie in combinations that harken back to the fifties give an inkling to what may be expected this season, and illustrated in a model seen of gray organdie, the skirt fulled slightly into the waist is banded at the foot with self color and finished at the top with cord and narrow knife plaiting of pale yellow. The quaint tight-fitting waist, modified by modern influence, depends upon knife plaitings and cording to trim. A good looking brown and white plaid gingham dress is combined with white organdie and set off with a brown suede belt, which carries it above the rank of the commonplace.

Blouses Without Sleeves.

Pumpkin yellow handkerchief linen is developed into a mannish tucked front, sleeveless blouse to wear with a navy suit, the jacket of which is short and boxlike.

Says Dodd's Kidney Pills, Wonderful Remedy

Mrs. Della Olson, of New London, Wis. like many others, knows after experiencing the use of Dodd's Kidney Pills that they are unexcelled. Here is what Mrs Olson recently wrote us:
"I suffered with rheumatism for years There was a gravel deposit in the urine and I had frequent headaches. I had dark circles around my eyes and was always tired. I bought a box of your Dodd's Kidney Pills and am glad I did, for I secured quick relief and think they are a wonderful remedy."
Mighty few people realize in time that kidney trouble is making its advances upon their health. They put off treatment—they say, "Oh, I'll be all right in a day or two." And the malady tightens its grip Result: Bright's Disease, hospital treatment, doctors' bills—often death.
DODDS KIDNEY PILLS
Insist on the name with three D's and enjoy freedom from kidney ills. At all druggists.

INTENTIONAL DUPLICATE EXPOSURE

"Every Picture Tells a Story"

"Blue" and Worried?

"Blue," worried, half-sick people should find out the cause of their troubles. Often it is merely faulty kidney action, which allows the blood to get loaded up with poisons that irritate the nerves. Backache, headaches, dizziness and annoying bladder troubles are added proofs that the kidneys need help. Use Doan's Kidney Pills. Thousands thank them for relief from just such troubles.

A Minnesota Case

Mrs. C. C. Lohmann, S. Main St., Zumbrota, Minn., says: "The first symptom of my kidney trouble was a pain through the small of my back; before long, it extended down into my limbs. I had nervous headaches and often got so dizzy, I couldn't see. I felt languid and was all worn out mornings. Doan's Kidney Pills gave me quick relief and after I had used a few boxes, I was cured. I have had no further trouble."

FRECKLES

Now Is the Time to Get Rid of These Ugly Spots

There's no longer the slightest need of feeling ashamed of your freckles, as the prescription othine—double strength—is guaranteed to remove these homely spots.

Simply get an ounce of othine—double strength—from your druggist, and apply a little of it night and morning and you should soon see that even the worst freckles have begun to disappear, while the lighter ones have vanished entirely. It is seldom that more than one ounce is needed to completely clear the skin and gain a beautiful clear complexion.

Be sure to ask for the double strength othine, as this is sold under guarantee of money back if it fails to remove freckles.—Adv.

Hugh L. Frayne, labor representative on the war industries board, has been intrusted with the duty of looking after the welfare of men and women employed in war work.

Skin Troubles That Itch

Burn and disfigure quickly soothed and healed by hot baths with Cuticura Soap and gentle anointings of Cuticura Ointment. For free samples, address, "Cuticura, Dept. X, Boston." Sold by druggists and by mail. Soap 25, Ointment 25 and 50.—Adv.

Win the War by Preparing the Land
Sowing the Seed and Producing Bigger Crops
Work in Joint Effort the Soil of the United States and Canada
CO-OPERATIVE FARMING IN MAN POWER NECESSARY TO WIN THE BATTLE FOR LIBERTY

The Food Controllers of the United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat are available to be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rests the burden of supply.

Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States [illegible] is for more men for seeding operation.

Canada's Wheat Production Last Year was 225,000,000 Bushels; the Demand From Canada Alone for 1918 is 400,000,000 Bushels

To secure this she must have assistance. She has the land but needs the men. The Government of the United States wants every man who can effectively help, to do farm work this year. It wants the land in the United States developed first of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there.

Apply to our Employment Service, and we will tell you where you can best serve the combined interests.

Western Canada's help will be required not later than April 5th. Wages to competent help, $50.00 a month and up, board and lodging.

Those who respond to this appeal will get a warm welcome, good wages, good board and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had apply to: U. S. EMPLOYMENT SERVICE, DEPARTMENT OF LABOR

War Club Week Is Proclaimed

St. Paul, March 2.—Governor Burnquist has issued the following proclamation for war club week:

Whereas, the people of the United States are at war with the German empire and the empire of Austria-Hungary and for the successful prosecution of the war, systematic and organized thrift, saving and economy are absolutely necessary in all of our citizens, and permanent agencies to carry on the work of thrift, saving and economy during the full period of the war are essential, and the government of the United States has requested its citizens to form themselves into war saving societies and in such societies to carry on, during the period of the war, a systematic and continuous campaign for the encouragement and practise of thrift, saving and economy and for the purchase of Thrift Stamps and War Savings Stamps and has outlined a plan for the organization of such societies;

Now, Therefore, I do set aside and designate the week commencing Sunday, the 10th day of March, 1918, as

WAR CLUB WEEK

and during said week I do earnestly urge and request the citizens of the state of Minnesota,

FIRST—To purchase liberally and enthusiastically War Savings Stamps and Thrift Stamps,

SECOND—To form war savings societies and within such societies solemnly and formally to declare unto the government of the United States that they will, while the war continues,

Practice in their personal affairs thrift and economy.

Abstain from expenditures which are not reasonably necessary to their health and well-being.

Save and invest the proceeds of their savings in Thrift Stamps and War Saving Stamps and,

Advise and solicit their friends, neighbors and associates to practise thrift, saving and economy and to purchase such stamps and in this manner to write upon the nation's honor roll the names of all those who are loyal and patriotic for the coming generations to read.

And I hereby call upon all women's clubs and organizations; all labor unions and railway brotherhoods and other labor organizations; all universities and colleges; all public, private parochial and denominational schools and colleges; all churches, lodges and benevolent and fraternal organizations; all state, county and city officials, fire departments, police departments and hospitals; all Y. M. C. A.s, Y. W. C. A.s, Christian Endeavor societies and Boy Scout organizations; all business houses, office forces, office buildings, mills, factories, commercial clubs, hotels and apartment houses and all other like and similar organizations to form within themselves one or more war savings societies and thereby to affiliate themselves with the National War Savings committee.

—J. A. A. Burnquist.

MINNESOTA NEWS NOTES.

Barnum.—Township Assessor Zimmer has resigned and the town board will name his successor shortly.

Wahkon.—D. E. Stalker, a resident of this community for several years, died at his home in Minneapolis.

Ortonville. — Resolutions adopted by the Ortonville Automobile club at a special meeting indorse the action the Minnesota Public Safety commission in removing A. B. Kaercher from the position of government draft appeal agent.

Hallock. — Grandma Jenkins celebrated the 89th anniversary of her birthday recently. A surprise party was given here by a number of her friends and admirers. A birthday cake decorated with 90 candles was presented to her.

Stillwater. — Many cords of excellent firewood have been gathered during the past week or ten days by the residents of "Dutchtown" from along the shores of the famous St. Croix river between this city and Marine-on-St. Croix.

International Falls.—E. B. Fisher, superintendent of the Minnesota, Dakota and Western railroad, with headquarters here, was arrested for making remarks tending to discourage enlistments. He was placed under bonds pending a hearing.

Akeley.—Government Indian agents destroyed 475 gallons of cider here. The cider was found to contain 7 per cent alcohol. It was reported several days ago that school children had become intoxicated after drinking the cider and an investigation was started.

St. Paul.—A small sample of "hard grape cider," said to have "turned the heads of many at Roosevelt," was received from a citizen of the Kittson county village at the offices of the State Public Safety commission. The same was forwarded to the University of Minnesota laboratory for analysis. The letter accompanying the package said that there is a blind pig somewhere in Roosevelt and that the strong cider was dispensed in a pool hall which is operated seven days a week.

Plans to End Rail Coal Shortage.

Washington, March 2.—Federal officials, Eastern railroad men and coal operators of Pennsylvania, Maryland and West Virginia conferred here at the invitation of the fuel administration to determine the best means of assuring an adequate supply of railroad fuel coal particularly adapted for use in other channels for the prosecution of the war. Disposition of 175,000,000 tons of coal is involved in the subject of railroad fuel coal and will be [illegible]

Proof that Some Women do Avoid Operations

Mrs. Etta Dorion, of Ogdensburg, Wis., says:

"I suffered from female troubles which caused piercing pains like a knife through my back and side. I finally lost all my strength so I had to go to bed. The doctor advised an operation but I would not listen to it. I thought of what I had read about Lydia E. Pinkham's Vegetable Compound and tried it. The first bottle brought great relief and six bottles have entirely cured me. All women who have female trouble of any kind should try Lydia E. Pinkham's Vegetable Compound."

How Mrs. Boyd Avoided an Operation.

Canton, Ohio.—"I suffered from a female trouble which caused me much suffering, and two doctors decided that I would have to go through an operation before I could get well.

"My mother, who had been helped by Lydia E. Pinkham's Vegetable Compound, advised me to try it before submitting to an operation. It relieved me from my troubles so I can do my house work without any difficulty. I advise any woman who is afflicted with female troubles to give Lydia E. Pinkham's Vegetable Compound a trial and it will do as much for them."—Mrs. MARIE BOYD, 1421 5th St., N. E., Canton, Ohio.

Every Sick Woman Should Try

LYDIA E. PINKHAM'S VEGETABLE COMPOUND

Before Submitting To An Operation

The Vernacular.

"My dear woman," asked the literary slum visitor, "do you periodically castigate your offspring?"

"I dunno," said the lady of the tenement, suspiciously.

"He means," translated the settlement-worker, "do you ever wallop your kinds?"

We are not simply to occupy space, but to occupy it well.

An old toper says it's the drinking between drinks that hurts a fellow.

Saved.

Little Girl (to aunt who is staying in the house on a visit)—Are you going out, auntie? You've got a hole in your veil.

Aunt—Have I? I'm afraid I haven't time to change it now.

Little Girl—Oh, well, it's not a very big one—and, after all, I don't suppose anyone will know you're my aunt.—London Punch.

Less than one-fifth of Spain's coal mines are officially recorded as productive.

Severe Test.

"It may be true that kind words never die," remarked the Observer of Events and Things, "but it must be admitted that a sudden fall on an ice-covered pavement is apt to put a sort of a crimp in them."

A spring gun has been invented for casting fishing lines farther than can be done by hand.

During the past few years there has been a falling off in the yield of the banana.

22 Million Families in the United States

IF EACH FAMILY saved one cup of wheat flour it would amount to 5,500,000 pounds, or more than 28,000 barrels. If this saving was made three times a week, it would amount to 858,000,000 pounds, or 4,377,000 barrels in a year.

You can do your share in effecting this saving and really help to win the war by omitting white bread from one meal today and baking in its place muffins or corn bread made according to this recipe:

Corn Meal Muffins

¾ cup corn meal
1¼ cups flour
¾ teaspoon salt
4 teaspoons Royal Baking Powder
2 tablespoons sugar
No eggs
1 cup milk
2 tablespoons shortening

Sift dry ingredients together into bowl; add milk and melted shortening and beat well. Bake in greased muffin tins in hot oven about 20 minutes. Same batter may be baked as corn bread in greased shallow pan.

Our new Red, White and Blue booklet, "Best War Time Recipes," containing many other recipes for making delicious and wholesome wheat saving foods mailed free—address

FARMER ALLY OF DEMOCRACY IN GREAT WAR

Tiller of Soil as Essential to Success as the Soldier or the Gun Maker.

IMPORTANCE REALIZED

Agricultural Interests Receive Early Consideration From Public Safety Commission—Help and Inspiration Given—State to Double Production.

Democracy's principal ally in this great war for the dethronement of Prussianism is the farmer. Though guns may thunder and cities crumble before the onslaughts of the millions now engaged in the great cause, peace, everlasting peace can come only through the lowly tiller of the soil.

To the thoughtless this may not appeal, but how inseparably the great cause and the farmer are linked is indicated in the unusual deference being shown him by those directing the allied interests. No battle is complete without the farmer, God speed him, is the constant supplication.

Among the first of the state war units to recognize the importance of the farmer in his relation to the great conflict was the Minnesota State Safety commission. Early was the consideration given the agricultural interests of the state by this body and in its twelve months of existence little has been overlooked in the way of help and patriotic inspiration. Returns in consequence have been many fold and further help is contemplated.

This year should see Minnesota's food production doubled and as the main source of that production is the farmers of the state the task the Minnesota safety commission has before it can be appreciated. And that the Commission will succeed there is little doubt as it has the confidence of the farmers and they will respond to a man.

One of the most active of the Minnesota Safety body in an agricultural way is C. H. March, vice president of the commission and a farmer himself. As the head of the agricultural division of the state organization both his time and his money have been freely given in its furtherance. Recently Mr. March returned from Washington where he went at the instance of Gov. Burnquist and the members of the Commission and his visit was not only of value to the agricultural interests of Minnesota, but to the entire Northwest. If only the promise of an increased fixed price for the 1918 wheat crop, which was one of the objects of the visit, is realized, this intervention alone will be worth many millions of dollars to the farmers of the state.

At the command of Gov. Burnquist and the Minnesota Safety commission Mr. March placed before President Wilson and those interested in food production a number of things necessary to the success of the farmers and the additional production which is so urgently desired and was successful to the extent that many reforms will undoubtedly follow. Not the least of the promises obtained was aid in behalf of a substantial increase in the government fixed price for wheat and a partial return to state grain grades which have been superseded by federal standards. Acting on behalf of the commission Mr. March pointed out to President Wilson and his war aides the great work Minnesota farmers are doing and urged as generous a government compensation as other lines of endeavor are now receiving. Such was only justice.

One of the early agricultural activities of the commission was the supplying of farm help made necessary by the draft. With the usual sources of supply cut off by the national call to arms the Commission at once took over the free employment machinery of the state and much financial loss was averted as a result. This year even greater plans are in preparation for the harvest call.

Another of the early problems was transportation and how it was handled by the Commission is best told in the thousands of freight cars that have been forwarded to every section of the state at the urgent call of farmers and communities generally. Any dearth in this respect has been kept down to the minimum.

One of the chief features of the success of the Commission in an agricultural way has been the confidence its activities has inspired. Education and patriotic appeal, instead of official commands have been the main feature of its propaganda and as a result general cooperation is greater than ever in the history of the state. Today the commission has more intimate relations and is in closer touch with the farmers of Minnesota than any other known agency.

With the opening of the new crop year efforts of the Minnesota Safety commission will be redoubled in making it a record breaker and there is every reason to believe that the fondest hopes of those in charge will be realized. Anticipating such, plans that will carry the commission well [illegible]

War Savings Stamps

Get the Habit of Saving

IN Thrift Stamps and War Savings Stamps, the United States Government offers you the greatest opportunity to save which any government has offered to its people. Like Liberty Bonds, War Savings Stamps have behind them the entire resources of the Government and people of the United States. They have the additional advantage that they steadily increase in value, and this increase is guaranteed by the Government. These stamps are issued in two denominations, the 25 cent Thrift Stamp and the $5.00 War Savings Stamp.

A "Thrift Card" is furnished to all purchasers of 25 cent stamps. This card has spaces for 16 stamps. When all the spaces have been filled the Thrift Card may be exchanged for a $5.00 stamp at post offices, banks or other authorized agencies by adding 12 cents in cash prior to February 1, 1918, and 1 cent additional each month thereafter.

If you prefer, you may buy a $5.00 stamp outright. These were on sale January 31, 1918, for $4.12. They automatically increase in value a cent a month every month thereafter until January 1, 1923, when the United States will pay $5.00 at any post office or at the Treasury in Washington for each stamp affixed to a War Savings Certificate.

When you purchase a $5 stamp, you receive an engraved folder known as a "War Savings Certificate," which bears your name and can be cashed only by you. This certificate contains 20 spaces. If these are all filled with War Savings Stamps before January 31, 1918, the cost to you will be $82.40, and on January 1, 1923, the Government will pay you $100—a net profit of $17.60. This is based on an interest rate of 4 per cent compounded quarterly from January 2, 1918.

If you hold a War-Savings Certificate and find it necessary to cash it before maturity, you may at any time after January 2, 1918, upon giving 10 days' written notice to any money-order post office receive for each stamp affixed to your certificate the amount paid therefor plus 1 cent for each calendar month after the month of purchase of each stamp. A registered certificate may be redeemed, however, only at the post office where registered.

You cannot lose and are certain to gain. You are buying the safest security in the world in the most convenient form in which the security of a great Government has ever been offered to its people.

Why You Should Buy Them

Your country needs every penny every man, woman and child can save, in order to feed, clothe, and arm the soldiers and sailors of America to win this war in defense of American honor and democracy.

A Country worth fighting for is a Country worth saving for.

To save money is to save life.

Buy War Savings Stamps at post offices, banks, trust companies, or other authorized agencies and strike a blow for your Country.

OF INTEREST TO BANKS.

In response to a letter from Secretary of the Treasury McAdoo the Postmaster General rules that there is no provision of law under which a bank can send through the mails free of postage notice informing a client that an installment payment on account of Liberty Loan Bonds purchased at the banks is due; that this is a private transaction between the bank and its customer, and it will be illegal to furnish banks with franked cards or envelopes for use in sending such notices.

BACK YARD POULTRY.

Uncle Sam expects you to KEEP HENS and RAISE CHICKENS, even though you do reside in a town or city.

Two hens in the back yard for each person in the house will keep a family in FRESH EGGS.

The smallest back yard has room for a flock large enough to supply the house with eggs. The cost of maintaining such a flock is small.

Table and kitchen waste provides much of the feed for the hens and they require but little attention.

An interested child, old enough to take a little responsibility, can care for a few fowls as well as a grown person.

Every back yard should contribute its share to a "bumper crop" of poultry and eggs in 1918. Perhaps not all will find it profitable to raise chicks in town, but nearly everyone can well keep a few hens. The objection to the "crowing of the cock" can be overcome by keeping no cock. This will not affect egg production in the least.

The house for the back yard flock should be inexpensive. A piano box or other large boxes may readily be converted into a suitable residence for the hens, and the runs may be very small.

Good hens, well cared for, will produce from 10 to 15 dozen eggs annually.

In time of peace, the back yard flock may be regarded as a PROFITABLE RECREATION.

In time of WAR, A PATRIOTIC DUTY.

Buy a few hens and start in at once All hens are laying now or will soon.

For information about methods of back yard poultry keeping, write the University Farm, St. Paul, Poultry Div. Room 24 of U. S. Dept. of Agri. Warhington, D. C.

THE THIRD LIBERTY LOAN.

The campaign for the Third Liberty Loan will be opended on the 6th of April, the anniversary of the declaration of a state of war between the United States and Germany.

The amount, terms, and conditions of the loan are dependent upon further legislation and will be announced as soon as Congress has granted the necessary powers.

Secretary McAdoo chose the 6th of April as the day to open the campaign as the most fitting day to call for a patriotic response to the summons to duty to every American, to ask from the people at home the same fervent patriotism that actuates our gallant sons on the battlefields of France and on the waters of the Atlantic.

GOODRIDGE

The most progressive and the biggest little town in northern Minnesota.

WAR GARDENS FOR WHOLE STATE

Gardening is to be major undertaking in Minnesota this year. Last year village, town and city dwellers made a begining. But this year every vacant lot is expected to be put to service and made to do its patriotic duty. Gardening is to be made an organized industry instead of a series of sporadic individual experiments.

The Commission of Public Safety is urging community action in war gardening throughout the state. All communities have been asked to get busy early, both to increase the number of gardens; and to limit planting to the vegetables which will be most available to relieve the food stringenty. The whole garden program is summed up in two phrases: Grow all you can; and grow only such vegetables as are most needed and which will keep. The following fundamentals in successful gardening are emphasized;

"1. Formulate a definite program of production for your community, prepared by practical and experienced local gardeners including only those vegetables that can be produced by the greatest possible number. Seeds are scarce, therefore a war garden this year should be limited to a few vegetables that can be easily and profitably produced.

"Secure the services of a competent person to supervise the garden movements in your community. if possible secure the voluntary services of a good amateur gardener in every block to give aid and advice to his neighbors.

List all available lots vacant land, and as soon as possible list all want gadens Plan for co-operative plowing. It is not wise, however, to plow up any land until its adaptability has been passed upon by someone who knows.

Arrange local meetings and have practical and experienced gardeners lecture on the prparation, care and cultivation of gardens.

The county agent and agricultural teachers of the high schools should be very active in this matter and each community can look to them to be of splendid service in organizing the gardening activities of their communities.

WHAT THE WAR SAVINGS STAMPS WILL BUY FOR OUR SOLDIERS.

A single Thrift Stamp will buy a tent pole or five tent pins, a waist belt or hat cord, shoe strings or identification tags; two will buy one trench tool or a pair of woolen gloves. Four Thrift Stamps will buy two pairs of canvas leggings; six will buy five pairs of woolen socks or three suits of summer underwear; twelve will buy a steel helmet.

One War Saving Stamp will buy one hundred cartridges or a cartridge belt or a scabbar for a bayonet; two will purchase two pairs of woolen breeches or two flannel shirts; two and a half will buy a gas mask Three War Saving Stamps will buy an overcoat or two woolen service coats; three and [illegible] will buy three pairs of woolen blankets; four will buy [illegible]

Rural School Notes

The High School Board Examinations will be held throughout the Pennington County Rural schools on March 21st and 22nd. The State program is not out yet, but the examinations will presumably begin at 9 o'clock A. M. on these days. For this reason that the State only furnishes a limited number of sets of questions 27 in all, certain schools most conveniently located will be grouped together for the purpose of the examination. The schools will meet as follows: Dist no. 27, 148, [illegible] Lilly B. Hoard, Kratka, conductor; Dist. No. 56, 46, Mrs. Hilda [illegible] Erie, conductor; Dist's. No. 219, [illegible] Esther Kellbary, Thief River Falls, conductor; Dist's No, 125, 2, Sophie Nelson, Thief River Falls; Dist's [illegible], 69, 99, Highberg, Wylie, conductor; 30, 28, Anna Adolph, Thief River Falls conductor; 12, 154, Anna [illegible], St. Hilaire, conductor; Dist's No. 41, 31, Esther Tandberg, Thief River Falls.

—Not grouped—

Dist. 4, Margaret J. McCrum, Thief River Falls, Dist. 64 Alice Thompson, Thief River Falls, 29, Emma Tandberg Thief River Falls, 147 Nellie Nelson Thief River Falls, 133 A. O. Bratvik, St. Hilaire, 178 Mabel Satre, St. Hilaire, 54 Agnes Elg, St. Hilaire, 14 E. E. Anderson, St. Hilaire, Mrs. Bert N. Thorstad, St. Hilaire, 8 con. A. O. Halvorson Goodridge, 70 Anna Paulson Goodridge, 57 Louise Furstnau Erie, 50 Alfred Hermanson Erie, 59 Alma I. Sether Erie, 52 Gertrude L. Olson Rhoda, 39 Emma Hanke, Sunbeam, 35 Elva Bartlett Plummer, 37 C. S. McReynolds Highlanding.

Subjects will be taken in the following order:

Thursday March 21st.

Spelling.

8th grade composition and Grammar, covered in one examination.

American History.

Friday, March 22nd:

Arithmetic

Geography

The next Examination will begin Friday May 24th.

Respectfully submitted,

A. Mostue.

Dist. 105 Laura Engen, Engelstad R. C. A. Dist. 165 Francis Holzknick.

Less than a third of the school has as yet reported to the School Committee for their Red Cross Auxiliary work. Howevev excellent organization work is going on throuhout our schools. The manual, enrollment cards and enrollment blanks with other literature were sent out as late as Saturday last week. For this reason organization and enrollment has been retarded. The above named schools are given on rather indefinite reports in some cases. The undersigned Chairman of the School Committee will respectfully ask that the report, enrollment cards and enrollment blanks be returned to this office as soon as the Auxiliary for the school is organized. This will [illegible] can be displayed in the school. The button will be sent out to the schools organized as soon as received from the Division Headquarters at Minneapolis.

As soon as an organization has been effected the Auxiliary will begin the work of making things for the Red Cross.

What can the pupils do?

The Manual states on pages 12 and [illegible] a list of things that can be made by the various grades. Of this list the following articles have been suspended. The supply on hand sufficient until further notice.

Snappings and comfort pillows. Knitted wash rags, handkerchiefs, table napkins. The boys may be able to knit squares, size 5x5 made out of old yarn, also knitting needles [illegible] long and 3-16 thick. The boys [illegible] as girls can do wonders when going at a thing with a will and determination. Just try and see if you can not, boys and girls, as well as the next best one in your school or the neighboring School.

Material will be ordered thru the chapter, Mrs. W. W. Prichard Sr. of Thief River Falls, will assist you in the selection. The materials must be paid for. Take a bill for the goods bought and get it receipted when paid for. The Auxiliary School treasures must keep a close tab on expenditures Draw on Mr. T. L. Melgaard Thief River Falls for any money needed. If any school or Auxiliary need literature of any kind please address this office.

The New Creamery

We promised in our last issue to give further particulars concerning the enthusiastic creamery meeting held in the Goodridge Hall last Wednesday afternoon. The business places were closed between the hours of one and three to enable both the farmers and business men to attend. This action had been formerly agreed upon between the business men at a commercial club meeting held the previous Monday evening. As stated last week it was decided to dissolve the old corporation and form a new one with increased capitalization. This new corporation will be known as the Goodridge Cooperative Creamery Association The following were elected officers of the new organization:

Pres. Louis Poppenhagen, Vice-Pres. G. Gunderson, Sec. M. J. Stephenson, Treas. Nick Bundlund. The above officers are also to act as the board of directors with the addition of A. O. Feragen as the fifth member, G. C. Gulrud was given the contract to move the creamery building Torgersen to Goodridge at the consideration of Six hundred dollars.

Saturday the board of directors of the old corporation and those of the new met in Goodridge and appointed the following to solicit subscriptions for shares in the creamery: G. Gunderson, G. C. Gulrud, M. G. Thoreson, L. P. Poppenhagen, A. O. Feragen, and G. T. Helle.

AMERICAN AND GERMAN EFFICIENCY.

The searchlight of war has brought out many interesting facts, and one of the test is that the vaunted German efficiency will not always stand the test of comparison with American efficiency. The Germans boasted of being the greatest farmers on earth. Investigation shows that in efficiency in agriculture, measured by the produce per acre, America being graded 100, Belgum leads the world, at 205; Great Britain comes second, at 155; Amerier comes fourth.

But the test is the man test rather than the acre test, and here America leads the world by over 2 to 1.

Again, grading America at 100 per farm worker, Great Britain produces 43 and Germany 42. The American farmer cultivates 27 acres, the German farmer but 7. With the aid of vast quantities of fertilizer the German produces [illegible]

THE QUESTIONAIRE.

The following poem was written by a Wm. Fowler and sent to Gen. [illegible] H. McCord, adjutant general of Missouri. The general thought it so good that he mailed it to a friend, J. E. [illegible], who had it inserted in the St. Joseph, Mo., Gazette:

Please promptly answer and with care,
The queries in your questionaire
[illegible]
[illegible] the fatal bell;
[illegible] age, condition, weight and race;
And name each blemish—feet to face;
If [illegible] hair, knock-kneed or blind,
[illegible] fully state befor it's signed.
If you've had wives, please state how many;
If not, just why you haven't any;
If living with your wife's relation,
Then state who rules the home plantation;
Does ma-in-law pay your house rent?
If so, please state to what extent;
Please answer, sir, with utmost care,
'Fore sending in your questiennaire.
If you've a wife with you to bunk,
State when your clothes went in one trunk;
Here give the total of your boodle,
And state what's wrong with your poor noodle.
Have you flat feet or wheels in head?
Are your beef cattle all corn fed?
How have you lived for twelve months past?
If preacher, state where you starved last.
Have you your last year's taxes paid?
Are you supporting man (or maid?)
If so, is she your wife's relation?
(Be careful here with explanation).
Have you been trained for war's dread strife,
Aside from battles with your wife?
Can you talk Kansas, French, or Greek,
And how much English do you speak?
When all have answerd and with care,
The queries in the questionnaire,
Then Uncle Sam will be much wiser,
And will proceed to whip the Kaiser.

Star Notes

(Too late for last week).

Mrs. K. Danielson visited at the Oscar Thoreson home west of Erie Sunday.

Halvor Syverson is reported sick at the hospital at Thief River Falls.

Ole Yatesund of Rhoda, handling McConnons goods, called on customers in S. E. Star latter part of the week.

John Hanson, resently drafted, reports himself as thriving well at Camp Dodge.

The infant of Mr. and Mrs. Even Sjulestad is reported ill.

Carl Vake departed for the county seat Monday to pose before the Military Draft Board Physician. By the way, Carl is one of North Star Region's natives with plenty of "pep" and "punch" to him, and if added to Uncle Sam's legions going to get the Kaiser, would no doubt do his bit.

A surprise party was given to Mr. and Mrs. Kittle Vatne on Sunday afternoon. A fancy lamp was presented.

George Hovet drove to Gully Friday to meet his brother John who was on his return from the lumber woods.

Gilbert Hanson the Star sawyer has now logs enough piled around his saw mill to keep him agoing till well nigh onto seedining time and then some.

Miss Thelma Kroko was the guests of Miss Syverson Sunday.

Mr. and Mrs. Hovet visited at the home of Mr. and Mrs. Mrs. Bon Kvestly in the vicinity of High Landing Sunday and Monday.

TOWHOM IT MAY CONCERN

This is to advise those who are interested that the firm of C. Gustafson & Son of Thief River Falls has the exclusive right to sell Avery tractors, threshing machines, and plows in the territory tributary to Thief River Falls, Germantown, and Esplee, Minn. They are our only representatives in this territory.

Signed Avery Co.
Branch at Grand Forks,
N. Dak.

The High Landing Branch of The Red Cross will hold an auction sale on March 16, at 2 p. m. in the schoolhouse one half mile west of High Landing. Everyone is invited to come and bring anything, no matter how small, which they wish to donate to the Red Cross. These donations will be sold at auction. You have something which you do not use that your neighbor needs. A lunch will be served after the auction at 25cts a plate. Come and do your bit.

War Savings Stamps

PROMISE someone that you'll save one War Savings Stamp each month, each week, or each day.

Penalize yourself by saving two every time you miss the day.

The first principle of money making is money saving. And every time you lick the stamp you help to lick the Kaiser.

War Savings Stamps at every bank, post office or other authorized agency.

WAR SAVINGS SOCIETY
BUY WAR SAVING STAMPS
DECLARE FOR THRIFT

W. S. S. SOCIETY ITEMT.

The ladies at the Red Cross work rooms last Friday afternoon decided to line up for systematic saving and organized the first War Savings Stamps Society in Goodridge. Mrs. Otto C Schultz was chosen president and Mrs. Otto C. Schultz was chosen president and Mrs. M. Vaughan secretary. Monthly reports are to be made of the growth of the society both in members and in savings. Join this society. It will not interfere with your work, your time, or anything else; but it will make you more independent, happier and richer.

Last Monday morning a War Savings Stamp Society was formed among the pupils of the Goodridge Consolidated Schools. Twelve members signed the application-pledge cards the first day.

Let every pupil become a member. Let parents urge their pupils to enroll and to save their pennies instead of spending them in things that injure them. Marshall Race was elected president and Lloyd Ferdinandsen, secretary.

OF INTEREST TO BANKS.

In response to a letter from Secretary of the Treasury McAdoo the Postmaster General rules that there is no provision of law under which a bank can send through the mails free of postage notice informing a client that an installment payment on account of Liberty Loan Bonds purchased at the banks is due; that this is a private transaction between the bank and its customer, and it will be illegal to furnish banks with franked cards or envelopes for use in sending such notices.

BACK YARD POULTRY.

Uncle Sam expects you to KEEP HENS and RAISE CHICKENS, even though you do reside in a town or city.

Two hens in the back yard for each person in the house will keep a family in FRESH EGGS.

The smallest back yard has room for a flock large enough to supply the house with eggs. The cost of maintaining such a flock is small.

Table and kitchen waste provides much of the feed for the hens and they require but little attention.

An interested child, old enough to take a little responsibility, can care for a few fowls as well as a grown person.

Every back yard should contribute its share to a "bumper crop" of poultry and eggs in 1918. Perhaps not all will find it profitable to raise chicks in town, but nearly everyone can well keep a few hens. The objection to the "crowing of the cock" can be overcome by keeping no cock. This will not affect egg production in the least.

The house for the back yard flock should be inexpensive. A piano box or other large boxes may readily be converted into a suitable residence for the hens, and the runs may be very small.

Good hens, well cared for, will produce from 10 to 15 dozen eggs annually.

In time of peace, the back yard flock may be regarded as a PROFITABLE RECREATION.

In time of WAR, A PATRIOTIC DUTY.

Buy a few hens and start in at once. All hens are laying now or will soon.

For information about methods of back yard poultry keeping, write the University Farm, St. Paul, Poultry Div. Room 24 of U. S. Dept. of Agri. Warhington, D. C.

THE THIRD LIBERTY LOAN.

The campaign for the Third Liberty Loan will be opended on the 6th of April, the anniversary of the declaration of a state of war between the United States and Germany.

The amount, terms, and conditions of the loan are dependent upon further legislation and will be announced as soon as Congress has granted the necessary powers.

Secretary McAdoo chose the 6th of April as the day to open the campaign as the most fitting day to call for a patriotic response to the summons to duty to every American, to ask from the people at home the same fervent patriotism that actuates our gallant sons on the battlefields of France and on the waters of the Atlantic.

GOODRIDGE

The most progressive and the biggest little town in northern Minnesota.

WAR GARDENS FOR WHOLE STATE

Gardening is to be major undertaking in Minnesota this year. Last year village, town and city dwellers made a begining. But this year every vacant lot is expected to be put to service and made to do its patriotic duty. Gardening is to be made an organized industry instead of a series of sporadic individual experiments.

The Commission of Public Safety is urging community action in war gardening throughout the state. All communities have been asked to get busy early, both to increase the number of gardens; and to limit planting to the vegetables which will be most available to relieve the food stringency. The whole garden program is summed up in two phrases: Grow all you can; and grow only such vegetables as are most needed and which will keep. The following fundamentals in successful gardening are emphasized;

"1. Formulate a definite program of production for your community, prepared by practical and experienced local gardeners including only those vegetables that can be produced by the greatest possible number. Seeds are scarce, therefore a war garden this year should be limited to a few vegetables that can be easily and profitably produced.

"Secure the services of a competent person to supervise the garden movements in your community. if possible secure the voluntary services of a good amateur gardener in every block to give aid and advice to his neighbors.

List all available lots vacant land, and as soon as possible list all want gadens Plan for co-operative plowing. It is not wise, however, to plow up any land until its adaptability has been passed upon by someone who knows.

Arrange local meetings and have practical and experienced gardeners lecture on the prparation, care and cultivation of gardens.

The county agent and agricultural teachers of the high schools should be very active in this matter and each community can look to them to be of splendid service in organizing the gardening activities of their communities.

WHAT THE WAR SAVINGS STAMPS WILL BUY FOR OUR SOLDIERS.

A single Thrift Stamp will buy a tent pole or five tent pins, a waist belt or hat cord, shoe strings or identification tags; two will buy one trench tool or a pair of woolen gloves. Four Thrift Stamps will buy two pairs of canvas leggings; six will buy five pairs of woolen socks or three suits of summer underwear; twelve will buy a steel helmet.

One War Saving Stamp will buy one hundred cartridges or a cartridge belt or a scabbar for a bayonet; two will purchase two pairs of woolen breeches or two flannel shirts; two and a half will buy a gas mask. Three War Saving Stamps will buy an overcoat or two woolen service coats; three and a half will buy three pairs of woolen blankets; four will buy a rifle.

Rural School Notes.

The High School Board Examinations will be held throughout the Pennington County Rural schools on March 21st and 22nd. The State program is not out yet, but the examinations will presumably begin at 8 o'clock A. M. on these days. For the reason that the State only furnishes a limited number of sets of questions 27 in all certain schools most conveniently located have to be grouped together for the purpose of the examination. The schools will meet as follows: Dist. no. 37, 148, 166, Lilly B. Hoard, Kratka conductor; Dist. No. 56, 46, Mrs. Hilda Sande, Erie, conductor; Dist's. No. 219, 25, Esther Kellbary, Thief River Falls, conductor; Dist's No. 135, 2, Sophie Nelson, Thief River Falls; Dist's. No. 59, 99, Highberg, Wylie, conductor; 30, 28, Anna Adolph, Thief River Falls conductor; 12, 154, Anna Moengen, St. Hilaire, conductor; Dist's. No. 41, 31, Esther Tandberg, Thief River Falls.

Not grouped—

Dist. 4, Margaret J. McCrum, Thief River Falls, Dist. 64 Alice Thompson, Thief River Falls, 29, Emma Tandberg Thief River Falls, 147 Nellie Nelson Thief River Falls, 133 A. O. Brevik, St. Hilaire, 178 Mabel Satre, St. Hilaire, 54 Agnes Elg, St. Hilaire, 149 E. E. Anderson, St. Hilaire, Mrs. Bert N. Thorstad, St. Hilaire, 8 con. A. O. Halvorson Goodridge, 70 Anna Paulson Goodridge, 57 Louise Furstnau Erie, 60 Alfred Hermanson Erie, 59 Alma I. Sether Erie, 52 Gertrude I. Olson Rhoda, 39 Emma Hanke, Sunbeam, 35 Elva Bartlett Plummer, 37 C. S. McReynolds Highlanding,

Subjects will be taken in the following order;

Thursday March 21st.

Spelling

8th grade composition and Grammar, covered in one examination.

American History.

Friday, March 22nd:

Arithmetic

Geography

The next Examination will begin Friday May 24th.

Respectfully submitted,

A. Mostue.

Dist. 178 Mabel Satre, J. R. C. A. Dist. 26 Chas. O. Asp, J. R. C. A. 51 Katherine Dunn, J. R. C. A. Dist. 31 Esther Tandberg, J. R. C. A. Dist. 35 Elva Bartlett, J. R. C. A. Dist. 105 Laura Engen, Engelstad R. C. A. Dist. 165 Francis Holzknick.

Less than a third of the school has as yet reported to the School Committee for their Red Cross Auxiliary work. Howevev excellent organization work is going on throuhout our schools. The manual, enrollment cards and enrollment blanks with other literature were sent out as late as Saturday last week. For this reason organization and enrollment has been retarded. The above named schools are given on rather indefinite reports in some cases. The undersigned Chairman of the school Committee will respectfullo ask that the report enrollment cards and enrollment blanks be returned to this office as soon as the Auxiliary for the school is organized. This will give us a complete line up of the Auxiliaries organized. Being organized the school will then receive a Certificate that can then be displayed in the school. The button will be sent out to the schools organized as soon as received from the Division Headquarters at Minneapolis.

As soon as an organization has been affected the Auxiliary will begin the work of making things for the Red Cross.

What can the pupils do?

The Manual states on pages 12 and 13 a list of things that can be made by the various grades. Of this list the following articles have been suspended. The supply on hand is sufficient until further notice. Snappings and comfort pillows. Knitted wash rags, handkerchiefs, table napkins. The boys may be able to knit squares, size 5x5 made out of old yarn, also knitting needles 14 in long and 3-16 thick. The boys as well as girls can do wonders when going to a thing with a will and determination. Just try and see if you can not, boys and girls, as well as the next best one in your school or the neighboring School.

Material will be ordered thru the chapter, Mrs. W. W. Prichard Sr. of Thief River Falls, will assist you in the selection. The materials must be paid for. Take a bill for the goods bought and get it receipted when paid for. The Auxiliary School treasures must keep a close tab on expenditures Draw on Mr. T. L. Melgaard, Thief River Falls for any money needed.

If any school or Auxiliary need literature of any kind please address this office.

The New Creamery

We promised in our last issue to give further particulars concerning the enthusiastic creamery meeting held in the Goodridge Hall last Wednesday afternoon. The business places were closed between the hours of one and three to enable both the farmers and business men to attend. This action had been formerly agreed upon between the business men at a commercial club meeting held the previous Monday evening. As stated last week it was decided to dissolve the old corporation and form a new one with increased capitalization. This new corporation will be known as the Goodridge Cooperative Creamery Association The following were elected officers of the new organization:

Pres. Louis Poppenhagen, Vice-Pres. G. Gunderson, Sec. M. J. Stephenson, Treas. Nick Bundhund. The above officers are also to act as the board of directors with the addition of A. O. Feragen as the fifth member, G. C. Gulrud was given the contract to move the creamery building Torgerson to Goodridge at the consideration of Six hundred dollars.

Saturday the board of directors of the old corporation and those of the new met in Goodridge and appointed the following to solicit subscriptions for shares in the creamery: G. Gunderson, G. C. Gulrud, M. G. Thoreson, L. P. Poppenhagen, A. O. Feragen, and G. T. Helle.

AMERICAN AND GERMAN EFFICIENCY.

The searchlight of war has brought out many interesting facts, and one of the test is that the vaunted German efficiency will not always stand the test of comparison with American efficiency. The Germans boasted of being the greatest farmers on earth. Investigation shows that in efficiency in agriculture, measured by the produce per acre, America being graded 100, Belgum leads the world, at 205; Great Britain comes second, at 155; Amerier comes fourth.

But the test is the man test rather than the acre test, and here America leads the world by over 2 to 1.

Again, grading America at 100 per farm worker, Great Britain produces 43 and Germany 41. The American farmer cultivates 27 acres, the German farmer but 7 With the aid of vast quantities of fertilizer the German produces more per acre, but he prohduces at a much greater cost per bushel and produces much less than half as much per man.

THE QUESTIONAIRE.

The following poem was written by a Wm. Fowler and sent to Gen. J. H. McCord, adjutant general of Missouri. The general thought it so good that he mailed it to a friend, J. E. Hunt, who had it inserted in the St. Joseph, Mo., Gazette:

Please promptly answer and with care,
The queries in your questionaire
Divorced or single, if wedded tell,
The date when tolled the fatal bell;
Give age, condition, weight and race;
And name each blemish—feet to face;
If lame, or halt, knock-kneed or blind,
Please fully state befor it's signed.
If you've had wives, please state how many;
If not, just why you haven t any;
If living with your wife's relation,
Then state who rules the home plantation;
Does ma-in-law pay your house rent?
If so, please state to what extent;
Please answer, sir, with utmost care,
'Fore sending in your questionnaire.
If you've a wife with you to bunk,
State when your clothes went in one trunk;
Here give the total of your boodle,
And state what's wrong with your poor noodle.
Have you flat feet or wheels in head?
Are your beef cattle all corn fed?
How have you lived for twelve months past?
If preacher, state where you starved last.
Have you your last year's taxes paid?
Are you supporting man (or maid?)
If so, is she your wife's relation?
(Be careful here with explanation).
Have you been trained for war's dread strfe,
Aside from battles with your wife?
Can you talk Kansas, French, or Greek,
And how much English do you speak?
When all have answerd and with care,
The queries in the questionnaire,
Then Uncle Sam will be much wiser,
And will proceed to whip the Kaiser.

Star Notes

(Too late for last week).

Mrs. K. Danielson visited at the Oscar Thoreson home west of Erie Sunday.

Halvor Syverson is reported sick at the hospital at Thief River Falls.

Ole Ytesund of Rhoda, handling McConnous goods, called on customers in S. E. Star latter part of the week.

John Hanson, resently drafted, reports himself as thriving well at Camp Dodge.

The infant of Mr. and Mrs. Even Sjulestad is reported ill.

Carl Vake departed for the county seat Monday to pose before the Military Draft Board Physician. By the way, Carl is one of North Star Region's natives with plenty of "pep" and "punch" to him, and if added to Uncle Sam's legions going to get the Kaiser, would no doubt do his bit.

A surprise party was given to Mr. and Mrs. Kittle Vatne on Sunday afternoon. A fancy lamp was presented.

George Hovet drove to Gully Friday to meet his brother John who was on his return from the lumber woods.

INTENTIONAL DUPLICATE EXPOSURE

INCREASE IN WESTERN CANADA ACREAGE

Will Prove a Big Factor in Winning the War.

Reports to hand indicate that Western Canada has a vastly increased acreage ready for crop this year over last year. The splendid open fall of 1917, gave a better opportunity for fall plowing than for some years. Work in the fields was almost continuous until the end of November. In fact, in the neighborhood of Pincher Creek, Alberta, there was sufficient mild weather in January of this year to permit farmers to plow, and many took advantage of it. A great many Americans owning land in Canada moved up last year, and this has also helped to increase the acreage. They came into possession of the land at prices varying from $15.00 to $30.00 an acre, and with the proven yields of wheat running from twenty and as high as fifty bushels per acre, with a set price of $2.21 a bushel, they could join production and patriotism together with a big margin of profit. The Post-Intelligencer of Seattle, Wash., gives a very conservative statement of the agricultural development and opportunities in Western Canada. In its issue of December 14, 1917, it says:—

"Since the beginning of the year American emigration into Canada has been greatly stimulated according to the reports of the Dominion authorities, and has been almost entirely made up of farmers attracted by the fertile and comparatively cheap wheat lands.

"Whatever may be said of wheat culture as a profitable avocation in ordinary years, since the beginning of the war it has offered advantages quite beyond the usual opportunities. War has boomed the price of wheat until the farmer now receives around $2 for his product at his granary. Average crops, according to the adaptation of soil and climate are from 12 to 25 bushels to the acre. Even the minimum crop, at $2 per bushel, brings in these war times a reasonable profit. Before the war wheat culture was fast being abandoned by farmers who worked intelligently for results on the right side of the ledger. It has been the popular crop for new countries, but when the pioneers settled down to business it was generally corn, hogs, cattle and diversified farming that brought the profits. Iowa and the Dakotas in turn, as their prairies became settled, mortgaged the land on wheat culture and afterwards paid off the mortgages with corn and hogs.

"War is thus bringing a temporary encouragement to wheat farming. Many of the ranchers of Manitoba, Saskatchewan and Alberta laid away $20,000 to $30,000 in the banks last fall. It may be pointed out, however, that the growing of wheat is not the only inducement which is leading settlement to Canadian lands. Low taxation, favorable agricultural climate, and profitable prices not only for grain but for hogs, cattle and all forms of farm produce all contribute their share toward the rapid settlement of the fertile lands of Western Canada."—Advertisement.

Caviar to the General.

Although some packers of caviar in New York report that spoonbill caviar is being marketed here in bulk as low as 75 cents a pound, the market generally remains at $1.25 for prime quality, and a few sales are reported at $1. The quantity has been limited from all sources and, indeed, operators here have not been buying heavily. There has been a scarcity of lake caviar in bulk, and packers report that the prevailing price for this grade has been usually $1.50 a pound.—Fishing Gazette.

A genius is a man who doesn't know whether he is eating boiled cabbage or stewed fudge.

HOW MRS. BOYD AVOIDED AN OPERATION

Canton, Ohio.—"I suffered from a female trouble which caused me much suffering, and two doctors decided that I would have to go through an operation before I could get well.

"My mother, who had been helped by Lydia E. Pinkham's Vegetable Compound, advised me to try it before submitting to an operation. It relieved me from my troubles so I can do my house work without any difficulty. I advise any woman who is afflicted with female troubles to give Lydia E. Pinkham's Vegetable Compound a trial and it will do as much for them."—Mrs. MARIE BOYD, 1421 5th St., N. E., Canton, Ohio.

Sometimes there are serious conditions where a hospital operation is the only alternative, but on the other hand so many women have been cured by this famous root and herb remedy, Lydia E. Pinkham's Vegetable Compound, after doctors have said that an operation was necessary—every woman who wants to avoid an operation should give it a fair trial before submitting to such a trying ordeal.

If complications exist, write to Lydia E. Pinkham Medicine Co., Lynn, Mass., for advice. The result of many years experience is at your service.

News of the State

Condensed for Busy Folks

Walker.—The Walker women made over 4,000 surgical dressings during the month of February.

Ada.—A Red Cross sale held here netted more than $2,300. Supper and amusement tickets brought $750 more, making a total of $3,050.

Mankato.—By defeating the Blue Earth basketball team in a game played in this city, the Waseca high school takes the district championship. The score was 59 to 14.

Moorhead.—Sivert Borgen, local mail carrier, has the record for the sale of War Savings Stampes here. Since the campaign began Mr. Borgen has sold $3,003 worth of stamps.

Winona.—Mrs. Frank Moehnke, 44 years old, of Eyota village, was fatally injured when she was drawn into a circular saw of a portable wood-sawing machine. Her dress was blown into the saw and she was dragged into the sharp teeth.

Alexandria.—Carl A. Wold, former state representative, editor of the Park Region Echo, has been convicted of discouraging enlistments. He was sentenced to serve three months in the Douglas county jail and to pay a fine of $200.

International Falls.—E. B. Fisher, who was bound over to the grand jury for alleged seditious utterances, has been relieved of his duties as superintendent of the M., D. & W. railroad. C. H. Woodford is filling the position temporarily.

Winona.—The city of Winona has purchased 300 feet of ground along the river front for terminal purposes. The property is 400 feet deep. It is within easy access of railway lines and is within the heart of the manufacturing district. The site is considered ideal for dock purposes.

St. Paul.—Work on the Twin City to Duluth highway probably will be completed by the coming fall, according to State Highway Commissioner C. N. Babcock. St. Paul, Minneapolis and Duluth have each agreed to contribute $10,000 toward the expense and the cities will be called on to fulfill their obligation soon.

Shakopee.—Shakopee claims the honor of being the first city in Minnesota to have its own war orphan. Mr. and Mrs. J. R. Pink of this city have adopted a French orphan, but the entire city is helping to take the credit because Mrs. Pink solicited funds from the residents. Mr. Pink is chief clerk at the Shakopee postoffice.

Mahnomen.—The contractors on the judicial ditch between Norman and Mahnomen counties have arrived here with their machinery which will be unloaded and transported to the scene of activity before the frost gets out of the ground. Work on the ditch will commence about the first of May.

Long Prairie.—John N. Johnson, 26 years old, a farmer of Iowa, is dying in a hospital here from burns received when a gasoline tank on an automobile exploded. Johnson, who is in class 1 of the draft, was about to go to Long Prairie for examination when he tried to look into the tank with the aid of a lighted match.

St. Paul.—Clifford L. Hilton has been appointed attorney general of Minnesota by Governor J. A. A. Burnquist. His appointment is for the unexpired term of the late Attorney General Lyndon A. Smith, on whose staff Mr. Hilton served for eight years. C. L. Weeks will become deputy attorney general, Mr. Hilton announced.

Minneapolis.—The great statewide, free for all, no handicap, war savings stamp race is on with some fast runners entered. Todd county held the banner place in the first heat as given in a statement issued covering the war stamp sales per capita, and showed in with $2.54 in stamps for every man, woman and child. Of the 86 counties in the state the 27 top ones in order show Winona, $2.09; Freeborn, $1.33; Ramsey, with St. Paul, $1.62; Douglas, $1.60; Lincoln, $1.56; Le Sueur, $1.53; Houston, $1.46; Goodhue, $1.40; Redwood, $1.29; Red Lake, $1.26; Mower, $1.24; Steele, $1.21; Pipestone, $1.15; Meeker, $1.14; Swift, $1.09; Rice, $1.07; Faribault, $1; Renville, 91 cents; Hennepin, 89 cents; Wadena, 84 cents; Sherburne, 82 cents; Blue Earth, 80 cents; Kandiyohi, 80 cents; Pennington, 76 cents, and St. Louis, 76 cents.

Kenyon.—Kenyon's village caucus voted to defend the community's loyalty from all suspicion of un-Americanism, then it adjourned in a body to escort to the station a Nonpartisan league organizer, George Breidal. Four hundred men marched to a moving picture show, sent a guard to the rear entrance and summoned the organizer. When Breidal came out he was requested to kneel and kiss an American flag. The ceremony was performed and the procession, headed by the village council, marched to the station, Breidal carrying the flag. Breidal was directed to purchase a ticket to Dodge Center and was put aboard a train.

St. Paul.—War savings and thrift stamp sales in Minnesota have amounted to only 75 cents per capita so far, and the Treasury department has asked that this be raised to $20 per capita before the end of the year. The Federal Reserve bank announced that the sales to date in the state amount to $1,843,098. The year's quota for the state is $46,000,000.

Thief River Falls.—Ray Herron, residing in this city, has been brought to his home from Shelley and is in bed with a broken leg. He was unloading gravel for Ed. O'Hara near Shelley and was caught in a cave-in.

Motley.—Mrs. Hill, of Motley, 88 years old and blind, has knit six pairs of socks for the Red Cross chapter.

Minneapolis.—Mrs. Martha A. Dorsett of this city, the first woman admitted to the bar in Minnesota, is dead. She was 66 years old.

East Grand Forks.—More than $360 each month has been pledged by East Grand Forks citizens for the support of the Red Cross organization.

Brainerd.—Albert Hill, charged with bigamy, pleaded guilty and was sentenced to an indeterminate term at Stillwater. Hiss was arrested at Duluth.

St. Paul.—State aid for Minnesota schools totaling $2,637,345, which has been held up by litigation since October, 1917, is being paid Minnesota schools entitled to such aid.

Albert Lea.—Chris. M. Nelson, a farmer living southeast of this city, has already sown 20 acres of spring wheat. The prospects for a large wheat acreage in this vicinity are promising.

St. Cloud.—A service flag displaying a field of seven stars was dedicated to the honor of seven young men of the Swedish Baptist church who are now in the service of the United States army.

Alpha.—Alpha, having a population of only about 200, raised $1,820 at an auction sale for the Red Cross. All kinds of farm produce and dry goods and groceries were donated by the people of the neighborhood.

Minneapolis.—William Skoglin, one of the men injured in the explosion of a boiler at the city hospital, died from burns and scalds. He was working as a fireman in the boiler room of the hospital when the explosion occurred.

Minneapolis.—Charles Lincoln Sawyer, 68, native of New Hampshire, once principal of the local high school, who served three terms in the legislature in the 90's and two years ago was candidate for congress from the Fifth district, died at his home here.

Cass Lake.—While hauling ice at the Indian mission north of Cass Lake a large black team owned by the mission was drowned. The accident happened at what is known as the Cass Lake bay. Large cakes of ice had been cut out and the team backed into this large hole.

Winona.—Four young women now are employed as depot operators on the Minnesota division of the Northwestern Line, the headquarters for which are in Winona. They are taking the places of young men released to meet the military needs of the United States government.

St. Paul.—As a result of the proposal made by a delegation of northern Minnesota citizens to the state board of immigration, that the opportunities for sheep raising on cutover lands in that section be developed in connection with the wartime food production movement, Commissioner Fred D. Sherman will make a survey to ascertain the number of communities that will organize and co-operate.

Elk River.—Investigation reveals that the high school here has been using up to a few days ago one of the German textbooks banned by the Minnesota Public Safety commission last November. This gives support to the 45 or more boys and girls in their action in going on "strike" gainst studying German. A night or two later the German textbooks used in the high school disappeared. They have not been located by the school authorities.

Minneapolis.—Public eating houses in Minnesota must serve sugar to patrons in small individual paper packets, each containing one heaping teaspoonful, under an order issued by A. D. Wilson, federal food administrator for the estate. The order goes into effect at once. Supplementing the order, Mr. Wilson issued a request that private families limit their use of sugar to three pounds a month per person.

Duluth.—Sons of the two most prominent food officials in the United States will be members of the Duluth Boat club's boys' training camp this summer. Herbert M. Hoover, Jr., son of the federal food administrator, and Robert L. Barnes, son of Julius Barnes, president of the United States Grain corporation, have enrolled from New York in the institution.

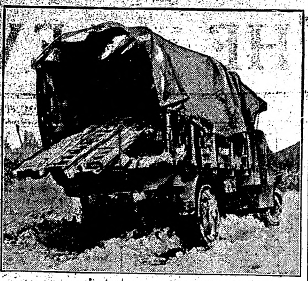
Winona.—Mystery surrounds the poisoning of four members of the family of Martin Wauk here. The head of the family, his wife and two girls, twins, aged 10, retired in normal health. At 2 a. m. one of the girls awoke and complained of violent pains. The mother attempted to go to her but collapsed. The other girl climbed out of her bed and also was stricken. Mr. Wnuk called for a physician, but before the doctor arrived he also was taken ill.

St. Paul.—State officials and employes and friends paid their respects to Attorney General Lyndon A. Smith, filing past the casket in which his body lay in state in the main retunda of the state capitol in St. Paul. The funeral service in Plymouth Congregational church, Holly avenue and Mckubin street, St. Paul, was conducted by the Rev. Harry P. Dewey, Minneapolis, and was attended by a large number of people. The body of Mr. Smith was taken East for burial at his former home in New Hampshire.

Hutchinson.—Following his refusal to sign a Red Cross contribution pledge and then ordering the committee of two citizens from his home, the residence of Rev. Mr. Mueller was profusely striped with yellow paint by indignant citizens, and the word, "pro-kaiser" was inscribed on the sides in flaming characters. Mueller is pastor of the German Evangelical chuch.

Caledonia.—Arrested a second time on the charge of making seditious utterances, K. G. Steffens of Hokah is in jail at Caledonia awaiting hearing. He was fined $50 and costs last October for a similar offense.

SNOWBOUND "SOMEWHERE IN FRANCE"



An idea of the difficulties of transportation in the snowbound sections of France is given by this photograph of a British motorlorry stalled in the impassable road leading to the front.

STARTING MOTOR IN AN EMERGENCY

Method Devised for Producing Extra Current Is Shown in Illustration.

SIX CELLS SECURELY TIED

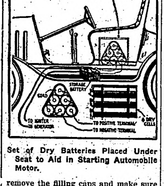
Connected Up by Insulated Wires With Storage Battery Terminals—Keep Bright by Scraping With Sharp Knife.

At least 50 per cent of the modern automobiles use battery ignition. As this system sometimes gives trouble, even in the most expensive cars, I devised a method for producing an emergency current as shown in the illustration.

Dry Cells Tied Together.

This consists of six dry cells securely tied together in a triangle shape and wired in series with a 4-foot length of well insulated copper wire attached to each of the negative and positive terminals. These wires are used to make connections with the storage battery terminals for starting the motor; then they are disconnected.

The batteries will last a long time for this emergency work. If the storage battery gives too much trouble, remove the filling caps and make sure that the liquid is a half inch above the top of the lead plates. Should the level be below this point, add enough distilled water to make up deficiency.



Set of Dry Batteries Placed Under Seat to Aid in Starting Automobile Motor.

Keep Terminals Bright.

Keep all the battery and wire terminals bright by scraping them with a sharp knife about once a month, and make sure that there is no short circuit in the dashboard switches and that no battery wire or other wire is chafing against any metal to produce a short circuit. In this way a battery may be kept at its highest efficiency.—P. P. Avery in Popular Science Monthly.

LOOSE NUTS ON WINDSHIELD

Sometimes Caused by Vibration and Finish Cracks in Vicinity of Shield Supports.

On many makes of cars the windshield is held in place by steel arms which protrude through the cowl and are fastened on the under side by a nut and lock nut. Sometimes these nuts work loose from the vibration present, with the result that the shield is allowed to move slightly. The first evidence of this is seen in cracked finish in the vicinity of the windshield supports. In making the necessary periodic inspection for loose nuts and bolts these windshield supports should not be forgotten.

Keep Radiator Cells Clean.

Best results can be secured from a motor cooling system by keeping the radiator cells free from foreign matter. Particularly on long trips over bad roads, the interstices of the radiator are packed with dirt and mud, retaining the heat which should be dissipated in radiation. A water hose will remove the mud while a stiff brush will give temporary relief.

OWNER HELD LIABLE FOR SPEED OF MOTOR

Gist of Important Case Decided Some Years Ago.

If He Is Occupant of Vehicle He Is Held by Court to Have Permitted Violation—Operator Is Usually Punished.

Few automobile owners know or realize that if they are driving and their driver should overspeed their car they may be charged with overspeeding or operating unlawfully as well as the driver himself.

This liability exists because it is presumed, says the New England Motorist, on account of his being in the machine and having a general control thereof as registered owner, that he knew and allowed his vehicle to be illegally run.

This was the gist of an important case decided some years ago where the owner, who was seated in the tonneau, was summoned to court for overspeeding.

Owner Found Guilty.

The court held that he could be found guilty, not because he was owner, but because of the fact that as registered owner of the machine, with the consequent right to control it while riding therein, he was presumed to have participated in the vehicle being run at an unlawful speed, and unless this presumption against him were explained or contradicted, the jury would be warranted in believing he did so participate in the driver's act, and in finding him therefore guilty.

Apparently, then, if the owner were riding in front beside the driver it would be harder for him to explain that he did not know and allow and hence participate in the illegal act than if he were seated elsewhere in the car.

When, too, the operator is the chauffeur of the owner in the automobile, the fact of employment, involving the right of the latter to direct and control the former, would make the presumption stronger than in the case where this relationship did not exist.

When Not Guilty.

But in either or any case, where it could be proved that the owner or person in charge of the automobile, although riding therein, was not likely to know and did not do or say anything to direct or control it, or as to how the driver should manage it, the owner or person in charge might not be found to have participated in the driver's unlawful act.

The enforcing authorities, however, usually confine their complaint to the operator, preferring in such cases not to raise these additional questions in court. Nevertheless, the owner or person in charge of the machine should keep them in mind, otherwise an unpleasant surprise may await him.

Case of Apple-plexy.

A teacher was explaining the garden of Eden story to her class.

"Strange," she said, "there is absolutely no record made that Adam or Eve ever died." "What is your opinion, John?" asked the teacher.

"Well, I dunno 'bout that," remarker the pupil, "but I 'spect they died with apple-plexy."

RECIPE FOR GRAY HAIR.

To half pint of water add 1 oz. Bay Rum, a small box of Barbo Compound, and ¼ oz. of glycerine. Any druggist can put this up or you can mix it at home at very little cost. Full directions for making and use come in each box of Barbo Compound. It will gradually darken streaked, faded gray hair, and make it soft and glossy. It will not color the scalp, is not sticky or greasy, and does not rub off. Adv.

What a Doughnut Is.

The ministry of food has informed the Twickenham food control committee that a doughnut is not a bun. Local unrest has been almost completely allayed by the prompt and fearless decision.—London Punch.

THE RED CROSS NURSES OF EUROPE ARE GIVING TOASTED CIGARETTES TO THE BOYS

To anyone who doesn't know of the wonderful advances that have been made in the preparation of smoking tobaccos in the last few years it may sound strange to speak of toasted cigarettes.

Strictly speaking, we should say cigarettes made of toasted tobacco; the smokers of this country will recognize it more readily by its trade name, "LUCKY STRIKE"—the toasted cigarette.

The American Tobacco Company are producing millions of these toasted cigarettes and these are being bought in enormous quantities through the various tobacco funds conducted by the newspapers of the country and forwarded through the Red Cross Society to the boys in France.

This new process of treating tobacco not only improves the flavor of the tobacco but it seals in this flavor and makes the cigarettes keep better.

The Red Cross nurse is always glad to have a cigarette for the wounded soldier, as, in most instances, that is the first thing asked for.—Adv.

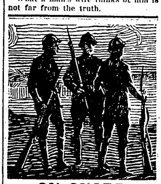
Cruel Facts.

He—"I could hold your hand till I die!" She—"Well, you're apt to die if you try it."

Cheap Enough.

Jones—"Did you get that mining stock at a bargain?" Brown—"Yes; I gave other mining stock for it."

What a man's wife thinks of him is not far from the truth.



ON GUARD

At this time of the year people feel weak, tired, listless, their blood is thin, they have lived indoors and perhaps expended all their mental and bodily energy and they want to know how to renew their energy and stamina, overcome headaches and backaches, have clear eyes, a smooth, ruddy skin, and feel the exhilaration of real good health tingling thru their body. Good, pure, rich, red blood is the best insurance against ills of all kinds. Almost all diseases come from impure and impoverished blood. It is to be noticed in the pale or pimply face, the tired, haggard appearance or the listless manner.

Drink hot water a half hour before meals, and for a vegetable tonic there's nothing better than Dr. Pierce's Golden Medical Discovery, the old-fashioned herbal remedy, which has had such a fine reputation for fifty years. It contains no alcohol or narcotics. It is made from Golden Seal root, Bloodroot, Oregon grape root, Queen's root, Black Cherry bark, extracted with glycerine and made into tablets and liquid. Tablets sixty cents, at most drug stores.

In order to insure pure blood and to build up the system try this tonic known as Dr. Pierce's Golden Medical Discovery. Get it now!

A German Republic.

I cannot easily believe in a German revolution, and still less, in a German republic. I shall, at all events, not live long enough to behold the latter. But I feel convinced that, long after we shall have quietly rotted in our graves, they will, in Germany, battle for a republic, with speech and sword. For republicanism is an idea, and the Germans have never yet given up an idea until they have fought it out to its ultimate results.—Heine.

WILSON SENDS SLAVS MESSAGE

President Pledges Support of United States in Restoring Free Russia.

PLEA FOR DEMOCRACY

Word Delivered to Soldiers' and Workmen's Congress Meeting to Pass on Germany's Peace Terms.

Washington, March 13.—President Wilson has sent a message of sympathy to the Russian people on the eve of the gathering at Moscow of the Russian congress of Soviets, which is to pass judgment on the German made peace accepted by the bolsheviki at Brest-Litovsk. The message is sent through the congress with a pledge that the United State will avail itself of every opportunity to aid them in driving out autocracy and restoring Russia to her place in the world with complete sovereignty and independence.

The United States now recognizes no government in Russia, but the President cabled his message to the American consul at Moscow for delivery to the congress, which is made up of soldiers' and workingmen's representatives and speaks for at least a considerable part of the Russian people.

Wilson's Message.

This is the message:

"May I not take advantage of the meeting of the Congress of the Soviets to express the sincere sympathy which the people of the United States feel for the Russian people at this moment, when the German power has been thrust in to interrupt and turn back the whole struggle for freedom and substitute the wishes of Germany for the purposes of the people of Russia.

"Although the government of the United States is unhappily not now in a position to render the direct and effective aid it would wish to render, I beg to assure the people of Russia, through the congress, that it will avail itself of every opportunity to secure for Russia once more complete sovereignty and independence in her own affairs and full restoration to her great role in the life of Europe and the modern world. The whole heart of the people of the United States is with the people of Russia in the attempt to free themselves from autocratic government and become the masters of their own life.

"Woodrow Wilson."

May Be New Uprising.

The President does not urge the Soviets to reject the peace treaty, though the delivery of his message at this time may be interpreted as suggesting such a course.

But there seems to be still a strong belief here that difficulty for Germany in the East by no means is ended; that as the humiliating nature of the Teutonic terms begins to be realized by the great mass of the Russians and the tyranny of the war lords in occupied territory shows itself, there will be a new uprising that will make itself felt.

May Lessen Misgivings.

Coming at the time it does, the President's message may serve to lessen misgivings in Russia over the proposed intervention by Japan in Siberia. The understanding here is that there is no difference of opinion among the Allies that any operations undertaken by Japan to check German machinations in the East and protect the war stores at Vladivostok will not in any degree threaten permanently Russia's territorial integrity.

LONG TERMS FOR SOCIALISTS

Twenty to 25 Year Sentences for Insubordination Announced.

Camp Dodge, Iowa, March 12.—Found guilty by a general courtmartial of refusing to obey orders, eight National army men from St. Paul, all professed socialists, have been sentenced to long terms of imprisonment in the Leavenworth penitentiary, it is announced.

One of the men, A. S. Broms, was given 20 years and the other seven were sentenced to 25 years confinement, all at hard labor.

13 Lost When Tugboat Sinks.

New Orleans, March 12.—Thirteen persons, mostly negroes, were lost when the tugboat W. A. Bisso sank in the Mississippi river near here, after she rammed a Mexican oil tanker.

Red and White Guards Battle.

Stockholm, March 12.—Heavy fighting is continuing in Finland between the Finnish White Guard and the Russian Red Guard troops, according to an official statement from the headquarters of the White Guard at Vasa. Violent encounters are reported on the Satakunta and Savalako fronts. Sanguinary fighting is proceeding day and night without interruption in Karelia. The statement announces that the Russians in the Ahvola fighting [illegible]

Girls! Use Lemons! Make a Bleaching, Beautifying Cream

The juice of two fresh lemons strained into a bottle containing three ounces of orchard white makes a whole quarter pint of the most remarkable lemon skin beautifier at about the cost one must pay for a small jar of the ordinary cold creams. Care should be taken to strain the lemon juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, smoothener and beautifier.

Just try it! Get three ounces of orchard white at any pharmacy and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands. It naturally should help to soften, freshen, bleach and bring out the roses and beauty of any skin. It is simply marvelous to smoothen rough, red hands. Adv.

The Statesman's Way.

"You were very late in getting home from the speaking last night, uncle," commented the old codger's niece next morning at breakfast. "Did Senator Greed have a great deal to say?"

"He had absolutely nothing to say," replied the venerable curmudgeon," but it took him till 'leven o'clock to say it."—Kansas City Star.

GREEN'S AUGUST FLOWER

has been a household remedy all over the civilized world for more than half a century for constipation, intestinal troubles, torpid liver and the generally depressed feeling that accompanies such disorders. It is a most valuable remedy for indigestion or nervous dyspepsia and liver trouble, bringing on headache, coming up of food, palpitation of heart and many other symptoms. A few doses of August Flower will immediately relieve you. It is a gentle laxative. Ask your druggist. Sold in all civilized countries.—Adv.

Up in the World.

"I overheard Mr. and Mrs. Grabcoin having a warm argument as to whether or not they should dress for dinner. Mr. Grabcoin contended that it would be all right not to put on evening clothes, as no guests were expected. Mr. Grabcoin said the effect on the servants would be demoralizing."

"Well, well! They are coming on. I can remember the time when Mr. Grabcoin shed his coat, collar and shoes before sitting down to the evening meal and nothing was said about it."—Birmingham Age-Herald.

GARAGE
ROOFING

Certain-teed Roofing

From every standpoint of service and cost—

Certain-teed has proved its claim—"The best type of roof for most buildings and the best quality roofing of its type."

Certain-teed has made good all over the world under all conditions—as proved by its enormous sale. It has become the *standard* roof for buildings of all types and sizes—

for factories, round houses, elevators, garages, warehouses, hotels, farm buildings, stores, out-buildings, etc.

Its economy is three-fold—first cost moderate, laying cost low, up-keep practically nothing. Its efficiency embraces every important roofing quality—weather proof, spark proof, clean and sanitary, and very durable. *Certain-teed* is not affected by acids, fumes or smoke, and does not melt under the hottest sun.

Guaranteed 5, 10 or 15 years, according to thickness.

It *pays* to get *Certain-teed* because it costs no more to lay than ordinary roll roofing, and lasts much longer.

Sowing the Seed and Producing Bigger Crops

Work in Joint Effort the Soil of the United States and Canada

CO-OPERATIVE FARMING IN MAN POWER NECESSARY TO WIN THE BATTLE FOR LIBERTY

The Food Controllers of the United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat are available to be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rests the burden of supply.

Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operation.

Canada's Wheat Production Last Year was 225,000,000 Bushels; the Demand From Canada Alone for 1918 is 400,000,000 Bushels

To secure this she must have assistance. She has the land but needs the men. The Government of the United States wants every man who can effectively help, to do farm work this year. It wants the land in the United States developed first of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there.

Apply to our Employment Service, and we will tell you where you can best serve the combined interests.

Western Canada's help will be required not later than April 5th. Wages to competent help, $50.00 a month and up, board and lodging.

Those who respond to this appeal will get a warm welcome, good wages, good board and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had apply to: **U. S. EMPLOYMENT SERVICE, DEPARTMENT OF LABOR**

Anxious Bantam.

The bantams were taking over a line of trenches from one of the guards' battalions during a very long spell of wet weather. As the guards were coming out one of the bantams asked a big guardsman:

"How are the trenches—comfortable?"

"Yes," replied the six-footer. "Very cushy, but full of water."

"How deep?" inquired the four-footer, anxiously.

"Oh, about up to here!" said the guardsman, pointing to some clay on the breast of his tunic.

The bantam put his hand up to his head and exclaimed, wearily:

"Then, heaven help my cap badge!"—London Tit-Bits.

To keep clean and healthy take Dr. Pierce's Pleasant Pellets. They regulate liver, bowels and stomach.—Adv.

Pretty as All That.

"Is she pretty? How long was the jury out?"

"Didn't go out at all."

Arizona is agitating for restoration of death penalty for murder.

Conservation.

"Mercy on us!" ejaculated Mrs. Flint, in the midst of her reading. "Here in the paper is a piece by a professor proving by the Scriptures that this war means the end of the world in April, and—"

"Well, if that's the case, I guess I'd just as well put off going to the dentist," returned honest Farmer Flint. "If what the professor says is true I won't need any new teeth. These old ones probably will answer for such gnashing as I'll have to do."—Kansas City Star.

A fellow isn't to be blamed for his start in life. It is his finish that he is responsible for.

About the hardest blow that most of us get is a light touch from our friends.

1,716,000,000 Pounds *of* Flour Saved

if each of our 22,000,000 families use this recipe instead of white bread.

One loaf saves 11,000,000 pounds; three loaves a week for a year means 1,716,000,000 pounds saved!

Enough to Feed the Entire Allied Army

Corn Bread with Rye Flour

1 cup corn meal
1 cup rye flour
2 tablespoons sugar
5 teaspoons Royal Baking Powder
1 teaspoon salt
1 cup milk
1 egg
2 tablespoons shortening

Barley flour or oat flour may be used instead of rye flour with equally good results. Sift dry ingredients into bowl; add milk, beaten egg and melted shortening. Stir well. Put into greased pan, allow to stand in warm place 20 to 25 minutes and bake in moderate oven 40 to 45 minutes.

Our new Red, White and Blue booklet, "Best War Time Recipes," containing many other recipes for making delicious and wholesome wheat saving foods, mailed free—address

ROYAL BAKING POWDER CO., Dept. W, 135 William St., New York

FOOD WILL WIN THE WAR

War Savings Stamps

THE difference between a five dollar bill and a War Savings Stamp is that while they are both promises to pay, backed by all of the resources of the richest government in the world, a five dollar bill never gets any bigger than $5.00 and War Savings Stamps are worth a penny more each month for 5 years. War Savings Stamps are United States $5.00 bills which the Government is offering in February for $4.13 and in March for $4.14 and so on adding a penny each month until January 1st, 1923, when they will reach $5.00.

Thrift Stamps

Thrift Stamps cost 25 cents each. The Government furnishes Thrift Cards with spaces on them for 16 Thrift Stamps. Thrift Stamps bear no interest but are as good as cash. When the 16 spaces are filled, making $4.00 worth of Thrift Stamps, the owner takes the card to any bank or post office, pays the additional 13 cents or whatever it may be that month, and receives a War Savings Certificate and one War Savings Stamp.

There is room for twenty $5.00 War Savings Stamps on each War Savings Certificate card. You can buy $100 worth for $82.40 in January, $82.60 in February, and 20 cents more each month you wait.

War Savers are Life Savers.

Speaking of Metallic Rings.

"I might have known that you would have refused me," said the poor but otherwise honest young man, who had failed to make an impression on the maiden's heart. "I noticed a metallic ring in your voice when I entered the parlor tonight, that bode me no good."

"And had you been a little more observant," she replied, "you would also have observed a metallic ring on my third finger, which Charlie Gotrox placed there last night."

Thirty seconds later his feet were following each other along the homeward trail.

War Savings Stamps

THEY earn a cent each month.

COMING

C. G. MUGG, Optometric Specialist

of Grand Forks, N. D., uses the daylight or natural method in fitting glasses, no drugs, dark rooms or machines—natural conditions only, in broad daylight. YOU see the benefit of the glass before ordering. YOU take no chance, your own vision tells YOU. By this method no operator can look wise and say $15.00 and get it before YOU see the benefit of the glasses YOU are supposed to wear. No one can judge just as well as yourself just how YOU see out of your own eyes. Drugs, dark rooms etc., create unnatural visual conditions that may effect the results and cause an imperfect glass. C. G. Mugg is licensed in N. D. and Minn. and has traveled in the Northwest for 22 years. A lot of cash is not always necessary. Prices are reasonable. Consultation is free but examination is not always so.

Ante-War prices have not been changed by C. G. Mugg, but after January 1918, $1.00 will be added for examination. Consultation is Free.

Call and see the daylight specialist, he will be at

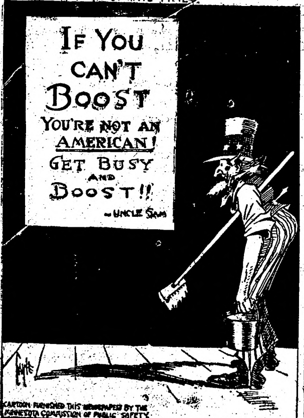
The Goodridge Hotel, [illegible]

March 22nd.

Women Better or Worse.

Women, when they are bad, are worse than men and more disposed to commit crime. When the sex which is sweet by inheritance once becomes degraded it falls into greater excesses than the other. Women are always either much better or much worse than men.—Bonaparte.

A SIGN OF THE TIMES.



IF YOU CAN'T BOOST YOU'RE NOT AN AMERICAN! GET BUSY AND BOOST!!
—UNCLE SAM

Sugar.

The world has a sweet tooth. It would be difficult to find individuals and probably impossible to find a people who do not like sweets. And of all sweets the most common is sugar, practically all of which is produced from the sugar cane and the beetroot, the beetroot being the source of somewhat more than half the supply. Sugar not only pleases the palate, but it helps to sustain the body, for though it is not sufficient itself, it forms a very useful compenent of foods, being easily soluble and assimilable.

Worth Consideration.

Pleasure comes through toil and not by self-indulgence and indolence. When one gets to love work, his life is a happy one.—Ruskin.

Sir Oliver Lodge's Faith.

"I will not believe that it is given to man to have thoughts higher and nobler than the real truth of things."

Buds and Flowers in Cookery.

The French Canadians are said to use the acid flowers of the redbud, or Judas tree, in salads, while the buds and tender pods are packed in vinegar. Honey locust pods, often locally called "honey-shucks," contain a sweetish, thick, cheeselike pulp, which is often eaten. Those of the mesquite furnish the Mexicans and Indians with a nutritious food. The Creoles of Louisiana, famous for their cookery, are reported to use the young buds of the sassafras as a substitute for okra in thickening soups.

Nova Scotia's Fish Army.

Nova Scotia is literally "the land of fish"—cod, herring, mackerel and the giant albacore or tuna. Nova Scotia is so much a land of fish, says a writer, that it produces over one-fourth the value of the entire Canadian catch, or $9,166,801 worth. Every tiny haven around the extensive Bluenose Land coast harbors fishing smacks galore, while Lunenburg, Canso, Liverpool and Chester are home ports for hundreds of fleet-winged deep-sea banking schooners.

BUGGY AT BARGAIN
A good, single-seated top-buggy, with auto-styled top, metal body and genuine leather upholstering, at a bargain if taken at once.

Rev. O. Shultz, Goodridge

Saturday evening, March 23, a basket social will be given in the Geving schoolhouse, Dist. No. 38, Anna Haugen teacher. There will be a short program before the sale. A. O. Halvorson principal of Goodridge Consolidated School will give a patriotic talk. The proceeds of this sale will be donated to the Red Cross.

Last week a deal was made by which J. P. Jensen became the owner of the residence property lately owned by Anton Myrom, formerly the residence of and still occupied by P. C. Halvorson. It is understood that J. P Jensen will move his family here in the near future.

We made a bad mistake in leaving out ten head of young stock from Anton Myrom's auction bill. The ten head that will be sold consist of;

1 red & white cow, 3 years old, fresh. 1 red & white cow, 3 yess old, fresh. 1 red heifer, 2 years old, fresh. 1 red & white heifer, 3 years old, fresh in March. 3 red heifers, 2 years old, coming fresh. 2 yearling steers. 1 - 7 month old 63-64 Holstein Bull calf.

RUSSIA TO RECLAIM DESERT

Good Pasture Lands Are Destroyed at the Rate of One Hundred Thousand Acres a Year.

The shifting sands of Astrakhan and the measures taken by the Russian government to deal with this problem form the subject of a memoir by J. G. Firstov, published in Petrograd, observes the Scientific American. Ten million acres of the province in question are covered with shifting sands formed during the nineteenth century and subsequently. These sands have been spreading at the rate of 100,000 acres a year, the result being the transformation of good pasture land into a barren waste. The principal cause is over grazing; flocks and herds are kept so long in one place as to result in the complete destruction of the turf. Poor agricultural methods are also responsible. About the beginning of the present century the government took measures of control and reclamation, and between 1904 and 1909 an area of about 46,000 acres was brought under cultivation. In 1913 a special service was ordered to deal with the question. The province was put under the charge of a chief forestry officer and divided into six districts, in each of which a subordinate official was appointed to superintend the work. At the time of writing good progress has been made in planting soil binders and growing herbaceous crops, but it was still problematical whether the province was adapted to the establishment of forests.

AUCTION SALE

Having sold my farm I will sell at Public Auction on the west 1-2 of Sec. 2, Highlanding Township, being 2 1-2 miles south and 2 miles east of Goodridge, the following described personal property, on

THURSDAY, MARCH 21

Commencing at 10 o'clock a. m.

This Is Our Winter of Test

SERVING food is a local problem for each community. Prices and definite rules for every one cannot be formulated. It is a duty for each one to eat only so much as is necessary to maintain the human body healthy and strong. This winter of 1918 is the period when is to be tested here in America whether our people are capable of voluntary individual sacrifice to save the world. That is the purpose of the organization of the United States Food Administration—by voluntary effort to provide the food that the world needs.

U. S. FOOD ADMINISTRATION

MAKING MEATLESS DAYS PERMANENT.

In the meatless menu there is a fertile field for developing new and nourishing dishes, according to E. H. Niles, writing in the Hotel Gazette, who believes that the present shortage of meat and fats will not end with the coming of peace, but may grow more acute and continue for five or six years, thus making it worth while to develop menus of grain, vegetables and fish on a more or less permanent basis. Meat can be replaced by cereals and other protein foods, or may be served in very small portions as a flavoring for other food. In making up meatless menus this author finds our American Creole and southern cuisine a broad field for investigation.

Boys Drowned, Cat Escaped.

The tables were turned in a tragic manner at Port Elizabeth, South Africa, recently when two young boys who attempted to drown a cat—at the request of the animal's owner—were themselves drowned in a small bay about three miles from the city. The cat struggled when the lads tried to hold its head under the waves and before the boys realized their danger they were swept out to sea by the outgoing tide. The cat escaped from the water and returned to its old home.

YANKEES WRECK FOE SECOND LINE

Participate in Three Raids On Enemy Positions—Boches Flee Under Fire.

GERMANS ARE BOXED IN

Barrage Prevents Flanking Moves—Americans Co-operating with French, Take Materials and Document.

With the American Army in France, March 12.—Co-operating with the French, American troops have carried out three raids opposite the American sector in Lorraine. Two of the raids were executed simultaneously. The Americans swept past the German first lines and penetrated to the enemy's second line, 600 yards back.

Shells Prepare Way.

The simultaneous raids were made after intense artillery preparation lasting for four hours, in which German positions were leveled. At midnight two forces, accompanied by small French forces on their flanks, moved upon the German objectives behind a creeping barrage, each on a front of 600 yards. When the Americans reached the enemy first lines the barrage was lifted so as to box in the German positions at both points.

The men dropped into the enemy's trenches, expecting a hand to hand fight, but found the Germans had fled. Continuing, they went forward 600 yards to the second German line. All the time American machine guns were firing on each flank of the two parties to prevent the enemy from undertaking flanking operations.

One French flanking party found two wounded Germans in a dugout and took them prisoner. The Americans found none.

Blow up Enemy Works.

The Americans remained for 45 minutes in the enemy lines. They found excellent concrete dugouts, which they blew up and also brought back large quantities of material and valuable papers. While they were in the enemy lines, German artillery began a vigorous counter barrage. It was quickly silenced by American heavy and light artillery which hurled large quantities of gas shells on the batteries.

An American trench mortar battery participated in the artillery preparation preceding the raid, helping to level the enemy positions.

Soon after these two raids had been carried the Americans staged another at a point further along the line to the right. They went over the top after artillery preparation of 45 minutes in which the enemy positions attacked were obliterated. At this place the dugouts were found to have been constructed principally of logs. Engineers accompanying the raiding party completed the artillery's work of destruction.

Raids Carried Out Skillfully.

The raids were carried out skillfully and but for the fact that the Germans fled more prisoners doubtless would have been taken. American gas shells are believed to have caused many casualties among the enemy. No Americans are unaccounted for.

GAS SURPRISE FOR BOCHES

Americans Prepared to Give Foe Hard Beating.

Washington, March 13.—America is prepared to give Germany the worst beating of all at Germany's own game, the gas attack. Reference in late dispatches from the front to the effectiveness of American gas shells in silencing heavy enemy batteries is the first official indication of use of gas by the United States. It may be stated in this connection that the group of scientists and military men who have been studying the gas and flame problem from both the attack and defense angle here have attained results that will be a great surprise to the Boche.

Slav Government Moves; Organizes for Defence

Petrograd, March 12.—The government is moving to Moscow as a first step in organization of resistance on all fronts, according to an official press announcement. It is believed it may be necessary for the bolsheviki government to fight both Germany and Japan.

U. S. Needs Trained Technical Men.

Washington, March 12.—Hundreds of trained technical men are needed by the government at once for the supervision of the production of aircraft. They will be employed by the equipment division of the aviation section of the signal corps. Applicants should possess technical education backed by manufacturing experience, and be familiar with modern methods of purchasing and shop production. Applications should be addressed to Lieutenant J. A. Sloan, 119 D street N. E., Washington, D. C.

ALLIED ENVOYS HELD

U. S. And Jap Ambassadors Detained By Bolsheviki.

Tokio Telegrams Containing News Not Confirmed—Conference on Siberian Invasion Called.

Philadelphia, March 13.—According to Japanese cablegrams received by the Philadelphia Public Ledger by way of Honolulu, American Ambassador D. R. Francis and Motchida, the Japanese ambassador, are being detained by the bolsheviki. A protest to Petrograd is being prepared by Premier Terarichi of Japan.

To Decide Japan's Course.

Emperor Yoshihito has summoned a conference of the elder statesmen for Wednesday to settle the course of the Japanese government respecting Siberia.

Vladivostok is reported in a chaotic condition. The stores are closed and Japanese residents are preparing to flee unless help comes immediately.

Washington Without Word.

Washington, March 12.—The state department is without information to confirm the report coming through Honolulu that Ambassador Francis has been detained, presumably at Vologda, by the bolsheviki authorities. Officials said tonight that their information from Mr. Francis was to the effect that he was remaining at Vologda voluntarily.

BURNQUIST SCORES LEAGUE

Charges Disloyal Propaganda In Reply to Invitation.

St. Paul, March 12.—Charging the Nonpartisan league with disloyal propaganda and arraigning its heads for stirring up factional and class feeling when the country should be working solidly and wholeheartedly for winning of the war, Governor J. A. A. Burnquist has delivered the most scathing condemnation of the A. C. Townley organization that it has yet received.

The governor's condemnation of the league and its heads was made in a letter to Arthur Le Sueur, former socialist mayor of Minot, now "executive secretary" of the league, declining an invitation to address the league's coming campaign rally.

TOWNLEY ARRESTED AGAIN

Taken In Fairmont While Answering Charge

Fairmont, March 12.—While A. C. Townley, president of the National Nonpartisan league, was in Fairmont awaiting action of the Martin county grand jury, which is considering a charge against him of circulating a seditious pamphlet, Sheriff O. C. Lee slipped over from Jackson county and arrested him on a charge of conspiring to obstruct the nation's military policies.

Townley immediately was arraigned before Judge C. M. Tifft, who is sitting for Judge Dean, and bound over to the Jackson county grand jury in $1,000 bail. The bond was furnished by four Martin county farmers.

SEE "ANGEL IN FLAMING SKY"

Windsor Residents' Report of Phenomenon Attract Attention.

Windsor, Ont., March 12.—Many Windsor residents, including members of the police force, affirm that they witnessed a startling phenomenon last Thursday night in the form of an angel who appeared surrounded by a circle of flaming red, in the western sky.

Following reports from France that soldiers have seen Joan of Arc and St. Michael leading them into battle as well as the apparition of of the angel of Mons, the experience of the Windsorites is attracting much attention.

McGOVERN TO BACK LENROOT

Former Wisconsin Governor Quits Senatorial Race.

Milwaukee, March 12. — Former Governor Francis E. McGovern, candidate for the Republican nomination for United States senator at the primary election March 19, has filed a natico of his withdrawal from the race with the secretary of state, and placed himself in the service of Congressman Irvine L. Lenroot for the nomination.

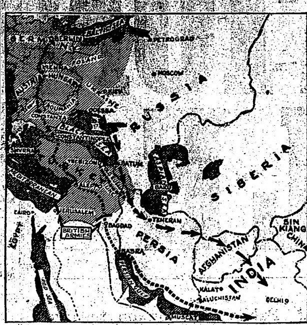
U. S. Ownership of Wires Proposed.

Washington, March 11.—To prevent spies from getting military information, Senator Morris Sheppard has introduced a resolution empowering the president to take over all telegraph, telephone, cable and radio communication systems during wartime, under the same terms as those governing federal railroads.

Packers in Control, Is Charge.

Kansas City, March 12.—W. R. Stubbs, former governor of Kansas, addressing the convention of the Missouri Livestock Producers' association here, charged that "the meat division of the Food administration had been controlled largely by the large packers of the country and that the meat producers of the country—the farmers and stock raisers—are not represented. Mr. Hoover has lost the confidence of a large percentage of the meat producers of the Middle West," Mr. Stubbs asserted.

THE NEW GERMAN MENACE



The map presented herewith shows plainly how the collapse of Russia has brought on anew the menace of pan-Germanism and the conquest of middle and eastern Europe, Asia Minor, India, and even northwestern China.

The line of arrows shows the route which the Germans now claim is open to them. The collapse of Russia has given them the north coast of the Black sea. It puts them into a position either to sweep around the Black sea or to cross it to Batoun (or Batum) and thence to the gates of India.

The route by which Germany first sought the entry into India is shown by the dotted line. This route apparently failed with the British successes in Mesopotamia. The British after their first disaster at Kut-el-Amara returned to their attack, captured Kut and then Bagdad, and their lines now stand firmly across the route north of Bagdad. The Russian lines for a long time stretched south and southeast from the anatolian coast of the Black sea, adding an additional menace, but they since have retired before the Turks.

Meanwhile the British forces which started their operations from Egypt and the Suez have continued their advance across the Holy Land until they now are within striking distance of Aleppa, where a further advance by them would cut the Constantinople-Bagdad railroad.

WAR SECRETARY GOES TO FRANCE

Cabinet Officer Arrives in Europe For Conference With General Pershing.

TO STAY A SHORT TIME

To Inspect In Person Results Already Achieved and Consult With American Commander on Requirements.

A French Seaport, March 12.—a staff of seven persons, Newton D. Baker, the American secretary of war, has arrived here on an American cruiser. The party was met at the pier by a French general, representing the French Army, Major General Squier, representing the American army; Admiral Mureau, representing the French navy; Rear Admiral Wilson, representing the American navy, and the mayor and councilors of the municipality.

General Pershing, Ambassador Sharp, and representatives of the French government will meet the secretary on his arrival in Paris. Secretary Baker plans to spend but a few days in France.

To Inspect American Results.

Washington, March 11.—Secretary Baker plans to spend a brief time in France, inspecting in person, the concrete results already achieved in the efforts of his department to place in the field this year an army that will be a factor in the campaign. On the eve of his departure, Mr. Baker told members of the press who have been in the habit of seeing him every day, that he did not expect to be away for any considerable length of time.

Goes to Talk With Pershing.

It was impossible for General Pershing to come for such a conference. Mr. Baker therefore determined, after many conferences with President Wilson, to go himself on an inspection tour, which will, he believes, better fit him for his great responsibility in meeting General Pershing's requirements in fighting men and materials and in keeping in operation a supply line more than 3,000 miles long.

15 Killed, 50 Hurt in Show.

Louisville, Ky., March 12.—Fifteen persons are reported killed, and 50 injured by the falling of a burning building wall upon a motion picture theatre adjoining in Winchester, Ky. Ten of the killed were children.

Hours Short for Capitol Workers.

Washington, March 11.—The extraordinary war population of the national capitol, it is estimated, will reach such proportions by January 1 that unless steps are taken to provide housing, 16,15 persons will have no place to live. Estimates presented to the House committee working on housing bills show 18,593 additional persons are expected to come here by July 1, and that the number will grow to 31,575 by December 31. Roughly half of this number can be cared for by im-

CHINA TO ENTER SIBERIA

Celestials to Send Army of 40,000 Men, Tokio Reports.

Foreign Loan Authorized to Finance Expedition—Harbin Made Siberian Capital.

Tokio, March 12.—Late dispatches state that the cabinet at Peking has decided to dispatch 40,000 Chinese troops to Siberia. Expenses of the expedition to the amount of $15,000,000 were authorized through the floating of a foreign loan.

After a conference of prominent Russians in Pekin it is reported that Harbin has been made temporary headquarters of the provisional Siberian government and that Prince Lvoff was mentioned for premier.

Definite announcement of Japan's policy is hoped for. At present the air is full of talk of mobilization

Prussian Public Surprised.

Petrograd, March 12—Russian public opinion is most surprised at the failure of President Wilson and America to halt Japan's hand in Siberia.

Those opposed to the Bolsheviki regime point out that this failure gives the Bolsheviki basis for their argument that imperialists in all countries are united against the Russian revolutionists

Attacking Prince Lvoff and others reported concerned with organizing a provisional Siberian government, the newspaper Pravda said:

"At present the air is full of talk of mobiliaztion, but the censorship is most strict and officials are silent.

"Intervention in Siberia is approved here, but America is hesitating, not wishing to run the risk of incuring united Russian hostility, according to belief in Tokio."

FOUR DIE IN OHIO TORNADO

Property Damages Estimated at Million Dollars.

Van Wert, Ohio, March 12.—Four persons are known to be dead, four persons are in a local hospital, between 25 and 50 farm homes are demolished and scores of barns and outbuildings blown down, the result of a tornado which swept this county. The financial loss in the county is estimated at $1,000,000.

The tornado first struck at Middleburg, traveling northeast across Harrison, Pleasant and Union townships. The twister would swoop down, wreck a farmhouse, or possibly two or three, and then jump over four or five miles before doing more damage.

Reports received here say that Continental and Holgate, Ohio, were not wiped out, but that much property damage was done. No lives were reported lost at either place.

Draft Law for Aliens.

Washington, March 11.—The Senate committee on military affairs has reported favorably Senator Fletcher's resolution providing that the President may draft certain aliens into the military service of the United States. The bill provides that the President may draft aliens whose governments have concluded treaties with the United States providing for such a contingency. Under the provisions of the bill, such aliens may have the option of enlisting in the services of their

KAISER TO RULE SCANDINAVIANS

Allies See German Plan to Grab Norway and Sweden, Deliberately Forcing Conflict.

WANTS OPENING TO SEA

Ultimate Object Thought To Be Control of Scandinavian Peninsula Giving Access to Atlantic Ocean.

Washington, March 12.—The Kaiser is deliberately seeking to provoke hostilities with Scandinavia. His ultimate object is the control of the Scandinavian peninsula and the establishment of a naval base in one of the magnificent deep water, naturally defended harbors of the Norwegian coast.

This is the interpretation placed here upon Germany's threat to close the North Sea against Sweden. Allied diplomats scanned the recent German message to Stockholm with the keenest interest. They compared it with advices that have been received from Berne and Amsterdam showing that similar threats have been made against Norway and Denmark.

Access to the Norwegian coast, it is pointed out, is a prize of incomparable value both for the conduct of the war and for the fortunes of Germany after the war.

Would Establish Sovereignty.

Washington, March 12. — Dispatches from an Entente government received here state that it is the intention of the German government to establish German sovereignty over Scandinavia and to make the Baltic a German lake. The intelligence was received by the Entente government from official correspondents in Berne and Amsterdam. The Berne telegram follows:

"The Wolff bureau reports on the 4th of March the signing of a treaty between Finland and Germany. By this treaty Finland is placed under the material, political and moral tutelage of the German empire. They having pretended on the 4th of March, in the principal committee of the reichstag, that Germany would only go to the aid of Finland in the defense of the liberty of the country threatened by the Red Guards, the German government has turned about, or rather has revealed then real ambition, which is nothing less that to make a German lake of the Baltic and establish a German sovereignty over the Scandinavian states.

"One can conceive of this policy not being of nature to calm Swedish uneasiness. It is this which the Kolnische Zeitung in one of its recent issues expresses: 'It seems,' says this paper, 'that an attitude of a part of the population (Swedish) is showing a scarcely disguised ill will. While Russia has ceased to be a danger to Sweden, Germany has acquired unprecedented power in the Baltic.'

"The intervention in Finland, the occupation of the Aland islands, the attitude taken as regards Norway and Denmark, all seem to belong to the same plan laboriously worked out, to establish German domination over Scandinavia. Pan-Germanism is developing and spreading in every direction.

"To those who know the habits of the German, it seems likely that Germany is seeking a quarrel with Denmark and even with Sweden."

TWO MINNESOTA MEN KILLED

Members of Gopher Gunners Lose Lives on West Front.

Minneapolis, March 12.—News of the death of two members of the 151st field artillery (First Minnesota) one of Minneapolis, and the other of Kellogg, Minn., have been received by parents of the soldiers. Private Lawrence Wenell of Battery C, son of August L. Wenell, 3724 Seventeenth Ave. south, died from wounds received in action, on the Western front on March 1, according to a telegram from the War department received by his father. Elmer J. McDonough, son of C. C. McDonough, of Kellogg, was killed in action on the western front in France on March 6, a telegram to his parents stated.

VICTOR BERGER IS INDICTED

Chicago, March 12.—Victor L. Berger, of Milwaukee, former Socialist congressman, has been indicted by the federal grand jury here on charges of obstructing recruiting, encouraging disloyalty and interfering with the prosecution of the war.

Reform in Keeping Records.

Washington, March 12.—The long delay in the publication of the roster of the American troops on board the transport Tuscania, sunk February 5, with a loss of more than 150 live, has caused the War department to adopt more stringent regulations governing the preparations and safeguarding of rosters. A general order instructs company and detachments commanders to prepare the record of units prior to entraining for the port of embarkation and to hold them readily accessable at all times through the journey.

Kill That Cold and Save Health

Robert' Position.

Robert was an honor to the force. He did not make the acquaintance of cooks, nor did he fall asleep on duty. He was ambitious and yearned for the time when he would be able to prefix the magic words "Chief Constable" to his surname. One day recently he arrested a man on a charge of assault. On the case coming before the magistrate he inquired as to who made the allegation against the prisoner.

Forward stepped the zealous Robert, who, with a sweeping salute, replied:

"Me, your worship; I'm the alligator!"—London Tit-Bits.

NEVER FAILS TO END MISERY OF PILES

Stops Itching at Once.

"Hundreds of people in this vicinity," says Peterson, "know of the mighty healing power of PETERSON'S OINTMENT in eczema, salt rheum, old sores, itching skin, ulcers, pimples and all diseases of the skin. They know it cures these ailments—that it is guaranteed to cure them."

Now I want to say to every sufferer from piles, either blind, bleeding or itching, that I will guarantee that a 30 cent box of PETERSON'S OINTMENT will rid you of piles or your druggist will return your money.

"For years I suffered terribly with itching and bleeding piles. I tried everything and despaired of ever getting rid of them. It gives me great pleasure to state that Peterson's Ointment entirely cured me, and I sincerely recommend it to all sufferers."—Yours truly, David A. Seymour, Supt. of Parks, Buffalo, N. Y. Adv.

Right.

"Old Bostely says he has a million-dollar brain," observed the man who was always picking up information.

"He's quite right," answered the other; "it would cost him fully that much to find out what's the matter with it."

Multiplied Bliss.

"Jupiter has eight moons."

"Gee whiz! Fancy escorting a girl under eight of 'em!"

WAS DISCOURAGED

Lost 65 Pounds in Weight and Had to Give Up Work. Has Been Well Since Using Doan's.

"Being exposed to extreme heat when working as an engineer, and then going outdoors to cool off, caused my kidney trouble," says Karl Goering, 8513 N. Orkney St., Philadelphia, Pa. "In cold weather and when it was damp, my joints and muscles would swell and ache and often my limbs were so badly affected it was only with great misery I was able to get around. For a week I was laid up in bed, hardly able to move hand or foot.

"Another trouble was from irregular and scanty passages of the kidney secretions. I became dull and weak and had to give up my work. Headaches and dizzy spells nearly blinded me and I went from 265 to 200 in weight. Nothing helped me and I felt I was doomed to suffer.

"At last I had the good fortune to hear of *Doan's Kidney Pills* and began taking them. I soon got back my strength and weight and all the rheumatic pains and other kidney troubles left. I have remained cured." *Sworn to before me,* WM. H. M'MUNN, *Notary Public.*

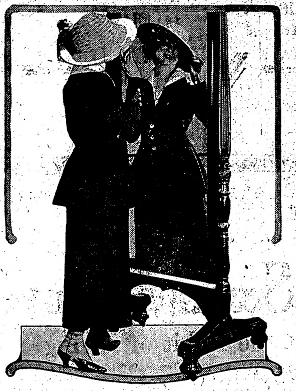
Fads And Fancies Of Fashion



SUIT WITH CLOSE FITTING COAT.

There is a choice this season in the line of the silhouette. We may disavow curves entirely and wear a coat or dress that is straight from neck to hem, or go to the other extreme and choose a bodice or coat that is fitted in to the figure closely, or stop anywhere between these. Half way between seems to be the happy medium that is most generally becoming. But the possessor of a very good figure may go even farther than the semifitted coat with fine effect as is attested by the coat suit which reflects this place of the style as shown in the picture above.

This braid and button trimmed suit of serge sets snugly to the body above the waist where the lines of the coat flow out into ripples at the back and sides, but are almost straight at the front. Parallel rows of narrow silk braid, stitched across the sides and back of the coat, end in a row of small bone buttons at each side. This is a novel placing of braid which is characteristic of this season. Corresponding rows of braid, ending in buttons are placed on the sleeves. There is a shawl collar and an over-collar of washable white satin.

In order to preserve the snug lines about the waist this coat is fastened with three buttons at the front. There are several ways of arriving at this closely fitted effect by means of ingenious cutting. They are novel but not more successful than the simple and direct methods shown in the picture.

The style of the skirt in this suit may be taken as a criterion for the season. It is a straight-line model, fitted about the hips, with waistline very slightly raised and it could hardly be simpler. These are the ideals that all skirt makers seem to have in mind just now.

Millinery shops are radiant with joyous Easter hats all proclaiming that styles have taken a new tack and are sailing in the direction of bright trimmings and plenty of them. Flowers are sprouting all over some shapes, others are fully covered with foliage. Ribbons are nothing if not abundant made up into all kinds of fanciful and beautiful garnitures and applied in novel ways. Ornaments, after a long, partial eclipse, have emerged and are given a conspicuous place of honor in the millinery firmament.

This return to favor of millinery trimmings comes as a surprise, for hats have been so meagerly ornamented for two seasons, that we were about to pronounce the obsequies over those lovely furbelows—the flowers and feathers and ribbons and laces and everything—that seemed to have languished to the point of death. There is no telling what will come to pass over night in the world of millinery, for here they are again, ready to form a joyous Easter parade proclaiming the eternal feminine.

The three hats pictured are typical styles. At the center is a wide-brimmed model of leghorn braid with its crown covered with crepe. Having gone this far last year the crown would consider nothing more expected of it. But now it is first dotted all over with beads and then its audacity in the new style adds as many tight roses of folded silk as it can carry without concealing the beads. Rose foliage lies in a flat wreath about the brim. It is one of the hats that trimmers class as belonging to the "bumpy" style. Below, at the right, a poke bonnet covered with crepe georgette, is faced with yedda braid. It has a long sash of ribbon that wanders over the crown and through slashes in the brim. The ends loiter along their way, which leads them half the length of the figure. A cluster of cherries and leaves are joined to the shape with chenille stitches that are disposed to divide attention with them.

The satin-covered shape at the left is the simplest of the three models. Except for folds on the side-crown the satin is put on plain. But there is method in this madness, the hat is merely a foil for a large ornament of cut crystals—mock amethysts—set in metal and elaborated with beads.

HAT STYLES SAIL TOWARD TRIMMINGS.

DAIRY FACTS

ENORMOUS WASTE IN WINTER

Minnesota Dairy Expert Makes Startling Statement as to Amount of Milk That Is Wasted.

Three and one-half billion pounds of milk are practically wasted in the dairy states every winter. This makes 21,000,000 pounds every day. The foregoing is a startling statement, but R. M. Washburn of the division of dairy husbandry, Minnesota College of Agriculture, says it is true. The farmer feeds most of his skim milk to hogs. This milk, fed to hogs, produces only 20 per cent of its energy value in edible pork. Eighty per cent of its energy value is lost. Mr. Washburn says, though, that some milk is necessary to start pigs off strongly.

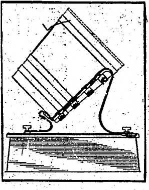
Much more of the energy value of the skim milk will be saved if it is made into cottage cheese. Every 100 pounds of skim milk, says Mr. Washburn, is equivalent to 20 pounds of ordinary meat, and will make 15 pounds of cottage cheese. The cheese contains about one-third more protein and one-third less energy than meat, and is therefore essentially equivalent to meat.

DEVICE ON BUTTER SCALES

Resilient Support Absorbs Most of Shock When Tub Is Thrown Hastily on Platform.

The Scientific American in illustrating and describing an attachment for scales, invented by F. D. Shea, 164 Chambers street New York, says:

This device is adapted particularly for the weighing of butter. It consists of a resilient support secured to the platform of the scales, which will absorb most of the shock when a tub of butter is thrown hastily thereon, thus relieving the scales of jar and making it possible to ascertain the weight of a tub of butter more quickly.



Attachment for Scales.

OPEN SHED IS SATISFACTORY

Experiments Conducted by Department of Agriculture on Government Farm at Beltsville.

(Prepared by the United States Department of Agriculture.)

In experiments at Beltsville, Md., by the bureau of animal industry, United States department of agriculture, a warm barn, commonly deemed essential for large milk production during the winter months, proved to be somewhat less satisfactory than an open shed. Experiments extending over three years showed that cows housed in the open shed consumed a little more feed, required more bedding and slightly increased labor cost, but because more milk was produced and on account of the lower cost of housing, the open shed was found to be somewhat more economical.

BEST GRASSES FOR PASTURE

When Sowing Make Up Mixture So That Some of Plants Will Be Growing at All Times.

It is possible for pasture to be so scant that the cow uses up all her energy in securing enough nutrients from it to maintain her body. When sowing for pasture make up a mixture of grasses such that some one of the grasses will be green and palatable at all times of the growing season.

REAL SUCCESS IN DAIRYING

End Can Be Brought About By Partnership Between Good Cow and Intelligent Feeder.

Real success in dairying comes from a partnership between the good cow and the good feeder. Many a good cow fails because never given a chance to prove her ability. If one would be a successful dairyman he must study the business, learn how to know cows and how to feed them.

Building Up Dairy Herd.

A good dairy herd is built up only after years of constructive breeding and selection. To sell these herds for beef would be to undo much of the effective work which has been done.

Keep All Milk Cows.

Don't dry up the milk cows. They are going to be scarce and high priced next year.

SMALL FLOCK OF CHICKENS SHOULD PRODUCE ENOUGH EGGS FOR FAMILY

FLOCK FOR PRODUCTION OF EGGS AND MEAT.

(Prepared by the United States Department of Agriculture.)

The keeping of a small flock of laying hens on a town or village lot or in a city back yard is an important branch of poultry keeping. Though the value of the product from each flock is small of itself the aggregate is large. The product of such a flock, both in the form of eggs and fowls for the table, may be produced at a relatively low cost, because of the possibility of utilizing table scraps and kitchen waste which would otherwise be thrown away. A small flock of hens, even as few as six or eight, should produce eggs enough, where used economically, for a family of four or five persons throughout the entire year, except during the molting period of the fall and early winter. By the preservation of surplus eggs produced during the spring and early summer this period of scarcity can be provided for. The keeping of pullets instead of hens also will insure the production of eggs at this time. Not only will the eggs from the home flock materially reduce the cost of living, but the superior freshness and quality of the eggs are in themselves well worth the effort expended. Eggs are a highly nutritious food and are so widely used as to be almost indispensable, and an occasional chicken dinner is relished by everyone.

Where conditions render it feasible and cheap small flocks of poultry should be kept to a greater extent than at present by families in villages and towns, and especially in the suburbs of large cities. The need for this extension of poultry raising is particularly great in those sections where the consumption of poultry products exceeds the production with the result that prices are high.

Kind of Fowls to Keep.

Householders usually desire not only eggs for the table and for cooking, but also an occasional chicken to eat. For this reason one of the general purpose breeds, such as the Plymouth Rock, Wyandotte, Rhode Island Red, or Orpington, is preferable to the smaller egg breeds, such as the Leghorns. Not only do the mature fowls of these breeds, because of their larger size, make better table fowls than the Leghorns, but the young chickens for the same reason make better friers and roasters, whereas chickens of the egg breeds are only suitable for the smaller broilers. The general-purpose breeds are also "broody" breeds, the hens making good sitters and mothers, which is a decided advantage when it is desired to hatch and raise chickens, since the hens of the egg breeds seldom go broody and are in any event rather unreliable sitters and mothers. If, however, the production of eggs outweighs the desire for an occasional table fowl, the lighter egg breeds undoubtedly will be found better, because they lay as many eggs and do so on less feed, with the result that they produce the eggs more cheaply. It is by all means advisable to keep some pure breed or variety. Where this is done, sales at a profitable figure can often be made of breeding stock which it is intended to market or of eggs for hatching.

Size of Flock.

The size of the flock which can be most efficiently kept will depend first of all upon the space available and, secondly, upon the amount of table scraps or other waste which is available for feed. It is a mistake to try to overstock the available space. Better results will be obtained from a few hens in a small yard than from a larger number. The back-yard poultry flock rarely will consist of over 20 or 25 hens and in many cases of not more than eight or ten, or occasionally of only three or four. For a flock of 20 to 25 hens a space of not less than 25 by 30 feet should be available for a yard. Where less space is available, the size of the flock should be reduced, allowing, on the average, 20 to 30 square feet per bird. A few hens are sometimes kept successfully with a smaller yard allowance than this, but if the space is available a yard of the size indicated should be used.

Procuring Stock.

The best way for the city poultry keeper to procure hens is to purchase them in the fall. An effort should be made to obtain pullets rather than older hens, and the pullets selected should be well matured, so that they will begin to lay before the cold weather sets in. Evidences of the maturity of pullets are the development and red color of the comb and a size and growth which are good for the breed of variety. Hens will lay little or no eggs during the fall and early winter, while they are molting. Well-matured pullets, however, should lay fairly well during this period, so that an immediate return is realized from the investment. The purchasing of pullets in the fall is preferable in most cases to purchasing day-old chicks or to hatching chicks in the spring. Usually there is little space available for the raising of chicks, and, moreover, many city dwellers have had no experience in raising them. Under these conditions the results are apt to be very poor. Hatching and rearing chicks also necessitates broody hens for this purpose, or else investing money in artificial apparatus such as incubators and brooders. Such an investment is often too great to prove profitable with the average small flock. If chicks are raised, they must be fed throughout the summer and no return will be obtained until the pullets begin to lay in the fall, except that the males can be eaten or sold.

Buying New Stock.

When pullets are to be purchased, it is well if possible to go to some farmer or poultryman who may be known to the prospective purchaser. In some cases it may pay to make arrangements with the farmer to raise the desired number of pullets at an agreed price. Where the householder does not have an opportunity to go into the country for his pullets, he can often pick them out among the live poultry shipped into the city to be marketed. The advice of some one who knows poultry should be sought in making such a purchase, to make sure that pullets or young hens are obtained, and that the stock is healthy. Often the local poultry associations are glad to help the prospective poultry keeper to get stock by putting him in communication with some of its members having stock for sale. Sometimes the local board of trade or chamber of commerce is glad to help to bring together the prospective purchaser and the poultry raiser.

CONTROL OF THE GYPSY MOTH

Severity of Infestation Important Factor in Determining Which Method Should Be Used.

(Prepared by the United States Department of Agriculture.)

Gypsy moth in orchards can be controlled by a number of methods, the severity of infestation being an important factor in which method should be used. If only a few egg clusters are present in the orchard, early spraying, such as is applied for the codling moth after the blossoms have fallen, will be found useful, providing the amount of poison used is increased to ten pounds to 100 gallons of water. If the infestation is more serious, a second spraying early in June, using a similar amount of poison, will be found very satisfactory. In cases where the infestation is severe it probably will be necessary to creosote egg clusters in the winter and spray in the spring if the insect is to be controlled. In any case, thoroughness is a prime essential if good results are to be secured.

All poor or hollow trees should be removed, and if badly infested woodland is nearby the orchard trees should be banded with the sticky substance previously mentioned or with tree-banding material. Orchard infestations can be managed by following up these methods, and it will not require much additional expense or a great deal of extra work to protect the trees. In making this statement it is assumed that the orchard is being cared for by up-to-date methods for protection from the codling moth and other injurious insects and diseases, and it is improbable that these results can be brought about in neglected orchards or where the owners do not practice the best horticultural methods in handling their growing trees.

POOR COCKEREL IS HANDICAP

Not Only Should Male Bird Be Purebred, but He Should Be From Strain of Producers.

The poor cockerel is a great handicap to progressive poultry raising. Not all poor cockerels are mongrels; there are many poor birds among the recognized breeds. An effort should be made to get the best to head the flock. Not only should the cockerel be purebred, but he should be from a strain of producers.

ROAD BUILDING

BENEFITS OF CONCRETE ROAD

Make Travel Quick, Safe and Easy, Clean and Comfortable—Saves More Than It Costs.

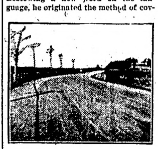
Concrete roads are country boulevards. They benefit a community in making travel quick, safe, easy, clean and comfortable. They extend neighborhood limits, bring more people into personal touch with each other, increase social opportunities and thereby remove the monotony of isolation; bring greater content to the youth on the farm, make city and country near neighbors and increase school attendance, thus cultivating a desire for a broader knowledge and higher standards of living.

Concrete roads make daily rural mail delivery a fact, every home unit in the community is put on the news wire with the political, financial, industrial and trading centers of the earth. The best thought of the world in every line of human effort and human achievement is transmitted overnight to the breakfast table of the community served by a network of concrete roads. A concrete road saves more than it costs. It is open to maximum traffic all the year round. It brings greater freedom and ease of movement in travel and transportation and permanently increases land values.

M'ADAM WAS ROAD REPAIRER

He Originated Method of Covering Surface of Ground With Impermeable Crust or Covering.

Just 200 years ago was born "the first of the pioneers who took up the work of scientific road building." John Metcalf showed how to carry solid highways across difficult bogs, and Thomas Telford built his roads, topped with gravel, on a solid foundation of stone blocks. But the great reform of the art came in with John Louden McAdam, who traveled 30,000 miles over the English and Scottish roads to study the conditions and needs for himself. Bestowing a new word on the language, he originated the method of covering the surface of the ground with an impermeable crust, cover or coating, so that water would not penetrate to the soil beneath. A road thus "macadamized" was found to yield less easily to weights pressing upon it, and could not be broken up by the action of frost. But while the inventor's fame spread his resources dwindled, and though made surveyor general of roads, he had to depend for his recompense on a parliamentary grant. McAdam was a road repairer rather than a road builder, but his system went all over the world.



Macadamized Road.

SPRING CARE OF HIGHWAYS

Go Over Road With Grader to Clean Out Ditches—Fill All Ruts With New Material.

Every spring before the ground becomes too hard the road should be thoroughly gone over with a grader to clean out the ditches, so that the water may have a free outlet. The ruts and holes should be filled, elevations in the road and shoulders on the side of the road planed off, the grade improved, and the road put in good condition.

Earth roads have a pronounced tendency to rut. When ruts begin to appear on the surface great care should be used in selecting new material, with which they should be filled immediately. One fundamental principle that is of special importance in the repair of any road is that whatever material is used in the construction of the surface, the same material—and no other—should be used in its repair. A good road with a surface of clay should be repaired by using clay, a gravel road with gravel and a surface of limestone with limestone.

Hog Needs Protection.

The hog is rather scantily provided with hair and the warmer the country the less hair. Therefore, he needs protection during the storms of winter. Unless you provide it, you invite colds, influenza, lung troubles, rheumatism.

Sowing Slow Seeds.

In sowing seeds that start slowly, as parsnips, celery, etc., it is well to sow with them a few strong, quick-germinating seeds to break the crust and mark the rows so that cultivation may begin early.

Every article produced in the home garden is a contribution to the cause of winning the war. Home products do not need transportation. They go from the garden to the table or to the preserve jar or the cellar, and take the place of some other food article that without the garden product would have to be shipped in to the community. In view of the railroad situation last year's gardens have been of inestimable value in preventing actual suffering for want of food. As the war goes on, and more of our men are sent across, the burden of the railroads will increase, and the need of home production, that much more imperative. Every spade full of dirt turned, every food article produced will help to win.

In order to stimulate wheat saving and to make available for export immediately a greater amount of wheat than is now being received for oversea shipping, the United States food administration has announced a suspension of the request for a daily meatless meal and porkless Saturday. This means that temporarily Tuesday will be the only meat saving day of each week. In making the announcement, Mr. Hoover states that experience has shown that the consumption of breadstuffs is intimately associated with the consumption of meats. For various reasons the supplies of meat in this country are considerably increases right now and it will be possible to supply for shipment all of the meat that the transportation facilities can take care of, and at the same time, increase somewhat our home consumption. The wheat is not being furnished in the quantity required and it is hoped that the increased meat consumption will release more wheat by decreasing bread consumption.

Actual sugar famine in some communites of the state recently indicate that the people will have to be more sparing in their use of sugar than requested in the recent order of the state food administration. Public eating places have been requested to relegate the sugar bowl and to serve, sugar on request in containers holding the minimum amount that should go with the food or drink being served. By exercising care in the use of sugar at this time, it will be possible to have some sugar all of the time, It will be possible to have some sugar all of the time, says the state food administration, but if we abuse what we have now, it will result in our going without it entirely until the transportation problem clears up and the distribution of the supply is made more general. Salt pork will become a common home product again if the art of salting has not become a lost one in Minnesota homes. During the temporary suspension of the porkless Saturday, the state food administration announces that it would de a good food conservation act to cure and store a reasonable supply of pork for home consumption.

War Savings Stamps

THE first principle of money making is money saving. Get the habit of buying War Savings Stamps regularly. This is the stamp which is going to help Uncle Sam stamp out Autocracy and help you, by saving, to start on the road to Success.

War Savings Stamps

Get the Habit of Saving

IN Thrift Stamps and War Savings Stamps, the United States Government offers you the greatest opportunity to save which any government has offered to its people. Like Liberty Bonds, War Savings Stamps have behind them the entire resources of the Government and people of the United States. They have the additional advantage that they steadily increase in value, and this increase is guaranteed by the Government. These stamps are issued in two denominations, the 25 cent Thrift Stamp and the $5.00 War Savings Stamp.

A "Thrift Card" is furnished to all purchasers of 25 cent stamps. This card has spaces for 16 stamps. When all the spaces have been filled the Thrift Card may be exchanged for a $5.00 stamp at post offices, banks or other authorized agencies by adding 12 cents in cash prior to February 1, 1918, and 1 cent additional each month thereafter.

If you prefer, you may buy a $5.00 stamp outright. These were on sale January 31, 1918, for $4.12. They automatically increase in value a cent a month every month thereafter until January 1, 1923, when the United States will pay $5.00 at any post office or at the Treasury in Washington for each stamp affixed to a War Savings Certificate.

When you purchase a $5 stamp, you receive an engraved folder known as a "War Savings Certificate," which bears your name and can be cashed only by you. This certificate contains 20 spaces. If these are all filled with War Savings Stamps before January 31, 1918, the cost to you will be $82.40; and on January 1, 1923, the Government will pay you $100—a net profit of $17.60. This is based on an interest rate of 4 per cent compounded quarterly from January 2, 1918.

If you hold a War Savings Certificate and find it necessary to cash it before maturity, you may at any time after January 2, 1918, upon giving 10 days' written notice to any money-order post office receive for each stamp affixed to your certificate the amount paid therefor plus 1 cent for each calendar month after the month of purchase of each stamp. A registered certificate may be redeemed, however, only at the post office where registered.

You cannot lose and are certain to gain. You are buying the safest security in the world in the most convenient form in which the security of a great Government has ever been offered to its people.

Why You Should Buy Them

Your country needs every penny every man, woman and child can save, in order to feed, clothe, and arm the soldiers and sailors of America to win this war in defense of American honor and democracy.

A Country worth fighting for is a Country worth saving for.

To save money is to save life.

Buy War Savings Stamps at post offices, banks, trust companies, or other authorized agencies and strike a blow for your Country.

HOW TO GET FERTILE EGGS.

To obtain fertile eggs late in the season is a comparatively simple task To obtain them early in the season so that you may sell your broilers and roasters before they are plentiful, and that you may have pullets laying in the fall and winter, and thus obtain the benefit of the best prices, requires the right kind of stock, the right kind of care and the right kind of houses;

THE STOCK. Both males and females must be mature birds. It matters not, particularly, whether they are yearlings or two years old, that is cocks or cockerels and pullets have made growth and development.

Too old males and females should not be used. As a rule, cocks or hens over two years old do not produce as many and as fertile eggs, nor as vigorous chicks as those under that age.

Only perfectly healthy stock should be tolerated in the breeding pens. Even among such, select the most active and vigorous. Reject the hen or pullet that has laid long enough to have reduced her strength or vitality.

Reject the male that has been with fifteen, twenty or more laying hens from early fall to the hatching season.

Reject hens that were big layers their pullet year, that moulted late and began laying late in January or in February.

THE FEEDING PROBLEM. The main secret: A wide variety in the rations, fed so as to compel exercise.

Feeds lack most often sufficient animal food and succulents. Both should be fed liberally when the birds are confined to the house.

Mineral matter, or ash, must be supplied; oyster shells, grit, bone meal in small amounts of which the fowls themselves are the best judges.

Feed grains in deep, loose litter, and in sufficient quantity to keep fowls plump, active and vigorous. Overfeeding causes insufficient exercise, and the result is an overfat and unhealthy fowl. Underfed fowls are poor producers. There is an advantage in feeding the male alone once a day, o using a different male on alternate days.

THE HOUSE. The house should be roomy. Breeding flocks should be allowed more space than those kept for laying. Allow as nearly as possible en square feet of floor space per bird. Ventilate judiciously. Maintain comfort by keeping the house reasonably warm, dry and clean.

To keep out Lice and Mites. Paint the roosts and nests with kerosene once a month. Dust the fowls with insect powder at the beginning of the breeding season and as occasion demands thereafter. Cut out all the breeders that show signs of disease or debilitation.

HELP THE SUFFERERS.

GOODRIDGE

The most progressive and the biggest little town in northern Minnesota.

WOOD FUEL AND DEMOCRACY

Every once in a while something breaks in upon the train of our almost unconscious progress and shows us how rapidly we are developing and drifting beyond and away from the simple life of our fathers. Sometimes we find we have improved things and sometimes we find we have simply piled on the extravagance. No matter. We do not even realize that we have changed till something suddenly stops the clock of our progress and rudely turns back the hands a half a century, bringing us face to face with some of the problems they had to solve.

Wood was the original fuel and it is still good. At one time our fathers nearly all burned wood. Some of them never knew the use of coal. Gradually coal has crept into the cities; the bulkier and less convenient wood [illegible] disappered. Our stoves and all our [illegible]its of life have changed to march [illegible] this new fuel. From the cities it spread to the smaller towns, from the towns to the country till many a farmer watches [illegible] while his teams are hauling coal from town.

The change has been gradual, almost imperceptible, certainly unoticed, Then comes the sudden shortage of coal due to the war, and everywhere the cry goes up, "Give us coal, or we freeze!" Not only in the cities, where the wood has long since ceased to come and can now no longer be obtained, but even in the little country village where the failing of dead timber threatens the lives of the citizens, they must have coal. They could not think of burning wood. So strong and binding have their habits grown.

But stern necessity knows no law, not even the law of habit, the strongest of them all. The government has recognized the progress of the times towards wasteful extravagances and luxury. They have appointed a food administrator to teach the people once more how to eat and stop their wasteful toying with the food that other people need to live; It worked; and spite of gouty appetites and bulging goldstuffed pocketbooks our rich folks go without a juicy steak on Tuesday night, and yet they live. And with it all there comes a certain generous mood a glorious feeling of world-fellowship. We have ceased to gorge ourselves, not because it is the law, but that another eats what we forego and blesses us. Perhaps we've never felt that warmth before; perhaps we never stopped to think how our such paltry little sacrifice might swell the blessings of another's life.

As with the food so with the coal. You think it hard to have to burn wood; Its inconvenient and it means more work, You've formed a habit that you cannot break. You need not break it. The fuel administrator, will break it for you. That's what he is for. He will teach you again how to burn wood. He'll decide whether your use of coal is a habit or necessity. And if you cannot make good your claim to him, then you'll burn wood.

At first you think it is hard and you feel rebellious toward that arbitrary rule; but with the habit strongly broken and the wood ablaze, the iron fist fades slowly from your view, and every stick of cordwood yields an added warmth because some other soul—perhaps your own [illegible] Uncle Sam—

It is only here and there that a lucky one of many thousands finds a chance to do some great heroic deed that sends an echo round the world To most of us there falls an humble easier task: to eat a certain kind of bread, to stoke our stoves with wood instead of coal,—such little things they hardly seem worth while and yet it is such little things as that that win a war and make this great big world a fit place for man to live. Were it not for these, our heroes' deeds would never reach the light.

To burn wood is not much to ask of anyone. Don't make our government ask a second time. Think what these things are for, do them with the cheerful spirit that is bound to go with a act of conscious generosity, and rest assured that you have taken so a mighty stride toward a great worldwide democracy.

(Too late for last week).

Halvor Syvertson is back from Thief River Falls where he has taken treatment for his Rheumatism at the bath and Massage Parlors. Mr. Syvertson is now well and feels like a new man and will gladly advice anyone to go there who is suffering from Rheumatism. It is the best and surest cure he has found.

Joseph K. Esebo was a business caller at "Camp Sub Urban" Monday.

Knut Drankedol returned from the lumber camps Saturday.

BORN—To Mr. and Mrs. H. A. Dahlen Saturday morning the 9th, a little girl weighing 10½ pounds. Dr. I. W. Froehlich of Thief River Falls was in attendance and Mrs. Andrew Vake acted as nurse. Mother and child are doing nicely and Mr. Dahlen smiles now and then, to say the least

The combination Vatne-Bisbing-Gulbrandson auction sale held Friday attracted a monster crowd and fabulously high prices were realized for nearly every item sold.

Nietzsche brothers returned from the lumber woods last Saturday.

Miss Diana P. Wold ventured on a regular girl scout hike all the way to her home near Krati's Friday evening to spend the week end.

A "tug of war" was pulled off at the Ludvick Johnson ranch Monday night. It came out a tie. No casualties.

Stephan Thoreson of Lake Saskatoon Canada, has been renewing acquaintance with friends and relatives in Star lately, and has spent part of the winter at the home of his uncle, Oscar Thoreson, near Erie.

Mrs. Talleiv Hevet was the guest of Mrs. Knute Danielson Tuesday evening

The families of Kittel (Tom) Vatne, Ole Bisbing and Albert Gulbrandson are to leave for distant Peace River tracts in Canada about the 23rd of this month. Our best wishes for their future success, prosperity and happiness go with them.

Iver Iverson visited at Roland Sunday.

Molder Lee Isak Vake and Ole Lien are among those who recently returned from the Redby lumber woods.

Mr. and Mrs. Theodore Sunsdal visited with Mr. and Mrs. G. A. Iverson Sunday afternoon.

Two surprise parties, one on Mr. and Mrs. Albert Gulbrandson the other on Mr. and Mrs. O. K. Lien, took place Sunday, and the Star "ushers" had to rustle some.

At the Star Farmers Non-Partisan Political League caucus the 22d. six new members, to wit, Magnus Anderson, Nils Lien, August Schneider, Olui Emlid, Eidelbes and Emil Grams were added to the list. Here's hope, and we don't doubt, that the Farmers Non-Partisan political League will be equal to the stunt of delegating to the "Order of has-beens" all those who take pride in being adepts at the art of "

RED CROSS SALE.

The Red Cross sale held last Saturday evening at the High Landing schoolhouse was one of the most successful ever held at High Landing, the proceeds amounted to about $63.00.

The High Landing Ladies Aid will meet at the High Landing Church Thursday afternoon, March 28. Every one is cordially invited.

If you want to succeed, save. Buy War Savings Stamps of your Postman or Banker.

RESON-SCOTT.

Last Thursday at two o'clock in the afternoon occurred the marriage of Miss Myrtle Reson to Stanley Scott of Mohall, N. Dak. The ceremony was performed by Rev. I. T. Aastad at his parsonage in Thief River Falls. Miss Gretta Gulrud acted as bridesmaid and Henry Iverson as best man. In the evening of the same day a reception and dance was given by the contracting parties at the Goodridge Hall. A large number of their friends attended the reception to wish the newlyweds a long and happy voyage on the matrimonial sea: The Eleven Towns joins in the wishes. The young couple will make their home at Mohall, N. Dak. where the groom is engaged in farming.

MODIFICATION OF WHEAT GRADES.

Last week President Wilson heard arguments for a change in the wheat grades from a delegation from the northwest with Congressman Halvor Steenerson as spokesman. A few days afterward orders came, through the Secretary of Agriculture, for a modification of the grades that will mean an average increase of from five to ten cents per bushel in the returns for the wheat crop.

The moisture content is raised from 13 to 15 per cent; 4 per cent of other wheat, instead of 2, is permitted; rye content is raised from 1 to 2 per cent; 2 instead of 1 per cent of damaged kernels is permitted; and there may be 1 per cent of heated kernels instead of none, and one percent separable small seeds is permitted.

The change in moisture content is the most important, as the bulk of the northwestern crop averages between 14 and 15 per cent in the moisture test.

The new rules will go into effect after hearings are held in the five principal grain center of the country, that for the northwest to occur in Minneapolis on March 21

The modifications are in line with Mr. Steenerson's bill, recently introduced in congress, and grants almost all that was asked for.

Free transportation to and from home from for men in the military service on furlough is provided in a bill by Representative Steenerson, of this district. Mr. Steenerson states that he wishes to make it possible for all to bid their relatives good-bye before going over-seas. Red Lake Falls Gazette.

Thrift is the power to save. Buy War aSvings Stamps of your Postman or Banker.

Making Bulgarian Milk.

The milk of the Bulgarians, well known all over the world for its superior nutritive quality, is made by exposing it to the sun, the rapid development of the germs under the action of the ultra violet rays being such that when it becomes dry they are in highly concentrated form.

Moss Is Valuable.

"Moss" is the popular name for several kinds of small flowerless plants which flourish in damp places. In mountainous and wet districts tracts of moss are of great service in retaining the water and preventing sudden floods.

Too Particular.

The girl who thinks more of her georgette crepe waist than she does of her beau and refuses to permit it to get mussed will never march to the well-known tune of Mr. Mendelssohn —Florida Times-Union.

TOWHOM IT MAY CONCERN

This is to advise those who are interested that the firm of C. Gustafson & Son of Thief River Falls has the exclusive right to sell Avery tractors, threshing machines, and plows in the territory tributary to Thief River Falls, Gentzentown, and Esplee, Minn. They are our only representatives in this territory.

Signed Avery Co.
Branch at Grand Forks,
N. Dak.

TO PROVIDE FOR LABOR WANTS.

The Commission of Public Safety has taken upon itself to provide all the labor help needed by the farmers. This can be furnished on short notice! Just get together with your nearest Safety Commission man.

RED CROSS NOTES.

At the Red Cross work rooms Friday afternoon the following ladies assisted with the work: Mesdames P. O. Tvedt, Otto Gulrud, H. Christianson, Elmer Bly Theo. Gilbertson, H. A. Halvorsen, Ferdinandsen, Edseth, M. Olson, Seavey, McDonald, Thoreson A. O. Halvorson Vaughan, Payne, and Misses Wiseth, Lund, Anderson, Murray, and Giefer. Twenty six bandages were completed.

Interest is increasing in Red Cross Work. To enable the Misses Wiseth and Lund to attend. Mrs. Otto Gulrud took her car and went out to get them and also brought them home again.

The village election slipped by so quietly that it was hardly noticed. In fact, it did not even succeed in arousing us enough to give it a write up in the paper. The results were as anticipated, as the only contest was between P. O. Tvedt and R. H. McDonald for a place on the council. The latter obtained the larger number of votes. The caucus ticket was elected entire. The following gentlemen [illegible] shape the destiny of our village [illegible] coming year: [illegible] C. Gulrud, Council men, Jay [illegible], H. McDonald, and Sever [illegible]son, Recorder, E. L. Rockne, [illegible], Nick Bundhund, Assessor [illegible] Stephenson, justice of peace, M. [illegible], Constables, C. H. Rossmon [illegible]

Star Notes

(Too late for last week).

Halver Syvertson is back from Thief River Falls where he has taken treatment for his Rheumatism at the bath and Massage Parlors. Mr. Syvertson is now well and feels like a new man and will gladly advice anyone to go there who is suffering from Rheumatism. It is the best and surest cure he has found.

Joseph K. Easbo was a business caller at "Camp Sub Urban" Monday.

Knut Drankedol returned from the lumber camps Saturday.

BORN—To Mr. and Mrs. H. A. Dahlen, Saturday morning the 9th, a little girl weighing 10½ pounds. Dr. I. W. Froehlich of Thief River Falls was in attendance and Mrs. Andrew Vake acted as nurse. Mother and child are doing nicely and Mr. Dahlen smiles now and then, to say the least

The combination Vatne-Bisbing-Gulbrandson auction sale held Friday attracted a monster crowd and fabulously high prices were realized for nearly every item sold.

Nietzsche brothers returned from the lumber woods last Saturday.

Miss Diana P. Wold ventured on a regular girl scout hike all the way to her home near Krati a Friday evening to spend the week end.

A "tug of war" was pulled off at the Ludvick Johnson ranch Monday night. It came out a tie. No casualties.

Stephen Thoreson of Lake Saskatoon Canada, has been renewing acquaintance with friends and relatives in. Sta[illegible] lately, and has spent part of the winter at the home of his uncle, Oscar Thoreson, near Erie.

Mrs. Talleiv Hovet was the guest of Mrs. Knute Danielson Tuesday evening

The families of Kittel (Tom) Vatne, [illegible] Bisbing and Albert Gulbrandson are to leave for distant Peace River districts in Canada about the 23rd of this month. Our best wishes for their future success, prosperity and happiness go with them.

Iver Iverson visited at Roland Sur[illegible]

Molder Lee Isak Vake and Ole Lien are among those who recently returned from the Reuby lumber woods.

Mr. and Mrs. Theodore Sunsdahl visited with Mr. and Mrs. G. A. Iverson Sunday afternoon.

Two surprise parties, one on Mr. and Mrs. Albert Gulbrandson the other on Mr. and Mrs. O. K. Lien, took place Sunday, and the Star "ushers" had to rustle some.

At the Star Farmers Non-Partisan Political League caucus the 22d. six new members, to wit, Magnus Anderson, Nils Lien, August Schnieder, Olut [illegible]mlid, Eidelbes and Emil Grams were added to the list. Here's hope, and we don't doubt, that the Farmers Non-partisan political League will be equal to the stunt of delegating to the "Order of has-beens" all those who take pride in being adepts at the art of "

RED CROSS SALE.

The Red Cross sale held last Saturday evening at the High Landing schoolhouse was one of the most successful ever held at High Landing. The proceeds amounted to about $63.00.

The High Landing Ladies Aid will meet at the High Landing Church Thursday afternoon, March 28. Every one is cordially invited.

If you want to succeed, save. Buy War Savings Stamps of your Postman or Banker.

RESON-SCOTT.

Last Thursday at two o'clock in the afternoon occurred the marriage of Miss Myrtle Resan to Stanley Scott of Mohall, N. Dak. The ceremony was performed by Rev. I. T. Austad at his parsonage in Thief River Falls, Miss Gretta Gulrud acted as bridesmaid and Henry Iverson as best man. In the evening of the same day a reception and dance was given by the contracting parties at the Goodridge Hall. A large number of their friends attended the reception to wish the newlyweds a long and happy voyage on the matrimonial sea: The Eleven Towns joins in the wishes. The young couple will make their home at Mohall, N. Dak. where the groom is engaged in farming.

MODIFICATION OF WHEAT GRADES.

Last week President Wilson heard arguments for a change in the wheat grades from a delegation from the northwest with Congressman Halvor Steenerson as spokesman. A few days afterward orders came, through the Secretary of Agriculture, for a modification of the grades that will mean an average increase of from five to ten cents per bushel in the returns for the wheat crop.

The moisture content is raised from 13 to 15 per cent; 4 per cent of other wheat, instead of 2, is permitted; rye content is raised from 1 to 2 per cent; 2 instead of 1 per cent of damaged kernels is permitted; and there may be 1 per cent of heated kernels instead of none, and one percent separable small seeds is permitted.

The change in moisture content is the most important, as the bulk of the northwestern crop averages between 14 and 16 per cent in the moisture test.

The new rules will go into effect after hearings are held in the five principal grain centers of the country, that for the northwest to occur in Minneapolis on March 11

The modifications are in line with Mr. Steenerson's bill, recently introduced in congress, and grants almost all that was asked for.

Free transportation to and from home from for men in the military service on furlough is provided in a bill by Representative Steenerson, of this district. Mr. Steenerson states that he wishes to make it possible for all to bid their relatives good-bye before going over-seas. Red Lake Falls Gazette.

Thrift is the power to save. Buy War Savings Stamps of your Postman or Banker.

Making Bulgarian Milk.

The milk of the Bulgarians, well known all over the world for its superior nutritive quality, is made by exposing it to the sun, the rapid development of the germs under the action of the ultra violet rays being such that when it becomes dry they are in highly concentrated form.

Moss is Valuable.

"Moss" is the popular name for several kinds of small flowerless plants which flourish in damp places. In mountainous and wet districts tracts of moss are of great service in retaining the water and preventing sudden floods.

Too Particular.

The girl who thinks more of her georgette crepe waist than she does of her head and refuses to permit it to get mussed will never march to the well-known tune of Mr. Mendelssohn —Florida Times-Union.

TO WHOM IT MAY CONCERN

This is to advise those who are interested that the firm of C. Gustafson & Son of Thief River Falls has the exclusive right to sell Avery tractors, threshing machines, and plows in the territory tributary to Thief River Falls, Germantown, and Espleo, Minn. They are our only representatives in this territory

HOW TO GET FERTILE EGGS.

To obtain fertile eggs late in the season is a comparatively simple task. To obtain them early in the season so that you may sell your broilers and roasters before they are plentiful, and that you may have pullets laying in the fall and winter, and thus obtain the benefit of the best prices, requires the right kind of stock, the right kind of care and the right kind of houses.

THE STOCK. Both males and females must be mature birds. It matters not, particularly, whether they are yearlings or two years old, that is cocks or cockerels and pullets have made growth and development.

Too old males and females should not be used. As a rule, cocks or hens over two years old do not produce as many and as fertile eggs, nor as vigorous chicks as those under that age.

Only perfectly healthy stock should be tolerated in the breeding pens. Even among such, select the most active and vigorous. Reject the hen or pullet that has laid long enough to have reduced her strength or vitality.

Reject the male that has been with fifteen, twenty or more laying hens from early fall to the hatching season.

Reject hens that were big layers their pullet year, that moulted late and began laying late in January or in February.

THE FEEDING PROBLEM. The main secret: A wide variety in the rations, fed so as to compel exercise.

Feeds lack most often sufficient animal food and succulents. Both should be fed liberally when the birds are confined to the house.

Mineral matter, or ash, must be supplied; oyster shells, grit, bone meal in small amounts of which the fowls themselves are the best judges.

Feed grains in deep, loose litter, and in sufficient quantity to keep fowls plump, active and vigorous. Overfeeding causes insufficient exercise, and the result is an overfat and unhealthy fowl. Underfed fowls are poor producers. There is an advantage in feeding the male alone once a day, or using a different male on alternate days.

THE HOUSE. The house should be roomy. Breeding flocks should be allowed more space than those kept for laying. Allow as nearly as possible an square feet of floor space per bird. Ventilate judiciously. Maintain comfort by keeping the house reasonably warm, dry and clean.

To keep out Lice and Mites. Paint the roosts and nests with kerosene once a month. Dust the fowls with insect powder at the beginning of the breeding season and as occasion demands thereafter. Cut out all the breeders that show signs of disease or debilitation.

HELP THE SUFFERERS.

This is the week for collecting old clothing for the suffering people of Belgium. It is done under the auspices of the Red Cross. [illegible]

GOODRIDGE.

The most progressive and the biggest little town in northern Minnesota.

WOOD FUEL AND DEMOCRACY

Every once in a while something breaks in upon the train of our almost unconscious progress and shows us how rapidly we are developing and drifting beyond and away from the simple life of our fathers. Sometimes we find we have improved things and sometimes we find we have simply piled on the extravagance. No matter. We do not even realize that we have changed till something suddenly stops the clock of our progress and rudely turns back the hands a half a century, bringing us face to face with some of the problems they had to solve.

Wood was the original fuel and it is still good. At one time our fathers nearly all burned wood. Some of them never knew the use of coal. Gradually coal has crept into the cities, the bulkier and less convenient wood disappeared. Our stoves and all [illegible] of life have changed to [illegible] this new fuel. From the cities it spread to the smaller towns, [illegible] to the country till [illegible] teams are hauling coal from town.

The change has been gradual, almost imperceptible, certainly unnoticed. Then comes the sudden shortage of coal due to the war, and everywhere the cry goes up, "Give us coal, or we freeze!" Not only in the cities, where the wood has long since ceased to come and can now no longer be obtained, but even in the little country village where the falling of dead timber threatens the lives of the citizens, they must have coal. They could not think of burning wood. So strong and binding have their habits grown.

But stern necessity knows no law, not even the law of habit, the strongest of them all. The government has recognized the progress of the times towards wasteful extravagances and luxury. They have appointed a food administrator to teach the people once more how to eat and stop their wasteful toying with the food that other people need to live. It worked; and spite of gouty appetites and bulging goldstuffed pocketbooks our rich folks go without a juicy steak on Tuesday night, and yet they live. And with it all there comes a certain generous mood, a glorious feeling of world-fellowship. We have ceased to gorge ourselves, not because it is the law, but that another eats what we forego and blesses us. Perhaps we've never felt that warmth before; perhaps we never stopped to think how our such paltry little sacrifice might swell the blessings of another's life.

As with the food so with the coal. You think it hard to have to burn wood. Its inconvenient and it means more work. You've formed a habit that you cannot break. You need not break it. The fuel administrator will break it for you. That's what he is for. He will teach you again how to burn wood. He'll decide whether your use of coal is a habit or necessity. And if you cannot make good your claim to him, then you'll burn wood.

At first you think it is hard and you feel rebellious toward that arbitrary rule, but with the habit strongly broken [illegible]

[illegible] breads to [illegible] with wood instead of coal [illegible] things that hardly [illegible] worth [illegible] yet it is such little things [illegible] win a war and make this [illegible] world a fit place for men to live. Were it not for these, our [illegible] deeds would never reach the light.

To burn wood is not much to ask of anyone. Don't make your government ask a second time. Think what these things are for, do them with the cheerful spirit that is bound to go with an act of conscious generosity, and rest assured that you have taken a mighty stride toward a great world wide democracy.

SAW WOOD, THE LIBERTY FUEL.

LITERARY PROGRAM

The next meeting of the Literary society will be held in the school house Thursday March 28. The following is the program for the evening:

Song	By Audience
Reading	Edna Stephenson
Short Stories	Irene Ferdinandsen
Current Events	Alvin Rattke
Reading	Sam Reese
Song	Group of children
Recitation	Christina Bundhund

Impromptu Debate Resolved that a scolding woman is worse than a smoking stove.

Everyday conversation — Mr. and Mrs. Bennie Johnson, Laurence Urdahl and Stuart McLeod.

Instrumental	Gretta Gulrud
Song	Audience

SCHOOL NOTES.

School visitors during the past month were: H. A. Halvorson, G. Gunderson, Mrs. A. O. Halvorson, and Mrs. Thoreson.

The Junior Red Cross commenced work last Friday afternoon. The Primary children made snippings for comfort pillows. The Intermediate Department hemmed 21 handkerchiefs. The Grammar grades finished a dozen towels.

The following is the perfect attendance report for the month: 8th grade, Stella Stenvick, Marshall Race. Grammar grades, Alfred Anderson, Joseph Christianson, Daniel Payne, Everett and Lawrence Seavey, Mabel Strand, Julian Markuson. Intermediate department, Gertrude Anderson, Eugene and Blanche Besancon, Hattie and Martha Bundhund, Genevieve Ferdinandson, Norton Gunderson, Emma Gilbertson, Selma Hanson, Bennie and Carl Mandt, Harry McDonald, Edwin Olson, Carl, Floyd, and Lynton Palmer, Vivian Thoreson, Luella Urdahl, Dan and Ethel Vaughan, Desmond and Miles Goudy. Primary department, Hazel Thoreson, Sidney Stephenson, Ida Bundhund, Opal Halverson, Inga and Edwin Hanson, Mollie Iverson, Ruth McDonald, Tillie Markuson, Harold Olson, Howard Seavey. Those perfect in spelling were: Grammar grades, Julian Markuson, Christina Bundhund. Intermediate department, [illegible] Ethel Vaughan. Primary [illegible] Ruth McDonald, Florence Halvorson, Laurie Erickson, Mabel and Tillie Markuson.

INTENTIONAL DUPLICATE EXPOSURE

THE BIG WORK IN THE WAR

The War Lord Salutes the Field Marshall.

Such is the striking title to a well-timed cartoon in an agricultural paper, showing the War Lord in salute to the farmer. The meaning of it is that without the assistance that the farmer renders in the matter of providing food for the army the fighting ability of that body would be proportionally decreased. While the army is fighting, the farmer is busy. The promptness with which he sprang into the breach was a patriotism equal to that of the man who enlisted and the farmer's record in this particular was worthy of the high record that has become his. All over the United States the appeal is being met by more production. Fields are enlarged, intensive agriculture has taken the place of slipshod methods, more cattle are being fattened, more hogs grown, veal and lamb have become scarce commodities. This is all in keeping with the food-controller's demands, and with the heartiness that is now prevalent, it would seem as if the requirements of the boys at the front and the allies in Europe would be fully met.

Not only are the tilled acres of the United States being brought into requisition, but the wild pasture lands are doing tribute with their cattle and sheep. Working in conjunction with the United States, Western Canada is also doing its share and a pretty large share it is, too. By an arrangement with the United States Government it will now be possible through its employment bureau to secure for the Western Canada fields such help as can be spared. It is thought in this way Canada will have its help to seed its millions of acres of wheat land fairly well met. The large number of young men of the farms who have enlisted and gone to the front has left many of the Western Canada farms weak in the matter of man power. This means that Canada can take all that the United States can spare. The wages will be good and the housing comfortable.

In addition to this the free homestead lands of Western Canada offer the greatest inducement to the man with limited means who is willing to undergo some of the hardships naturally accompanying this enterprise. There is also the large area of uncultivated lands that are waiting the man with sufficient means to purchase and equip. And this is not expensive. The lands are cheap and the terms very reasonable. Equipped with tractor or horse power the cultivation cost is slight when the return is considered. Yields of wheat varying from 20 to 40 bushels per acre may be relied upon, and with a set price of over $2.00 per bushel, it is an easy matter to arrive at the cost. Production, including interest on land, has been estimated at figures not exceeding ten dollars an acre. With a twenty bushel yield, at a two dollar price—forty dollars. Ten from forty and you have the profits many farmers made in Western Canada the past year.

The Dominion and Provincial Governments are working conjointly in an increased production propaganda. Among the important steps that have been taken to bring this about is the recent order by which it is made possible to take into Canada tractors that cost fourteen hundred dollars and less in the country of production. This will give those residing in the United States, owning lands in Canada, the opportunity to place them under cultivation at much less cost than in the past. Another inducement is the privilege of taking sheep and cattle in free of duty. Automobiles form a necessary part of the outfit of a good many farmers that would like to move to Canada. These are now accorded free duty. Provision is also made that those requiring seed and unable to obtain it in any other way, may get it from the Government. So from this it will be seen that it is not only the fertile lands of Western Canada that invite the settler, but the ease and cheapness with which a farmer may establish himself.—Advertisement.

The Better Way.

"I'll sue him for alienating your affections." "Why don't you just get out an injunction against him."

Soft, Clear Skins.

Night and morning bathe the face with Cuticura Soap and hot water. If there are pimples first smear them with Cuticura Ointment. For free samples address, "Cuticura, Dept. X, Boston." Sold by druggists and by mail. Soap 25, Ointment 25 and 50.—Adv.

A Different Matter.

Oke—"You're paying too much rent, old man." Owens—"You mean the rent is too high."—Boston Transcript.

Dr. Pierce's Pellets are best for liver, bowels and stomach. One little Pellet for a laxative, three for a cathartic. Ad.

The Substitute.

"Is Mrs. Gaddy good at knitting sweaters?" "No, but she's capital at unraveling yarns."

Warroad.—The Great Northern coal shed and roundhouse here were burned. The locomotives were saved.

St. Cloud.—Oliver Chairhart was yesterday elected mayor of Sauk Rapids with only a margin of two votes over his closest opponent.

Minneapolis.—B. W. Cowperwaite of St. Paul was elected president of the Minnesota Electrical association at the closing session of the annual convention in the Radisson hotel.

Sauk Rapids.—The confectionery store of George Dame here was entered at night. The thieves took several books of street car tickets, oranges and other small articles.

St. Cloud.—The general committee having in charge the arrangements for the convention of the state Eagles, which meets in this city in June, has perfected an organization.

Staples.—M. C. Tifft of Minneapolis and supervisors of the Northern Pacific road, addressed an audience of 850 persons here in the interests of the war savings stamp movement.

Little Falls.—Robert Moore of St. Paul, who was taken into custody by the police here, was sent back to his parents. The boy is 13 years of age and ran away from his home, coming directly to this city. His parents moved to St. Paul from this city about a year ago.

Bemidji.—Roland Henrionnet, who was recently convicted of murder in the second degree for shooting Oscar Nelson, teller at the Northern National bank, and who was sentenced to life imprisonment by Judge C. W. Stanton, has been taken to the penitentiary at Stillwater.

St. Paul.—The Minnesota Home Guard is to be placed on a permanent basis as a part of the state's military forces, the organization being completed by a board of Home Guard officers from the various units, it is announced by Major W. A. Curtis, of staff to Adjutant General W. F. Rhinow.

Crookston.—Chief of Police Sanders announces that beginning at once there will be a war on dogs in this town. Any dog not having a license attached to his clolar will be picked up by the local police and held for a week for the owner. At the end of that time the dog will either be offered for sale or killed.

International Falls.—In order to give the Red Cross workers throughout Koochiching county a better knowledge of the work, the directors of the Koochiching county chapter have arranged a one-day convention to be held here on Saturday, March 23. Regular delegates will be present from the twelve branches.

Minneapolis.—The "help yourself" sugarbowl must go, State Food Administrator A. D. Wilson said, and he urged Minnesota people to confine their sugar consumption to maximum of six teaspoonfuls a day. Not only is there a temporary sugar shortage due to lack of shipping facilities, Mr. Wilson said, but economy is necessary to supply American soldiers abroad and help out the French and English supplies.

St. Paul.—Many competitive bids for contracts on the new state normal school building at Bemidji were opened by the state board of control. The building is estimated to cost $100,000 and the low bids totaled $95,645, exclusive of architects' and engineers' fees and equipment. A bid of $[illegible]900 by S. M. Klarquist & Son, Minneapolis, was the lowest of ten offered on the general contract.

The government is sending George W. Winterburn, Lieut.-Col. of the quartermaster's corps to Minnesota to purchase horses for the army. He said that he has to get 12 carloads of animals from Minnesota, one carload from each inspection point on the first round, the inspection point to be announced later. Col. Winterburn said that the government would pay $200 for each animal accepted as follows: Geldings, though 15 per cent will be accepted in mares, between ages of 5 and 10 years; sorrels, bays, blacks, and bays with white markings; weight between 1,400 and 1,700 pounds; height between 16 and 17 hands; sound, gentle and broke to harness; without material blemish or defect, and passed the mallein test for glanders.

St. Paul.—Plans for one-unit telephone service throughout Minnesota were finally and definitely agreed on at a conference in the state capital between the State Railroad and Warehouse commission and representatives of large telephone companies. The Northwestern Telephone Exchange company will operate in Minneapolis and the northern part of the state, and the Tri-State Telephone & Telegraph company in St. Paul and the southern section. The dividing line will be the northern boundary of Washington, Ramsey, Scott, McLeod, Renville and Yellow Medicine counties.

Thief River Falls.—The Fair Price Food committee of this city, has decided to make formal complaint to Herbert Hoover, national food administrator, relative to the continued advance in prices of flour substitutes, requesting that the government take steps to regulate the prices of other grains as well as wheat.

St. Peter.—The movement for a $50,000 gymnasium at Gustavus-Adolphus college was resurrected by President Johnson pledging $500. "It is the one thing most needed at the college, and we can't wait until the war is over," said President Johnson.

CLIFFORD L. HILTON.

Clifford L. Hilton, recently appointed attorney general of Minnesota to fill the vacancy caused by the death of Lyndon Smith.

Brainerd.—Outing, a Crow Wing town, reports no alien residents. Only two citizens prevent it from being classed as all-American.

Fairmont.—Judge Tifft overruled a motion to quash both indictments against Townley and Gilbert, Nonpartisan league leaders, charged with issuing seditious literature.

Camp Dodge.—Private Carl Larson, Company D, 349th infantry, Ortonville, Minn., died at the base hospital here. He was a member of the last draft contingent to arrive.

Washington.—A. A. Andrews of Bemidji has been admitted to practice before the supreme court of the United States upon the motion of Congressman Halvor Steenerson.

Bagley.—O. B. Anderson, superintendent of the high school, who a short time ago was re-elected for the coming school year, recently handed in his resignation and Principal Cogswell elected his successor.

Detroit.—Held to the Federal court on a charge of introducing liquor on Indian treaty land Harry Becker, examined before United States Commissioner Winje, is at liberty under $1,000 bonds to appear for trial. David Bellan, who was held on a suitcase charge, was unable to furnish bonds.

Moorhead.—That the insurance men of Minnesota are expected to raise $3,000,000 in Thrift stamps is indicated by a letter received by Edwin Adams, as secretary of the Moorhead Fire Underwriters' society, from the secretary of the Minnesota and North Dakota Fire Underwriters' association.

Moorhead.—The urgent need of substituting wood for coal was pointed out in a letter received by Edwin Adams, Clay county fuel administrator, from the state administrator, Judge J. F. McGee. Judge McGee points out the fact that within a short time farmers will be occupied with putting in crops and that now is the time to get wood cut to take the place of coal.

St. Paul.—Financial difficulties at the Minnesota Soldiers' home, which recently threatened to send many of the veterans on forced furloughs, were straightened out at a joint meeting of the state calamity board and trustees of the home. Funds were made available to tide the home over until a special appropriation can be obtained in the next legislature. It is estimated that $35,000 will be required.

Pipestone.—An investigation is being conducted as to the cause of a fire at Ihlen, this county, which totally destroyed one of the elevators of the town, together with about 10,000 bushels of corn, oats and wheat. At the time of the fire the village pump was found to be out of commission and the rope on the fire bell was broken. So far no clue has been discovered tending to show that the elevator was fired.

St. Paul.—Six state officials went to Helena, Mont., to represent Minnesota at a conference to plan a campaign for revision of federal grain grades to overcome objections of Northwestern farmers to the present schedule. The Minnesota delegates were Attorney General Clifford L. Hilton and J. E. Palmer of his staff; Col. C. H. March, Litchfield, of the Public Safety commission, and Commissioner O. P. B. Jacobson, inspector of the State Railroad and Warehouse commission.

Winona.—Wet and dry elections in southern Minnesota failed to change the situation in any of the contest cities and towns. Altho the wets gained slightly in certan districts, the drys evened up matters in others. Owatonna went wet by a majority of 102 votes; Eyota dry by 19 votes; Elgin dry by 330 votes; Stewartville dr yby 74 votes; Pine Island dry by 51 votes; Hammond wet by 18 votes, Goodhue wet by 24 votes; Blooming Prairie wet by 42 votes; Minneiska wet by 28 votes, and Kellogg wet by 16 votes.

Fergus Falls.—Henry Stock was arrested here charged with having declared that "he wishd that the Germans had gotten the whole bunch of American soldiers aboard the Tuscania." He was found guilty and given three months in the county jail. His daughter, Miss Hattie Stock, has also been arrested on the charge of making disloyal remarks.

S. Paul.—Montreville J. Brown, a Bemidji attorney, has been appointed on the state legal staff by Attorney General Clifford L. Hilton. Assistant Attorney Brown will enter upon his duties at once.

AUTO RADIATOR AS SHOP HEATER

Blacksmith Provided Himself With Very Economical Hot-Water Supply.

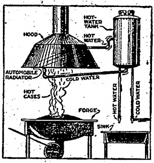
HIS ARRANGEMENT IS SHOWN

Circulating Water Is Heated by Hot Gases and Air Above Forge and Piped to Conveniently Located Storage Tank.

By reversing the work done by an automobile radiator, which was no longer fit for service as such, a blacksmith provided himself with a hot-water supply, which he appreciated especially in washing up after a hard day's work, writes E. F. Hallock of Brooklyn, N. Y., in Popular Mechanics. In the arrangement which he devised, as shown in the illustration, the water circulating within the radiator is heated by the hot gases and air above the forge.

Piped to Storage Tank.

The hot water is piped to a conveniently located storage tank. The method of arranging the pipe to provide for a cold-water supply and a hot-water delivery system is shown, the arrows indicating the direction of flow. The radiator is supported at an angle in the hood of the forge. The vent in the radiator is soldered, and the filler opening provided with a wiped joint, to which the half-inch iron pipe, used to make the connection to the half-way point on the side of the six-gallon tank, is attached.



Old Auto Radiator Utilized to Provide Water Heater for Workshop.

Heat Is Conserved.

The heated water is taken from the top of the tank, and the cold water enters by means of a pipe extending through the top and down inside the tank to the bottom. Heat otherwise lost is thus conserved.

MAY CAUSE SERIOUS MISHAP

Chance of Having Brakes Fail Through Slack Adjustment Is Worthy of Consideration.

Loose check nuts on the rods in the braking system may become the cause of a serious mishap if they are not remedied in time.

When the check is removed from the turnbuckle or other adjustment the tendency of the vibration is to loosen the adjustment of the bands. As this may occur when the car is running, the chance of having the brakes fail through slack adjustment is worth taking into consideration.

LOOKS IN WRONG DIRECTION

Bad Practice of Many Operators of Cars to Keep Eyes on Accelerator Pedals, Etc.

Keep your eyes on the road. Many operators are continually looking down at their feet, at the accelerator pedals, etc., while operating. This takes their attention away from the road, which is dangerous. With a little practice you can soon locate all the necessary pedals, etc., without looking for them. This is the only safe way to drive.

AUTO IS ESSENTIAL TO AMERICAN PEOPLE

Necessary to Maintain Standard of Human Efficiency.

It Would Be Just About as Easy to Get Along Without Telephone, Telegraph, Typewriter, Street Car or Elevator.

Could the American people get along without the automobile?

Undoubtedly they could, but no easier than they could get along without typewriter, telegraph, telephone, street car and elevator. It is necessary in order to maintain present standards of human efficiency. It is one of the things that has made us great in achievement, because it has kept us in close touch with others. It has reduced miles to yards, hours to minutes.

Fulfill Obligations.

There is, therefore, a feeling in official, as well as in civic circles, that after the automobile plants have fulfilled their obligations and handed over to the government whatever facilities are necessary for the manufacture of munitions, they can best fulfill their duty to help win the war by building plenty of cars.

Thus this year will see many of our factories busy all night and day supplying the boys "over there" with their requirements, and the folks left behind with theirs. In both these duties—to the soldier and to the civilian—the automobile industry will be helping materially to rout the enemy.

Just as physical fitness in the soldier is the prime essential on the battlefield, so it is equally important that there be at hand every aid to prompt and energetic action on the part of those at home.

Beneficial Results.

There is scarcely a phase or feature of business life which the automobile has not entered with beneficial results. It carries thousands where railroads and street cars cannot penetrate. It is ready at call.

These facts are more generally realized than ever since we entered the war. People have ceased to think of the automobile in terms of pleasure only. They know, by proof of eye and personal experience, that it is a great and indispensable utility.

DRIVING MOTOR WITH BRAINS

Amateur Must Learn That Brakes Are Least Effective When They Are Most Needed.

One of the first things for the amateur driver to learn is that, unfortunate as it may be, the brakes are less effective when they are most needed, writes H. W. Slausen in Leslie's. When descending steep hills the weight of the car is, to a large degree, taken off of the tires, for the force of gravity is straight downward. This means that the wheel on even a heavy car will slip more easily, when coasting down a steep grade, and skidding, is, therefore, far more liable to take place. With the engine positively connected, however, and turning the wheels over at a slow rate of speed slipping, and, therefore, skidding, cannot take place. The other condition in which braking effect is reduced to a minimum is on slippery streets. The brakes may be so set that they are able to lock the wheels and cause them to slide even on the driest pavement, but the braking effect of sliding wheels is not nearly so great as that obtained before sliding is allowed to take place. With slippery pavement it must be remembered that the brakes can only be used effectively to the point when sliding is just about to occur.

Securing Vibrator Box.

If the screws that hold the small brass brackets to the vibrator box become worn so that they do not hold, don't use longer screws. They may injure the windings of the coil and ruin the vibrator. Put a metal band clear around the box and attach it to the dash with small bolts.

CATERPILLAR FIGHTS SNOW IN GOTHAM

New York has its caterpillar tractor; it is shown on Fifth avenue fighting the snow. It proves a useful snowplow and does good work in clearing off the city streets. The Fifth avenue busses depend on this tractor to make a path for their passage through the snow; this does the trick and the big cars continue to run on schedule ti

A NERVOUS BREAKDOWN

Miss Kelly Tells How Lydia E. Pinkham's Vegetable Compound Restored Her Health.

Newark, N. J.—"For about three years I suffered from nervous breakdown and got so weak I could hardly stand, and had headaches every day. I tried everything I could think of and was under a physician's care for two years. A girl friend had used Lydia E. Pinkham's Vegetable Compound and she told me about it. From the first day I took it I began to feel better and now I am well and able to do most any kind of work. I have been recommending the Compound ever since and give you my permission to publish this letter."—Miss FLO KELLY, 476 So. 14th St., Newark, N. J.

The reason this famous root and herb remedy, Lydia E. Pinkham's Vegetable Compound, was so successful in Miss Kelly's case was because it went to the root of her trouble, restored her to a normal healthy condition and as a result her nervousness disappeared.

That Old Guy.

Mrs. Carico, a middle-aged and talkative ruralist, was appearing in a suit brought by her husband. She insisted on loudly commenting on each answer given by the first witness. Repeatedly the judge requested her to keep quiet, but she persisted in audibly disputing the words of the witness. Finally the judge said:

"Mrs. Carico, the court demands that you remain quiet. Unless you do so you will be held in contempt."

Giving the judge a savage look, the woman turned to her attorney and inquired:

"Who is that old guy that's buttin' in all the time?"—Harper's Magazine.

A Teller of Tales.

There had never been the best of feeling between them, and when they collided somwhat forcibly, as they rounded a corner, headed in opposite directions, in a snowstorm, Smith took the opportunity to vent his spleen.

"Look here, you loafer! You cowardly slacker! Why don't you look where you are going?"

Brown gulped, reddened perceptibly and demanded:

"Who showed you my questionnaire?"—Pittsburgh Sun.

The tusks of the cow elephant have been found best adapted to the making of billiard balls.

Of 80,000 graduate nurses in this country 2,000 already are in active war service.

A Conserving Food

The recognized value of

Grape-Nuts

as a "saving" food for these serious times, rests upon real merit.

Unlike the ordinary cereal Grape-Nuts requires no sugar, little milk or cream, and requires no cooking or other preparation in serving.

A trial is well worth while for those who sincerely desire to save.

"There's a Reason"

For Coughs and Colds

Use NOTHING but a DEPENDABLE, PROMPT and effective medicine—one guaranteed to soothe and RELIEVE PROMPTLY, or money refunded.

SCHIFFMANN'S

EXPECTORANT

(Makes 64 Teaspoonsful)

Is guaranteed one of the most effective, soothing and best remedies for promptly relieving Hacking, Dry, Painful Coughs, Chest Colds, Whooping Cough, Spasmodic Croup, or loosening Phlegm. It heals the irritated throat membranes almost instantly, and the lasting relief it affords will be surprising and gratifying. Contains no opiates. Sign and give

THIS FREE 15 CENT COUPON

to ANY DRUGGIST who will accept it for 15 cents in purchasing a regular 50 cent size bottle, and if it is NOT EXACTLY as REPRESENTED, go back and get your MONEY REFUNDED.

W. N. U., Minneapolis, No. 12--1918.

LEMON JUICE IS SKIN WHITENER

CHEAP HOME-MADE BEAUTY LOTION TO REMOVE TAN, FRECKLES, SALLOWNESS.

At the cost of a small jar of ordinary cold cream one can prepare a full quarter pint of the most wonderful lemon skin whitener and complexion beautifier, by squeezing the juice of two fresh lemons into a bottle containing three ounces of orchard white. Care should be taken to strain the juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach a darkened skin and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands. It is marvelous to whiten rough, red hands.—Adv.

DADDY'S EVENING FAIRY TALE

BY MARY GRAHAM BONNER

THE OTTER FAMILY.

"Our fur is very beautiful, I consider," said Mr. Otter.

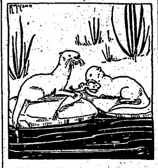
"So do I," said Mrs. Otter, "but I don't like to have folks think too well of it. I'm not in the least bit anxious to be made into a coat, a scarf, a muff or a hat. In fact, I don't want to be used for trimming, either."

"In fact," repeated Mr. Otter, "you don't want to be used at all."

"Not by other creatures," said Mrs. Otter. "I can appreciate myself very well indeed."

"But I can too," said Mr. Otter. "That was why I was admiring my own fur."

"Admire it yourself, but don't let other creatures—those creatures they call people—don't let them admire it," said Mrs. Otter.



They Had Their Luncheon of Fish.

"I'll try my best not to," he said.

"I'm having fish for luncheon," said Mrs. Otter.

"Good," answered Mr. Otter. "There is nothing that pleases me more."

"I found it in yonder river," said Mrs. Otter.

"Speaking of rivers," said Mr. Otter, "did you know that we were known very often as the river otters?"

"It seems as if I had heard that," said Mrs. Otter. But just then they thought danger was near.

"Dive! Dive!" said Mrs. Otter. They had both been sitting on the bank of the river.

"At once! At once!" said Mrs. Otter.

"Stay underneath, stay underneath!" said Mr. Otter. They both stayed underneath the water for some time, until they felt danger was past, and then they came up again. But they came up in another place, for they were taking no chances. They were careful otters.

They had their luncheon of fish, and after they had finished they had a nap. Then they went into the water and swam. They used their feet for oars to paddle themselves along. Their feet are very strong.

Their tails made fine rudders, steering them where they wanted to go to. The otter has a big head, short ears and almost no nose at all—it is so small.

His toes are webbed, his nails long and crooked and his tail flat. But his fur is very beautiful and also valuable.

"It doesn't matter," said Mr. Otter when they were through with their swim, "if we happen to have webbed feet. Now for the peacocks, ducks and many of those creatures it's most trying."

"Why?" asked Mrs. Otter.

"They have to wobble along as best they can, and they haven't all the other fine points we have. For instance, they haven't our fur. And speaking of our fur, I know of an honorable story to tell you."

"What is an honorable story?" asked Mrs. Otter.

"One full of honor—honor for us," said Mr. Otter. "At least that is what it means when I say it means that."

"Of course," agreed Mrs. Otter, for she was wise and didn't try to argue with Mr. Otter.

"Once," said Mr. Otter, "some very brave soldiers decided that they would choose our fur for their winter costumes.

"They had hats of otter fur—or maybe they called them helmets. At any rate they wore them on their heads."

"Hats will do then," said Mrs. Otter.

"They also wore fur collars and fur gloves made of us."

"They must have been cold," said Mrs. Otter.

"They lived where it was pretty cold in the winter," said Mr. Otter. "They thought our fur was beautiful and they chose it for their own. How fine they did look, with their bright uniforms and our soft, wondrous fur for beautiful touches."

"They had to touch us to get it," said Mrs. Otter sadly.

"Yes, some of our cousins had to give it," Mr. Otter admitted. "But I heard they were honored and glad," he continued, "that they were going to be used by fine, brave men, and since that time," he went on, "these men have proved that they were among the very bravest of the brave. And they wore our fur once."

"An honorable story," agreed Mrs. Otter proudly.

A Bad One.

Basil, aged four, was spending a few days in the country, and hearing, for the first time, a mule braying, he said:

"Uncle, you ought to give that horse some medicine. He's got the whoopin' cough awful bad!"

Win the War by Preparing the Land

Sowing the Seed and Producing Bigger Crops

Work in Joint Effort the Soil of the United States and Canada

CO-OPERATIVE FARMING IN MAN POWER NECESSARY TO WIN THE BATTLE FOR LIBERTY

The Food Controllers of the United States and Canada are asking for ater food production. Scarcely 100,000,000 bushels of wheat are avail- to be sent to the allies overseas before the crop harvest. Upon the rts of the United States and Canada rests the burden of supply.

ry Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist

Western Canada has an enormous acreage to be seeded, but man power ort, and an appeal to the United States allies is for more men for seed operation.

ada's Wheat Production Last Year was 225,000,000 Bushels; the Demand From Canada Alone for 1918 is 400,000,000 Bushels

To secure this she must have assistance. She has the land but needs men. The Government of the United States wants every man who can fectively help, to do farm work this year. It wants the land in the United tates developed first of course; but it also wants to help Canada. Whenver we find a man we can spare to Canada's fields after ours are supplied, ve want to direct him there.

Apply to our Employment Service, and we will tell you where you can est serve the combined interests.

Western Canada's help will be required not later than April 5th. Wages o competent help, $50.00 a month and up, board and lodging.

Those who respond to this appeal will get a warm welcome, good wages, ood board and find comfortable homes. They will get a rate of one cent mile from Canadian boundary points to destination and return.

For particulars as to routes and places where employment may be had ply to: U. S. EMPLOYMENT SERVICE, DEPARTMENT OF LABOR

Swift & Company Publicity

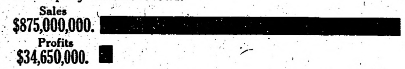
At a recent hearing of the Federal Trade Commission there was introduced correspondence taken from the private files of Swift & Company, which showed that the Company had been considering for some time an educational advertising campaign.

The need for this publicity has been apparent to us for several years. The gross misrepresentation to which we have recently been subjected has convinced us that we should no longer delay in putting before the public the basic facts of our business, relying on the fair-mindedness of the American people.

The feeling against the American packer is based largely on the belief that the income and well-being of the producer and consumer are adversely affected by the packers' operations, resulting in unreasonably large profits.

Swift & Company's net profit is reasonable, and represents an insignificant factor in the cost of living.

For the fiscal year 1917 the total sales and net profit of Swift & Company were as follows:



This is equivalent to a $3,465. profit on a business of $87,500.

If Swift & Company had made no profit at all, the cattle raiser would have received only one-eighth of a cent per pound more for his cattle, or the consumer would have saved only one-quarter of a cent per pound on dressed beef.

Swift & Company, U. S. A.

Advice.

"My son, it is easy enough to be a promising young man."

"Yes, father."

"But the trick in life is not to promise, but to perform."

KIDNEY TROUBLE OFTEN CAUSES SERIOUS BACKACHE

When your back aches, and your bladder and kidneys seem to be disordered, go to your nearest drug store and get a bottle of Dr. Kilmer's Swamp-Root. It is a physician's prescription for ailments of the kidneys and bladder.

It has stood the test of years and has a reputation for quickly and effectively giving results in thousands of cases.

This preparation so very effective, has been placed on sale everywhere. Get a bottle, medium or large size, at your nearest druggist.

However, if you wish first to test this preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Adv.

How to Make Oatmeal Bread

Healthful to Eat—Saves the Wheat

- 1 cup flour
- 1½ cups corn meal
- 1 teaspoon salt
- 5 teaspoons Royal Baking Powder
- 2 tablespoons sugar
- 1 cup cooked oatmeal or rolled oats
- 2 tablespoons shortening
- 1⅓ cups milk
- No eggs

Sift together flour, corn meal, salt, baking powder and sugar. Add oatmeal, melted shortening and milk. Bake in greased shallow pan in moderate oven 40 to 45 minutes.

This wholesome bread is easily and quickly made with the aid of

ROYAL BAKING POWDER

If used three times a week in place of white bread by the 22 million families in the United States, it would save more than 900,000 barrels of flour *a month.*

Our new Red, White and Blue booklet, "Best War Time Recipes", containing many other recipes for making delicious and wholesome wheat saving foods, mailed free—address

ROYAL BAKING POWDER CO., Dept. W, 135 William St., New York

FOOD WILL WIN THE WAR

War Savings Stamps

THE difference between a five dollar bill and a War Savings Stamp is that while they are both promises to pay, backed by all of the resources of the richest government in the world, a five dollar bill never gets any bigger than $5.00 and War Savings Stamps are worth a penny more each month for 5 years. War Savings Stamps are United States $5.00 bills which the Government is offering in February for $4.13 and in March for $4.14 and so on adding a penny each month until January 1st, 1923, when they will reach $5.00.

Thrift Stamps

Thrift Stamps cost 25 cents each. The Government furnishes Thrift Cards with spaces on them for 16 Thrift Stamps. Thrift Stamps bear no interest but are as good as cash. When the 16 spaces are filled, making $4.00 worth of Thrift Stamps, the owner takes the card to any bank or post office, pays the additional 13 cents or whatever it may be that month, and receives a War Savings Certificate and one War Savings Stamp.

There is room for twenty $5.00 War Savings Stamps on each War Savings Certificate card. You can buy $100 worth for $82.40 in January, $82.60 in February, and 20 cents more each month you wait.

War-Savers are Life Savers.

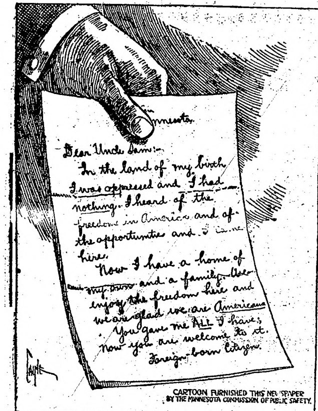
H. Christianson & Son,

Goodridge, [illegible]



Minnesota

Dear Uncle Sam:—
In the land of my birth
I was oppressed and I had
nothing. I heard of the
freedom in America and of
the opportunities and I came
here.
Now I have a home of
my own and a family. We
enjoy the freedom here and
we are glad we are Americans.
You gave me ALL I have;
now you are welcome to it.
Foreign-born Citizen.

CARTOON FURNISHED THIS NEWSPAPER BY THE MINNESOTA COMMISSION OF PUBLIC SAFETY.

GENUINE LOYALTY

Facial Failure.

He—"Your friend isn't much stuck on her looks." She—"Say, she wouldn't dare shoot her own husband."—Judge.

Scientific Foresight.

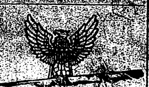
"How did the boy get his motorcycle?" "He seized the cycle-logical moment to ask for it."

Sugar the Most Common Sweet.

The world has a sweet tooth. It would be difficult to find individuals and probably impossible to find a people who do not like sweets. And of all sweets the most common is sugar, practically all of which is produced from the sugar cane and the beetroot, the beet being the source of somewhat more than half the supply. Sugar not only pleases the palate, but it helps to sustain the body, for though it is not sufficient itself, it forms a very useful component of foods, being easily soluble and assimilable.

GUS HALVORSON [illegible]

Entered at the postoffice at Goodridge, Minn., as a second class mail matter.



This paper has enlisted with the government in the cause of America for the period of the war.

Four points to be remembered with respect to the Third Liberty Loan are: First, No one is hired to get the bonds sold. The only ones getting any renumeration in connection with it are a few employees who take care of the office details. All the members of district, state, county, township and village organizations not only serve without pay, but they pay their own expenses. Second, Individual or banks that handle the bonds do not make any profit on them.

Third, All the money that is used for supplies and clerical help goes to the goverment treasury to be used for war purposes.

Fourth, America will now "go over the top", with the largest free will offering ever made by any nation at any time, to assist realizing the highest ideal ever striven for among mankind.

War Savings Stamps

THE first principle of money making is money saving. Get the habit of buying War Savings Stamps regularly. This is the stamp which is going to help Uncle Sam stamp out Autocracy and help you, by saving, to start on the road to Success.

JAY PAYNE

A Leaking Faucet.

When the faucets in the bathroom or kitchen leak or do not allow the water to flow freely they need a new washer, and the washers cost five cents each. To put on the washer, turn off the water, the rod is usually under the sink or in the basement, and unscrew the faucet; take off the worn-out washer and slip on a new one and turn your water on again and presto! the work is done and no repair bill to pay.

Make Windows by Hand.

In making stained-glass windows every bit of the work is done by hand, and it is amazing to realize how many times each piece of glass must be handled. An operator tells of counting up one day and finding that no less than twelve times were necessary. All the leadwork is done by hand too, even the opening of the little slots into which the glass is fastened.

Record Floods in China.

The Celestial kingdom has been the scene of some of the most terrible floods on record, observes London Tit-Bits. In 1801 the Yellow river overflowed and destroyed nearly 2,000 villages and towns and 5,000,000 people. Two years later there were great inundations in Mongolia, caused by typhoons, resulting in a death roll of 6,000.

Do Your Work Properly.

Make up your mind that you will do what you have to do the very best you know how. There is very little work that is really difficult. Half of good work is painstaking. If you put your whole soul into your work, you will learn to enjoy it, and you will become constantly better and more worth while.

INDIVIDUAL INCOME TAX IN BRIEF

The Requirements Boiled Down for Busy Folks.

Returns must be filed on or before April 1, 1918.

Tax due may be paid now or on or before June 15, 1918.

If you were single and your net income for 1917 was $1,000 or more you must file a return.

If you were married and living with wife (or husband) and had a net income of $2,000 or more for 1917 you must file a return.

Husband's and wife's income must be considered jointly, plus income of minor children.

Income of a minor or incompetent, derived from a separate estate, must be reported by his legal representative.

Severe penalties are provided for those who neglect or evade the law.

For false or fraudulent return there is a penalty not exceeding $2,000 fine or year's imprisonment, or both, plus 100 per cent of tax.

For failure to make return on or before April 1, 1918, fine is from $20 to $1,000, plus 50 per cent. of tax due.

Returns must be filed with the Collector of Internal Revenue of district in which you live.

An agent may file return for a person who is ill, absent from the country or otherwise incapacitated.

Each return must be signed and sworn or affirmed by person executing it.

Single persons are allowed $1,000 exemption in computing normal tax.

A married person living with wife (or husband) is allowed $2,000 exemption, plus $200 for each dependent child under 18.

A head of family, though single, is allowed $2,000 exemption if actually supporting one or more relatives.

Returns must show the entire amount of earnings, gains and profits received during the year.

Officials and employees are not taxable on the salaries or wages received from a state, county, city or town in the United States.

Interest on state and municipal bonds issued within the U. S. is exempt from federal income tax and should be omitted.

Interest on United States government bonds is also exempt, except on individual holdings of Liberty Fours in excess of $5,000 par value.

Dividends are not subject to normal tax, but must be reported and included in net income.

Gifts and legacies are not income and should not be included on the return of the beneficiary.

Life insurance received as a beneficiary or as premiums paid back at maturity or surrender of policy is not income.

Payments received for real or personal property sold is not income; but the profit realized thereon is income for the year of sale.

Amounts received in payment of notes or mortgages is not income, but the interest on such notes or mortgages is taxable income.

From the entire gross income certain allowances are made in arriving at the net income.

Necessary expenses actually paid in the conduct of business, trade or profession may be claimed.

A farmer can claim payments for labor, seed, fertilizer, stock feed, repairs on buildings, except his dwelling; repairs of fences and farm machinery, materials and small tools for immediate use.

The amount of rent paid for a farm may also be claimed as a tenant farmer's expense.

Payments for live stock are allowable if bought for resale. But if bought for breeding purposes cattle are an investment, not an expense, and cannot be allowed.

A storekeeper can claim amounts paid for advertising, clerk hire, telephone, water, light and fuel, also drayage and freight bills and cost of operating and repairing wagons and trucks.

A physician can claim cost of his professional supplies, rent, office help, telephone, expense of team or automobile used in making professional calls and expenses attending medical conventions.

A dentist can claim similar items, except team or auto expense, which are not necessary in his profession.

Expenses that are personal or connected in any way with the support or well being of a person or family are not allowable.

The costs of machines, instruments, vehicles or implements that are more or less permanent in character are not allowable as an expense. They are investments.

Interest paid on a mortgage or other personal indebtedness is allowable on a personal return.

All taxes paid within the year can be taken out on a federal return, except federal income taxes, inheritance taxes and assessments for local improvements.

Losses sustained in business or through fire, storm or shipwreck or by theft, except when compensated by insurance or otherwise.

Wear and tear of rented buildings or machinery used in business may be claimed.

You can also claim the amount paid to the Red Cross and to other charitable, religious or educational organization to the extent of 15 per cent of your net income.

War Savings Stamps

It isn't so much the amount of money you save as it is getting into the habit of saving a definite amount regularly. The best way to learn to save is not only to promise yourself that you will do it regularly but promise some one else, your wife, your parent, your husband, or your teacher, that you will not let a first of the month or first of the week go by without saving.

The Habit of Thrift Will Help Win The War

The United States Government needs money to equip our armies and to fight for democracy. Your Government—the richest in the world—is willing to pay interest for your money now. Uncle Sam offers you $5.00 War Savings Stamps for $4.13 in February, and one cent additional each month thereafter.

A Thrift Card is furnished to all purchasers of 25 cents Thrift Stamps. When all the spaces have been filled, the Thrift Card may be exchanged for $5.00 War Savings Stamps at any post office or bank. You should start saving a certain amount regularly. Outline your program. Start at once by going to your post office and getting your first War Savings Stamp or Thrift Card. And stick to it. As you treasure your right to live in this nation of freedom, do not miss a single day on which you have determined to save.

C. G. MUGG, Optomoric Specialist

of Grand Forks, N. D., uses the daylight or natural method in fitting glasses, no drugs, dark rooms or machines—natural conditions only, in broad daylight. YOU see the benefit of the glass before ordering. YOU take no chance, your own vision tells YOU. By this method no operator can look wise and say $15.00 and get it before YOU see the benefit of the glasses YOU are supposed to wear. No one can judge just as well as yourself just how YOU see out of your own eyes. Drugs, dark rooms etc., create unnatural visual conditions that may effect the results and cause an imperfect glass. C. G. Mugg is licensed in N. D. and Minn. and has traveled in the Northwest for 22 years. A lot of cash is not always necessary. Prices are reasonable. Consultation is free but examination is not always so.

Ante-War prices have not been changed by C. G. Mugg, but after January 1st, $1.00 will be added for examination. Consultation is Free.

Call and see the daylight specialist, he will be at

March 22nd

Buds and Flowers in Cooking.

The French Canadians are said to use the acid flowers of the redbud, or Judas tree, in salads, while the buds and tender pods are packed in vinegar. Honey locust pods, often locally called "honey-shucks," contain a sweetish, thick, cheeselike pulp, which is often eaten. Those of the mesquite furnish the Mexicans and Indians with a nutritious food. The Creoles of Louisiana, famous for their cookery, are reported to use the young buds of the sassafras as a substitute for okra in thickening soups.

Nova Scotia's Fish Army.

Nova Scotia is literally "the land of fish"—cod, herring, mackerel and the giant albacore or tuna. Nova Scotia is so much a land of fish, says a writer, that it produces over one-fourth the value of the entire Canadian catch, or $9,166,851 worth. Every tiny haven around the extensive Bluenose Land coast harbors fishing smacks galore, while Lunenburg, Canso, Liverpool and Chester are home ports for hundreds of fleet-winged deep-sea banking schooners.

Floods in Brazil.

The native inhabitants of Brazil have lately been suffering from the disastrous effects of the flooding of the Amazon, whose relentless waters have submerged the countryside for hundreds of miles around. At regular intervals this mighty river overflows its banks, and a famous traveler estimated that no fewer than 3,000,000 natives have lost their lives during the last five centuries through these terrible floods.

He Didn't Know.

In a murder trial six experts were examined. Most of them had a national reputation. A hypothetical question of 20,000 words, which it required two hours to read, was asked of Doctor Jelly, a Boston expert on insanity. The learned doctor answered the question in three words: "I don't know." A frank answer, but rather perplexing to counsel.—Case and Comment.

MORE WHEAT IS GOOD BUSINESS

State Food Administration Issues Call for Larger Acreage Both for Profit and Patriotism.

SAYS WHEAT PRICE SURE

Besides, a Big Crop Means Backing the Boys Who Have Been Sent to the Front to Fight.

The Federal Food Administration for Minnesota is issuing a call for a larger acreage of spring wheat. It makes the following statement of world needs the basis for the call:

The United States, Canada, and the Allies (England, France, Italy and Belgium) in 1917 produced 400,000,000 bushels less wheat than they needed. Shipping is so limited and so badly needed for other products that wheat cannot be brought from more distant points where there is a surplus such as Argentina, Australia and India. This has made very rigid economy in the use of wheat necessary. It is not likely the Allies can produce more in 1918 than in 1917 because their production has continually decreased since the war began so that in 1917 they produced 150,000,000 bushels less than their average production for five years before the war. If they produce as much in 1918 as in 1917 they will need to import between 550,000,000 and 600,000,000 bushels to supply normal demands. The United States is about 3,500 miles from England and France; Argentina is about 6,500 miles distant; India is about 12,000 miles away; and Australia 12,500 miles. It is evident then that if there is any scarcity of ships, the more wheat surplus we have in the United States the better it will be for all concerned.

The Outlook in the United States.

In 1917 the United States produced about 650,000,000 bushels with a surplus of about 50,000,000 bushels above own needs. In 1917 the winter wheat belt produced 418,000,000 bushels and the spring wheat belt produced 232,000,000 bushels. The outlook for winter wheat last December 1 indicated a probable yield of 540,000,000 bushels. It may be more, or less. At any rate much more spring wheat will be needed than can be produced so that every acre of land in the spring wheat belt that is suitable for spring wheat and that can be handled reasonably well should be seeded to that crop. It, of course, is not wise from the standpoint of the individual farmer to sow wheat on land that will produce a materially better crop of something else or sow wheat on a farm not equipped to handle the crop economically.

Prices and Profits.

The $2.17 per bushel guaranteed price for 1918, is high enough to make the growing of wheat decidedly profitable with a fair crop. It would seem, in view of this fact that the outlook for raising wheat on good wheat land is as promising as the outlook for any other crop and besides this, the patriotic appeal to furnish bread for the millions who need it, is very strong. It is doubtful if the farmers of the Northwest can make a greater contribution to their country, or to humanity generally, than to grow wheat.

Wheat Looks Most Surely Profitable.

It is the opinion of Andrew Boss, Vice Director of the Minnesota Experiment Station, that wheat looks like the most surely profitable grain crop this year. He states: "The high price of oats and barley at the present time, however, is likely to bring an increased acreage of these crops at the expense of the wheat crop. Farmers will do well to consider the possibilities of profit from these crops before changing the acreage materially. The average yield of wheat in Minnesota for the last 10 year period was 13.5 bushels an acre, at $2.00 a bushel, which is about the price that the average Minnesota farmer can expect to net for this year's crop, this would bring a return of $27.00 an acre. The average yield of oats for the same period was 30.8 bushels. To bring $27.00 an acre, oats would need to sell at 87.9 cents a bushel this year. The average yield of barley for the same 10 year period was 23.6 bushels. To bring $27.00 an acre, barley would need to sell at $1.14 a bushel. While oats are bringing something over 80 cents now, and barley is much higher than $1.14, it is not probable that present prices will be maintained if a normal crop of the small grains is secured especially if corn should prove to be a good crop. That is why wheat looks the most surely profitable grain crop.

"Barley and oats must compete with corn as a feed crop. Farmers will prefer to feed corn if it is available. The consequence will be that barley and oats will shrink in price more quickly than wheat. Corn probably would be a keener competitor for wheat than the small grains were it not for the seed shortage. If this is over come corn may yet crowd wheat for the increased acreage. The average state yield of corn for the last 10 year period was 32.3 bushels per acre. To bring as much as an acre of wheat, corn must sell at 83.6 cents per bushel. With live stock at present prices, it is likely that it will sell for that, even though a normal crop is secured."

TO SETTLE FAMILY ROWS

Friendly Wagers Between Husband and Wife Serve to Quench Frequent Dangerous Quarrels.

Here is a plan by which a great many family quarrels have been averted for a certain couple. They used to quarrel all the time.

Before, the wife would say:

"My dear, you'll make a mistake if you do so and so."

And the husband would reply:

"My darling, you are altogether too fussy. I know my business. Kindly let me alone, will you?"

Then would ensue a row of fearful dimensions that sometimes would shake the house, startle the servants and scandalize the neighborhood.

But now they do differently.

When they disagree they do it thus:

"Well, dear, if you think you're right, suppose you back your opinion? If I'm wrong I'll give you half a dozen pairs of gloves."

If she feels pretty confident she backs her opinion with a box of cigars, and the agreement is carefully signed by both and locked up. Then one or the other pays when the decision is reached. The young woman has an income of her own, so the arrangement is a fair one, which it might hardly be were she compelled to take her husband's own money to pay for his cigars.

Gambling is, of course, a wicked thing to do, but it checks wild assertions and smothers, in this case, many a fire that would burn up comfort.—New York Evening Post.

The Potato.

The potato was first introduced into Spain by Hieronymus Cardan, a monk, in 1553; into England by Sir John Hawkins [illegible] in 1565, and into Ireland by Sir Walter Raleigh in [illegible]

Nova Scotia is literally "the land of fish"—cod, herring, mackerel and the giant albacore or tuna. Nova Scotia is so much a land of fish, says a writer, that it produces over one-fourth the value of the entire Canadian catch, or $9,166,851 worth. Every tiny haven around the extensive Bluenose Land coast harbors fishing smacks galore, while Lunenburg, Canso, Liverpool and Chester are home ports for hundreds of fleet-winged deep-sea banking schooners.

Floods in Brazil.

The native inhabitants of Brazil have lately been suffering from the disastrous effects of the flooding of the Amazon, whose relentless waters have submerged the countryside for hundreds of miles around. At regular intervals this mighty river overflows its banks, and a famous traveler estimated that no fewer than 3,000,000 natives have lost their lives during the last five centuries through these terrible floods.

He Didn't Know.

In a murder trial six experts were examined. Most of them had a national reputation. A hypothetical question of 20,000 words, which it required two hours to read, was asked of Doctor Jelly, a Boston expert on insanity. This learned doctor answered the question in three words: "I don't know," a frank answer but rather perplexing [illegible]

[illegible]

MORE WHEAT IS GOOD BUSINESS

State Food Administration Issues Call for Larger Acreage Both for Profit and Patriotism.

SAYS WHEAT PRICE SURE

Besides, a Big Crop Means Backing the Boys Who Have Been Sent to the Front to Fight.

The Federal Food Administration for Minnesota is issuing a call for a larger acreage of spring wheat. It makes the following statement of world needs the basis for the call:

The United States, Canada, and the Allies (England, France, Italy and Belgium) in 1917 produced 460,000,000 bushels less wheat than they needed. Shipping is so limited and so badly needed for other products that wheat cannot be brought from more distant points where there is a surplus such as Argentina, Australia and India. This has made very rigid economy in the use of wheat necessary. It is not likely the Allies can produce more in 1918 than in 1917 because their production has continually decreased since the war began so that in 1917 they produced 150,000,000 bushels less than their average production for five years before the war. If they produce as much in 1918 as in 1917 they will need to import between 550,000,000 and 600,000,000 bushels to supply normal demands. The United States is about 3,500 miles from England and France; Argentina is about 6,500 miles distant; India is about 12,000 miles away; and Australia 12,500 miles. It is evident then that if there is any scarcity of ships, the more wheat surplus we have in the United States the better it will be for all concerned.

The Outlook in the United States.

In 1917 the United States produced about 650,000,000 bushels with a surplus of about 50,000,000 bushels above own needs. In 1917 the winter wheat belt produced 418,000,000 bushels and the spring wheat belt produced 232,000,000 bushels. The outlook for winter wheat last December 1 indicated a probable yield of 540,000,000 bushels. It may be more, or less. At any rate, much more spring wheat will be needed than can be produced so that every acre of land in the spring wheat belt that is suitable for spring wheat and that can be handled reasonably well should be seeded to that crop. It, of course, is not wise from the standpoint of the individual farmer to sow wheat on land that will produce a materially better crop of something else or sow wheat on a farm not equipped to handle the crop economically.

Prices and Profits.

The $2.17 per bushel guaranteed price for 1918, is high enough to make the growing of wheat decidedly profitable with a fair crop. It would seem, in view of this fact that the outlook for raising wheat on good wheat land is as promising as the outlook for any other crop and besides this, the patriotic appeal to furnish bread for the millions who need it, is very strong. It is doubtful if the farmers of the Northwest can make a greater contribution to their country, or to humanity generally than to grow wheat.

Wheat Looks Most Surely Profitable.

It is the opinion of Andrew Boss, Vice Director of the Minnesota Experiment Station, that wheat looks [illegible]

price of oats and barley at the present time, however, is likely to bring an increased acreage of these crops at the expense of the wheat crop. Farmers will do well to consider the possibilities of profit from these crops before changing the acreage materially. The average yield of wheat in Minnesota for the last 10 year period was 13.5 bushels an acre, at $2.00 a bushel, which is about the price that the average Minnesota farmer can expect to net for this year's crop, this would bring a return of $27.00 an acre. The average yield of oats for the same period was 30.8 bushels. To bring $27.00 an acre, oats would need to sell at 87.9 cents a bushel this year. The average yield of barley for the same 10 year period was 23.8 bushels. To bring $27.00 an acre, barley would need to sell at $1.14 a bushel. While oats are bringing something over 80 cents now, and barley is much higher than $1.14, it is not probable that present prices will be maintained if a normal crop of the small grains is secured especially if corn should prove to be a good crop. That is why wheat looks the most surely profitable grain crop.

"Barley and oats must compete with corn as a feed crop. Farmers will prefer to feed corn if it is available. The consequence will be that barley and oats will shrink in price more quickly than wheat. Corn probably would be a keener competitor for wheat than the small grains were it not for the seed shortage. If this is over come corn may yet crowd wheat for the increased acreage. The average state yield of corn for the last 10 year period was 32.3 bushels per acre. To bring as much as an acre of wheat, corn must sell at 83.6 cents per bushel. With live stock at present prices, it is likely that it will sell for that, even though a normal crop is secured."

TO SETTLE FAMILY ARGUMENTS

Friendly Wagers Between Husband and Wife Serve to Quench Frequent Dangerous Quarrels.

Here is a plan by which a great many family quarrels have been averted for a certain couple. They used to quarrel all the time.

Before, the wife would say:

"My dear, you'll make a mistake if you do so and so."

And the husband would reply:

"My darling, you are altogether too fussy. I know my business. Kindly let me alone, will you?"

Then would ensue a row of fearful dimensions that sometimes would shake the house, startle the servants and scandalize the neighborhood.

But now they do differently.

When they disagree they do it thus:

"Well, dear, if you think you're right, suppose you back your opinion? If I'm wrong I'll give you half a dozen pairs of gloves."

If she feels pretty confident she backs her opinion with a box of cigars, and the agreement is carefully signed by both and locked up. Then one or the other pays when the decision is reached. The young woman has an income of her own, so the arrangement is a fair one, which it might hardly be were she compelled to take her husband's own money to pay for his cigars.

Gambling is, of course, a wicked thing to do, but it checks wild assertions and snotherss in this case, many a fire that would burn up comfort.—New York Evening Post.

INTENTIONAL DUPLICATE EXPOSURE

HOLD EASTERN TREATIES VOID

Allies Refuse to Acknowledge German Peace Pacts With Russia and Roumania.

STATEMENT IS ISSUED

Will Fight to End to Establish Peaceful Reign of Justice Instead of Teuton Policy of Plunder.

London, March 19.—A statement has been issued by the supreme war council of the Allies condemning German political crimes against the Russian and Roumanian peoples and refusing to acknowledge Germany's peace treaties with them, and also declaring:

"We are fighting and mean to continue fighting, in order to finish once for all with this policy of plunder, and establish in its place the peaceful reign of organized justice."

The document is in the nature of a restatement of the Allies' war aims. It embodied a protest against Germany's action, in the name of German peace, toward the Russian people.

The statement makes plain that the Allies scorn any peace at the expense of Russia.

The council's statement, which is issued through the foreign office, says

Note Crimes of Enemy.

"The prime ministers and foreign ministers of the Entente assembled in London feel it to be their bounden duty to take note of the political crimes, which under the name of a German peace, have been committed against the Russian people. Russia was unarmed. Forgetting that for four years Germany had been fighting against the independence of nations and rights of mankind, the Russian government, in a mood of singular credulity, expected to obtain by persuasion that 'democratic peace' which it had failed to obtain at war.

"The results were that the intermediate armistice had not expired before the German command, though pledged not to alter the disposition of its troops, transferred them en masse to the western front, and so weak did Russia find herself that she dared to raise no protest against this flagrant violations of Germany's plighted word.

Annexation Camouflaged.

"What folowed was of like character, when 'the German peace' was translated into action. It was found to involve the invasion of Russian territory, the destruction or capture of all Russia's means of defense, and the organization of Russian lands for Germany's profit, a proceeding which did not differ from 'annexation' though the word itelf was carefully avoided.

Judgment Never Doubted.

"For us of the Entente government, the judgment which the free peoples of the world will pass on these transactions would never be in doubt. Why waste time over German pledges when we see that no period in her history of conquest—not when she overran Silesia, nor when she partitioned Poland—has she exhibited herself so cynically as a destroyer of national independence, the implacable enemy of the rights of man and the dignity of civilized nations?

"Peace treaties such as these we do not and cannot acknowledge. Our own ends are very different. We are fighting, and mean to continue fighting, in order to finish once for all with this policy of plunder and to establish in its place the peaceful reign of organized justice.

Only Appeal Is to Right.

"As incidents of this long war unroll themselves before our eyes, more and more clearly do we perceive that the battles for freedom are everywhere interdependent; that no separate enumeration of them is needed and that in every case the single, but all-sufficient appeal is to justice and right.

"Are justice and right going to win? Insofar as the issue depends on battles yet to come, the nations whose fate is in the balance may surely put their trust in the armies, which, even under conditions more difficult than the present, have shown themselves more than equal to the great cause entrusted to their valor."

Rockefeller Resists Tax Payment.

Cleveland, Ohio, March 19.—Claiming New York as his legal residence, John D. Rockefeller in federal court here has filed a petition for an injunction to prevent County Treasurer Boyle from collecting taxes on $5,000,000 worth of personal property, which he has been assessed by the county auditor of Cuyahoga county in which Cleveland is situated.

Engravers In Price Fixing Charge.

Washington, March 19.—Thirty-four photo engraving companies of Chicago have been charged with an alleged agreement to maintain prices, in a complaint filed by the Federal Trade commission. The firms are members of the Photo Engravers' club. The complaint says this club persuaded the Chicago Photo Engravers union No. 5 to enter this agreement and to order its workmen to strike in plants which refused to maintain the standard price agreement. The firms will be given a hearing April 29.

WILSON TO SPEAK SOON

Said to Be Planning Step to Stop All Talk of Peace.

Would Drive to Cover Those Who Thwart War Work With Peace Propaganda.

Washington, March 19.—It is indicated that President Wilson expects to give a forceful war message to the world soon. It is thought that the president has decided to end his silence in regard to America's position toward the proposed Japanese expedition into Siberia. At the same time it is plainly stated that all talk of peace now is idle in view of Germany's activities in the near east and her ruthless invasion of Russia.

"Peace Must Come by Sword."

In light of the news that the president will clarify the confusion about the fact that he has definitely set his foot down on peace talk, officials and diplomats believe the president will definitely dictate that peace now must come by the sword.

The United States and Japan are continuing to exchange views over Japanese intervention in Siberia, but the American position of opposition to the move is unchanged, it was learned officially.

Japan Presents Arguments.

This was the first intimation that this government had any positive statement on the Japanese problem since it became known that our views were against intervention. Japanese views were not revealed.

The exchange, however, is in friendly fashion and it is assumed that Japan is presenting arguments to offset the American claims of lack of necessity and danger of a Russian upheaval if Japanese troops land.

The fact that President Wilson now contemplates a statement on the Siberian situation is presumably due to the Japanese views, to the British official terminations of support of intervention and to the Russian tendency to be suspicious of the Japanese move.

START FINLAND OFFENSIVE

German Take Town and 3,000 Red Guards, Vasa Dispatch Says.

Copenhagen, March 19.—Dispatches received here from Vasa says that the German army has started a general offensive in southern Finland. The town of Heinola has been captured by General Mannerheim. Three thousand of the red guard were taken prisoners.

Takes Steps to Prevent Panics.

Paris, March 18.—A judicial investigation has been begun into the circumstances attending the panic in a subway station which resulted in the death of seven men, 29 women and 30 children in the last air raid. The gates giving access to the subways which opened outward are being removed and special arrangements are being made for regulating the electric current during any future raid, as according to the Temps there have been victims by electrocution in the subways in raiding periods.

URGE SUPPORT TO DOWN ENEMY

Senator Nelson and Explorer Amundsen Call on Countrymen to Rally to U. S. Flag.

NO "KULTUR" WANTED

Speakers Declare Scandinavians Should do Their Bit to Help Down Enemy—Avenge U-Boat Work.

New York, March 19.—Captain Roald Amundsen, discoverer of the south pole, who spoke at a patriotic mass meeting here in his honor, called on all Scandinavians, particularly to the men of Norway, to rally around the flag of the United States.

Captain Amundsen told the Scandinavians that the murder by Germany of Norwegian sailors, was a contemptible and tragic disregard of Norway's neutrality and that they could best avenge it by employing their skill and knowledge of shipbuilding in the construction of ships for this country.

Help Defeat Submarines.

The first thing to be done, he said, was to overthrow the submarine enterprise of the Germans which could be accomplished only by building ships.

"We do not want this German kultur in our countries," said Captain Amundsen. "If you have the word in your language I would advise you to kill it out, for German kultur has come to be known the world over as a synonym of brutality.

Senator Nelson Speaks.

Senator Nelson of Minnesota, who was born in Norway, said that his heart had been in the war long before the United States entered it.

"Germany has been making bombs here," said Senator Nelson, "to blow up our ships. She has been burning our property right here at home and lately has been trying to create a longshoremen's strike among you Scandinavian people who came here to enjoy the hospitality and freedom of this country. Vindicate the insults and avenge the murder of your fellow countrymen whom the Germans killed in life boats."

U. S. to Aid Live Stock Men.

Washington, March 18.—Under an agreement just announced between the food administration and representatives of the livestock producers and feeders of the Western corn belt, the administration will add to the staff of its meat division a practical production man to be selected from a list submitted by the corn belt men, and will undertake to relieve difficulties surrounding the cattle feeding industry by increasing the proportion of government purchases of the higher grades of beef.

FRANCIS LEAVES RUSSIA

American Ambassador Now On His Way to Japan.

Departure Is Mystery to Government at Washington—Other Diplomats Leave.

Tokio, March 20.—David R. Francis, American ambassador, the Japanese ambassador to Petrograd, Viscount Ushida and the diplomatic representatives of Great Britain and France are expected to arrive at Seoul, according to advices from the Korean capital. They are on the way to Japan.

Francis Arrives at Irkutsk.

Tokio, March 19.—Ambassador Francis, with a party of 36 Americans, has safely arrived at Irkutsk, in Siberia. The Bolsheviki government has consented to grant safe passage to the Allied diplomats on their trip to Vladivostok.

Japan's action with regard to Siberia is held in abeyance, pending the arrival here of Ambassador Ushida, whose views will have a decisive influence on the situation.

Mystery in Washington.

Washington, March 19.—The reason for the withdrawal of America's ambassador from Russia is a mystery to government officials in Washington. The government had not been advised of such an intention, it was indicated. It was apparent that the move had not been ordered.

URGE HIGHER WHEAT PRICE

Minnesota Senators Join Fight for Better Figure.

Washington, March 19.—Western senators have renewed their fight for a higher guarantee wheat price citing the ability of farmers to make more money raising other cereals, shortage and increased cost of farm labor and vital necessity of insuring adequate wheat supplies.

Wheat price-fixing, Senator Nelson of Minnesota, Republican, asserted, has been an "abject failure." He advocated an open market with prices fixed only by natural laws or extension of price-fixing to other cereals more profitable for farmers to raise.

While expressing reluctance to increase the cost of living by raising wheat prices, Senator Kellogg of Minnesota, declared such action absolutely necessary in order to stimulate production and to prevent a national and world shortage.

Railroad Discharges 48 Conductors.

Sioux Falls, S. D., March 17.—Railroad men arriving in the Black Hills report that the Union Pacific has discharged from the service 48 passenger conductors. This is said to be the largest "cleanup" of passenger conductors ever made at one time by any railroad in the country. It is alleged that in every one of the 48 cases railway money was not turned in. Railroad men report that since the government took control the system of espionage over conductors is more strict and complete than ever before.

ALLIES ANXIOUS TO START DRIVE

Threaten to Take Initiative Against Teutonic Legions at Various Points.

ARE WEARY OF WAITING

Allied Control of Entire Front From North Sea to Switzerland Is Maintained—Artillery Fire Increases.

London, March 19.—The official reports from the Allied and Teuton war offices, read day after day by the Allied world in the hope that some inkling of the real situation would present itself, the realization has come home that the Americans, French, British, Belgian and Portuguese troops are maintaining their control over the front running from the North sea to Switzerland.

Artillery fire, at some points growing in intensity, is reported, but the Allies have held their own and their raiding parties are everywhere busy in the enemy's trenches.

The long-expected and confidentially awaited German drive has not materialized and the Allies threaten to start an offensive of their own at various points against the Teutonic legions.

Spirited Action.

There is hardly a sector on the Western battle line which is not being marked by spirited actions, but Verdun and the Vosges regions are apparently storm centers where big events may develop. At Verdun the opposing artilleries have been thundering for several days and the roar of the guns kept up, especially on the right bank of the Meuse.

In the Vosges mountains, the artillery fighting is reported to be very heavy. No infantry actions have been mentioned in the war office statements issued at Paris and Berlin.

Belgians Take Over Coast Sector.

One of the most encouraging features of the war news may be found in the fact that the Belgian army, reorganized and ready for battle has taken over the important coast sector in Flanders.

That the Belgian army, said to be excellent in morale, has freed the French and British forces for action elsewhere on the front demonstrates that the past winter has been one of constructive work on the part of the Belgian and Allied army staffs. The latest official report said that attacks by German shock troops have been repulsed by the Belgians.

U. S. Guns Reply Effectively.

Heavy guns are battering the American sectors along the front and many shells of large calibre have fallen. Here, however, the American guns have replied with good effect and the excellent weather of the past few days has given American airmen an opportunity to take pictures of the terrain back of the German trenches.

IS RELIEVED OF HIS COMMAND

Major Geen. Scott Loses Leadership of 78th Division.

Washington, March 18.—Maj. Gen. Hugh L. Scott, formerly chief of staff, has been ordered relieved of his command of the 78th division of the National army at Camp Dix, N. J., and placed in command of the camp itself, which is to be made an embarkation camp. Brig. Gen. James T. Dean has been appointed to command the 78th division temporarily.

No official reason for the order was assigned.

FOE TAKES SWEDISH SHIPS

U-Boats Force Trawlers and Big Steamer to Go to Germany.

London, March 18.—A number of large Swedish trawlers and one of the largest Gothenburg steamers have been captured by German submarines off the Skaw, the northern extremity of Jutland, Denmark, and forced to go to Germany, according to a report printed by the Gothenburg Shipping Gazette and forwarded from Copenhagen by the Exchange Telegraph company.

SUBMARINE BELIEVED SUNK

Washington, March 19.—The probably sinking of a German submarine by shots from an armed guard of the steamer Borinquen is revealed by Secretary of the Navy Josephus Daniels' commendation of Tromas J. Berrien, chief gunner's mate for the cool and steady work of the gun crew when that vessel was attacked by a German submarine on the night of Oct. 30, 1917.

Unusual Case of Dual Identity.

San Diego, Cal., March 19.—An unusual case of dual identity has developed at the United States aviation school on North Island, near here. Joseph J. Novak, age 28, enlisted as a private in the Aviation corps at Kansas City November 7, 1917. Joseph S. Novak, age 28, did likewise at Detroit on the same day. Both were assigned to the North Island school, reported there on the same day and were assigned to the same company. They are not related. They were born on the same day.

Willie—Say, maw, pop must tell you a lot of riddles.

His Mother—Why do you ask?

Willie—Well, I heard him tell Mr. Jones last night that he had you guessing.

Nerves All Unstrung?

Nervousness and nerve pains often come from weak kidneys. Many a person who worries over trifles and is troubled with neuralgia, rheumatic pains and backache would find relief through a good kidney remedy. If you have nervous attacks, with headaches, backaches, dizzy spells and sharp, shooting pains, try Doan's Kidney Pills. They have brought quick benefit in thousands of such cases.

A Minnesota Case

Mrs. Henry Zumach, Hutchinson, Minn., says: "My back ached day and night and at times I got so dizzy I thought I was going to faint. At night I had to place a pillow under my back for the slight relief it gave. I got so weak I couldn't lift anything and the medicine didn't help me. Finally, I used Doan's Kidney Pills and they rid me of all the trouble. I don't have any cause for complaint now."

"Living them down."

Nearly all of the principal cities of England have policewomen.

THE SPRING DRIVE

Our boys are going "Over the top" and into "No man's land" this spring. No one has any doubt of their ability to get there. There will also be a spring drive on this side of the ocean, because March is the year's "blue Monday." It is the most fatal month of the year. March and April is a time when resistance usually is at lowest ebb. It is a trying season for the "run-down" man. But medical science steps in, and says, "it need not be"! We should cultivate a love of health, a sense of responsibility for the care of our bodies. Do not allow the machinery of the body to clog. Put the stomach and liver in proper condition. Take Dr. Pierce's Golden Medical Discovery, to be had at most drug stores in tablet or liquid form, tablets sixty-cents a vial, composed of native herbs. This puts the stomach and liver in proper condition. You may be plodding along, no spring, no elasticity, no vim, but as soon as you have put the body into its normal physical condition—oiled the machinery, as it were—you will find new vim, vigor and vitality within you. A little "pep," and we laugh and live. Try it now. Send Dr. Pierce, Buffalo, N. Y., 10c. for trial package. A little energy will save the day. The prime necessity of life is health. With spirit and energy you have the power to force yourself into action. The Golden Medical Discovery is the spring tonic which you need.

STOP YOUR COUGHING

No need to let that cough persist. Stop the irritation, and remove tickling and hoarseness, by relieving the inflamed throat with

PISO'S

PUBLIC ROADS

GOOD ROADS IN CONNECTICUT

State Superintendent of Repairs Directs All Work Through Maintenance Organization.

(By E. B. HOUSE, Colorado Agricultural College, Fort Collins, Colo.)

Connecticut places the maintenance of her roads under an officer known as the superintendent of repairs. The state is divided into ten districts. Each district is under the control of a supervisor of repairs, who is located near the center of his district. Each district is divided into sections, and each section is in charge of a foreman. Under ordinary conditions these foremen work singly and devote their entire time to the repair and maintenance of the roads in their section. If an emergency comes, ten or fifteen men are placed under a foreman for repair work. These gangs of workmen are maintained continually and are transferred from place to place; put under one foreman for a few days, and then transferred to another section in order that the work may be properly done.

Permanent Road in Connecticut.

COMPANY TAKES OVER ROAD

Virginia Legislature Grants Charter to Private Concern to Operate Old Highway.

The legislature of Virginia has granted a charter to an association known as the Warrenton and Fairfax Turnpike company, Inc., which will take over the old Alexandria-Warrenton pike, to grade and resurface the road and operate it as a tollroad until the state wishes to take it back.

The charter states that when the state does take it back it must pay the stockholders the cost of the road, with interest, minus dividends.

IMPROVEMENT BY ROAD DRAG

Farmer Can Be Convinced of Effectiveness by Use of Implement After Each Rain.

If you are not one of the fortunate ones with a good macadam or even concrete road in front of your place, you can make a good road of it if drainage has been attended to by the use of the road drag. Just try it after each rain, on the stretch of road leading from your gateway toward town the length of your holdings; you will not only be surprised and gratified with the improvement, but you may be encouraging your neighbor just beyond to do likewise.

OUTLINES GOOD ROADS PLAN

Opening of Forty-Mile Boulevard in Canada First Step in System of Improved Highways.

The new concrete highway between Toronto and Hamilton, Ontario, was opened recently. The premier of Ontario announced at the opening that the 40-mile boulevard between the two cities was only the first step in a great system of improved highways throughout the whole of Ontario. Plans have been made for this work, but it will not be undertaken until the actual end of the war is in sight.

GOOD ROADS ARE ESSENTIAL

Better Highways Must Be Secured to Make It Possible to Consolidate the Schools.

Back of the whole country school problem looms the road question. You can't have better schools without better roads. Better roads must be secured to make it possible to centralize and consolidate the schools. Where communities enjoy the advantages of good roads, commodious buildings have been provided, more competent teachers have been employed and modern facilities for teaching have been supplied at a minimum cost.

Plan Size of Culvert.

The size of the culvert to be placed depends upon the amount of water to be taken care of, but no less than a 12-inch pipe is recommended.

Determine Type of Culvert.

The side of the culvert and the type of structure should be determined by careful investigation.

Feed Calf Skim Milk.

If one has an abundance of skim milk it is well to feed the calf six or eight months.

SPRAYING OUTFITS FOR SMALL ORCHARDS

DOUBLE-ACTION-PUMP-FOR-SPRAYING.

(Prepared by the United States Department of Agriculture.)

For spraying a few plants or very small trees hand atomizers may be used. These are made of brass, copper, heavy tin, or other material, and usually have a capacity of one quart.

Bucket Pumps.

Bucket pumps are fairly convenient and satisfactory for spraying small gardens and shrubs or small trees. They should be of brass or other noncorrosive metal and preferably should be equipped with an agitator. In some pumps agitation is provided by means of a small jet of the liquid which squirts from the bottom of the pump into the liquid as the pump is operated. For convenience in spraying, these pumps may be clamped to the bucket, or used free in a tub or other vessel containing the spray material. They should be supplied with a spray rod, and sufficient hose to spray conveniently the plants to be treated.

Knapsack Pumps.

A knapsack pump may be used for small spraying operations. These pumps have a capacity of about four gallons and are provided with an air chamber to insure pressure and a steady spray. They are carried on the back of the operator and pumped by one hand, while the other is used to hold the spray rod.

Small Compressed-Air Pumps.

Compressed air pumps are frequently used in small fruit gardens, and are preferred to the bucket or knapsack pumps by those who do not wish to pump while applying the spray. These pumps are usually made of brass or galvanized sheet steel and have a capacity of three to four gallons. They are carried by means of a shoulder strap. In the better types, agitation is provided, usually by the entrance of the air at the bottom of the tank.

Barrel Pumps.

The barrel hand-pump outfit has a capacity of about 50 gallons, and has come into extensive use for the home orchard or fruit garden. With a good barrel pump considerable spraying may be done in satisfactory manner. The working parts of the pump should be of bronze, brass, or other noncorrosive material, and the valves and plungers should be readily accessible, and easily repaired. The pump should be provided with an efficient agitator, either of the paddle or rotary type. To insure a good pressure and uniform discharge of the spray material the pump should be provided with an adequate air chamber, to which a pressure gauge may be attached if desired. The pump may be mounted either on the head or side of the barrel, and the whole outfit placed on skids or on a wagon. On hilly land it is preferable to have the barrel in a horizontal position.

The double-action hand pumps usually are employed in connection with spray tanks of greater capacity than a barrel, as the 150 or 400-gallon half-round tank used in place of the wagon bed. The pump, which may be either vertical or horizontal, is fastened to a small platform, and placed on top of the tank or on a platform at the hind end of the wagon. A suction hose extends into the spray tank. A barrel or 100-gallon hogshead may be used, however, and placed at one end of the wagon bed or platform, thus leaving plenty of room for the pump and operator. When properly used these double-acting, double-cylinder pumps furnish adequate pressure for two leads of hose, and for single or double nozzles. They furnish an outfit intermediate in cost and capacity between the barrel pump and the gasoline or other power sprayer. A common defect is lack of adequate facilities for agitation, although tanks are available in which this deficiency is corrected to some extent.

SOME SOIL "TOBACCO SICK"

Disease-Resisting Varieties Being Developed by Specialists of Department of Agriculture.

(Prepared by the United States Department of Agriculture.)

Because some soils in the Connecticut valley have become "tobacco sick," which has resulted in heavy losses to tobacco growers, particularly where artificial shades are used for growing wrapper leaf, specialists of the United States department of agriculture have been at work developing disease-resistant varieties.

It has also been shown that the use of fertilizer or acid reaction will materially reduce the injury caused by the disease. Proper rotation wherever practicable also appears to be an effective remedy. In Maryland, where a similar or identical disease is giving much trouble, the native varieties which are susceptible have been crossed with foreign resistant strains, with a view to obtaining resistant types adapted to local requirements.

In Wisconsin and in the Burley section of Kentucky progress has been made in the control of tobacco root rot through the development of resistant varieties. The disease causes heavy damage in these regions every year and ordinary Burley tobacco is especially susceptible. In fields where the native Burleys have failed completely, some of the resistant strains have given surprisingly good results.

Swine Most Profitable.

Swine, next to cows, are the most profitable animals the farmer can raise. They require less feed and care than cows and are less liable to disease.

REDUCE DECAY IN SHIPPING

Loss of Celery and Lettuce While in Transit Can Be Avoided by Careful Handling.

(Prepared by the United States Department of Agriculture.)

Careful handling and the precooling of lettuce and celery before making shipments will greatly reduce the losses that are often sustained while these perishables are in transit. This information, which specialists of the United States department of agriculture gathered in a recent investigation conducted in Florida, should be of interest to all truck growers, but particularly to growers and shippers of celery and lettuce in the Gulf states.

Decay in lettuce in transit is due largely to "lettuce drop," the specialists found, a disease which appears to enter the head mainly through the lower leaves. Carefully removing the diseased leaves before shipment and precooling the lettuce in cars at the shipping point to a temperature of about 40 degrees F., enables the lettuce to reach its destination in almost perfect condition and to hold up much better on the market than lettuce handled in the usual way.

Precooled celery, with initial icing only, the tests showed, arrived on the market in a uniformly fresh condition, with the leaves on the top tier nearly as green as those on the bottom. Celery that was not precooled shipped under standard or full refrigeration showed very yellow leaves on the top tier, which greatly discounted the value of the entire shipment. The cost of precooling and of the first icing of a car of celery was less than the usual charge for full refrigeration. Celery often is injured in transit, the specialists say, because with tight loads it is impossible to secure sufficient free air circulation and rapid cooling. Smaller crates properly spaced and braced with provision of floor racks to facilitate air circulation would help to insure more uniform and rapid cooling.

Don't Crowd Breeding Fowls.

Breeding birds should never be crowded as it will prevent them from getting sufficient exercise.

SMUT STILL IS WORTHLESS

It Deteriorates Grain It Grows in and Make It Sell for Less Money—Use Formaldehyde.

Don't plant seed grain that is inoculated with smut. Grains are high-priced but smut is still worthless—it is not only worthless but deteriorates the grain it grows in and makes it sell for less money. Use formaldehyde or anything else that you prefer, but don't plant smutty seed.

Save All Brood Sows.

Save the brood sows. Feed them, breed them, and increase production. Fed plenty of pork, our soldiers will be fit for the fight and strengthened to endure the stress and rigors of their march to victory.

Culture of Rabbit.

Rabbit culture seems to be coming into its own. Unlike the boom in the nineties the present popularity of the rabbit is based on economic conditions rather than [illegible]

DAIRY FACTS

CALVES ON SEPARATED MILK

No Fixed Rules of Feeding Can Be Given—Size and Vigor of Animal Must Be Considered.

(Prepared by the United States Department of Agriculture.)

At least four-fifths of all dairy calves are raised on separated milk, grain being used to supply the fat removed. Usually it pays well to feed whole milk for about two weeks, at the end of which time separated milk may be used in part. The proportion of the latter may be gradually increased until at the end of the fourth week it is used altogether. No fixed rules of feeding, based upon age, can be given, because the size and vigor of the calf must always be considered. Calves especially strong at birth may be put on separated milk entirely at two weeks of age, but this should not be attempted with weak ones. Until the calf is in vigorous and thrifty condition no attempts should be made to change to separated milk. This change should always be made gradually.

For the first four days, from eight to twelve pounds of milk from the dam should be fed. After this time the milk may be from any cow or cows in the herd, but preferably not from any that are nearly dry. Milk containing not more than 4 per cent of butterfat is considered the best for this purpose.

At the beginning of the third week the substitution of either skim or separated milk may commence at the rate of one pound a day. The quantity of the daily ration may be increased two to four pounds, depending upon the vigor of the calf. The quantity, however, should be kept well below the capacity of the calf; that is, when it does not drink eagerly what is offered, the quantity should be cut down.

At the beginning of the fourth week, from one-half to three-quarters of the milk ration should be separated milk.

Teaching Calf to Drink.

During the week the change should be continued until by the end of the week only separated milk is fed. With especially vigorous calves the change to separated milk may be made about a week earlier.

After this time separated milk may be fed entirely unless the calf is very delicate. The quantity fed can be gradually increased until 18 to 20 pounds a day are given. It is usually not economical to feed more than this unless milk is very plentiful.

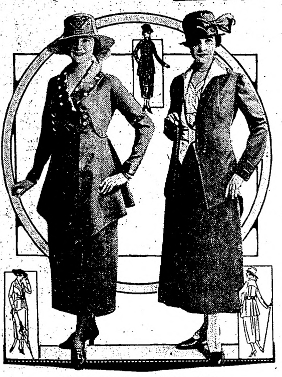
The time that milk should be discontinued depends upon its cost in relation to the value of the calf, its breed, size, vigor, etc. The season in which it reaches the age of six months and the other feeds available at that time must also be taken into consideration. Six months is probably a good average age at which to wean calves from milk. When the best of hay, silage, and a good variety of grains are available, the calf may be weaned earlier than when such feeds are lacking. The season of good, succulent pasturage presents the best possible condition for weaning a calf, and when this exists the calf can be weaned earlier than when it is lacking.

When the calf is two months old, and if it is carefully watched, sour milk, whether whole, skim, or buttermilk, may be fed without harmful results, provided the change from sweet milk is made gradually. It is not well, however, to alternate between sweet and sour.

Avoid Feed at Milking Time.

Cows will stand more quietly and the milking can be done more comfortably if the animals are not trying to eat while they are being milked. Feeding at milking time also may add dust and other impurities to the milk.

What Well Dressed Women Will Wear



SUITS THAT LOOK LIKE SPRING.

Here is a group of suits for spring that even the unpracticed eye—at a glance—will perceive to be quite unlike the suits of yesterday. Their designers have wandered into green fields and pastures new, gathering ideas, and are displaying the results of their wanderings now in suits that have many interesting style features. They appear to have centered attention on coats and to have agreed that skirts shall be plain, hang straight, or show a little narrowing toward the bottom, and reach at least to the shoe top.

In coats the most noticeable innovation is the uneven line at the bottom of the coat skirt. There is only an occasional coat that is even at the bottom edge, but this variety is good style always. Another new feature in coats is the fitted-in lines at the back, which are achieved by new methods of cutting and shaping, that almost vie with semifitted models in point of numbers. There are many coats that fail to close at the front, and some whose only closing point is at the waistline. These open models are worn with light waistcoats in some cases, or over blouses that are glimpsed to the waist.

At the left of the picture a very graceful and clever coat has pointed fronts and its skirt is set on to a double-breasted body ending in a belt across the front. There is a little ripple in the skirt of the coat, which slopes upward from the front and across the back. Some models of this kind are very short at the back. The collar and cuffs are of satin with white polka dots and the skirt narrows toward the hem.

At the right of the picture the suit of serge maintains more mannish lines, but reverses the order of things shown in the other suit. Its coat slopes down in a curved line across the back, and is one of the longest models shown. It is worn over a low-cut vest of white wash satin and has a satin overcollar. The edges are bound with narrow silk braid and strips of this braid, with two bone buttons finish the cuff. The skirt is plain and hangs almost straight.

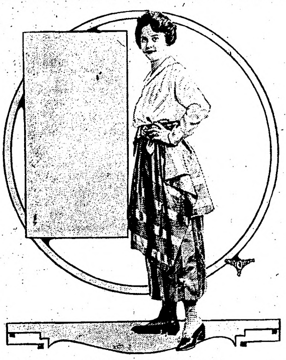
Little sketches elsewhere in the picture reveal the diversity of the new styles. Assortments are so wide in suits that every woman may have the satisfaction of satisfying her own style and preferences when she makes a selection.

The dressy, separate silk skirt has made a history for itself that insures its welcome every season, but its great day is ushered in with spring. Its rival, the sports skirt, has promoted it; success for the separate skirt of silk is sure and deserved, and there is no end to the variety in silks and color combinations that make it a thing of beauty this spring.

Two or three shades of one color in stripes and plaids, or combinations of contrasting colors, or colors with crossbars in black or white, in as many designs as we find in ginghams, make the choice unlimited, but so far stripes have been developed into the most attractive of the new skirts.

The season is dominated by two styles, each with many variations. One is the skirt laid in plaits about the waistline and the other is the tunic skirt. The plaited skirt is not so new as the tunic, but it is too good looking, and may be fitted with too much good style for women to leave it out of their reckoning.

Tunics, like coats, are usually uneven in length. They are ingeniously draped and here the art of the designer either shines or fails. In the skirt shown above a single piece of silk is so well managed in the draping that the stripes run diagonally across the front and horizontally across the back. A feature to be noted is the disposition of most of the fullness in the tunic at the front of the skirt and the sash of silk, like the skirt, tied in a bow of two loops, at the front of the waist. The square end of the silk used for the tunic is cascaded at the left side and nicely finished with a row of small, flat buttons set close together. The underskirt is plain and narrow, merely two lengths of goods sewed together and finished with a three-inch hem.



TUNIC SKIRT OF STRIPED SILK.

MR. SIMPKINS PAYS HIS INCOME TAX

By ROBERT McBLAIR.

Mr. Simpkins gazed at the portrait on the wall till his eyes filled with tears. It was a portrait of his father, Colonel Simpkins, who had four times been promoted for valor during the Civil War and had died bravely on the field of action. Mr. Simpkins' throat ached now for two reasons: First, he reverenced and adored the memory of his father; secondly, his age and his eyes and his game leg wouldn't let him go to war himself. And as he observed the martial bearing and uncompromising gaze of Colonel Simpkins he saw, in imagination, the khaki-clad lads of the new generation marching forth and crossing three thousand miles of sea to fight, maybe die, for liberty.

Mr. Simpkins peered around to make sure that neither Sam nor John (who were at the teasing ages of sixteen and seventeen) were where they could see him; then he straightened and threw his right arm up for a salute. But his gouty shoulder twinged, and he groaned. He couldn't even salute.

"Damn!" said Mr. Simpkins, and with his other hand fiercely twirled his white mustachios.

He turned and limped into the library and sat down creakily before the mahogany desk on which were lying the blanks for his income tax statement, blanks which he had rather grumpily got from the Internal Revenue officer only that day after luncheon on his way home from the club.

Mr. Simpkins' income for 1917 had mounted to just about $15,000, and he had been rather snappy on the subject of taxes ever since he had discovered that the more income a man has the greater the percentage of it he pays in taxes. He could think of several men who, like himself, were married and had two children, and yet, although their incomes were nearly half of his, they would pay only a small fraction of the amount he paid. He gloomily drew the blank nearer and began filling in the information that it asked for.

As Mr. Simpkins' income was $15,000 he had to figure out the amounts payable on each of the successive smaller classes of incomes in order to arrive at the total due from himself. He passed over the first class who must pay taxes, that is, single men making over 1,000. His calculation for married men then showed up as follows:

First, they pay 2 per cent. (under the 1916 law) on all income over 4,000, deducting $200 for each of their children under eighteen years. In Mr. Simpkins' case this was $212, which he put down in the "payable" column.

He saw next that, under the 1917 law, married men pay an additional 2 per cent. on all over $2,000—with the same allowance for children. This added $252 to his "payable" column.

He then observed that for every 2,500 jump in his income over $5,000 he had to pay a Surtax, the percentage growing larger with each jump. This was $250 more added to his burden. And on top of all this came an "Excess Profits" tax of 8 per cent. on all occupation" income over $6,000, making $720 more.

The total, then, he must pay was fourteen hundred and thirty-four dollars.

"Whew!" exclaimed Mr. Simpkins angrily. "There's young Henry Wilkins, who married Jake Johnson's girl, he makes $2,000 and he doesn't pay a cent of taxes. I guess this is his war as well as mine!"

Thinking of young Henry Wilkins, he remembered that Mrs. Wilkins went every afternoon to make bandages for the Red Cross and that Henry, who was a lawyer, was aiding the Local Draft Board with its questionnaires.

"Well," he admitted to himself, "that makes a difference."

He thought next of Judge Willoughby, whose income was about $3,000.

"He only pays $20," commented Mr. Simpkins, not quite so angrily this time; and then a thought struck him and he sat up rigidly in his chair.

Judge Willoughby's son had been drowned on the Tuscania when it was submarined with the loss of two hundred soldiers.

"Judge Willoughby gave his son to America," muttered Mr. Simpkins.

He leaned forward suddenly and put his face in his hands.

For a long time Mr. Simpkins sat very still in that position. There was no sound in the library except the ticking of the tall clock and an occasional trill of laughter from the children skylarking upstairs. The square of light on the carpet gradually withdrew itself through the window, and first twilight and then darkness settled in about the quiet, white haired, sometimes irascible old man.

Mr. Simpkins was thinking things which he would never afterward speak of, he was thinking things that were too sacred ever to be put into words. But some inkling of his thoughts may be found in his rejoinder to Mrs. Simpkins when that placid lady came in and turned on the lights, and asked him whether he was ready for dinner.

"Judge Willoughby's only son was worth as much as fourteen hundred and thirty-four dollars, wasn't he?" Mr. Simpkins demanded of her.

As his wife, who was not unused to his superficial irritations, watched him in mild astonishment, Mr. [illegible] stepped out to the hall and [illegible] his old felt hat and silver-headed cane from the hat rack. Letting himself out into the foggy evening, he tapped his way down to the corner, and mailed his income tax statement and check with [illegible].

NEED BIG HERDS

Europe's Meat Supply Must Come From America.

Warring Nations Have Depleted Live Stock at Enormous Rate, Even Killing Dairy Cattle For Food.

American stock breeders are being asked to conserve their flocks and herds in order to meet Europe's tremendous demands for meats during the war and probably for many years afterward.

The United States food administration reports that American stock raisers have shown a disposition to co-operate with the government in increasing the nation's supply of live stock.

Germany today is probably better supplied with live stock than any other European nation. When the German armies made their big advance into France and then retreated virtually all the cattle in the invaded territory — approximately 1,800,000 head—were driven behind the German lines.

But in England—where 2,400,000 acres of pasture lands have been turned into grain fields—the cattle herds are decreasing rapidly. One of the reasons apparently is the declining maximum price scale adopted by the English as follows: For September, $17.76 per 100 pounds; October, $17.28; November and December, $16.68; January, $14.40. The effect of these prices was to drive beef animals on the market as soon as possible.

In France the number of cattle as well as the quality have shown an enormous decline during the war. Where France had 14,807,000 head of cattle in 1913, she now has only 12,341,900, a decrease of 16.6 per cent. And France is today producing only one gallon of milk compared to two and one-half gallons before the war.

Denmark and Holland have been forced to sacrifice dairy herds for beef because of the lack of necessary feed.

Close study of the European meat situation has convinced the Food Administration that the future problem of America lies largely in the production of meat producing animals and dairy products rather than in the production of cereals for export when the war will have ceased.

Leaves of absence for the purpose performing Farm labor-act of December 20, 1917. (Public No. 94)-instructions.

Department of the Interior,
General Land Office,
Washington, D. C., Jan. 10, 1918
Registers and Receivers,
United States Land Offices.

Sirs; Your attention is directed to the act of Congress of December 20, 1917 (Public, No. 94), granting leaves of absence, during the pendency of the existing war, to homesteaders to enable them to engage in farm labor on lands other than those embraced in their homestead claims, which labor may be in connection with lands owned by themselves. It provides:

That during the pendency of the existing war any homestead settler or entryman shall be entitled to a leave of absence from his land for the purpose of performing farm labor, and such absence, while actually engaged in farm labor, shall, upon compliance with the terms of this act, he counted as constructive residence; Provided, That each settleror entryman within fifteen days after leaving his claim for the purpose herein provided shall file notice thereof in he United States Land Office, and at the expiration of the calender year file in said land office of the district wherein his claim is situated a written statement, under oath and corroborated by two witnesses giving the date or dates when he left his claim, date or dates of return thereto, and where and for whom he was engaged in farm labor during such period or periods of absence: Provided further. That nothing herein shall excuse any homestead settler or entryman from making improvements or performing the cultivation required by applicable law upon his claim or entry Provided further, That the provisions of this act shall apply only to homestead settlers and entrymen who may have filed their application prior to the passage of this act. The Secretary of the Interior is authorised to provide rules and regulations for carrying this act into effect.

2. The privilege of such absence may be exercised by any person who had made a valid settlement on public land before December 20, 1917, or who has made, or shall make, entry pursuant to application filed before that to notice and without reason stated, but the periods thereof are to be regarded as forming part of the seven months' residence ordinarily required. date. If no entry has been made prior to the filing of the notice stipulated in the act and herein below mentioned, you will give it the current serial number register, noting that no entry has been made. also on the tract book if the land is described by subdivisions, section, township and range.

3. There is no limit either to the number or the length of the absences a homesteader may have under this act. They do not in anywise interfe with the five-month absence privilege accorded by law to the homesteader during each residence year, pursuant

GOODRIDGE

The most progressive and the biggest little town in northern Minnesota.

HAVE YOU FILED YOUR INCOME TAX RETURN

If you are an unmarried person and had a net income of $1,000 or over for the year 1917, you must make a return If you are a married person, living with your wife or husband c December 31, 1917, and had a net income of $2,000 or over, you must make a return.

You come under the classification of "an unmarried person" if you were not married December 31, 1917, or not living with your husband or wife on that date. A widow or widower is classified as an unmarried person. While an unmara person may be the head of a family and entitled to the $2,000 specific exemption, it will, however, be necessary to file a return of his or her net income- if the same amounts to $1,000 per year or over, although there would be no tax due.

All returns are due in the office of the Collector of Internal Revenue, St. Paul, Minnesota, on or before April 1, 1918. The law provides severe penalties for failure to file returns on or before that date. You may procure proper blanks by making application to your banker, or by writing E. J. Lynch, Collector Internal Revenue, St. Paul, Minnesota. If you are in doubt as to wheather or not you should make a return, consult your banker, or take the matter up direct with the Collector.

Rember-- that your Goverment asks you to file a return on or before April 1, After that date the Goverment will compel you to make a return. In a short time deputies will start canvassing the State to ascertain who should have made a return and failed to do so. If you are a slacker, do not complain when the severe penalties provided by law are inflicted.

TO SETTLE FAMILY ARGUMENT

Friendly Wagers Between Husband and Wife Serve to Quench Frequent Dangerous Quarrels.

Here is a plan by which a great many family quarrels have been averted for a certain couple. They used to quarrel all the time.

Before, the wife would say:

"My dear, you'll make a mistake if you do so and so."

And the husband would reply:

"My darling, you are altogether too fussy. I know my business. Kindly let me alone, will you?"

Then would ensue a row of fearful dimensions that sometimes would shake the house, startle the servants and scandalize the neighborhood.

But now they do differently.

When they disagree they do it thus:

"Well, dear, if you think you're right, suppose you back your opinion? If I'm wrong I'll give you half a dozen pairs of gloves."

If she feels pretty confident she backs her opinion with a box of cigars, and the agreement is carefully signed by both and locked up. Then one or the other pays when the decision is reached. The young woman has an income of her own, so the arrangement is a fair one, which it might hardly be were she compelled to take her husband's own money to pay for his cigars.

Gambling is, of course, a wicked thing to do, but it checks wild assertions and smothers, in this case, many a fire that would burn up comfort.—New York Evening Post.

Utilizing Rice Hulls.

Experiments have been made with rice hulls in combination with different binding agents, but while the resulting briquets gave every satisfaction from the standpoint of heating yet the initial cost of the various binding agents made their cost too high for practical purposes. The experiments, however, are being continued and it is hoped that in the future a briquet can be manufactured that will be satisfactory from an economic standpoint.

Star News

(Too late for last week)

Auctions and surprise parties are the order of the day; probably another sign of spring coming.

Knute Tollefson called on Hubert Jacobson on business matters Saturday

Lars C. Fevig is finishing up his lumber cutting at the Hansen mill.

Nels Graue is reported ill. Knute Drankey is helping with the work on the place.

The Aukus concert was well represented by Star residents at the Erie Hall Tuesday evening. All report a good time.

Theo. Berg of Reiner and Andrew Lasda of Kratka were transients enroute to the Hannah Petersen auction near Neptune Friday.

Iver Iversen departed for North Dakota points Monday, to be employed at Farm work for the season. His brother Gustav accompanied him as far as Goodridge.

"Old Man Ellertson" is busily engaged cutting up his summer's supply of stove wood.

Among these attending the Petersen auction at Neptune Friday, may be named: August Schneider, Otto Parnow Henry Tommerdahl, G. G. Olson, Knut Roisland, Tellef Hovet, Danielson brothers, Ole Tharaldson, Ed. Torgerson "Hal Halling" and others "too numerous to mention"

The Melder Lee family, recent arrivals from St Paul, are now Leated on the Oliver Tommerdahl place, having rented same place for the summer.

Mrs. Hans Svare is also reported ill. Mr. Atkins of Grygla is in attendance

Miss Wold attended the Red Cross auction at High Landing Friday eve.

Jacobson and Peterson of Reiner are bailing [illegible] for Ole Skommedahl.

The Ladies Aid met with Mrs. Loyland Wednesday afternoon.

Kristine Kulseth assisted Mrs. H. A. Dahlen during the week.

Sfot Alfred Knutson suffered quite an accident Thursday afternoon, but came bravely out of the ordeal after all.

Halvor Syverson is busy cutting cord wood for G. G. Olson.

Post Office Department Gives Form of Address for Oversea Mail

Persons who send mail to members of the Expeditionary Forces are particularly requested, in a statement issued by the Post Office Department, to use ink only in writing the addresses. Every piece of mail matter should also bear the name and adress of the sender.

Heavy paper, canvas, or cloth should be used for wrapping packages. When canvas or cloth is used the adress should be written on a shipping tag, with the name and adress of the sender on the reverse side.

Given names should be written in full, instead of initials. The title of the of the adressee and the full name of the unit or organiation to which he is assigned should be added' it being sufficient in the way of further adddress to use the words "American Expeditionary Forces".

RED CROSS NOTES.

[illegible] the afternoon, as is their habit now, in the schoolhouse working for the boys "over there". Forty one bandages were completed and shipped to Thief River Falls. Ladies who were there for first time were :Mesdames Markuson, Kusmak, Theo. Nelson, and Samuelson. Three large boxes, two of clothing and one of shoes, were filled and shipped from Goodridge from the clothing and shoes collected for the destitute in Belgium. The people were very liberal with donations, which we are sure the Belgians will apreciate.

New members for the Red Cross this week are: Mrs John Markuson, Mr Henry Halvorson, Mrs Elmer Bly, Ragnhild Gevine, Geo. Wold, Martin

OLD PARR'S" AGE BELIEVED

Said to Have Lived to Be 152 Years Old—Lived Under Reigns of Ten Princes.

"Old Parr" was an Englishman whose proper name was Thomas Parr and who broke the modern record by living to the ripe old age of one hundred and fifty-two years, an exchange says. The British cyclopedia gives this account of him:

"Thomas Parr (1483-1635), English centenarian, known as 'Old Parr,' is reputed to have been born in 1483 at Winnington, Shropshire, the son of a farmer. In 1500 he is said to have left his home and entered domestic service and in 1518 to have returned to Winnington to occupy the small holding he then inherited on the death of his father. In 1563, at the age of eighty, he married his first wife, by whom he had a son and a daughter, both of whom died in infancy. At the age of one hundred and twenty-two, his first wife having died, he married again His vigor seems to have been unimpaired, and when one hundred and thirty years old he is said to have thrashed corn. In 1635 his fame reached the ears of Thomas Howard, earl of Arundel, who resolved to exhibit him at court, and had him conveyed to London in a specially constructed litter. Here he was presented to King Charles I, but the change of air and diet soon affected him and the old man died at Lord Arundel's house in London on the 14th of November, 1635. He was buried in the south transept of Westminster abbey, where the inscription over his grave reads: 'Tho. Parr, of ye county of Salopp. Born in anno 1483. He lived in ye reigns of ten princes, viz: King Edward 4, King Edward 5, King Richard 3, King Henry 7, King Henry 8, King Edward 6, Queen Mary, Queen Elizabeth, King James and King Charles, aged 152 years, and was buried here November 5, 1635.'"

That the son of a small farmer who had started in life as a hired man (the British cyclopedia says he left home and entered domestic service), should have been buried in Westminster abbey, shows that the story of his great age was believed.

Origin of Life on Planets.

The many speculations that have been published concerning the origin of life on the earth and on any other bodies in the universe where it may possibly exist usually assume that, in some way or other, "life germs" are transported across the gulfs of space from one planet to another. Thus it has been suggested that life may have been brought to the earth in meteors. One of the most recent suggestions is that minute "life germs" may escape from the atmosphere of a planet in which life exists, just as molecules of the atmospheric gases are believed to escape from our terrestrial atmosphere, and may be driven by light-pressure to some world where physical conditions have become suitable to support life. While there is nothing essentially absurd in these hypotheses, it is not clear why their authors should take it for granted that life cannot originate de novo on a cooling planet.—Scientific American.

MAKING MEATLESS DAYS PERMANENT.

In the meatless menu there is a fertile field for developing new and nourishing dishes, according to E. H. Niles, writing in the Hotel Gazette, who believes that the present shortage of meat and fats will not end with the coming of peace, but may grow more acute and continue for five or six years, thus making it worth while to develop menus of grain, vegetables and fish on a more or less permanent basis. Meat can be replaced by cereals and other protein foods, or may be served in very small portions as a flavoring for other food. In making up meatless menus this author finds our American Creole and southern cuisine a broad field for investigation.

Boys Drowned, Cat Escaped.

The tables were turned in a tragic manner at Port Elizabeth, South Africa, recently when two young boys who attempted to drown a cat—at the request of the animal's owner—were themselves drowned in a small bay about three miles from the city. The cat struggled when the lads tried to hold its head under the waves and before the boys realized their danger they were swept out to sea by the outgoing tide. The cat escaped from the water and returned to its old home.

Our Rabbits.

The term rabbit was formerly more properly applied to the burrowing species of the old world, Lepus cuniculus (meaning to burrow), though by common usage our molly cottontail has so long been termed a rabbit that the name will now stand, as will that of jack rabbit for the big western hare of the prairies and Pacific coast.

Some Towers.

The height of the Eiffel tower, Paris is 986 feet; of the Blackpool tower, 520 feet; of New Brighton tower, 570 feet, and of the Woolworth building, New York, 760 feet.

Queer Place for Meteorites.

One of the remarkable features of the ocean's floor is the fact that in some places it is covered with the dust of meteorites.

The cat escaped from the water and returned to its old home.

Our Rabbits.

The term rabbit was formerly more properly applied to the burrowing species of the old world, Lepus cuniculus (meaning to burrow), though by common usage our molly cottontail has so long been termed a rabbit that the name will now stand, as will that of jack rabbit for the big western hare of the prairies and Pacific coast.

Some Towers.

The height of the Eiffel tower, Paris is 986 feet; of the Blackpool tower, 520 feet; of New Brighton tower, 670 feet, and of the Woolworth building, New York, 750 feet.

Queer Place for Meteorites.

One of the remarkable features of the ocean's floor is the fact that in some places it is covered with the dust of meteorites.

Silent Applause.

Many a vaudeville actress seems to think she's a big thing because she sings through her nose, like an elephant.—Exchange.

Vehicles Bear Owners' Names.

In England all carts and wagons must bear the owner's name and address before being used in a public highway.

Strength Gave Out

Mrs. Schmitt Was Miserable From Kidney Trouble Until Doan's Came to Her Assistance. Now Well.

"My kidneys gave out during the change of life," says Mrs. Margaretha Schmitt, 63 Alabama Ave., Brooklyn, N. Y. "My back ached and pained as if it were broken. When I moved in bed, sharp, darting pains caught me across my back and I couldn't turn. Mornings I was stiff and sore and it felt as if heavy weights were tied to me. I was so worn-out. I often came near falling from dizziness and flashes of fire would come before my eyes, blinding me.

Mrs. Schmitt

"I had the most severe headaches and my kidneys didn't act regularly. The secretions passed too often and caused much distress. I was hardly able to do my housework and just to walk upstairs took all my strength.

"As soon as I began taking *Doan's Kidney Pills*, I improved and six boxes put me in better health than I had enjoyed for years."

Mrs. Schmitt gave the foregoing statement in 1916 and on April 6, 1917, she said: "My cure has been permanent. I keep *Doan's* on hand, however, and take a few doses occasionally."

Soothe the irritation and you relieve the distress. Do both quickly and effectively—by promptly using a dependable remedy—
PISO'S

What She Would Take.

At an Irish assize a deaf old lady, who had brought an action for damages against her neighbor, was being examined, when the judge suggested a compromise, and instructed counsel to ask what she would take to settle the matter.

"His lordship wants to know what you will take?" asked the learned counsel, bawling as loud as he could in the old lady's ear.

"I thank his lordship kindly," answered the dame; "and if it's no inconvenience to him, I'll take a little whisky and water."

Really Quick Work.

An Irishman, who was a bricklayer, and who was evicted, went to America to find work. When he was passing through New York he saw some bricklayers at work, and stood looking at them. While he was standing the foreman came over and said to him:

"Well, Pat, are you able to build houses as quick as this in Dublin? We start a house in the morning and the tenant is living in it in the evening."

"Well, begorra!" said Pat, "that's nothing. In Dublin we start a house in the morning, and the landlord is evicting the tenant from it in the evening."

Too Valuable.

"That prima donna didn't seem at all angry."

"How did you get that impression?" inquired the weary manager?"

"She never once raised her voice."

"Well, you don't think she'd waste a high note on me, do you?"

"There's a Reason"

Brief Items of State News

Mora.—Dr. Marion Burton, president of the University of Minnesota, was the principal speaker when the new high school here was dedicated.

Red Lake Falls.—Mrs. Festy Ridge, native of Ireland, 42, wife of a prominent farmer of Brown's Creek town, died at her home of autointoxication.

Aitkin.—Rev. Father Iciek of Duluth delivered an address here in the opera house under the auspices of the third Liberty Loan executive committee of Aitkin county.

St. Cloud.—Dr. A. L. Bruener of St. Cloud, who was made a first lieutenant in the dental corps of the army when he enlisted last year, has been promoted to a captaincy.

Anoka.—Chester E. Evans of Champlin, aged 81, is dead. He came to Minnesota in 1856 and settled in Maple Grove, Henepin county, where he lived until twenty years ago, when he moved to Champlin.

Mankato.—The board of education has decided to abandon the teaching of the German language in the Mankato public schools after the present classes complete their work, which will be in December.

St. Cloud.—One hundred and sixty cans of trout fry were received here from the state fish commission and planted in nearby streams. The local anglers each contributed $1 to help defray the expenses of planting the fry.

Glenwood.—David Bogie, chief of police, was stricken with apoplexy while alone at his office late at night and was found dead when a search was made for him. He was born in Colbourne, Ont., in 1850, and came to Glenwood forty-two years ago.

Minneapolis.—Col. E. T. Lee will lead a delegation of the Sons of the Veterans from Minneapolis to Shiloh battlefield April 1 to attend the annual reunion there of veterans of that battle. They will board a Tennessee river packet at St. Louis for a river journey to the battlefield.

St. Paul.—General property taxes in Minnesota during the past year have increased approximately 19 per cent. The total amount levied by the state and all its counties, cities, villages, school districts and townships in 1917 and payable this year is $62,446,401.79. The total levy in 1916, payable in 1917, was $52,449,740.06. The increase is $9,948,661.73, 18.95 per cent, to be exact.

St. Cloud.—Day schools will replace night schools at the St. Cloud state reformatory, Superintendent H. K. W. Scott has reported to the state board of control. Reformatory inmates, of whom 373, or about four out of five in the institution are enrolled in the school, will be given seven and one-half hours of classes weekly under the new plan, as compared with only four and one-half hours in the old night schools.

St. Paul.—Minnesota fire losses during February were only $417,092 compared with a total of $2,035,333 for the corresponding month a year ago, according to a bulletin issued late yesterday by George H. Nettleton, assistant state fire marshal. Greatest reductions in fire losses were in Minneapolis and in localities outside of St. Paul and Duluth. A corresponding decrease in the number of fires also is shown.

Crookston.—The 12th annual commencement exercises of the University of Agriculture began here with a special sermon to the graduating class by Rev. W. E. Dudley, on "The Call for Service," at the First Congregational church. The commencement program continued for four days, closing with commencement day exercises, at which Marion L. Burton, president of the university, spoke and presented the diplomas.

St. Paul.—Employ teachers early and make contracts for the full time of the next school year; seek out qualified teachers who have retired from teaching with a record of efficient service; and fix salaries in some proportion to the increase of living cost. This is the trinity that is being emphasized by educators as emergency measures to offset the effect of the war. C. G. Schulz, state superintendent of education, is taking prominent part.

Minneapolis.—Details of the pro- Minneapolis and Rochester, will be posed "University Road," between discussed on the evening of Tuesday, April 2, when county commissioners and surveyors of five counties meet as guests of the new South Town Civic club, sponsors of the new trail into the southern part of the state, at a banquet at the South Side high school. In addition to Hennepin county, there will be county officials from Dakota, Goodhue, Olmstead and Fillmore counties, and 400 men are expected so be present.

Wells.—This village, with a population of 2,000 persons, established a record in a Red Cross sale which is believed to be the best of any town of its size in the country. More than $9,000 was raised. A single pig, registered under the name of "Red Cross Maid," sold for more than $1,000.

Baudette.—Placing the muzzle of a pistol in his mouth last Wednesday Magnus W. Anderson pulled the trigger and literally blew off his head. He was about [illegible] and leaves a wife [illegible]

Spring Valley.—The recent Red Cross wood drive here has proven a success financially and netted for the good cause $500.

Park Rapids.—Hon. E. R. Hinds, who has served Hubbard county in several sessions of the legislature, has filed for re-election.

St. Paul.—Arguments on questions of law relating to indictments against A. C. Townley, head of the Nonpartisan league, and Joseph Gilbert, manager, will be heard in the state supreme court May 31.

Pine City.—Representative Adolph S. Larson of Sandstone filed as a candidate for state senator from this district. He is the second man to file for the position. Senator Rystrom having also done so.

Red Lake Falls.—Oswald Lind, who has been state engineer for Marshall county for four years, has been selected by the state highway commission as the state engineer for Red Lake county and moved here with his family this week.

Red Lake Falls.—Extensive repairs will be made to St. Mary's Catholic church here this season according to the rector, James J. Hawks, who has called for bids for the work which will include a new cement foundation, siding and decorating inside and out.

Brainerd.—Fred T. Lincoln, secretary of the Northern Minnesota Development association, has returned from a conference at Grand Rapids where matters were taken up to make the fall meeting of the association there November 20 and 21 one of widespread interest.

St. Paul.—Minnesota soldiers numbering 40,000 to 50,000 will be disfranchised in the statewide primary election June 17 unless some steps are taken within the next few weeks to provide for collecting and counting their votes. The subject is giving deep concern to state officials.

St. Paul.—Dr. Arthur F. Kilbourne, superintendent of the Rochester state hospital for insane was stricken with apoplexy, according to a report received by the State Board of Control. Dr. Kilbourne was reported to show some improvement and his chances of recovery are said to be good.

Wells.—A new chemical automobile fire truck has been added to the equipment of the department. The truck is large enough to carry twenty firemen and will be used on emergency calls from neighboring villages and will also respond to fire calls from the surrounding farming districts.

Bemidji.—The recruiting office here has averaged better than a man a day during the month of March. From present indications it appears that this record is to continue and that the Bemidji office will retain the banner as securing the largest number of enlistments per capita in Minnesota.

St. Paul.—Many prospective settlers from Iowa and Illinois are planning to buy from 15,000 to 20,000 acres of state land in Roseau county at a sale there, according to J. F. Gould, of State Auditor J. A. O. Preus' staff, who has left to conduct the Roseau sale. About 45,000 acres will be offered.

Hinckley.—The Pine county commissioners have let the contract for the grading and surfacing of the Duluth-Twin City highway, from Pine City to Sandstone, to S. J. Grove & Sons of Minneapolis for $37,182.60. The stretch is about twenty miles in extent. The contract calls for an overhead crossing of the Northern Pacific railroad tracks at Mission creek. Work will commence at once.

Warroad.—Claiming that he was driven from the community through threats by the defendants and menaced by lynching at their hands, W. C. Raderstarts has brought a $25,000 damage suit against George Marvin, Rev. Mr. Foster, E. A. Linder, Prof. Wilcox, Syver Johnson, C. E. Carlquist and Martin Berg. The complaint charges that on March 17, 1916, they threatened to lynch him and to do physical violence

St. Paul.—Patriotic Minnesotans of German blood will meet to form a permanent and aggressive loyalty organization in St. Paul April 2, it is announced by Henry F. Wessel, St. Paul, head of the temporary organization formed at a meeting March 4. The meeting will be at the Saint Paul hotel at 10:30 a. m. and responses from all parts of the state indicate that there will be a large and representative attendance.

Red Wing.—Joseph Gilbert, L. Martin and N. S. Randall, Nonpartisan league speakers, through their attorney, Thomas Sullivan, entered demurrers in district court here to indictments charging disloyalty in Kenyon and Goodhue counties last summer. The demurrers were based on the alleged grounds that "the facts in the indictments to not constitute a public offense." J. C. Seebach and his son Carl, also under indictment on disloyalty charges, entered demurrers similar to the Nonpartisan men.

Ironton.—H. J. Councilman, trainmaster of the Northern Pacific, was in town recently completing arrangements for his line to connect with the main system at Deerwood, thereby giving this village connection with Duluth and Minneapolis over the Northern Pacific.

Brookpark.—Superintendent R. C. Weech returned from Murdock, Minn., where he was hired as superintendent of schools. The school building is a new $85,000 building [illegible]

HOLLAND OBJECTS; SHIPS ARE SEIZED

SEVENTY-SEVEN VESSELS IN AMERICAN WATER REQUISITIONED DESPITE PROTEST.

GERMAN THREATS EFFECTIVE

Were Cause of Holland's Refusal to Put Into Effect Her Agreement to Restore Ships To Normal Service.

Washington, March 21.—Upon Holland's refusal in the face of German threats to put into effect her voluntary agreement for restoring her merchant marine to normal activity, the United States government has requisitioned all Dutch ships in American waters. United States naval guards went on board the ships immediately. At the same time Great Britain was taking over Dutch vessels in British ports.

A total of 77 ships of probably 600,000 tons was added to the American merchant marine by the requisitioning. Another 400,000 tons are put into the Allied service by Great Britain's action. Most of them will be used in the food carrying trade between the United States and Europe.

President Wilson's proclamation taking over the ships was issued only after word finally came from London that Holland's delayed reply was a rejection of the British-American demand.

Guarantee Made to Holland.

The government had waited more than 48 hours beyond the time when Holland had been requested to make a decision as to whether she would carry out the original pact or submit to requisitioning. Every effort was made to avoid drastic action, as transfer by agreement was sought, rather than by seizure, although the latter is an exercise of sovereign rights justified in international law and practiced by all nations.

Although the ships had been taken over without any formal agreement, the United States proposes to carry out scrupulously the terms of the original pact, so that Holland shall receive ample foodstuffs and will be protected in her colonial trade by having sufficient tonnage to maintain its commerce.

The President's proclamation was issued, authorizing the navy to take over the vessels, which will be equipped and operated by the Navy department and the Shipping board, the Dutch crews being supplemented by American civilian sailors and naval reservists. Compensation will be made to the owners, as required by law.

President Makes Statement.

In a statement outlining the negotiations which preceded the requisitioning, President Wilson pointed out that the permanent agreement with the Dutch government had been blocked by Germany, despite the little kingdom's acute need of foodstuffs, for which the agreement provided. A temporary agreement then was negotiated to tide over the emergency and that too, was held up by Prussian diplomacy.

"Although the reason never was formally expressed," the President said, "it was generally known that the Dutch shipowners feared lest their ships would be destroyed by German submarines. That this fear was not wholly unjustified has unhappily been shown by the recent act of the German government in sinking the Spanish ship Sardinero outside the danger zone, when carrying a cargo of grain for Switzerland, and after the submarine commander had ascertained this fact by an inspection of the ship's papers."

For two months the proposed agreements lay in diplomatic pigeon holes without action and meanwhile, the President says:

"German threats have grown more violent." The final proposal to Holland was transmitted on March 7 and set last Monday as the time by which a reply was wished. Failing to receive a favorable reply, the United States proceeded to requisition the ships as dictated by military necessity.

FEAR FOE MOVE ON MOSCOW

Russians Anxious Over Apparent Enveloping Campaign.

London, March 21.—Various reports from Russia indicate the greatest anxiety over what appears to be an enveloping movement the Austro-German forces are carrying out against Moscow. There is talk of moving the government, according to these advices, to Sarjov, 450 miles southeast, or to Nichni Novgorod, 265 miles northeast of Moscow.

U. S. Has Hopes For Russia.

Washington, March 21.—The United States government holds firm to the belief there is yet hope of arousing Russia against the Teutons. "It is a small margin," high officials say, "but worth hanging on to." And it may be assured President Wilson will continue his efforts to drive home to the Russians America's friendship to the last. Confidence in official circles here has been aroused slightly by the new tone adopted toward America by [illegible]

Is your home *Certain-teed*?

You pay for insurance against a fire loss that *may* happen. Are you equally protected against loss that surely *will* happen if your home remains unpainted,—or poorly painted? Is your property *Certain-teed* against deterioration and decay?

Wherever there is need for paint or varnish, that need is supplied by a *Certain-teed* Paint or Varnish made for the purpose. For interior walls, ceilings, woodwork, floors and furniture; for exterior walls, roofs, porches, outbuildings and porch furniture — there is a *Certain-teed* product made to withstand the use or exposure to which it will be subjected.

Certain-teed

Paints and Varnishes
are more decorative than ordinary paints,—their colors and finish more clear and lustrous. And they are, in the ultimate, more economical; for they spread farther and last longer, and each color is priced according to its cost of production; whereas most paints are sold at a flat price, based upon the production cost of the most expensive color.

For Porch and Lawn Furniture

The man in the illustration is giving his porch and lawn furniture a coat of *Certain-teed* Porch Furniture Enamel. The sun will not fade its color; rain will not dim its lustre; hot weather will not soften its surface. This enamel, like all other *Certain-teed* products, is compounded of pure materials, properly proportioned, accurately mixed by machinery under the supervision of paint experts.

Certain-teed
Paint Products
Porch Furniture Enamel
Certain-teed Varnishes

Certain-teed Paints and Varnishes are made for all uses, in all colors and in all sizes of cans. Any store that sells paints can supply you. If the dealer you apply to, cannot immediately supply you what you want, he can obtain it promptly.

Win the War by Preparing the Land
Sowing the Seed and Producing Bigger Crops
Work in Joint Effort the Soil of the United States and Canada

CO-OPERATIVE FARMING IN MAN POWER NECESSARY
TO WIN THE BATTLE FOR LIBERTY

The Food Controllers of the United States and Canada are asking for greater food production. Scarcely 100,000,000 bushels of wheat are available to be sent to the allies overseas before the crop harvest. Upon the efforts of the United States and Canada rests the burden of supply.

Every Available Tillable Acre Must Contribute; Every Available Farmer and Farm Hand Must Assist

Western Canada has an enormous acreage to be seeded, but man power is short, and an appeal to the United States allies is for more men for seeding operation.

Canada's Wheat Production Last Year was 225,000,000 Bushels; the Demand From Canada Alone for 1918 Is 400,000,000 Bushels

To secure this she must have assistance. She has the land but needs the men. The Government of the United States wants every man who can effectively help, to do farm work this year. It wants the land in the United States developed first of course; but it also wants to help Canada. Whenever we find a man we can spare to Canada's fields after ours are supplied, we want to direct him there.

Apply to our Employment Service, and we will tell you where you can best serve the combined interests.

Western Canada's help will be required not later than April 5th. Wages to competent help, $50.00 a month and up, board and lodging.

Those who respond to this appeal will get a warm welcome, good wages, good board and find comfortable homes. They will get a rate of one cent a mile from Canadian boundary points to destination and return.

160 ACRE FARMS IN WESTERN CANADA

U. S. WHEAT RATION REDUCED ONE-HALF

NEW FOOD RULES ALLOW 1⅓ POUNDS OF WHEAT PRODUCT PER WEEK TO EACH PERSON.

FLOUR SALES ARE TO BE CUT

Only Thirty Days' Flour Supply Permitted On Hand—To Save 50 Per Cent of U. S. Wheat For Allies.

Washington, March 25.—Further reduction in the consumption of wheat is asked of the public by the Food administration that the scant supplies available before the next harvest may be stretched to meet the needs of the army, domestic consumers and the Allies.

Every American is requested to cut his average ration of wheat by 50 per cent, which would reduce the total normal consumption of 42,000,000 bushels a month to 21,000,000. This gives a ration of not more than 1½ pounds of wheat products weekly for each person. Flour sales will be cut to one-eighth of a barrel for a town customer and one-quarter for any country customer, that retailers' stocks may be illustrated to as great a number as possible.

Statement Is Issued.

The Food administartion's statement says:

"If we are to furnish the Allies with the necessary proportion of wheat to maintain their war bread from now until the next harvest, and this is a military necessity, we must reduce our monthly consumption to about 21,000,000 bushels a month as against our normal consumption of about 42,000,000 bushels, or 50 per cent our normal consumption. Reserving a margin for distribution to the army and for special cases, leaves for general consumption approximately one and one-half pounds of wheat products weekly per person.

Many of our consumers are dependent upon bakers' bread. Such bread must be durable and therefore requires a larger proportion of wheat products then cereal breads baked in the household.

Potatoes Are Abundant.

'With improved transportation conditions we now have available a surplus of potatoes. We have in the spring months a surplus of milk and we have ample corn and oats for human consumption. The drain on rye and barley as substitutes has already exhausted the supply of these grains.

"To effect the needed saving of wheat we are wholly dependent upon the voluntary assistance of the American people and we ask that the following rules shall be observed: Householders to use not to exceed a total of 1½ pounds per week of wheat products per person. This means not more than 1¾ pounds of Victory bread containing the required percentage of substitutes and one-half pound of cooking flour, Macaroni, crackers, pastry, pies, cakes, wheat breakfast cereals, all combined.

Wheatless Day Continue

"Public eating places and clubs to observe two wheatless days per week, Monday and Wednesday, as at present. In addition thereto, not to serve to any one guest at any one meal an aggregate of breadstuffs, macaroni, crackers, pastry, pies, cakes, or wheat breakfast cereals containing a total of more than two ounces of wheat flour. No wheat products to be served unless specially ordered. Public eating establishments not to buy more than six pounds of wheat products for each 90 meals served, thus conforming with the limitations requested of the householders.

"Retailers to sell not more than one-eighth of a barrel of flour to any town customers at any one time and not more than one-quarter of a barrel to any country customer at any one time and in no case to sell wheat products without the sale of an equal weight of other cereals.

Victory Bread Affected.

"We ask the bakers and grocers to reduce the volume of Victory bread sold, by delivery of the three-quarter pound loaf where one pound was sold before and corresponding proportions in other weights. We also ask bakers not to increase the amount of their wheat flour purchases beyond 70 per cent of the average monthly amount purchased in the four months prior to March first.

"Manufacturers using wheat products for non-food purposes should cease such use entirely. There is no limit on the use of other cereals, flours and meats, corn, barley, buckwheat, potato flour, etc.

Sweden To Be Strictly Neutral.

Stockholm, March 25.—Premier Eden, speaking recently at Henkoeping on the new and grave problems facing Sweden, through the complete transformation of the situation in the Baltic, declared the government would maintain a policy of unshakable neutrality. With reference to Finland and the Aland Islands questions the premier said the [illegible]

GIRLS! MAKE A BEAUTY LOTION WITH LEMONS

At the cost of a small jar of ordinary cold cream one can prepare a full quarter pint of the most wonderful lemon skin softener and complexion beautifier, by squeezing the juice of two fresh lemons into a bottle containing three ounces of orchard white. Care should be taken to strain the juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, smoothener and beautifier.

Just try it! Get three ounces of orchard white at any pharmacy and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands. It should naturally help to whiten, soften, freshen and bring out the roses and beauty of any skin. It is truly marvelous to smoothen rough, red hands. Adv.

THE TRUTH ABOUT ECZEMA AND PILES

Thousands and thousands of people, says Peterson, are learning every week that one 30 cent box of Peterson's Ointment will abolish Eczema and banish piles, and the grateful letters I receive every day are worth more to me than money.

I had Eczema for many years on my head and could not get anything to do it any good. I saw your ad and got one box and I owe you many thanks for the good it has done me. There isn't a blotch on my head now, and I couldn't help but thank Peterson, for the cure is great. Mrs. Mary Hill, 420 Third Ave., Pittsburgh, Pa.

I have had itching piles for 15 years and Peterson's is the only ointment that relieves me, besides the piles seem to have gone. A. B. Ruger, 1127 Washington Avenue, Racine, Wis.

Use Peterson's Ointment for old sores, salt rheum and all skin diseases. It banishes pimples and blackheads in less than 10 days and leaves the skin clean, clear and pleasant to look upon. Druggists guarantee it. Adv.

An honest man thinks that a pretty woman is also a noble work.

To The American People

There is no foundation for the alleged violations of law attributed to our Company by agents of the Federal Trade Commission and I want to say emphatically that Swift & Company is not a party to any conspiracy to defraud the Government. Nor has Swift & Company been guilty of improperly storing foods or of making false entries or reports.

Conferences of packers, where prices have been discussed, have been held at the urgent request and in the presence of representatives of either the Food Administration or the Council of National Defense. And yet the packers have been accused of committing a felony by acting in collusion on Government bids!

We have done our best, with other packers, large and small, to comply with the directions of the United States Food Administration in all particulars, including the furnishing of food supplies for the U. S. Army and Navy and the Allies, now being handled through the Food Administration.

We will continue to do our utmost, under Government direction, to increase our production and assist the Food Administration. We consider that the opportunity to co-operate whole-heartedly and to our fullest powers with this branch of the Government is our plain and most pressing duty.

The Trade Commission Attorney has, by false inference and misplaced emphasis, given to disconnected portions of the correspondence taken from our private files and read into the Record, a false and sinister meaning with the plain purpose of creating antagonistic public opinion.

The services of the packers of the United States are most urgently needed, and I regret exceedingly that we should at this time have to spend our efforts in defending ourselves against unfounded, unproved, and unfair assertions such as are being daily made public.

L. F. Swift President

Swift & Company, U. S. A.

SPOHN'S DISTEMPER COMPOUND

HORSE SALE DISTEMPER

You know that when you sell or buy through the sales you have about one chance in fifty to escape SALE STABLE DISTEMPER. "SPOHN'S" is your true protection, your only safeguard, for as sure as you treat all your horses with it, you will soon be rid of the disease. It acts as a sure preventive, no matter how they are "exposed." 50 cents and $1 a bottle; $5 and $10 dozen bottles, at all good druggists, horse goods houses, or delivered by the manufacturers.

22 Million Families in the United States

4 CUPS OF WHEAT FLOUR TO THE POUND

If each family used 4 cups of flour less per week, the saving would be 22 million pounds or 112,244 barrels *every week.*

The greatest help housekeepers can give to win the war is to make this saving and *it can be done* by using this recipe in place of white flour bread.

Corn Meal Biscuits

- ¾ cup scalded milk
- 1 cup corn meal
- 2 tablespoons shortening
- ¾ teaspoon salt
- 1 cup white flour
- 4 teaspoons Royal Baking Powder

Save ¼ cup of the measured flour for board. Pour milk over corn meal, add shortening and salt. When cold, add sifted flour and baking powder. Roll out lightly on floured board. Cut with biscuit cutter and bake in greased pan fifteen to twenty minutes.

Our new Red, White and Blue booklet, "Best War Time Recipes," containing many other recipes for making delicious and wholesome wheat saving foods, mailed free—address

ROYAL BAKING POWDER CO., Dept. W, 135 William Street, New York

FOOD WILL WIN THE WAR

We learn from the Cape Girardeau Republican that a farmer of Millersville, that county, drove into Jackson, the county seat, the other day carrying in one automobile and one wagon products of the farm which sold for $1,380 cash. The by-products consisted of wool, feathers, poultry products and garden truck. Time was when the average farmer would not have fooled with any of these products, except wool, considering them good for use by the womenfolks in trade at the village store—as, indeed, they were. But the world is calling for the products and by-products of the American farm as never before, says St. Louis Republican. The farmer who neglects the call and allows things to go to waste for which there is an active cash demand is the one who will still have a mortgage on his place instead of a tractor and an automobile.

PASSING OF THE SWORD.

The war department order eliminating the sword as part of the equipment of the officer in the organization of the new National army is quite in line with the accepted practice in the embattled armies in Europe since the beginning of the war, but it none the less marks the passing—perhaps final—of one of the most cherished, albeit useless, badges of the military profession, says Philadelphia Public Ledger. This ancient weapon is abandoned for two good reasons: It is no longer of real service either as an instrument of offense or of defense, and it is a distinguishing mark which makes its bearer a conspicuous target for the enemy sharpshooter. The cavalry saber will probably remain for a time, where cavalry can find anything to do, for this form of the sword is to the trooper what the bayonet is to the infantryman. Notwithstanding the admitted uselessness of the sword, its passing will be regretted. It may still linger awhile as a ceremonial adornment, a symbol of military rank far from the field of active service, but, like all antiquated things, must finally succumb to the inevitable and be banished from the kit of the real soldier.

Floods in Brazil.

The native inhabitants of Brazil have lately been suffering from the disastrous effects of the flooding of the Amazon, whose relentless waters have submerged the countryside for hundreds of miles around. At regular intervals this mighty river overflows its banks, and a famous traveler estimated that no fewer than 5,000,000 natives have lost their lives during the last five centuries through these terrible floods.

The ice house for the creamery is completed and filled. O. N. Fjose and C. H. Rossmon have been in charge of the work. The creamery itself is on the way. In a comparatively short time the institution will be in running order. We hope that the people in the community will support it to the extent that is ought to be supported. We cannot build up a community by opposing everything that is for the good of that community. Stock is what will make this unity worth anything, and the most profitable way to handle stock is in connection with a creamery. There is none within a radius of many miles from Goodridge that has a valid objection to an institution of this kind. Then, why not support it? As a matter of fact there are only a few who do oppose it. But even these few have no reason whatever. Let them fall in line and build up instead of tearing down.

It is Goodridge that has made your land worth something. Before this village was located here you could not have sold if you had tried to. Now you wont sell it unless you get a big price for it. Do you see the point?

Rev. J. M. Sundheim Will Visit Goodridge

Rev. J. M. Sundheim of Fertile, this state, President of the Northern Minnesota District of the Norwegian Lutheran Church of America will come to Goodridge, Saturday, April 6. This is an official visit and, therefore, the president will be present at the service the following Sunday at the Goodridge Church. The local pastor, Rev. Tungseth, will conduct services in the forenoon and Pres. Sundheim will occupy the pulpit in the afternoon and also catechise the children. Everybody should avail themselves of this grand opportunity to hear the Rt. Rev, J. M. Sundheim, President of the Northern Minn District.

War Savings Stamps

Get the Habit of Saving

IN Thrift Stamps and War Savings Stamps, the United States Government offers you the greatest opportunity to save which any government has offered to its people. Like Liberty Bonds, War Savings Stamps have behind them the entire resources of the Government and people of the United States. They have the additional advantage that they steadily increase in value, and this increase is guaranteed by the Government. These stamps are issued in two denominations, the 25 cent Thrift Stamp and the $5.00 War Savings Stamp.

A "Thrift Card" is furnished to all purchasers of 25 cent stamps. This card has spaces for 16 stamps. When all the spaces have been filled the Thrift Card may be exchanged for a $5.00 stamp at post offices, banks or other authorized agencies by adding 12 cents in cash prior to February 1, 1918, and 1 cent additional each month thereafter.

If you prefer, you may buy a $5.00 stamp outright. These were on sale January 31, 1918, for $4.12. They automatically increase in value a cent a month every month thereafter until January 1, 1923, when the United States will pay $5.00 at any post office or at the Treasury in Washington for each stamp affixed to a War Savings Certificate.

When you purchase a $5 stamp, you receive an engraved folder known as a "War Savings Certificate," which bears your name and can be cashed only by you. This certificate contains 20 spaces. If these are all filled with War Savings Stamps before January 31, 1918, the cost to you will be $82.40, and on January 1, 1923, the Government will pay you $100—a net profit of $17.60. This is based on an interest rate of 4 per cent compounded quarterly from January 2, 1918.

If you hold a War-Savings Certificate and find it necessary to cash it before maturity, you may at any time after January 2, 1918, upon giving 10 days' written notice to any money-order post office receive for each stamp affixed to your certificate the amount paid therefor plus 1 cent for each calendar month after the month of purchase of each stamp. A registered certificate may be redeemed, however, only at the post office where registered.

You cannot lose and are certain to gain. You are buying the safest security in the world in the most convenient form in which the security of a great Government has ever been offered to its people.

Why You Should Buy Them

Your country needs every penny every man, woman and child can save, in order to feed, clothe, and arm the soldiers and sailors of America to win this war in defense of American honor and democracy.

A Country worth fighting for is a Country worth saving for.

To save money is to save life.

Buy War Savings Stamps at post offices, banks, trust companies, or other authorized agencies and strike a blow for your Country.

NEXT LOAN FOR $3,000,000,000

Third Liberty Issue to Be at Four and One-Quarter Per Cent Non-convertible.

TO ACCEPT FIRST ISSUES

Secretary McAdoo Makes Announcement of Third Liberty Loan Issue to Open April 6—Issue Less Than Expected.

Washington, March 27.—Three billion dollars will be the amount of the third Liberty Loan, to open April 6. The interest will be 4¼ per cent and all oversubscriptions will be taken.

Bonds of the first loan, bearing 3½ per cent interest, and of the second loan at four per cent, may be converted into the new bonds, but those of the third loan will not be convertible into any future issue.

This announcement is made by Secretary McAdoo with the comment that "the great events now happening in France must fire the soul of every Amrican with a new determination to furnish all the dollars and all the matrial resources of America that are needed to put an end to the execrable atrocities of German militarism."

Sinking Fund Is Planned

In connection with the loan, the Secretary plans to establish a sinking fund to purchase back bonds of the third loan thrown upon the market, to aid in keeping them at par.

Maturity of the bonds is yet to be determined, but it was officially stated that they would be long term, probably between 20 and 30 years.

Other features which are to be settled are the length of the campaign and the terms of payments on the bonds.

Deduction of government expenditures and Allied loans below the former estimate is responsible for the loans size, Secretary McAdoo explained. He said the bonds were made non-convertible to put an end to expectations of higher interest rates in the future, indicating his purpose to maintain the 4¼ rate for future loans.

Legislation to Be Asked.

Legislation will be drafted by Chairman Kitchin of the House ways and means committee to provide for an additional bond authorization of $4,500,000,000 more than the $3,666,000,000 sum already authorized but unissued to provide for future issues, for the increased interest rate, for continuance of loans to the Allies this summer and for issuance of more than the $4,000,000,000 certificates of indebtedness now authorized.

In his statement Secretary McAdoo says:

Defeat Faces the Kaiser

"I am sure that the people will respond to the third Liberty Loan with the same loyalty and enthusiasm that characterized their support of the first two loans. The great events now happening in France must fire the soul of every American with a new determination to furnish all the dollars and all the material resources of America that are needed to put an end to the execrable atrocities of German militarism. Defeat faces the kasier. Let us hasten it by asserting America's might with increased vigor in concert with out gallant comrades."

U. S. BUYS RUSSIAN SHIPS

Admiral Knight Purchases All Coast Vessels From Slavs.

London, March 25.—A dispatch to the Daily Mail from Tokio, says:

"The newspaper Kokumin Shimbun announces that Admiral Austin M. Knight, commander of the United States Asiatic fleet, has purchased all the shipping on the Russian coast. This totals 650,000 tons. Admiral Knight is now at Vladivostok.

REINFORCEMENTS FOR HAIG

Premier Says Men are In France Or Coming.

London, March 26.—In a message to Field Marshal Haig, David Lloyd George, the British premier, says that the men necessary to replace those lost are either now in France or already on their way. All guns will be replaced and still further reinforcements of men and guns are ready to enter the battle.

DUTCH DECLINE GRAIN OFFER

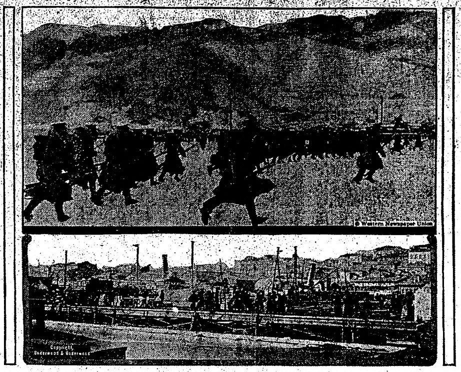
Cabinet Said to Have Rejected Allied Ship Proposal.

London, March 26.—The Dutch cabinet is said to have decided to send the Allied Powers a formal refusal of their offer of grain in return for Dutch ships, a dispatch from The Hague to the Daily Mail says.

70 Mile Guns Futile, Says Maxim.

New York, March 26.—"It is quite practicable to build an ordinary Maxim silencer that would deaden the report of a gun throwing shells into Paris from the suburbs of the city," Hudson Maxim, famous inventor of explosives, declared after reading accounts of mysterious shells falling in Paris. "If the Germans really have built a 70-mile long range gun it would be so expensive and futile as to indicate their mental deterioration and should be the cause for great Allied rejoicing," said the gun builder.

JAPANESE ARE READY TO TAKE POSSESSION OF THE IMPORTANT RUSSIAN PORT OF VLADIVOSTOK



© Western Newspaper Union

Copyright, Underwood & Underwood

Recent photograph of the commercial harbor and docks of Vladivostok, the great Pacific port of Russia, and, above, some of the Japanese troops that are held in readiness to seize that city to protect the immense stores of food and war supplies sent there by the allies before the Russians quit the war against Germany.

AMERICANS IN BATTLE

Two Regiments of Engineers Fighting With British.

No Word Received of Three Companies Working In Vicinity of Crozat Canal.

Washington, March 26.—Two regiments of American engineers are attached to the British froces on the front attacked by the Germans, according to a cable received by the war department from General Pershing.

Three companies of the engineers, General Pershing said, were working in the areas in which the Germans official statement mentioned the presence of American troops, and no report has been received concerning them.

This message announced by Major General March, acting chief of staff, definitely disposed of reports that American reserves had been sent into the battle. General Pershing said there was nothing unusual to report from the American sectors.

Enemy Uses Gas At Toul.

The dispatch follows:

"Summary of activities from noon, March 24 to noon March 25—Nothing to report, but usual patrol and trench activities, with some gas shelling by the enemy north of Toul.

"Reference to German communiques of March 24 and 25 regarding American troops, two regiments of railway engineers are with the British armies involved in this battle. Three companies of engineers were working in the areas mentioned in the communique in the vicinity of the Crozat canal. No report other than the German communiques yet received regarding these troops."

FORMER GERMAN SHIP SUNK

Chattahoochee, In American Service, Is Victim of Submarine.

London, March 26.—The admiralty announces the American steamer Chattahoochee, 5,088 tons net, has been sunk by a German submarine off the English coast. Her crew of 78 was landed safely.

The master says the submarine fired a number of torpedoes, of which four struck the vessel.

The Chattahoochee formerly was the German ship Sachsen of the Hamburg-American line, and was taken over by the United States when war was declared.

WOMAN RIDES ON RAIL; MADE TO WAVE FLAG

Benton, Ill., March 26.—Mrs. Frances Bergen, a woman of Bohemian birth, residing at West Frankfort, south of her, was ridden on a rail through the main street of that town by 500 members of the Loyalty league, who charged her with disloyalty.

She was made to wave a flag throughout the demonstration and to shout praise for President Wilson at various intervals.

Woman Fails To Face Charge.

Springfield, Mo., March 25.—Mrs. Rose Pastor Stokes, Socialist party worker, who was arrested here when she persisted in addressing a meeting of Socialists after Chief of Police Rathbone had prohibited her speaking, failed to appear in municipal court when her case was called. She was booked after her arrest at police headquarters on a charge of holding a street meeting without obtaining a permit from the chief of police as required by the city ordinance. She was released on bond of [illegible]

FOE PAYS AWFUL TOLL TO BRITISH

Germans Continue to Hurl Great Forces of Infantry into Crucial Conflict.

FIGHTING SANGUINARY

Enemy Placing Dependence Largely In Sheer Weight of Members to Overcome Heroic Resistance Offered by British.

With the British Army in France, March 27.—Most sanguinary and desperate fighting continues along the whole front of the new battle zone. In fact in the northern sector there has been no cessation in the awful work since Sunday morning.

The Germans have continued to hurl great forces of infantry into the conflict, depending largely on weight of numbers to overcome the increasing opposition offered by the heroically resisting British.

Heavy Attacks at Three Points.

On the northern wing of the offensive the enemy brought up additional troops after an all night struggle of the fiercest nature and renewed his efforts to break the British front in the region of Evillers. To the south near the center of the line an equally strong attempt is being made by the invaders to extend the long narrow salient which they had pushed in south of Bapaume, near Longueval—famous in the annals of the battle of the Somme. These places were again the scene of shambles in which the British machine gunners and riflemen exacted a terrible toll of death from the closely pressing enemy. Still further south the Germans were pounding the front hard in an endeavor to push on and get a firm grip on Nelse and swing the British right flank back while the determined defenders were battling doggedly to force the enemy back and reclaim the positions previously held by them along the river.

AIRPLANE SEEN OVER CAIRO

Egyptians Warned of Possibility of Attack—Lighting Restricted.

London, March 26—The inhabitants of Cairo, Egypt, have been informed officially according to a Reuter dispatch, that a hostile airship has been observed over the coast. The public was warned of the possibility of air raids and ordered to observe the necessary lighting restrictions.

Two Spanish Ships Sunk.

Washington, March 25.—Sinking of the Spanish vessels Arpillac and Begona by German submarines, is reported in official dispatches from Barcelona. The Begona was attacked while on its way to Piraeus. The Arpillac was sunk off the Canary islands.

Drive Arouses Congress to Action.

Washington, March 26.—The German drive has aroused leaders in congress to the necessity of passing the war department measures. The senate will consider this week some of the 35 administration bills on the calendar instead of wasting time in speeches. The most urgent bills are those providing for commandeering lumber and for registration of men who have become 21 years of age since June 5. The logging interests objected to empowering the president to take over [illegible]

ITALIANS EXPECT FIGHT

Artillery Activity of Teutons Indicates Big Drive Coming.

Enemy Ariplanes Dropping Manifestos and Peace Literature Instead of Bombs.

London, March 26.—Fighting activity continues comparatively light on other than British battle fronts except for reciprocal bombardments and trench raiding operations.

Along the Aisne front and in Champagne, the artillery duels between the French and the Germans have been somewhat violent. The Americans on their sectors, especially northwest of Toul, are daily keeping up their artillery practice, with visibly good results against the German positions in front of them and now and then carrying out successful raids.

In the Italian theatre the snow on the ground and the freshlets in the valleys continue to hinder the operations on a large scale, but from the preparatory artillery activity and the skirmishes that are being carried out it becomes increasingly evident that this theatre shortly is to be the scene of a sanguinary encounter.

The cannonade along the Piava and the mountain fronts is beginning to show increased activity. The enemy is again resorting to insidious methods of propaganda and the last air raids are notable for the dropping of manifestos and peace literature, instead of bombs.

MINE SINKS FOE TRANSPORT

Gunner Admiral, Soldiers and Grew Are Reported Drowned.

London, March 25.—Finlanders arriving at Stockholm on the gunboat Svenskund, say that the German transport Frankland struck a mine and sank at Moorland, according to an Exchange Telegraph dispatch from Stockholm.

The transport was crowded with soldiers, cannon and munitions and, according to the dispatch, the entire crew, all of the soldiers, and Admiral von Meyer were lost.

SEEKS U. S.-HOLLAND BREAK

Dutch Official to Ask Rupture Dispatch from The Hague Says.

Amsterdam, March 23.—A dispatch from The Hague to the Handelsblad says one of the most prominent members of parliament intends to ask the government whether it is not time to recall the Dutch minister at Washington and hand passports to the American minister at The Hague.

Agree to The Sale of Foe Property.

Washington, March 25.—Legislative riders to the urgent deficiency appropriation bill authorizing the sale of enemy property and acquisition by the government of German owned ship termials at Hoboken, N. J., have been accepted by the house conferees, completing agreement on the bill between representatives of the two houses.

First Dutch Steamer Under U. S. Flag.

An Atlantic Port, March 26.—The first of the fleet of Dutch steamers seized by the United States on Thursday to go to sea under the American flag, left here for another American port, to be loaded and engaged in the coastwise trade. The ship was manned by American officers and crew. This vesel, with about 20 of the smaller seized craft, has been assigned to the control of the United States Shipping board and will be used in coastwise, Cuban and Latin-American trade.

FIELD MARSHAL HAIG

Leader of gallant British troops now facing Teuton hordes.

Field Marshal Haig reports that the British have blocked the German onrush at all points and have hurled the enemy back at some places. Though forced to retire in the early stages of the offensive reports indicate that the story of the British defense will be one of a magnificent stand against overwhelming odds.

BRITISH CHECK FOE; AIDED BY U. S. ENGINEERS

Haig's Troops, Outnumbered Three to One, Counter-Attack Valiently—Drive Enemy Back

FRANCE ENTERS FRAY

Throws Weight of Forces in Great Struggle—Germans Now on Somme Battle Field—Crisis Near—Exhaustion Predicted.

Paris, March 26.—The French have gone to the assistance of the British and have taken over a sector of the battlefront, the war office announces. In the region of Noyon and on the right bank of the Oise heavy fighting with the Germans is in progress.

On Somme Battlefield.

Berlin, March 26.—The Germans are now standing to the north of the Somme in the middle of the former Somme battlefield, says the official statement. Bapaume was captured in night fighting. In the evening Nesle was taken by storm, the statement adds. British, Americans and French were thrown back through a pathless wooded country.

45,000 Prisoners Taken.

More than 45,000 prisoners and more than 600 guns have been captured, the statement says. Guiscard and Chauny were captured in the evening. Violent fighting developed for possession of Combles and the heights west of the town. The enemy was defeated, the statement says.

France Enters Fight.

France has thrown the weight of her forces into the great battle raging on the western front and the British and French armies are now battling together against the onslaught of the common enemy in his desperate attempt to break through the Allied line.

British Hold Fast.

The British armies are holding fast along the line of the Somme and also in the region of Bapaume, Feld Marshal Haig reports. The Germans in the latter section reached the British trenches at only one point and there they were immediately ejected. Their assaults elsewhere were smothered by the British fire with great losses to the enemy.

Driven Across Somme.

On the Somme line bodies of German troops which had succeeded in forcing their way across the river between Lycourt and Brie, south of Peronn, were driven back to the easterly bank. On both sides of the Bapaume German attacks were resumed.

The greatest danger at present seems to be further south where the Germans apparently have driven through the greater width of the region they devastated in retiring in 1917 as the Paris statement reports heavy fighting in the region of Noyon. This town itself is some 10 miles to the west of Chauny in the region on which Berlin reported the repulse of the Franco-American reserves, but the German advance probably has been met considerably short of Noyon.

Deep Wedge Driven.

The wedge driven into the Allied line is evidently a deep one as the French troops are reported by Paris to be contesting for the heights north of the Oise with important German forces. The Oise on this part of the front runs southwest past Chauny and passes to the south of Noyon.

U. S. Engineers Engaged.

British Army Headquarters in France, March 26.—A further advance by the Germans at some points along the battlefront is recorded.

American engineers have again been in the throes of fierce conflict, in which they have done excellent work in transportation.

The presence of the American engineers on the battlefront has long been known. They were praised highly for their gallantry in the battle of Cambrai last fall.

Outnumbered 8 to 1.

Further north the British also withdrew from the Holnon wood. The Germans then drove at Ham, which had been cleared of civilians, and southward into the British positions.

Between Arras and Bapaume the Germans made their first drive against the high ground between the Cojel and Sensee rivers. The German preliminary bombardment was terrific and their infantry outnumbered the British eight to one in some cases.

Execution Is Deadly.

The British withdrew to a line covering Vaux-Vrancourt, Morchies and Baumetz-Lez-Cambrai. The hottest and most disputed point was Mory, which the Germans occupied.

At Veudeuil a group of British held. One company of machine gunners on Henin hill held up the German advance for a long time, doing deadly execution in the densely formed ranks. The Germans have been bringing up artillery in the most able manner behind their shock troops and have been making full use of this arm as the advance continues.

Division Every 2,000 Yards.

The main thrust on the British right flank was south of St. Quentin and the enemy used a division for every 2,000 yards of front, approximately one German division against every British battalion. The purpose was to acquire high ground for a further advance.

On the extreme right of the British the enemy crossed the Oise at two places. One body of the troops came out of LaFere and swung north while another army crossed at Mory and turned south to form a junction with the LaFere group. The battle raged continuously in the lowlands of the Oise.

Defense Is Gallant.

A little further north the Germans stormed Urvillers and Essigny. Just west of St. Quentin the British were forced to fall back but they clung to the Holnon wood, northwest of the city.

South of St. Quentin strong British relouts made a gallant defense and it was nightfall before the last of them with their machine gunners had been reduced.

27 Divisions Hold 97.

Field Marshal Haig is holding the great German drive of 97 divisons with only 27 divisions of battling Tommies, it is stated by the British military men in Washington.

According to the British strategy, it believed here Haig will not rush up greater concentrated forces until he is ready to assume the offensive at the break in the German onrush. During a bombardment it is not well to overconcentrate men, it is pointed out.

British officials estimate the German losses at approximately 100,000 men a day killed, wounded and captured. At this rate, they hold, they are justified in optimism and in the belief that the Germans are defeating themselves by their own losses.

FOE POISED FOR STAB AT ITALIANS IN NORTH

Washington, March 26.—Austro-Germans are preparing for a great offensive on the Italian front, official cables from Rome to the embassy here stated. Official review of the situation at the front shows beyond doubt the drive awaits only return of "natural conditions" in Northern Italy, the dispatches say.

Austrian divisions are arriving steadily, there are daily reinforcements of artillery and machine gun contingents, while new aviation camps and munitions depots are observed under construction.

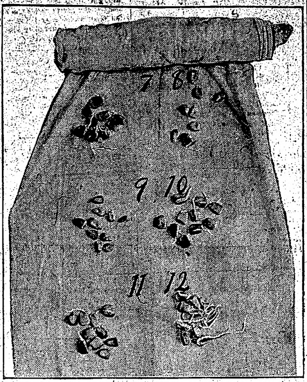
Germans Close on Slav Capital.

Washington, March 26.—German occupation of Petrograd within 24 hours was predicted by American Consul Tredwell in a dispatch just reaching the State department, dated March 20. Virtually all Americans have left the city, the dispatch says. The consul reported from Moscow after returning from a trip to Petrograd. The commissary of the city, he said, had told him he expected the establishment of German control within a day.

To Raise Army of Farm Workers.

Washington, March 26.—An army of 500,000 war emergency farm workers comprising men willing to devote two or three days a week of their vacations to agricultural labor, will be recruited by the United States employment service. Professional men, college students, clerks and other classes will be enrolled. An army of 250,000 boys also is being mobilized. State directors will extend their organization.

RAG DOLL TESTER IS EFFECTIVE IN SHOWING GERMINATION OF SEED CORN



Results of Ear Test by "Rag Doll" Method—Note the Differences in Germination—Some Have Only a Weak Germination While Only One Is a Desirable Seed Ear.

(Prepared by the United States Department of Agriculture.)

There are no large sections north of Virginia, Kentucky, Arkansas and Oklahoma where the corn crop matured and dried well enough to supply any large quantity of seed which can be planted with safety without ear testing. There is very little seed of the 1916 crop available. As a result each section must depend largely upon its own 1917 crop for seed. Germination tests show that much of the supposedly good seed put up last fall is not germinating well. In this crisis there is only one way to make sure of high germinating, adapted seed, which will guarantee a good stand of vigorous growing plants necessary for a high yield. This way is to ear-test the available supply in the locality, and it is the opinion of corn specialists of the department of agriculture that all local seed supplies should be tested before outside sources are resorted to.

Most Practical Tester.

The obviously unfit ears can be eliminated by inspection, but many of those left, which to all appearances are well matured and fit for seed, will be shown by the tester to be weak or dead, while the remainder can be relied upon to give good results when planted. There are many testers in use, but the most practical and economical of them all is the "rag doll." Bleached muslin is a satisfactory material for making the doll. Cut into strips 16 inches wide and three to five feet long. By a line drawn down the center, and cross lines every four inches, the doll is divided into sections, each of which is to be filled with a six to ten kernel sample from an ear to be tested. Select these kernels from different parts of the ear. Number the ears to correspond with the number of the section in which the kernels are to be placed. Fold the outer edges of the tester toward the center so that they meet, roll the doll about a corn cob or other cylindrical object and tie. Soak the doll for a few hours, drain off the excess moisture, and place it where it will not dry out and will be subjected to a good growing temperature. At the end of about five days the tests should be ready for reading. (The accompanying illustration shows a tester ready for reading.) Ears germinating 80 per cent or more should be saved for seed. This year it is well to retain all ears showing a germination of 60 per cent or over, keeping these poorer germinating ears separate. These may have to be used if the supply of seed germinating 80 per cent or better is not sufficient. If used they should be planted thicker than the good seed.

Farmer's Bulletin 948 of the United States department of agriculture, entitled "The Rag Doll Seed Tester," describes fully this method of testing seed corn.

SUPPLYING HUMUS TO SOILS

First and Best Method Is Addition of Stable Manure—Plant Green Crops to Turn Under.

(Prepared by the United States Department of Agriculture.)

There are three general methods of supplying humus to the soil. The first and best is the addition of stable manure. When properly managed it adds large quantities of both plant food and humus. But manure is not always available. When such is the case, the best thing to do is to make it available. Raise more forage, keep more stock, and make more manure. But this takes time and capital, so that other means are sometimes necessary. When stable manure is not to be had, plant crops for the purpose of turning them under, thus adding large quantities of humus at comparatively little cost. Plowing under green crops is called green manuring. Under certain conditions this is an excellent practice.

A third method of adding humus is to grow crops like clover and timothy. These crops are usually allowed to occupy the land for two years or more. During this time their roots thoroughly penetrate the soil. Old roots decay and new ones grow. When the sod is plowed up, more or less vegetable matter is turned under. This, with the mass of roots in the soil, adds no small amount to the supply of humus. Another advantage from the cultivation of clovers and alfalfa is found in fact that they are deep-rooted plants, and when their roots decay they leave channels deep into the earth, thus aiding in the absorption of rains and letting in air to sweeten the soil. Perennial grasses like timothy are particularly valuable as the numerous fine roots leave the soil in very fine tilth.

WASTED GRAIN FOR POULTRY

One of Best Reasons for Raising Chickens Is That Fowls Consume Feed Otherwise Lost.

The grain that is wasted in many barn lots and the scraps from some tables would raise a large flock of fowls, producers of eggs and meat. One of the best reasons for raising

TO REPLACE FARM MACHINES

Farmer Should Make Use of Improved Implements to Overcome Serious Labor Problem.

(Prepared by the United States Department of Agriculture.)

Make every possible use of improved machinery and implements. It is, of course, poor farm management to invest in too much or needless farm equipment, but it is always economy to purchase well selected implements and machines.

The use of the largest and most improved farm machinery, always desirable, is of special importance. Where large acreages are farmed the largest machinery is the most economical. Many of the latest machines embody improvements which will often justify their purchase where obtainable from the standpoint of economy even though the old outfit is still serviceable.

When new machines are bought on large farms to replace others still capable of service, it is suggested that the owners afford an opportunity to other farmers who operate on a smaller scale to purchase this replaced machinery at a reasonable price. This plan should benefit both parties.

All worn-out machinery should be sold for junk at the first opportunity, first removing all bolts or other parts which might be useful in repairing other equipment. It is usually false economy to attempt to use a worn-out machine, as the time wasted with breakages and other delays and the extra power required for its operation usually more than offset the saving effected by continuing it in use.

SWINE NEED STRONG BONES

Feet and Legs of Breeding Stock Should Be Short, Straight, Strong and Wide Apart.

(Prepared by the United States Department of Agriculture.)

The feet and legs of swine are very important in breeding stock. They should be short, straight, strong, of medium size, and placed wide apart. If the pig stands up well on its toes and the dewclaws are an inch clear of the ground we can be sure the bone

DAIRY

PRODUCTIVE COWS PAY BEST

Income Over Feeding Costs Advances Rapidly With Increased Butterfat Yields.

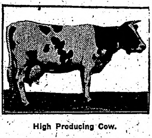
(Prepared by the United States Department of Agriculture.)

The large producers are the most profitable cows in the dairy herd. Every dairyman strives to fill up his herd with animals known to be high producers, but few realize fully the remarkable rate at which profits advance as production increases, say dairying specialists of the United States department of agriculture. The following figures, obtained from the records of 1,668 cows in various cow-testing associations, show how rapidly with increased production of butterfat income advances over cost of feed.

Production and Profit.

Average butterfat production (pounds).	Average income above feed cost.
100	$ 4
150	18
200	29
250	43
300	56
350	68
400	88
450	108

As butterfat production increased from 150 pounds to 300 pounds, income over cost of feed advanced from $18 to $56, or as production doubled income above feed cost increased three times. As butterfat production increased from 150 pounds to 450 pounds income over cost of feed advanced from $18 to $108, or as production trebled income above feed cost increased six times. If no expenses except the cost of feed are considered, the cow that produced 450 pounds of butterfat was as profitable as 27 cows of the first group, whose average production was 100 pounds. If labor and miscellaneous expenses also could be taken into consideration the results would be much more striking.



High Producing Cow.

A further study of the records showed that the cost of roughage was about the same for all groups, but that the total cost of feed was somewhat greater for the more productive cows. The increased profit should therefore be credited in part to better feeding, but apparently it was more largely due to better cows. The present high cost of feed will eliminate the low-producing cow, or it must eventually eliminate the dairyman who keeps such cows. More cows are needed, but better cows are needed more. Certainly it pays to keep good cows and to feed them well.

BARREL TYPE OF CHURN BEST

Found by Dairy Specialists to Be Most Satisfactory—Scald Preparatory to Churning.

The barrel type of churn has been found by dairy specialists to be one of the most satisfactory churns. The dasher or plunger type requires a somewhat greater expenditure of labor. Earthenware churns are undesirable unless perfectly glazed, since if pores are exposed, they absorb milk and cream which later decay. The churns with mechanical devices inside them are difficult to clean and sometimes injure the body of the butter. The churn should be scalded preparatory to churning, but should be cooled with water before the cream is placed inside.

STRIVE FOR STRONG CALVES

Six Weeks Before Parturition Cow Should Be Turned Dry—Aim to Prevent White Scours.

The care of the calf should start about six weeks before parturition, by turning the cow dry and enabling her to rest and put on flesh. If the cow is not turned dry, weak calves will generally be the result. Ordinarily a calf will be nursing in less than an hour after birth—extra strong calves in much less time. The herdsman or attendant should disinfect the navel of the calf at once in order to prevent white scours. A solution of carbolic acid or tincture of iodine will be very effective.

RAISING HEIFERS FOR DAIRY

Main Object Is to Produce Animals With Plenty of Constitution and High Capacity.

The main object in raising dairy heifers is to produce animals with plenty of constitution and capacity. The feed should be bulky and at the same time contain plenty of protein and ash. The protein and ash aid in the building of muscle and bone, and bulky feeds distend and develop the

MOTOR FOR REMOVING SNOW DRIFTS

The fad of ice skating is making such a hit among the frozen people of the East that this clever invention has been devised by the superintendent of parks, Boston, for removing snow drifts and enabling skaters to have a smooth surface over which to glide. The blade can be adjusted to any angle, and it makes a clean job of the deepest snow piles. Mr. R. J. Hayden conceived this new method of removing the snow, and he intends to offer it to the government for use at the army cantonments.

SET OF VALVES OF IMPORTANCE

Few Realize Need of Adjustment of Lifters—They Are Hard to Reach.

THEY ARE OFTEN NEGLECTED

Best Engine in World Will Lose Power If It Is Not Given Attention at Proper Time—Twisting Wrong Nut Is Harmful.

One seldom realizes the importance of correct adjustment of the valve lifters, yet the best engine in the world will lose power if these are not properly set.

Since they are usually difficult to reach, dirty to handle, and do not force themselves on the driver's attention, they are neglected until the trouble becomes really serious.

Of course if they become noisy the knocking is so noticeable that the owner is forced to make adjustments immediately. But ordinarily these parts receive scant attention and so the loss of power is attributed to either the carburetor or ignition, until a thorough overhauling of the motor leads to the discovery of the real trouble.

As aforementioned, they may become noisy, due to the fact that the space becomes too wide. As they rise they give a hammer blow to the valve stems, causing a knock which may readily be heard. By stopping the motor, removing the valve cover plates and shaking them up and down the ones out of adjustment may readily be located.

Examine Adjustment Carefully.

Sometimes several are at fault, so, while about it, set all of them. Examine the adjustment carefully to understand it, for much damage may be caused by twisting the wrong nut. One is locking nut, which must be loosened first. The adjustment nut is then set to the right distance and the locking nut fastened.

The opening should approximate one-sixty-fourth inch for exhaust valves, and three-one-thousandths inch for inlet valves. Use an ordinary business car as a gauge for the exhaust valve clearance. If possible to have a card the right thickness it is best to do so. This can be readily measured with a micrometer. A piece of notepaper is about right for inlet valve clearance. It will be found difficult to adjust the space correctly unless the following directions are followed: Place the desired gauge in space and screw adjusting nut until it touches. Now unscrew it either one-sixth or one-fourth turn. Then lock the nut that holds it in place. Try the gauge and see if it has just a slight friction.

Reason for Unscrewing.

The reason for unscrewing the adjusting nut is that the locking-nut pushes it up and so throws the adjustment out of true. If the clearance becomes too great the valves open late and close early.

Since they should move exactly as the designer intended, it is evident that the engine will lose power if both ends of a stroke are cut off. If the clearance is too small the engine will lose compression and with it a great deal of power. This is due to the fact that as the engine heats up the valve stem lengthens.

As they grow longer they use up the space between valve stem and valve lifter. If the space is too small the valve stem rests on valve lifter. As it lengthens the head of the valve is lifted off its seat in the cylinder, opening the valve and so losing the compression.

It will be evident from this that valve clearance is one of the important things about a motor and one that should be borne in mind and inspected whenever one looks for causes of lost power.

Look After Water and Oil.

EIGHT SIMPLE RULES FOR SAVING GASOLINE

Suggestions Made Are Principally on Handling Car.

Carburetor Adjustment of Great Importance and Should Not Be Attempted by Inexperienced Owner—Oil Is Essential.

No matter what the car, or what its size, the driver can save gasoline if he will follow the simple suggestions made by an engineer of a big automobile concern. Most of them are a matter of handling the car. Here they are—eight of them:

Carburetor adjustment is of prime importance. A mixture that is too rich or too lean will cause more gasoline to be used in performing a given amount of labor than a correct mixture. But don't attempt to adjust your carburetor unless you know how.

Economical Speed.

Most cars have what may be termed an economical speed. It ranges from 12 to 20 miles per hour. When you get above that speed the amount of gas used per mile increases.

Anticipate slowing up and stops. Close the throttle and disengage the clutch far enough ahead of the place you want to stop so that very little use of the brake will be necessary. Whenever you use the brakes you destroy momentum that has required gasoline to create.

Accelerate gradually. It takes less gas to do that than to reach a fast gait quickly.

Gas Makes No Showing.

Whenever you allow the engine to run with the car standing you are using up gas that doesn't make any showing on your odometer.

See that the brakes are properly adjusted. Tight brakes cause friction and friction takes power, and hence gasoline, to overcome.

Good lubricating oil is also essential to gasoline economy.

Finally, tires should be properly inflated. Soft tires drag and require more power to propel the car than tires containing correct air pressure.

GIVES DIRECTION OF MOTOR

Visible Signal Provided Mounted to Swing to Either Side—Chauffeur Has Control.

In illustrating and describing an indicator for motor vehicles, invented by B. M. Takahashi of Harlowtown, Mont., the Scientific American says:

The mechanism provided is capable of being attached to existing motor vehicles for indicating to pedestrians, chauffeurs and drivers of other vehicles, traffic officers and the like, the direction which the driver of the motor vehicle intends to take, to the right, the left, or straight ahead, and wherein a visible signal is provided mounted to swing to either side and normally occupying a central position, together with controlling mechanism under the control of the chauffeur for swinging the signals.

Indicator for Motor Vehicles.

WHEN BATTERY NEEDS WATER

Dial Recently Invented by Garage Man, Makes Lack Known—Warning Signal Is Given.

An instrument recently invented by a garage man indicates by its dial on the dashboard when the storage battery of an automobile needs water through evaporation or leakage of the electrolyte in any of its cells. The dial is that of a voltmeter installed on the dash and connected to the battery by wires forming a closed circuit. When the fluid in the battery reaches a dangerously low level, the warning

NOW RAISES 600 CHICKENS

After Being Relieved of Organic Trouble by Lydia E. Pinkham's Vegetable Compound.

Oregon, Ill.—"I took Lydia E. Pinkham's Vegetable Compound for an organic trouble which pulled me down until I could not put my foot to the floor and could scarcely do my work, and as I live on a small farm and raise six hundred chickens every year it made it very hard for me.

"I saw the Compound advertised in our paper, and tried it. It has restored my health so I can do all my work and I am so grateful that I am recommending it to my friends."—Mrs. D. M. ALTERS, R. R. 4, Oregon, Ill.

Only women who have suffered the tortures of such troubles and have dragged along from day to day can realize the relief which this famous root and herb remedy, Lydia E. Pinkham's Vegetable Compound, brought to Mrs. Alters.

Women everywhere in Mrs. Alters' condition should profit by her recommendation, and if there are any complications write Lydia E. Pinkham's Medicine Co., Lynn, Mass., for advice. The result of their 40 years experience is at your service.

Daily Thought.

Degrees infinite of luster there must always be, but the weakest among us has a gift, however seemingly trivial, which is peculiar to him and which, worthily used, will be a gift also to his race forever.—Ruskin.

IN THE SPRING

will be the great test of a life and death struggle on the Western front. In the everyday walks of life, it is the spring time that brings ill health. One of the chief reasons why the run-down man finds himself in a bad state of health in March or April, is because he has spent nearly all his hours for the past four or five months penned up within the walls of house, factory or office. It is the reason for our diminished resistance—that is, lack of out-door life, coupled with perhaps over-eating, lack of good exercise, insufficient sleep, and constipation. In other words, we keep feeding the furnace with food but do not take out the "clinkers," and our fire does not burn brightly. Always keep the liver active.

There is nothing better for health than taking an occasional mild laxative, perhaps once a week; such a one as you can get at any drug store, made up of May-apple, jalap, aloes, (sugar-coated, tiny, easily taken), which has stood the test of fifty years of approval—namely, Dr. Pierce's Pleasant Pellets. But for the "Spring Fever," the general run-down condition, the lack of ambition, the "blues," one should take a course of treatment every spring; such a standard tonic as Dr. Pierce's Golden Medical Discovery, now to be had in tablet form in sixty-cent vials. Watch the people go plodding along the street. There's no spring, no vitality. A vitalizing tonic such as this vegetable extract of Dr. Pierce's gives you the power to force yourself into action. The brain responds to the new blood in circulation, and thus you're ready to make a fight against stagnation which holds you in bondage. Try it now! Don't wait! Today is the day to begin. Gain a little "pep," and laugh and live. Vim and vitality are the natural out-pouring of a healthy body. It does not spring up in a night. Try this spring tonic, and you gain the courage that comes with good health.

Forced to Falsehood.

"I like a truthful man."

"And yet," commented Miss Cayenne, "you wouldn't have any esteem for a dentist who owned up at the outset that he was going to hurt you terribly."

YOU'LL LAUGH! DOESN'T HURT TO LIFT CORNS OUT

Magic! Costs few cents! Just drop a little Freezone on that touchy corn, instantly it stops aching, then you lift the bothersome corn off with the fingers. Truly! No humbug!

Try Freezone! Your druggist sells a tiny bottle for a few cents, sufficient to rid your feet of every hard corn, soft corn, or corn between the toes, and calluses, without one particle of pain, soreness or irritation. Freezone is the mysterious ether discovery of a noted Cincinnati genius. Great!

Cupid Makes Early Call.

…n American professor, who has …t his life investigating and has …cted the evidence of 1,203 young …e, declares that both sexes start …r wounded by Cupid's darts at the …f three and that a woman's love …ches maturity at twenty-two and a … at twenty-four.

Velvet-Making.

…lvet was developed and originated … fur in China. Thence velvet-…ing was introduced into India, and …he fourteenth century into Italy, …e that sort of fabric especially …nted, and where the art of velvet-…ng reached its height.

APRIL 1 LAST DAY FOR FEDERAL RETURNS

Penalties for Income Dodgers Are Severe—Get Your Return in If You Are Liable.

April 1, 1918, is the final day allowed under the federal income tax law for the filing of federal income tax returns. Persons who are required to file returns under the provisions of law and who fail to get their returns in on time are subject to severe penalties, as follows:

For making false or fraudulent return, not exceeding $2,000 or not exceeding one year's imprisonment, or both, in the discretion of the court, and, in addition, 100 per cent. of the tax evaded.

For failing to make return on time, not less than $20 nor more than $1,000, and, in addition, 50 per cent. of the amount of tax due.

If on account of illness or absence from home you are unable to render your return within the time prescribed by law you may obtain an extension of 30 days if a request therefor is filed with the collector of your district before the due date of the return. In this request you must state the reason why the return cannot be filed within the time prescribed by law.

Collectors of internal revenue are not authorized to grant extensions of more than 30 days, but the commissioner of internal revenue has authority to grant a reasonable extension beyond 30 days in meritorious cases. If you desire an extension of more than 30 days your request should be addressed to the commissioner and should contain a detailed statement covering the reasons which make it impossible for you to file your return on or before April 1.

The internal revenue men are now completing their tour of the country, during which they were in touch with the people of every city and town. If you failed to get in touch with the deputy which visited your section it is not too late to get advice. Consult your postmaster as to where the nearest deputy is now. Get your blank form, study the directions and the requirements as shown thereon and make your return without fail if your income was sufficient to come within the bounds named in the law.

It is pointed out by Commissioner Roper that it is important that the people comply with the federal laws as fully as they are complying with the drafts for men and the conservation of foods and fuel. "The war must be paid for," says Commissioner Roper. "Congress has as much right to conscript a just portion of income as it has to conscript our boys. The tax for 1917 is designed to reach moderate as well as large incomes, so that all persons who are in financial position to bear a portion of the heavy government expenses can be assessed in proportion to their ability to pay

"The man who is barely making a living or barely supporting a family is not affected by the 1917 law. But the man who is able to bear a share of the burden has been reached by the new law, and he should accept his responsibility in the same patriotic spirit that our young men have shown in offering themselves for this great purpose of the country to make the world safe for people of all kinds to live in and to govern themselves."

This tax is one which recognizes women as on an equal basis with men. The unmarried woman or the married woman with a salary must make tax return just the same as any man. Only the woman supporting her mother or other members of her family may take out $2,000 exemption.

Under the law the head of the family is the one whose earning power contributes to the family's support.

Similarly a widow, with small children to support can take out $2,000 exemption and $200 additional exemption for each of her children under eighteen. Thus it is intended that the law shall work no hardship to women having to struggle to get along. But each must file return if her income is $1,000.

A man whose wife dies and who is left with small children to support upon a moderate income may also take full exemption under the new tax law and also claim $200 exemption for each of his children under eighteen.

The widower under the law is a single man and must make tax return accordingly. Married men need not file returns unless they are earning $2,000 or more.

"This is as much a national obligation as the reporting for duty of a man drafted for service with the colors," says D. C. Roper, commissioner of internal revenue. "As it stands, it is much a matter of the man or woman's own conscience. It is for him or for her to determine just how far he is liable to the tax. He must figure his own income and if it reaches the figures named in the law must make faithful report upon it to the proper authority.

"This tax is distinctly a war measure and will be in effect during the war.

"This is a people's tax—it reaches right down into the pockets of the small wage earner; it makes him a partner in the job of winning the war."

Making Bulgarian Milk.

The milk of the Bulgarians, well known all over the world for its superior nutritive quality, is made by exposing it to the sun, the rapid development of the germs under the action of the ultra violet rays being such that when it becomes dry they are in highly concentrated form.

Moss Is Valuable.

"Moss" is the popular name for several kinds of small flowerless plants which flourish in damp places. In mountainous and wet districts types of moss are of great service in retaining the water and preventing sudden floods.

Too Particular.

The girl who thinks more of her Georgette crepe waist than she does of her beau and refuses to permit it to get mussed will never march to the well-known tune of Mr. Mendelssohn.—Florida Times-Union.

A Leaking Faucet.

When the faucets in the bathroom or kitchen leak or do not allow the water to flow freely they need a new washer, and the washers cost five cents each. To put on the washer turn off the water, the rod is usually under the sink or in the basement, and unscrew the faucet; take off the worn out washer and slip on a new one and turn your water on again and presto—the work is done and no repair bill to pay.

Make Windows by Hand.

In making stained-glass windows every bit of the work is done by hand, and it is amazing to realize how many times each piece of glass must be handled. An operator tells of counting up one day and finding that no less than twelve times were necessary. All the leadwork is done by hand too, even the opening of the little slots into which the glass is fastened.

Record Floods in China.

The Celestial kingdom has been the scene of some of the most terrible floods on record, observes London Tit-Bits. In 1801 the Yellow river overflowed and destroyed nearly 2,000 villages and towns and 5,000,000 people. Two years later there were great inundations in Mongolia, caused by typhoons, resulting in a death roll of 6,000.

Do Your Work Properly.

Make up your mind that you will do what you have to do the very best you know how. There is very little work that is really difficult. But all good work is painstaking. If you put your whole soul into your work, you will learn to enjoy it, and your work will become constantly better and more worth while.

Speaking of Metallic Rings.

"I might have known that you would have refused me," said the poor but otherwise honest young man, who had failed to make an impression on the maiden's heart. "I noticed a metallic ring in your voice when I entered the parlor tonight, that bode me no good."

"And had you been a little more observant," she replied, "you would also have observed a metallic ring on my third finger, which Charlie Gotrox placed there last night."

Thirty seconds later his feet were following each other along the homeward trail.

THE ELEVEN TOWNS.

VOLUME XIII No. 14 GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, THURSDAY, APILR 2, 1918. $1.50 PER YEAR.

MINNESOTA HISTORICAL SOCIETY

Market Reports,

Goodridge, Minn.

Corrected every Wednesday.

Wheat	2.02
Oats	.80
Barley	1.84
Flax	3.81
Rye	2.56
Butter	.35
Eggs	.30
Vivo Flour	$5 60
Mascot Flour	5.60

An urgent appeal to the farmers of the statet of Minnesota to market the wheat they now have on hand before May 15th, was issued this week by National Food Administrator Hoover, in whidh the necessity of this marketing is brought out by Mr. Hoover, in the statement that this a war call from Uncle Sam who is fighting for his lige; Tne message reads:

"In order that we may comply with the urgent demands of the allier for wheat and at the same time take c re of our own domestic supply we urgently need this year an earlier and mere complete marketing of the wheat in fargers hands than usuai. The Allies are taking from us 50 per cent of cereals other than wheat to mix their bread. Inasmuch as the people in the Allied countries and the soldiers must be fed with bread baked in bakeries it it impossible for them to prepare bread made wholly with all other cereals. I, therefore, appeal to all of the farmers in the state of Minnesota that they shall bring all of their wheat except their necessary reserve for seed to market before May 15." This is a war call and a service to Uncle Jam who is fighting for his life. If your local miller is unable to buy all the wheat that is offered, market it in the customary trade channels through which it will reach the food administration grain corporation."

BIDS WANTED.

The town board of High Landing will receive sealed bids up to April 10th at 7 o'clock for dragging the following roads, the coming season.

Rt. 1.—Four miles running North from High Landing Post Office and two miles west between Sec. 5 and 8, and Sec. 6 and 7.

R. 2—One mile south from Erle and five miles west.

R. 3—1½ miles running South from N. E. corner of Township and three miles west on town line.

The board reserves the right to reject any or all bids.

H. I. Fingrad, Clerk

Four Thrift Stamps will be given to any girl or boy for each name sent of those that need glasses, if they will get them in gold frames on my next visit. Names must be sent before any date advertised. If this is not understood, write to O. G. Mugg, O. S., Grand [illegible]

GOODRIDGE

The most progressive and the biggest little town in northern Minnesota.

If you need any painting or Calsomining done, drop a card to G. L. Randall, Mavie.

Farmers and other breeders of poultry should practice selective mating to improve their flocks and as an economic proposition. There are many good reasons for selecive mating of the breeding in our poultry.

It is through this practice that breeds, varieties and strains have been built up to an ideal. It is through this plan of breeding that the two minute horse was produced, the cow that makes a record of more than 1000 pounds of butter and the hen that lays 300 eggs in a year In other lines of selective breebing the same evolution have been brought about.

Why select the breebing pen? Because, in every fleck of hens there are comparatively few thrt approach the ideal of their kind, and not all of those possess characteristics and conformation of the good layer. Then too, the late developing pullets and the hen lacking in vigor will be laying during the breeding season, if at no other time, and thus the hatching of chicks lacking vitality.

All these can be overchme by careful selection of the breeders and greater interest will be engenered in our poultry operations at the same time.

Progressive farming at once suggests the importance of the selecting one of the various breeds varieties of standard-bred fowl, and breeding it pure. Study the correct type of your breed and follow closely in mating up your breeding pens, but characteristics of habits count for even more than type in detecting the good layer, and this important feature must not, on any account, be overlooked, The good layer is always active and alert. She is up and hustling early in the morning and the latest on the roost at night. She stands squarely on legs set well apart, has a deep, broad body with great capacity, a comparatively short well curved beak, a broad crown to her head, and fine texture to the comb. She is usually a good singer and always looking for her feed. Good disposition in a hen is an asset every time, and should be cultivated. The male heading the pen is half the flock, and it is very important that his dam posses all the characteristics above stated.

NOTICE FOR PUBLICATION.

DEPARTMDNT OF THE INTERIOR,
U. S. LAND OFFICE at CROOKSTON, MINN.

March 26, 191

NOTICE is hereby given that Bets H. Gedestad, of Goodridge, Minn. who, on August 16th., 1911, made Homestead Application Serial, No 06355, for Lots 1, 2 and S½NE¼ Section 1, Township 154 N., Range 41 W., 5th Principal Meridian, has filed notice of intention to make Commutation Proof, to establish claim to the land above described, before, before Wilhelm Michelet, U. S. Commissioner for district of Minnesota, at Thief River Falls, Minn., on the 6th dry of May, 1918.

Claimant names as witnesses;

Torje Hegtvedt, Kittel Jordeshauge Life Jordeshaugen, Nick Bunchun all, of Goodridge, Minn.

Proof made according to law under which entry was made.

War Garden a Pledge Of Loyalty

Any Family Which Can Grow a Garden, and Doesn't Will Fall Short of Duty to Nation.

Each family that can grow a garden this year and doesn't, will fall short in the most urgent services demanded bp the nation.

Garden products are consumed where they are growh, thus transportation is conserveb. Gardening is the extra war work of those who do it, so no added strain is put upon the labor supply of the country. Alfo everything grown in war gardens is in addition to the normal food production; hence it releases, pound for pound, that much more food for America's soldiers and allies. At the same time it reducef, dollar's worth for dollar's worth, the living expenses of each and all who grow garsens—money that may very well be invested in thrift stamps or liberty bonds.

The Commission of Public Safety calls upon all town and city dwellers throughout the state to take up gardening. The directors of each County is urged to take the lead in his county. Such directors have been urged to call meetings, organize clubs and not only arouse the people to the need for gardens, but to show them how easily gardens may be grown.

In general, hhwever, gardening is a task for the family or the individual and each individual and family should realize that fact. Also each individual should realize that the time for talking about gardening has past, that the time for planting is at hand. And each should remember that a war garden will be a sort of growing badge of patriotism, a pledge of loyalty to the nation.

THE MONEY COMES BACK.

The cycle of money invested in Liberty Bonds is short and complete. The people lend the money to the Government, the Government lends some to our Allies, and our Government and our Allies straightway spend the money, or the greater portion of it, among the people of the United States. In some instances the money paid in by wage earners on one installment of Liberty Bonds is paid by the Government to their employers, and by their employers paid back to them in the way of wages before the next Bond installment is due.

MUSIC REACHES THE HEART

Performer Dealing in Emotions Captivates Women More Swiftly Than the Poets or Painters.

The poet deals in words, while the painter deals in color and form, but the musician deals in emotions and therefore his appeal to women is always more swift, as it is always more subtle, than the appeal of any other artist.

Such, summed up by a writer in the Philadelphia North American, is the latest theory to explain the lure of music for women and the attraction of the dark-eyed, long-haired musician himself.

The average woman, say the theorists, is hemmed in with conventions that make her feel a prudish discomfort if a book or a poem talks too openly of what she thinks of, but never puts into words. With a picture it is the same way, but in the music, she hears with emotional delight all the romanticism, all the beauty, and all the vague dreams which she hides so closely from the world. In consequence she reads into the music her own feelings, and then she confuses the musician with his music. He, too, is keyed up to a high tension; he feels telepathically the emotion he has communicated, and so a spark is kindled between them. As for the result—well, sometimes it is love, sometimes a momentary infatuation—that all depends upon how much music they hear together and how much pent-up nervous emotionalism lies buried in the woman's soul.

Small Prescriptions.

Many physicians have a habit of writing prescriptions without calculating the quantity of medicine their patients are to take. This leads to a great waste of drugs and much unnecessary expense. Which leads the New York Medical Journal to urge physicians to be more careful.

Another evil result of this far too common practice, is that partly used prescriptions are stored away in the medicine chest, and next time the patient has, or thinks he has, the same symptoms, he takes what he supposes to be the same medicine.

But the chief reason why physicians should not prescribe four or six ounces when they know only one or two will be used, is that it is wasting the drugs and making the patient pay far more for his medicine than is at all necessary.

First Introduced Canes.

The Mexicans first used canes in America. When the Spanish conquered the country, a queer custom was introduced. The chief executive of the towns carried a stick with a gold or silver head. It was a kind of scepter.

The people, of course, rarely knew how to read or write, and when anyone was wanted for a crime, one of the mayor's subordinates would take the cane, find the culprit and place it horizontally upon the latter's chest. The proceeding was equivalent to a summons, and the man had to appear before the mayor under the penalty of being cast into prison. This action was borrowed from Spain, where it still prevails in the more important actions.

Find Skeleton of Giant.

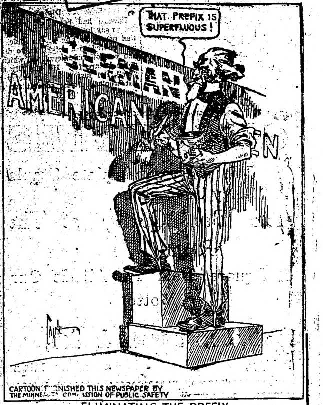
A perfect sketeleton was uncovered in Surrey, England, during the work of carrying out alterations to surface water drainage in one of the main streets in Farnham. The chief bones were in a perfect state of preservation, and were sufficient to show that the body was that of a man of unusual stature. Close by was found a bone of a horse. The site of a Norman cemetery is only a little distance from the spot where the body was found, and here some years ago cinerary urns were discovered, which were stated to be perfect examples of first-century urns. Some of these are now preserved in Waverly abbey.

Best Kind of Play Is Work.

One of the best kinds of play is work. Many of the elements of play enter into work if it is performed in the right spirit. The most satisfying forms of play are those in which interest is excited; competition, with desire to succeed and accomplish some definite end, makes the game worth playing. Work is fatiguing and distasteful when it is lacking in these elements.

Take Pains.

Genius has been defined as an innate capacity for taking pains, and talent, which is a sort of second cousin of genius, has the same characteristics, observes an educator. One who will take pains enough will meet with a measure of success. And no one who belittles the need of patient, plodding work is likely to succeed, no matter [illegible] endowments.



THAT PREFIX IS SUPERFLUOUS!
GERMAN
AMERICAN
CARTOON FURNISHED THIS NEWSPAPER BY THE MINNESOTA COMMISSION OF PUBLIC SAFETY

ELIMINATING THE PREFIX.

TYPISTS MAKE BAD ERRORS

Slips Are Very Amusing in Some Instances, and Hard to Explain in Many Others.

If some lady typists can make a mistake they will, and some of their efforts are very amusing, a humorist relates. One typist produced the remark, in regard to a rather conceited man, that "his one weakness was onion sauce," the real word being "omniscience." Another, in an obituary of a great theologian, spoke of his belief in the "immorality of the soul." Just the omission of the "t" from "immortality" made all the difference.

Some few years ago a speaker at a meeting waxed very sympathetic over the death of the wife of a manager of the company at some fever-stricken place in West Africa, and the reporters who were afterwards getting out this speech together to save time were in a jocular mood. At the end of the pathetic oration the one who was dictating said, for a joke, and to amuse the others, "Loud Laughter," and the foolish girl, who was as much a machine as the typewriter at which she sat, actually put the words in. Moreover, they appeared in print in a financial newspaper, and a very humble apology had to be made by the editor afterwards, although any explanation of the "slip" was impossible.

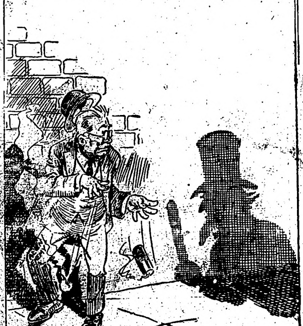
The Thin People.

Overeating is a common cause of emaciation, paradoxical as this statement may seem. Many of our thinnest neighbors are the biggest eaters of the community, Physical Culture Magazine says. It is an old-fashioned saying that these people "eat so much that it makes them thin to carry it around." In any case, it is not a question of the amount of food one swallows, but a question of how much is digested and assimilated. Many persons will gain in weight upon discontinuing the three-meal plan and adopting the plan of two meals per day. The stomach is then no longer overburdened or overworked, and the digestion is so much more perfect and the health so improved that a gain in weight results naturally.

Carnauba Wax.

Carnauba wax is made from the leaves of the carnauba plant, indigenous to the state of Piauhy, Ceara, and Rio Grande do Norte, in northeastern Brazil, whose roots are used locally as medicine, whose branches are used for bridge and housebuilding because they resist the attacks of insects, and whose fibers are used in rope and paper making; the wax has been used extensively in adulterating beeswax, but is finding an honest market on its merits, not only for candle manufacture, but for coating the insulating material of electric wires, etc.; the annual production of wax in Rio Grande do Norte is about 450 tons a year, valued at about $250,000; perhaps three-fourths of this is exported; but the forests of carnauba plant can produce, if developed, many times this quantity.

A FOREBODING SHADOW!



[illegible] twenty-five or thirty bushels of grain to market [illegible] that can now be made by [illegible] in half a day. Then the patient animals did well to jig along at the rate of two or three feet a second.

Severe Test.

Perhaps no test of one's poise and manual dexterity is more difficult for a man of sedentary and intellectual [illegible] on the effort to pick up seven or eight newly released watermelon seeds from the tablecloth with his left hand without arousing so much as a passing suspicion in his wife's breast that they're there at all.—Ohio State Journal.

Edward's Diplomacy.

Edward had been told repeatedly not to say he did not like food which was passed to him at the table. He was invited to a neighbor's to dinner and was offered cherry pie, which he did not care for. He tactfully said, "Well, I'm just crazy for cherry pie, but won't you just save it for supper?"

EARLY MAN [illegible]

Ancestors of Present People Were Called Upon to Face Beasts That Inhabited Plains and Rivers.

The first houses were caves. Early man was a fighting animal, and had to contend against the huge and ferocious beasts that infested the plains and rivers, observes a writer. His dwelling naturally had to be a place of security as well as a habitation. Caves were natural and artificial, the latter being hollowed out of solid rock by rude flint instruments. Most of them were formed in the sides of cliffs and among high, rugged hills.

To those early ancestors of ours, the primeval men and women who secured, as one would think, but scanty shelter and protection from these stone caves and holes in the rock, we apply the generic term of cliff dwellers.

They were entirely ignorant of agriculture, and subsisted by hunting and fishing and on the natural products they found growing in a wild state.

What is very remarkable, at our very doors can still be seen the typical houses and handiwork of those pre-historic tribes in the caves of the Lancos river in southern Colorado. These, in most instances, are as well preserved as when their ancient occupants deserted them—perhaps 10,000 years ago. When inhabited they were reached quite frequently by notches cut in the rock, and at other times rope ladders must have been used.

Gladstone a Hard Worker.

Gladstone was a hard worker, with no dreads with regard to work, says the American Magazine.

He turned from political responsibilities of the heaviest to Greek for recreation, and lived his four-score years and more, just as Pope Leo XIII, turned to Latin poetry for his relaxation from world-wide burdens, and lived on beyond four-score and ten, living so hopefully that when, at the little dinner given him on his ninetieth birthday, one of the cardinals said, in proposing a toast to him, "Here's that you may live to be a hundred, holy father," the old pontiff replied: "But why limit me to a hundred?"

They were contemporaries of Ranke, the German historian, who at the age of ninety-one proposed to write a history of the world in 12 volumes, one volume to be completed each year, and actually lived, I believe, to complete nearly half of it.

These men had no dreads; but they allowed their energies to work on, without any fear of exhausting their vitality.

Almost the Speed Limit.

"At Chattanooga," said a veteran of the Civil war, "one of the men in my company left early in the action, and no one saw him till after the battle, when he appeared in camp unwounded and unabashed. Some of the boys accused him of running away, but he wouldn't admit it.

"'I only retreated in good order,' he declared.

"I heard of the matter, and a few days later I asked him if he had any idea how fast he had 'retreated.'

"'Well, I'll tell you, cap'n,' he said. 'If I had been at home, and going after the doctor, folks that see me passin' would have thought my wife was right sick!'"—Harper's Monthly.

[illegible] and the [illegible] of the city themselves started the conflagration in all parts of the city. It was [illegible] these fires which forced the little corporal to commence his disastrous retreat across the snowbound steppes of Russia. Napoleon had his headquarters in the Kremlin, and while the flames were not so destructive there as in other parts of the city, yet they forced evacuation.

Compressing Cotton.

Scientific investigation has proved that compression of a high degree does not injure the fiber, and cotton is packed in other countries today at a density substantially three times that of ours by the most economical practice. The Egyptian package has a density of about 37 pounds a cubic foot; the Indian cotton is compressed to 45 pounds per cubic foot; while some Indian and Chinese baling plants effect a density of from 55 to 60 pounds of cotton per cubic foot.

The Arab as a Neighbor.

The Arab makes a good neighbor. His love of the beautiful in architecture is evidenced in a hundred cities where his handiwork survives. Every visitor to Granada knows what was left behind at the Alhambra. When the Arab met Rome, he produced Palmyra; having absorbed the Sassanian dynasty of the neo-Persian empire in 637, the Arab created Bagdad; in overrunning Spain, he worked magic at Cordova and Secille.

To Remove Smoke Stains.

This suggestion will be beneficial to housewives who have not the convenience of electricity or the modern gas fixtures. Frequently the ceiling above an old-fashioned gas jet becomes discolored from smoke and heat. The discoloration may be removed if a layer of starch and water is applied with a piece of flannel. After the mixture has dried it should be brushed lightly with a brush. No stain or mark will remain.

Women Catch Fish With Hands.

Fishing in Samoan seas is often done by the women, and without nets, boats or hooks. They simply wade into the water and form themselves into a ring. The fishes being so plentiful, they are almost sure to imprison some in the ring. These women are very quick and active, and every time they catch a fish with their hands they simply throw it, alive, into the basket on their back.

Translation of Y. M. C. A.

W. Gordon Griffiths of the Y. M. C. A. told an audience at Cefu that he was proud to be a Welshman although he was unable to speak the "language of Paradise." He had, however, learned one thing in Welsh and that was that the letters Y. M. C. A. may be translated to mean "Yma Mae Cyfle Arderchog" ("Here is a splendid oppertunity.")

Coffee a Nutrient.

Coffee is not a stimulant pure and simple, but a very considerable nutrient. Justus Liebig proved that, by taking equal lots of men, working in the salt mines, feeding one lot bread and meat, the other bread and coffee, and comparing results. The coffee squad did more work and came out in better shape than the meat eaters.

Strict Regulation.

Freeman was visiting at his grandpa's home, and as he was a mischievous little chap, was constantly being told, "Don't do this," and "Don't do that." Finally, with a look of disgust on his face, he climbed up into a chair and asked, seriously, "What can a fella [illegible] this house, anyway?"

Studying Plant Life in India.

In order to encourage arboriculture and the study of plant life the government of India has offered a series of valuable prizes to be awarded to those who are most successful in various lines in connection with the growth of trees and shrubs on government land.

Neatly Put.

We are told that Tom Hood liked best to work in a serious vein, on such poems as "The Bridge of Sighs." As he put it himself: "It's only for my livelihood that I'm a lively Hood."—Boston Transcript.

Endurance of Reindeers.

The reindeer is said to be able to endure more fatigue than any other draft animal except the camel. It has been known to pull 200 pounds 10 miles an hour for 12 hours.

Wrong Side Up.

"Why didn't you toss a coin to decide which to do?" "I did; but the darn thing didn't come down the way I wanted it to."—Buffalo Express.

Climbing.

You can climb no higher than Fuji with your feet, but with your mind you may inherit eternity.—A Japanese Philosopher.

Cruel Enlightenment.

He—"You seem to think I couldn't make any woman happy." She—"Oh, yes, there is one; your widow."

Arthur Tvedt returned to Thief River Falls Monday morning to resume his studies at High School after spending the Spring vacation at his home here.

Richard Menzel returned to his studies at the Thief River Falls High School Monday after spending the Easter vacation here.

P. C. Halvorson sold his stock to Kompelin & Aubol of Erie last week The Inventory was compieted and the stock taken over immediately.

The Northwest Experiment Farm, Crookston, has choice seed for sale including Oderbrucker Barley; No. 281, No. 295, and Newmarket oats; Marquis, No. 169, and Velvet Chaff wheat; and flax. This is a good chance to secure a pure bred seed supply for a small clean field which will furnish choice seed for your fields the next year. Get in touch with your county agent regarding pure seed trials in cooperation with Northwest Experiment Station.

The Community Club and Literary Society will meet in the schoolouse Friday evening April 12th. Mr Ross P. White and Miss Hazel Rockwood will be the speakers. Mr White will speak on Alfaifa and calves, and Miss Rockwood will speak on Sewing and Gardening.

Church Announcement.

(Nor. Luth. Church)

Services Sunday forenoon at 10:30 by Rev. Tungseth and in the afternoon by Rev. Sundheim.

G. A. Tungseth, Pastor.

FOR SALE.- Abont 150 bu. of flax and a lot of young pigs.

John T. Homme, High Landing, Minn.

[illegible] speed than an ox [illegible] the old days, the days before the advent of railroads it would take a farmer and his ox team two weeks to make a round trip with twenty-five or thirty bushels of grain to market, a trip that can now be made by rail in half a day. Then the patient animals did well to jig along at the rate of two or three feet a second.

Severe Test.

Perhaps no test of one's poise and manual dexterity is more difficult for a man of sedentary and intellectual [illegible] than the effort to pick up seven or eight newly released watermelon seeds from the tablecloth with his left hand without arousing so much as a passing suspicion in his wife's breast that they're there at all.—Ohio State Journal.

Edward's Diplomacy.

Edward had been told repeatedly not to say he did not like food which was passed to him at the table. He was invited to a neighbor's to dinner and was offered cherry pie, which he did not care for. He tactfully said, "Well, I'm just crazy for cherry pie, but won't you just save it for supper?"

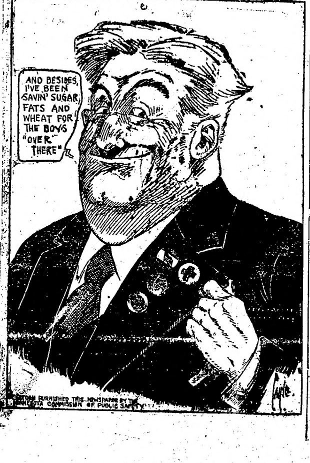
TOO OLD TO SERVE BUT NOT TO CONSERVE



AND BESIDES, I'VE BEEN SAVIN' SUGAR, FATS AND WHEAT FOR THE BOYS "OVER THERE"
CARTOON FURNISHED THIS NEWSPAPER BY THE MINNESOTA COMMISSION OF PUBLIC SAFETY

A. O. HALVORSON

Entered at the post[illegible] ridge, Minn. as a sec[illegible] matter.

This paper has enlisted with the government in the cause of America for the period of the war

With the present high cost of p[illegible] help etc. it became nessary us to one of two things; either we raise the subscription price, or cut down on the size of the paper. [illegible] did not feel like raiseing the price just now, so we took the latter alternati[illegible] and reduced thr size of the pap[illegible]. There will be the same amount of ho[illegible] print as befote. In facn, it will be home print now. The patient matt[illegible] is not read very extdnsively an[illegible]. We hope that in a short time we sh[illegible] be adle to make a change to the larg[illegible] paper again. Meanwhil[illegible] shall endeovor to give our readers the new[illegible] of general interest to the communit[illegible] to an ever greater extent than before. The paper will be of a better quality more readable, so that, on the whol[illegible] the change will be more of an improvement that otherwise.

EARLY MAN [illegible]

Ancestors of Present People Were Called Upon to Face Beasts That Inhabited Plains and Rivers.

The first houses were caves. Early man was a fighting animal, and had to contend against the huge and ferocious beasts that infested the plains and rivers, observes a writer. His dwelling naturally had to be a place of security as well as a habitation. Caves were natural and artificial, the latter being hollowed out of solid rock by rude flint instruments. Most of them were formed in the sides of cliffs and among high, rugged hills.

To those early ancestors of ours, the primeval men and women who secured, as one would think, but scanty shelter and protection from these stone caves and holes in the rock, we apply the generic term of cliff dwellers.

They were entirely ignorant of agriculture, and subsisted by hunting and fishing and on the natural products they found growing in a wild state.

What is very remarkable, at our very doors can still be seen the typical houses and handiwork of those pre-historic tribes in the caves of the Lancos river in southern Colorado. These, in most instances, are as well preserved as when their ancient occupants deserted them—perhaps 10,000 years ago. When inhabited they were reached quite frequently by notches cut in the rock, and at other times rope ladders must have been used.

Gladstone a Hard Worker.

Gladstone was a hard worker, with no dreads with regard to work, says the American Magazine.

He turned from political responsibilities of the heaviest to Greek for recreation, and lived his four-score years and more, just as Pope Leo XIII, turned to Latin poetry for his relaxation from world-wide burdens, and lived on beyond four-score and ten, living so hopefully that when, at the little dinner given him on his ninetieth birthday, one of the cardinals said, in proposing a toast to him, "Here's that you may live to be a hundred, holy father," the old pontiff replied: "But why limit me to a hundred?"

They were contemporaries of Ranke, the German historian, who at the age of ninety-one proposed to write a history of the world in 12 volumes, one volume to be completed each year, and actually lived, I believe, to complete nearly half of it.

These men had no dreads; but they allowed their energies to work on, without any fear of exhausting their vitality.

Almost the Speed Limit.

"At Chattanooga," said a veteran of the Civil war, "one of the men in my company left early in the action, and no one saw him till after the battle, when he appeared in camp unwounded and unabashed. Some of the boys accused him of running away, but he wouldn't admit it.

"'I only retreated in good order,' he declared.

"I heard of the matter, and a few days later I asked him if he had any idea how fast he had 'retreated.'

"'Well, I'll tell you, cap'n,' he said. 'If I had been at home, and going after the doctor,-folks that see me passin' would have thought my wife was right sick!'"—Harper's Monthly.

[illegible] with the rest of the city of Moscow, the Kremlin has been burned, the last occasion being in 1812 when it was occupied by Napoleon and the inhabitants of the city themselves started the conflagrations in all parts of the city. It was indeed these fires which forced the little corporal to commence his disastrous retreat across the snow-bound steppes of Russia. Napoleon had his headquarters in the Kremlin, and while the flames were not so destructive there as in other parts of the city, yet they forced evacuation.

Compressing Cotton.

Scientific investigation has proved that compression of a high degree does not injure the fiber, and cotton is packed in other countries today at a density substantially three times that of ours by the most economical practice. The Egyptian package has a density of about 37 pounds a cubic foot; the Indian cotton is compressed to 45 pounds per cubic foot; while some Indian and Chinese baling plants effect a density of from 55 to 60 pounds of cotton per cubic foot.

The Arab as a Neighbor.

The Arab makes a good neighbor. His love of the beautiful in architecture is evidenced in a hundred cities where his handiwork survives. Every visitor to Granada knows what was left behind at the Alhambra. When the Arab met Rome, he produced Palmyra; having absorbed the Sassmian dynasty of the neo-Persian empire in 637, the Arab created Bagdad; in overrunning Spain, he worked magic at Cordova and Secille.

To Remove Smoke Stains.

This suggestion will be beneficial to housewives who have not the convenience of electricity or the modern gas fixtures. Frequently the ceiling above an old-fashioned gas jet becomes discolored from smoke and heat. The discoloration may be removed if a layer of starch and water is applied with a piece of flannel. After the mixture has dried it should be brushed lightly with a brush. No stain or mark will remain.

Women Catch Fish With Hands.

Fishing in Samoan seas is often done by the women, and without nets, boats or hooks. They simply wade into the water and form themselves into a ring. The fishes being so plentiful, they are almost sure to imprison some in the ring. These women are very quick and active, and every time they catch a fish with their hands they simply throw it, alive, into the basket on their back.

Translation of Y. M. C. A.

W. Gordon Griffiths of the Y. M. C. A. told an audience at Cefu that he was proud to be a Welshman although he was unable to speak the "language of Paradise." He had, however, learned one thing in Welsh and that was that the letters Y. M. C. A. may be translated to mean "Yma Mae Cyfle Arderchog" ("Here is a splendid opportunity.")

Coffee a Nutrient.

Coffee is not a stimulant pure and simple, but a very considerable nutrient. Justus Liebig proved that, by taking equal lots of men, working in the salt mines, feeding one lot bread and meat, the other bread and coffee, and comparing results. The coffee squad did more work and came out in better shape than the meat eaters.

Strict Regulation.

Freeman was visiting at his grandpa's home, and as he was a mischievous little chap, was constantly being told, "Don't do this," and "Don't do that." Finally, with a look of disgust on his face, he climbed up into a chair and asked, seriously, "What can a fella [illegible] this house, anyway?"

Studying Plant Life in India.

In order to encourage arboriculture and the study of plant life the government of India has offered a series of valuable prizes to be awarded to those who are most successful in various lines in connection with the growth of trees and shrubs on government land

Neatly Put.

We are told that Tom Hood liked best to work in a serious vein, on such poems as "The Bridge of Sighs." As he put it himself: "It's only for my livelihood that I'm a lively Hood."—Boston Transcript.

Endurance of Reindeers.

The reindeer is said to be able to endure more fatigue than any other draft animal except the camel. It has been known to pull 200 pounds 10 miles an hour for 12 hours.

Wrong Side Up.

"Why didn't you toss a coin to decide which to do?" "I did; but the darn thing didn't come down the way I wanted it to."—Buffalo Express.

Climbing.

You can climb no higher than Juji with your feet, but with your mind you may inherit eternity.—A Japanese Philosopher.

Cruel Enlightenment.

He—"You seem to think I couldn't make any woman happy." She—"Oh, yes, there is one; your widow."

War Savings Stamps

It isn't so much the amount of money you save as it is getting into the habit of saving a definite amount regularly. The best way to learn to save is not only to promise yourself that you will do it regularly but promise some one else, your wife, your parent, your husband, or your teacher, that you will not let a first of the month or first of the week go by without saving.

The Habit of Thrift Will Help Win The War

The United States Government needs money to equip our armies and to fight for democracy. Your Government—the richest in the world—is willing to pay interest for your money now. Uncle Sam offers you $5.00 War Savings Stamps for $4.13 in February, and one cent additional each month thereafter.

A Thrift Card is furnished to all purchasers of 25 cents Thrift Stamps. When all the spaces have been filled, the Thrift Card may be exchanged for $5.00 War Savings Stamps at any post office or bank. You should start saving a certain amount regularly. Outline your program. Start at once by going to your post office and getting your first War Savings Stamp or Thrift Card. And stick to it. As you treasure your right to live in this nation of freedom, do not miss a single day on which you have determined to save.

Buy War Savings Stamps and Thrift Stamps (25 cents) at any bank or post office.

PIDGIN ENGLISH IS POPULAR

In China the Lingo is Used by Both Servants and Employers in Speaking to Each Other.

In China servants speak pidgin, or business, English to their employers; and servants from different parts of China will use this weird language in speaking to each other. The formation of the sentence is the same as in Chinese; the language itself is an extraordinary mixture of English, Portuguese, French and Chinese. Some of the phrases, says Mrs. De Burgh Daly in An Irishwoman in China, are very quaint and amusing.

A bishop is called "No. 1, top side joss pidgin man." "Top side" means heaven, "joss," god, "pidgin," business.

There is a story of two men who came to call upon the King of Siam when he was staying in Shanghai. They entered the hotel and asked the proprietor, a courteous American, if his majesty were at home.

"Boy," called the proprietor, "one piecee king have got?"

"Have got, sir," replied the boy cheerfully.

"His majesty is at home, gentlemen," translated the proprietor.

One day, says Mrs. Daly, a large party assembled on a steamer to bid farewell to homeward-bound friends. Wishing to make certain that the steamer should not carry us off, we informed the steward in excellent Mandarin that he was to come and warn us of her departure. He stared blankly. Some one tried Ningpo dialect—no use; Shanghai—still a blank stare. At last my husband called out:

"Boy!"

"Yessir."

"Wantchee walkee can come talkee! Savve ?"

"All right, sir; my savvee."

Servants quickly find out our likes and dislikes in food, and act accordingly. A friend of mine was fond of snipe, and often ordered them for dinner. One evening, when an unexpected guest arrived, she told Boy that since there were not enough snipe she would not eat one. Presently Boy nudged her and remarked in a loud whisper:

"Missee can have snipe; one piecee man no chow!"

BESSEMER IRON AND STEEL

Original Process Involved Decarbonization, or Burning Out of Excess Carbon, by Blowing Air.

Henry Bessemer, who invented the method named for him in the manufacture of iron and steel, which revolutionized the industry, was granted a patent by the British government on October 17, 1855. This was the first patent given him, notes an exchange. Additional patents were taken out in the following December and February, covering improvements. Bessemer's original process involved decarbonization, or the burning out of the excess carbon, by blowing air through pig iron. This revolutionary invention was due indirectly to the Crimean war.

Bessemer undertook to invent an improved cannon, but found all available metals too weak for the gun he sought to make. He then began experiments in steel making, with the ultimate result of the production of "Bessemer steel." His invention won for him fame and fortune and the honor of knighthood. Sir Henry Bessemer was born in England, but was of French Huguenot descent. Since his pioneer invention, the process of converting iron into steel has been vastly improved.

That Bore of a Fond Parent.

Of course, you have a bright youngster who says and does amusing things, asserts a writer.

But all children do.

Your child has not a monopoly.

If you wish to be classed with the worst of bores, continue your constant eulogy of all that your child says or does.

If, for instance, some other child said or did what your boy or girl does, would you think it so excruciatingly funny?

Every bright, healthy, intelligent child is delightful in the unfolding.

To each fond father and mother the particular angles of understanding, as they come to light, are most interesting.

But the youngster is chiefly interesting to yourself.

You see traits and characteristics in the light of what you know you are yourself. That is what makes it sound so funny.

How about the mean little tricks that your own child has and that you cannot get away from? They all have them, too. Do you tell these things? No.

Then your wonderful tales are merely another form of braggadocio. How about it?

Everything in Its Place.

Mrs. H. had just employed a new maid, fresh from the old country. She asked the girl to take the baby out in the baby carriage. Gunhilde was delighted. She had never seen a baby before and from her articulate joy one might think that she had waited for this moment all her life. Mrs. H. was pleased to see that the girl was so willing. The baby was wrapped up and they started. Two minutes later Mrs. H. looked out of the window and her face froze with horror. Instead of rolling gently down the sidewalk the way a baby should her child was being piloted majestically down the middle of the street in the midst of automo- [illegible]

NEWLYWEDS DINE ON STEW

Wifey Prepares Dainty Morsel With Own Little Hands — But Physician Must Be Called for Hubby.

The cook had insisted on a day off, and young Mrs. Freshly-Wedd was in a quandary and her stunning new house gown of twisted percale, muses the Detroit Free Press.

"I'll make a stew—anybody can make a stew!" she cried.

And she proceeded to make a stew. In the icebox she found seven frankfurters, a dozen fried oysters and three pickled herring.

"How fortunate—meat is the very importantest thing!" she exclaimed. And she chopped it all up and added three cupfuls of salt and two of pepper so as to be sure not to forget the seasoning. Then—because she knew that a stew must have lots of variety—she put in a glass of olive oil, two tablespoonfuls of grated nutmeg, two packages of Saratoga chips, a can of salmon and a half cake of bitter chocolate.

At 6:30 Freshly-Wedd came home—her Ben, stalwart and handsome, who had never known an hour's illness in his life.

"Phew!" he exclaimed. "What's that smell?"

"It's a stew I made for you wiv my own 'ittle hands," she told him.

"Divine aroma!" cried Freshly-Wedd, and forthwith sat down and ate two big platefuls, while his wife watched him so eagerly that she forgot to eat any herself.

Three hours later, in response to a hurry call, Doctor Blister drove up and rang the front doorbell. Query: Who was the patient, and why?

Press Gang at Church.

The cursory examinations which many recruits allege they received in the earlier days of the war were far greater tests of endurance and stamina than the recruit of 50 years ago was wont to receive. In those days, if a man could count all his limbs and had sufficient teeth to enable him to crunch the hard army biscuits and salt beef, or bite off the end of a cartridge before putting it into his old Brown Bess, he was certain of being accepted.

In earlier times, however, there was no pretense at medical examination at all. When Queen Elizabeth resolved to assist in raising the siege of Calais in 1596, the lord mayor and aldermen of London received instructions to raise a thousand men for this service, and on Easter Sunday they proceeded to several churches with their constables, fastened the doors, and selected from the congregation the number of men required. Without any medical examination they were equipped and sent to Dover.—Tit-Bits.

Typical American Eloquence.

Following is the peroration of a speech delivered in an intercollegiate oratorical contest in central Kentucky, 1896:

"Standing upon the last decade of the grandest century ever measured by the flight of worlds, 'I dipt into the future as far as human eye could see, saw the vision of the world and the wonder that would be;' saw the American continent formed; saw it the great sun of the solar system of nations around which all revolved, giving life and liberty to each and prosperity and happiness to all; saw its ports filled with the argosies of commerce; its brow blooming with the wreath of science; the breath of heaven blessing its flag; yet, in the vigor and buoyancy of youth, scorning pessimism and decay, marching ever onward to the accomplishment of its grand and glorious destiny."—Exchange.

PATRIOTIC RALLY

Chief Justice Bruce of North Dakota gave an interesting and instructive address to a large and enthusiastic audience at the Goodridge Hall last Thursday afternoon, In spite of the busy spring work season a large number of farmers were present. The business houses in the village were closed during the meeting, enabling the business men to attend. The teachers brought the pupils of the local schools so that, all in all, the community was exceptionally well represented, Mr. Geo. Johnson and Prof. J. H. Hay accompanied Mr. Bruce from Thief River Falls.

The Chief Justice was made good use of while in Pennington County. In the forenoon on the same day he addressed the people in St. Hilaire and in the evening in Thief River Falls. He was sent out by the Publicity Department of the Third Liberty Loan Committee of the Ninth Federal Reserve District. The burden of his address was loyalty and patriotism, Among other things which he emphasized was Pres. Wilson's statement that we are fighting not the German people, but the German autocratic government of which he showed up the true nature and purpose. He showed how the principle of the "Super Man" had permeated the whole society of Germany. This principle teaches that the Germans are superior to all other nationalities; that in Germany, the nobility is superior to the common people; that superior to all is the Kaiser. The nations not accepting this principle must be crushed, That is what the Kaiser purposes to do in the present war. That is what we are fighting against. Mr. Bruce said very little directly on the Third Liberty Loan drive, deeming it unecessary to dwell on that as the people will surely take care of it properly when they understand the graveness of the situation and the necessity of combating the idea of the "Super Man."

THE GOODRIDGE. CREAMERY.

The Creamery formerly located at Tergerson and all the equipment belonging to it have already been hauled in. It now remains to place the building on its foundation and install the machinery and a creamery in Goodridge is a reality. This important institution has at last come into its logical position It now remains for the people of the community to give it the proper support. If this is done, an improvement will soon be apparent on every hand. The farmers who give it their wholehearted support will soon get more and better buildings, larger bank accounts, smaller mortgages.

The First Lessons.

The happy and prosperous children are those who have before all else the education that comes by reverence writes Amelia E. Barr. This education is beyond all doubt the highest the deepest, the widest and the most perfect of all the forms of education ever given to man. A child that has not been taught to reverence God, and all that represents God to man—honor, honesty, justice, mercy, truth love, courage, self-sacrifice, is sent into the world like a boat sent out to sea, without rudder, ballast, compass or captain. The manipulation table can wait until the child has been taught to reverence all that is holy, wise and good, and the [illegible]

GOODRIDGE

The most progressive and the biggest little town in northern Minnesota.

LIBERSY LOAN MEETING.

The local solicitors for the Third Liberty Loan, the drive for which opens April 15, were called together for a conference by county chairman Johnson at the Commercial Club rooms last Saturday afternoon, Representatives of the government were there to explain the method of procedure. The local Solicitors from Goodridge and vicinity who attended the meeting were, among others, Jay Payne, Nick Bundhund, J. P. Jenser, M. Vaughan, Sam Rouze, A. O. Halverson, Elmer Strand, Ivar Solheim, J. Hofland, Martin Johnson, E. Wahlin.

"THE DEVIL RESIGNS"

The Devil sat by a lake of fire,
On a barrel of sulphur kegs,
His head was bowed upon his breast,
His tail between his legs.
A look of shame was on his face,
The sparks dripped from his eyes;
He had sent up his resignation
To the throne up in the sky.
"I'm down and out" the devil said,
And he said it with a sob,
"There are others that outclass me
And I want to quit my job,"
"Hell isn't in it with the land
That lies along the Rhine;"
"I'm a has-been and a piker,
Therefore I must resign.
One ammunition maker with
His bloody shot and shell,
Knows more about damnation
Than all the imps of Hell.
Give my job to Kaiser Wilhelm,
The author of this war,
He understands it better
A million times by far.
I hate to leave the old home,
The spot I love so well,
But I admit that I'm not up-to-date
In the art of running Hell.'

NOTICE FOR PUBLICATION.

DEPARTMDNT OF THE INTERIOR,
U. S LAND OFFICE at CROOKSTON, MINN.

March 26, 1918

NOTICE is hereby given that Betsy H. Gedestad, of Goodridge, Minn., who, on August 16th., 1911, made Homestead Application Serial, No. 06355, for Lots 1, 2 and S½NE¼, Section I, Township 154 N,, Range 41 W., 5th Principal Meridian, has filed notice of intention to make Commutation Proof, to establish claim to the land above described, before, before Wilhelm Michelet, U. S. Commissioner for district of Minnesota, at Thief River Falls, Minn., on the 6th dry of May, 1918.

Claimant names as witnesses;

Torje Hegtvedt, Kittel Jordeshauger Life Jordeshaugen, Nick Bundhund all, of Goodridge, Minn.

Proof made according to law under which entry was made.

A. J. Tungse

MILITARY MORALS,

One of the uses of the proceeds of the Liberty Loan that will appeal strongly to the mass of American people is the care and attention given to the moral welfare and protection of the American soldiers.

Heretofore with the American Army and even now with some of the armies of our allies the moral welfare of the soldier was and is a matter largely ignored. In the German armies provision is even made for immorality.

It is to the glory of American Army and American national character that of the men who wear the United States uniform a high standard of conduct is expected and demanded, and provided for. Kipling's "Single men in barracks" are not to find this prototype in the American Army.

Gen. Pershing says there is no cleaner-living body of men in the world than the American Army in France.

THE CLOVERLEAF RED CROSS BRANCH.

The Clever Leaf Branch of the Red Cross was formed last Thursday evening when over sixty people gathered in the town hall at Mavie to listen to Chairman Thos. A. Way and Secretary Scott Laird of Thief River Falls Chapter tell of the work of the Red Cross.

All townships in Pennington county are now organized, according to the records of Mr. Laird, except Smiley, Deer Park, Hickory and the west half of Black River and the eastern half of Polk Center.

The officers elected in Clover Leaf are: Chairman, J. N. Schie; Vice Chairman, A. Staurt McLeod; Secetary, Miss Margaret Kettlan: Treasurer, Thos. H. Smith; Chairman Finance Committee, T. J. Skaa.

DO NOT FORGET TO WRITE TO THE BOYS "OVER THERE"

Every time you write any of the "boys" who have joined the army or navy or any branch of the servic, enclose one of the Red Cross Military Relief postal card, so that they can report the names of any one of their comrades who are not getting letters from home or friends. Ask the secetary of your township branch for one of these postals, or ask the secretary of the Military Relief Committee. They should have them and will appreciate having the name of your son and his present address. When sending the card please request that nothing be said to the comrade whose name he fills in that some will be asked to write him. We will have some schoolmate or some neighbor surprise him and gladden his heart with a weekly letter from home. It does not matter if the comrade came from some other state. We will see that the proper ones write him. Do your share to lighten the load of those who are making the fight for a safe world to live in. His sister might be forced to suffer as did the women of Belgium.

Small Prescriptions.

Many physicians have a habit of writing prescriptions without calculating the quantity of medicine their patients are to take. This leads to a great waste of drugs and much unnecessary expense. Which leads the New York Medical Journal to urge physicians to be more careful.

Another evil result of this far too common practice is that partly used prescriptions are stored away in the medicine chest, and next time the patient has, or thinks he has, the same symptoms, he takes what he supposes to be the same medicine.

But the chief reason why physicians should not prescribe four or six ounces when they know only one or two will be used, is that it is wasting [illegible]

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

Of The Eleven Towns published weekly at Goodridge, Minnesota for April 1, 1918.

State of Minnesota
County of Pennington

Before me, a Notary Public in and for the State and county aforesaid, personally appeared A. O. Halvorson, who, having been duly sworn according to law, deposes and says that he is the Editor and Owner of the [illegible] Towns and that the [illegible] the best of his [illegible] a true statement [illegible] management, [illegible] publication for the [illegible] in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

That the names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher, A. O. Halvorson, Goodridge, Minnesota.

Editor, A. O. Halvorson, Goodridge, Minn.

Managing Editor, A. O. Halvorson, Goodridge, Minn.

Business Managers, A. O. Halvorson, Goodridge, Minn.

That the owners are: A. O. Halvorson, Goodridge, Minn.

That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or securities are: J. W. [illegible]

A. O. Halvorson.

Sworn to and subscribed before me this 26th day of March 1918.

J. P. Jensen.

My commission expires Oct. 12th 1918.

RED CROSS NOTES.

At a special meeting of the Red cross called in the schoolhouse Saturday evening the following committee were appointed:

Committee on supplies for fighting men.
Mrs. Jay Payne, Chairman.
Mrs. M. Vaughan
Mrs. A. O. Halvorson.
Committee on Hospital Supplies,
Mrs. J. P. Ferdinandsen, Chairman
Mrs. M. G. Thoreson
Mrs Ole Kirklie,
Committee on membership,
Miss Myrtle Blair, Chairman,
Miss Laurence Urdahl
Miss Tillie Thompson
Crop pledge committee,
M. Vaughan, chairman
Elmer Bly
John Kastaak.

Ox, Slowest Animal.

There is no animal possessing less speed than an ox. In the old days, the days before the advent of railroads it would take a farmer and his ox team two weeks to make a round trip with twenty-five or thirty bushels of grain to market, a trip that can now be made by rail in half a day. Then the patient animals did well to jig along at the rate of two or three feet a second.

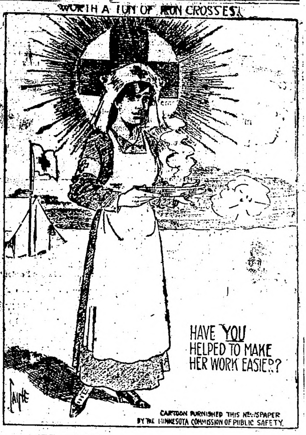
Severe Test.

Perhaps no test of one's poise and manual dexterity is more difficult for a man of sedentary and intellectual pursuits than the effort to pick up seven or eight newly released watermelon seeds from the tablecloth with his left hand without arousing so much as a passing suspicion in his wife's breast that they're there at all.—Ohio State Journal.

Edward's Diplomacy.

Edward had been told repeatedly not to say he did not like food which was passed to him at the table. He was invited to a neighbor's to dinner and was offered cherry pie, which he did not care for. He tactfully and [illegible]

WORTH A TON OF IRON CROSSES!



HAVE YOU HELPED TO MAKE HER WORK EASIER?
CAINE

CARTOON FURNISHED THIS NEWSPAPER BY THE MINNESOTA COMMISSION OF PUBLIC SAFETY.

Best Kind of Play Is Work.

One of the best kinds of play is work. Many of the elements of play enter into work if it is performed in the right spirit. The most satisfying forms of play are those in which interest is excited; competition, with desire to succeed and accomplish some definite end, makes the game worth playing. Work is fatiguing and distasteful when it is lacking in these elements.

Take Pains.

Genius has been defined as an infinite capacity for taking pains, and talent, which is a sort of second cousin of genius, has the same characteristics, observes an educator. One who will take pains enough will meet with a measure of success. And no one who belittles the need of patient, plodding work is likely to succeed, no matter what his endowments.

Find Skeleton of Giant.

A perfect sketeleton was uncovered in Surrey, England, during the work of carrying out alterations to surface water drainage in one of the main streets in Farnham. The chief bones were in a perfect state of preservation, and were sufficient to show that the body was that of a man of unusual stature. Close by was found a bone of a horse. The site of a Norman cemetery is only a little distance from the spot where the body was found, and here some years ago cinerary urns were discovered, which were stated to be perfect examples of first-century urns. Some of these are now preserved in Waverly abbey.

The Thin People.

Overeating is a common cause of emaciation, paradoxical as this statement may seem. Many of our thinnest neighbors are the biggest eaters of the community, Physical Culture Magazine says. It is an old-fashioned saying that these people "eat so much that it makes them thin to carry it around." In any case, it is not a question of the amount of food one swallows, but a [illegible] of how much is digested and assimilated. Many persons will gain [illegible] weight upon discontinuing the three-meal plan and adopting the plan of two meals per day. The stomach is then no longer overburdened or overworked, and the digestion is so much more perfect and the health so improved that a gain in weight results naturally.

Carnauba Wax.

Carnauba wax is made from the leaves of the carnauba plant, indigenous to the state of Piauhy, Ceara, and Rio Grande do Norte, in northeastern Brazil, whose roots are used locally as medicine, whose branches are used for bridge and housebuilding because they resist the attacks of insects, and whose fibers are used in rope and paper making; the wax has been used extensively in adulterating beeswax, but is finding an honest market on its merits, not only for candle manufacture but for coating the insulating material of electric wires, etc.; the annual production of wax in Rio Grande do Norte is about 450 tons a year, valued at about $250,000; perhaps three fourths of this is exported; but the forests of carnauba plant can produce, if developed, many times this quantity.

The teachers brought the pupils of the local schools so that, all in all, the community was exceptionally well represented. Mr. Geo. Johnson and Prof. J. H. Hay accompanied Mr. Bruce from Thief River Falls.

The Chief Justice was made good use of while in Pennington County. In the forenoon on the same day he addressed the people in St. Hilaire and in the evening in Thief River Falls. He was sent out by the Publicity Department of the Third Liberty Loan Committee of the Ninth Federal Reserve District. The burden of his address was loyalty and patriotism. Among other things which he emphasized was Pres. Wilson's statement that we are fighting not the German people, but the German autocratic government of which he showed up the true nature and purpose. He showed how the principle of the "Super Man" had permeated the whole society of Germany. This principle teaches that the Germans are superior to all other nationalities; that in Germany, the nobility is superior to the common people; that superior to all is the Kaiser. The nations not accepting this principle must be crushed. That is what the Kaiser purposes to do in the present war. That is what we are fighting against. Mr. Bruce said very little directly on the Third Liberty Loan drive, deeming it unecessary to dwell on that as the people will surely take care of it properly when they understand the graveness of the situation and the necessity of combating the idea of the "Super Man."

THE GOODRIDGE. CREAMERY.

The Creamery formerly located at Torgerson and all the equipment belonging to it have already been hauled in. It now remains to place the building on its foundation and install the machinery and a creamery in Goodridge is a reality. This important institution has at last come into its logical position. It now remains for the people of the community to give it the proper support. If this is done, an improvement will soon be apparent on every hand. The farmers who give it their wholehearted support will soon get more and better buildings, larger bank accounts, smaller mortgages.

The First Lessons.

The happy and prosperous children are those who have before all else the education that comes by reverence, writes Amelia E. Barr. This education is beyond all doubt the highest, the deepest, the widest and the most perfect of all the forms of education ever given to man. A child that has not been taught to reverence God, and all that represents God to man—honor, honesty, justice, mercy, truth, love, courage, self-sacrifice, is sent into the world like a boat sent out to sea, without rudder, ballast, compass or captain. The manipulation table can wait until the child has been taught to reverence all that is holy, wise and good, and the imagination received its first impulse.

GOODRIDGE

The most progressive and the biggest little town in northern Minnesota.

LIBERSY LOAN MEETING.

The local solicitors for the Third Liberty Loan, the drive for which opens April 15, were called together for a conference by county chairman Johnson at the Commercial Club rooms last Saturday afternoon. Representatives of the government were there to explain the method of proceedure. The local Solicitors from Goodridge and vicinity who attended the meeting were, among others, Jay Payne, Nick Bundhund, J. P. Jenser, M. Vaughan, Sam Rouze, A. O. Halverson, Elmer Strand, Ivar Solheim, J. Hofland, Martin Johnson, Ed. Wahlin.

"THE DEVIL RESIGNS"

The Devil sat by a lake of fire,
On a barrel of sulphur kegs,
His head was bowed upon his breast,
His tail between his legs.
A look of shame was on his face,
The sparks dripped from his eyes:
He had sent up his resignation
To the throne up in the sky.
"I'm down and out" the devil said
And he said it with a sob,
"There are others that outclass me
And I want to quit my job,"
"Hell isn't in it with the land
That lies along the Rhine;"
"I'm a has-been and a piker,
Therefore I must resign.
One ammunition maker with
His bloody shot and shell,
Knows more about damnation
Than all the imps of Hell.
Give my job to Kaiser Wilhelm,
The author of this war,
He understands it better
A million times by far.
I hate to leave the old home,
The spot I love so well,
But I admit that I'm not up-to-date
In the art of running Hell.'

NOTICE FOR PUBLICATION.

DEPARTMENT OF THE INTERIOR,
U. S LAND OFFICE at CROOKSTON, MINN.

March 26, 1918

NOTICE is hereby given that Betsy H. Gedestad, of Goodridge, Minn., who, on August 16th., 1911, made Homestead Application Serial, No. 06355, for Lots 1, 2 and S½NE¼, Section I, Township 154 N., Range 41 W., 5th Principal Meridian, has filed notice of intention to make Commutation Proof, to establish claim to the land above described, before, before Wilhelm Mishelet, U. S. Commissioner for district of Minnesota, at Thief River Falls, Minn., on the 6th dry of May, 1918.

Claimant names as witnesses;

Torje Hegtvedt, Kittel Jordeshaugen, Life Jordeshaugen, Nick Bundhund all, of Goodridge, Minn.

Proof made according to law under which entry was made.

Peter M. Ringdal,
Register.

SEED POTATOES.

One carload of the "Red River Early Ohio" will be on the track at Goodriege Satuday. Leave your order at the Goodridge Mercantile.

A. J. Tungse

MILITARY MORALS,

One of the uses of the proceeds of the Liberty Loan that will appeal strongly to the mass of American people is the care and attention given to the moral welfare and protection of the American soldiers.

Heretofore with the American Army and even now with some of the armies of our allies the moral welfare of the soldier was and is a matter largely ignored. In the German armies provision is even made for inmorality.

It is to the glory of American Army and American national character that of the men who wear the United States uniform a high standard of conduct is expected and demanded, and provided for. Kipling's "Single men in barracks" are not to find this prototype in the American Army.

Gen. Pershing says there is no cleaner-living body of men in the world than the American Army in France.

THE CLOVERLEAF RED CROSS BRANCH.

The Clover Leaf Branch of the Red Cross was formed last Thursday evening when over sixty people gathered in the town hall at Mavie to listen to Chairman Thos. A. Way and Secretary Scott Laird of Thief River Falls Chapter tell of the work of the Red Cross.

All townships in Pennington county are now organized, according to the records of Mr. Laird, except Smiley, Deer Park, Hickory and the west half of Black River and the eastern half of Polk Center.

The officers elected in Clover Leaf are: Chairman, J. N. Schie; Vice Chairman, A. Staurt McLeod; Secetary, Miss Margaret Kettlan; Treasurer, Thos. H. Smith; Chairman Finance Committee, T. J. Skaa.

DO NOT FORGET TO WRITE TO THE BOYS "OVER THERE"

Every time you write any of the "boys" who have joined the army or navy or any branch of the servic, enclose one of the Red Cross Military Relief postal card, so that they can report the names of any one of their comrades who are not getting letters from home or friends. Ask the secetary of your township branch for one of these postals, or ask the secretary of the Military Relief Committee. They should have them and will appreciate having the name of your son and his present address.

When sending the card please request that nothing be said to the comrade whose name he fills in that some will be asked to write him. We will have some schoolmate or some neighbor sur surprise him and gladden his heart with a weekly letter from home. It does not matter if the comrade came from some other state. We will see that the proper ones write him.

Do your share to lighten the load of those who are making the fight for a safe world to live in. His sister might be forced to suffer as did the women of Belgium.

Small Prescriptions.

Many physicians have a habit of writing prescriptions without calculating the quantity of medicine their patients are to take. This leads to a great waste of drugs and much unnecessary expense. Which leads the New York Medical Journal to urge physicians to be more careful.

Another evil result of this far too common practice is that partly used prescriptions are stored away in the medicine chest, and next time the patient has, or thinks he has, the same symptoms, he takes what he supposes to be the same medicine.

But the chief reason why physicians should not prescribe four or six ounces when they know only one or two will be used, is that it is wasting the drugs and making the patient pay far more for his medicine than is at all necessary.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

Of The Eleven Towns published weekly at Goodridge, Minnesota for April 1, 1913.

State of Minnesota
County of Pennington

Before me, a Notary Public in and for the State and county aforesaid, personally appeared A. O. Halvorson, who, having been duly sworn according to law, deposes and says that he is the Editor and Owner of the Eleven Towns and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

That the names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher, A. O. Halvorson, Goodridge, Minnesota.
Editor, A. O. Halvorson, Goodridge, Minn.
Managing Editor, A. O. Halvorson, Goodridge, Minn.
Business Managers, A. O. Halvorson, Goodridge, Minn.

That the owners are;
A. O. Halvorson, Goodridge, Minn.

That the known bondholders, mortgage, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or securities are:
H. W. Smith.

A. O. Halvorsen.

Sworn to and subscribed before me this 26th day of March 1918.

J. P. Jensen.

My commission expires Oct. 12th 1918.

RED CROSS NOTES.

At a special meeting of the Red cross called in the schoolhouse Saturday evening the following committee were appointed:

Committee on supplies for fighting men.
- Mrs. Jay Payne, Chairman.
- Mrs. M. Vaughan
- Mrs. A. O. Halvorson.

Committee on Hospital Supplies,
- Mrs. J. P. Ferdinandsen, Chairman
- Mrs. M. G. Thoresou
- Mrs Ole Kirklie,

Committee on membership.
- Miss Myrtle Blair, Chairman
- Miss Laurenca Urdahl
- Miss Tillie Thompson

Crop pledge committee,
- M. Vaughan, chairman
- Elmer Bly
- John Kastaak.

Ox, Slowest Animal.

There is no animal possessing less speed than an ox. In the old days, the days before the advent of railroads it would take a farmer and his ox team two weeks to make a round trip with twenty-five or thirty bushels of grain to market, a trip that can now be made by rail in half a day. Then the patient animals did well to jig along at the rate of two or three feet a second.

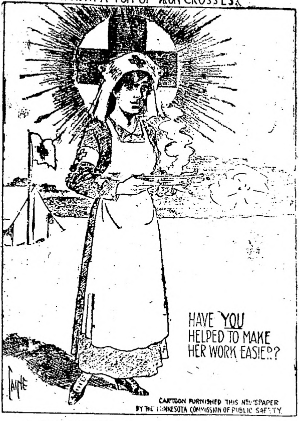
Severe Test.

Perhaps no test of one's poise and manual dexterity is more difficult for a man of sedentary and intellectual pursuits than the effort to pick up seven or eight newly released watermelon seeds from the tablecloth with his left hand without arousing so much as a passing suspicion in his wife's breast that they're there at all.—Ohio State Journal.

Edward's Diplomacy.

Edward had been told repeatedly not to say he did not like food which was passed to him at the table. He was invited to a neighbor's to dinner and was offered cherry pie, which he did not care for. He tactfully said, "Well, I'm just crazy for cherry pie, but won't you just save it for supper?"

WORTH A TON OF IRON CROSSES.



HAVE YOU HELPED TO MAKE HER WORK EASIER?
CAINE

CARTOON FURNISHED THIS NEWSPAPER BY THE MINNESOTA COMMISSION OF PUBLIC SAFETY.

Best Kind of Play Is Work.

One of the best kinds of play is work. Many of the elements of play enter into work if it is performed in the right spirit. The most satisfying forms of play are those in which interest is excited; competition, with desire to succeed and accomplish some definite end, makes the game worth playing. Work is fatiguing and distasteful when it is lacking in these elements.

Take Pains.

Genius has been defined as an infinite capacity for taking pains, and talent, which is a sort of second cousin of genius, has the same characteristics, observes an educator. One who will take pains enough will meet with a measure of success. And no one who belittles the need of patient, plodding work is likely to succeed, no matter what his endowments.

Find Skeleton of Giant.

A perfect sketeleton was uncovered in Surrey, England, during the work of carrying out alterations to surface water drainage in one of the main streets in Farnham. The chief bones were in a perfect state of preservation, and were sufficient to show that the body was that of a man of unusual stature. Close by was found a bone of a horse. The site of a Norman cemetery is only a little distance from the spot where the body was found, and here some years ago cinerary urns were discovered, which were stated to be perfect examples of first-century urns. Some of these are now preserved in Waverly abbey.

The Thin People.

Overeating is a common cause of emaciation, paradoxical as this statement may seem. Many of our thinnest neighbors are the biggest eaters of the community, Physical Culture Magazine says. It is an old-fashioned saying that these people "eat so much that it makes them thin to [illegible] around." In any case, it is not a question of the [illegible] of food one swallows, but a [illegible] of how much is digested and [illegible]ated. Many persons will gain [illegible] upon discontinuing the three-meal plan and adopting the plan of two meals per day. The stomach is then no longer overburdened or overworked, and the digestion is so much more perfect and the health so improved that a gain in weight results naturally.

Carnauba Wax.

Carnauba wax is made from the leaves of the carnauba plant, indigenous to the state of Piauhy, Ceara, and Rio Grande do Norte, in northeastern Brazil, whose roots are used locally as medicine, whose branches are used for bridge and housebuilding because they resist the attacks of insects, and whose fibers are used in rope and paper making. The wax has been used extensively in adulterating beeswax, but is finding an honest market on its merits, not only for candle manufacture but for coating the insulating material of electric wires, etc.; the annual production of wax in Rio Grande do Norte is about 450 tons a year, valued at about $250,000; perhaps three-fourths of this is exported; but the forests of carnauba plant can produce, if developed, many times this quantity.

PATRIOTIC RALLY

Chief Justice Bruce of North Dakota gave an interesting and instructive address to a large and enthusiastic audience at the Goodridge Hall last Thursday afternoon. In spite of the busy spring work season a large number of farmers were present. The business houses in the village were closed during the meeting enabling the business men to attend. The teachers brought the pupils of the local schools so that all in all the community was exceptionally well represented. Mr. Geo. Johnson and Prof. J. H. Hay accompanied Mr. Bruce from Thief River Falls.

The Chief Justice was made good use of while in Pennington County. In the forenoon on the same day he addressed the people in St. Hilaire and in the evening in Thief River Falls. He was sent out by the Publicity Department of the Third Liberty Loan Committee of the Ninth Federal Reserve District. The burden of his address was loyalty and patriotism. Among other things which he emphasized was [illegible] that we are fighting not the German people, but the German autocratic government of which he showed up the true nature and purpose. He showed how the principle of the "Super Man" had permeated the whole society of Germany. This principle assumes that the Germans are superior to all other nationalities, that in Germany the nobility is superior to the common people; that superior to all is the Kaiser. The nations not accepting this principle must be crushed. That is what the Kaiser purposes to do in the present war. That is what we are fighting against. Mr. Bruce said very little directly on the Third Liberty Loan drive, deeming it unecessary to dwell on that as the people will surely take care of it properly when they understand the graveness of the situation and the necessity of combating the idea of the "Super Man."

THE GOODRIDGE CREAMERY.

The Creamery formerly located at Tergerson and all the equipment belonging to it have already been hauled in. It now remains to place the building on its foundation and install the machinery and a creamery in Goodridge is a reality. This important institution has at last come into its logical position. AND STILL THERE ARE SLACKERS!!

INTENTIONAL DUPLICATE EXPOSURE

Making Bulgarian Milk.

The milk of the Bulgarians, well known all over the world for its superior nutritive quality, is made by exposing it to the sun, the rapid development of the germs under the action of the ultra violet rays being such that when it becomes dry they are in highly concentrated form.

Moss Is Valuable.

"Moss" is the popular name for several kinds of small flowerless plants which flourish in damp places. In mountainous and wet districts tracts of moss are of great service in retaining the water and preventing sudden floods.

Too Particular.

The girl who thinks more of her georgette crepe waist than she does of her beau and refuses to permit it to get mussed will never march to the well-known tune of Mr. Mendelssohn.—Florida Times-Union.

TYPISTS [illegible] BAD ERRORS

Slips Are Very Amusing in Some Instances, and Hard to Explain in Many Others.

If some lady typists can make a mistake they will, and some of their efforts are very amusing, a humorist relates. One typist produced the remark, in regard to a rather conceited man, that "his one weakness was onion sauce," the real word being "omniscience." Another, in an obituary of a great theologian, spoke of his belief in the "immorality of the soul." Just the omission of the "t" from "immortality" made all the difference.

Some few years ago a speaker at a meeting waxed very sympathetic over the death of the wife of a manager of the company at some fever-stricken place in West Africa, and the reporters who were afterwards getting out this speech together to save time were in a jocular mood. At the end of the pathetic oration the one who was dictating said, for a joke, and to amuse the others, "Loud Laughter," and the foolish girl, who was as much a machine as the typewriter at which she sat, actually put the words in. Moreover, they appeared in print in a financial newspaper, and a very humble apology had to be made by the editor afterwards, although any explanation of the "slip" was impossible.

When the faucets in the bathroom or kitchen leak or do not allow the water to flow freely they need a new washer, and the washers cost five cents each. To put on the washer, turn off the water, the rod is usually under the sink or in the basement, and unscrew the faucet; take off the worn-out washer and slip on a new one and turn your water on again and presto! the work is done and no repair bill to pay.

Make Windows by Hand.

In making stained-glass windows every bit of the work is done by hand, and it is amazing to realize how many times each piece of glass must be handled. An operator tells of counting up one day and finding that no less than twelve times were necessary. All the leadwork is done by hand too, even the opening of the little slots into which the glass is fastened.

Record Floods in China.

The Celestial kingdom has been the scene of some of the most terrible floods on record, observes London Tit-Bits. In 1801 the Yellow river overflowed and destroyed nearly 2,000 villages and towns and 5,000,000 people. Two years later there were great inundations in Mongolia, caused by typhoons, resulting in a death roll of [illegible].

Almost the Speed Limit.

"At Chattanooga," said a veteran of the Civil war, "one of the men in my company left early in the action, and no one saw him till after the battle, when he appeared in camp unwounded and unabashed. Some of the boys accused him of running away, but he wouldn't admit it.

"'I only retreated in good order,' he declared.

"I heard of the matter, and a few days later I asked him if he had any idea how fast he had 'retreated.'

"'Well, I'll tell you, cap'n,' he said. 'If I had been at home, and going after the doctor, folks that see me passin' would have thought my wife was right sick!'"—Harper's Monthly.

ANNOUNCEMENT

In opening up business in Goodridge we to inform the public that we shall continue the policy of our predecessor in the shoe line. We are carrying a strong line of up-to-date footwear at reasonable prices. Besides our regular line of standard groceries we have on hand a large assortment of men's and boys' hats. Come in and get acquainted.

TO SETTLE FAMILY ARGUMENT

Friendly Wagers Between Husband and Wife Serve to Quench Frequent Dangerous Quarrels.

Here is a plan by which a great many family quarrels have been averted for a certain couple. They used to quarrel all the time.

Before, the wife would say:

"My dear, you'll make a mistake if you do so and so."

And the husband would reply:

"My darling, you are altogether too fussy. I know my business. Kindly let me alone, will you?"

Then would ensue a row of fearful dimensions that sometimes would shake the house, startle the servants and scandalize the neighborhood.

But now they do differently.

When they disagree they do it thus:

"Well, dear, if you think you're right, suppose you back your opinion? If I'm wrong I'll give you half a dozen pairs of gloves."

If she feels pretty confident she backs her opinion with a box of cigars, and the agreement is carefully signed by both and locked up. Then one or the other pays when the decision is reached. The young woman has an income of her own, so the arrangement is a fair one, which it might hardly be were she compelled to take her husband's own money to pay for his cigars.

Gambling is, of course, a wicked thing to do, but it checks wild assertions and smothers, in this case, many a fire that would burn up comfort.—New York Evening Post.

Do Your Work Properly.

Make up your mind that you will do what you have to do the very best you know how. There is very little work that is really difficult. But all good work is painstaking. If you put your whole soul into your work, you will learn to enjoy it, and you will become constantly better and more worth while.

First Introduced Canes.

The Mexicans first used canes in America. When the Spanish conquered the country, a queer custom was introduced. The chief executive of the towns carried a stick with a gold or silver head. It was a kind of scepter.

The people, of course, rarely knew how to read or write, and when anyone was wanted for a crime, one of the mayor's subordinates would take the cane, find the culprit and place it horizontally upon the latter's chest. The proceeding was equivalent to a summons, and the man had to appear before the mayor under the penalty of being cast into prison. This action was borrowed from Spain, where it still prevails in the more important actions.

"OLD PARR'S" AGE BELIEVED

Said to Have Lived to Be 152 Years Old—Lived Under Reigns of Ten Princes.

"Old Parr" was an Englishman whose proper name was Thomas Parr and who broke the modern record by living to the ripe old age of one hundred and fifty-two years, an exchange says. The British cyclopedia gives this account of him:

"Thomas Parr (1483-1635), English centenarian, known as 'Old Parr,' is reputed to have been born in 1483 at Winnington, Shropshire, the son of a farmer. In 1500 he is said to have left his home and entered domestic service and in 1518 to have returned to Winnington to occupy the small holding he then inherited on the death of his father. In 1563, at the age of eighty, he married his first wife, by whom he had a son and a daughter, both of whom died in infancy. At the age of one hundred and twenty-two, his first wife having died, he married again. His vigor seems to have been unimpaired, and when one hundred and thirty years old he is said to have thrashed corn. In 1635 his fame reached the ears of Thomas Howard, earl of Arundel, who resolved to exhibit him at court, and had him conveyed to London in a specially constructed litter. Here he was presented to King Charles I, but the change of air and diet soon affected him and the old man died at Lord Arundel's house in London on the 14th of November, 1635. He was buried in the south transept of Westminster abbey, where the inscription over his grave reads: 'Tho. Parr, of ye county of Salopp. Born in anno 1483. He lived in ye reigns of ten princes, viz: King Edward 4, King Edward 5, King Richard 3, King Henry 7, King Henry 8, King Edward 6, Queen Mary, Queen Elizabeth, King James and King Charles, aged 152 years, and was buried here November 5, 1635.'"

That the son of a small farmer who had started in life as a hired man (the British cyclopedia says he left home and entered domestic service), should have been buried in Westminster abbey, shows that the story of his great age was believed.

Utilizing Rice Hulls.

Experiments have been made with rice hulls in combination with different binding agents, but while the resulting briquets gave every satisfaction from the standpoint of heating, yet the initial cost of the various binding agents made their cost too high for practical purposes. The experiments, however, are being continued, and it is hoped that in the future a briquet can be manufactured that will

3RD Liberty Loan

Invest In Liberty

In 1776 our forefathers staked their all that their children might have the right of Liberty. For years no one challenged this right. We lived in peace and prosperity. This nation became the richest nation in the world. But today the Germans have challenged our right to freedom and right to live at peace with our neighbors.

We must buy again that Liberty with our blood. We must back our boys with our money.

In Third Liberty Loan Bonds your Government offers you the safest investment in the world and with the money you loan pledges to equip your armies to reinsure your Liberty.

Cupid Makes Early Call.

An American professor who has spent his life investigating and has collected the evidence of 1,703 young people, declares that both sexes start being wounded by Cupid's darts at the age of three and that a woman's love reaches maturity at twenty-two and a man's at twenty-four.

Velvet-Making.

Velvet was developed and originated from fur in China. Thence velvet-making was introduced into India, and in the fourteenth century into Italy, where that sort of fabric especially appealed, and where the art of velvet-making reached its height.

At Sunday School.

"Give an account of Balaam," said the teacher. "Balaam was a prophet who lived a long way off," replied the student. "After a while he went out for a ride on his donkey, and he got very angry with the donkey and hit him, and a voice from heaven said, 'You must [illegible] the donkey; it is [illegible].'"

J. M. BISHOP, [illegible]

PIDGIN ENGLISH IS POPULAR

[illegible] the Lingo Is Used by Both Servants and Employers in Speaking to Each Other.

In China servants speak pidgin, or business, English to their employers; and servants from different parts of China will use this weird language in speaking to each other. The formation of the sentence is the same as in Chinese; the language itself is an extraordinary mixture of English, Portuguese, French and Chinese. Some of the phrases, says Mrs. De Burgh Daly in An Irishwoman in China, are very quaint and amusing.

A bishop is called "No. 1, top side joss pidgin man." "Top side" means heaven, "joss," god, "pidgin," business.

There is a story of two men who came to call upon the king of Siam when he was staying in Shanghai. They entered the hotel and asked the proprietor, a courteous American, if his majesty were at home.

"Boy," called the proprietor, "one piecee king have got?"

"Have got, sir," replied the boy cheerfully.

"His majesty is at home, gentlemen," translated the proprietor.

One day, says Mrs. Daly, a large party assembled on a steamer to bid farewell to homeward-bound friends. Wishing to make certain that the steamer should not carry us off, we informed the steward in excellent Mandarin that he was to come and warn us of her departure. He stared blankly. Some one tried Ningpo dialect—no use; Shanghai—still a blank stare. At last my husband called out:

"Boy!"

"Yessir."

"Wantchee walkee can come talkee! Savve ?"

"All right, sir; my savvee."

Servants quickly find out our likes and dislikes in food, and act accordingly. A friend of mine was fond of snipe, and often ordered them for dinner. One evening, when an unexpected guest arrived, she told Boy that since there were not enough snipe she would not eat one. Presently Boy nudged her and remarked in a loud whisper:

"Missee can have snipe; one piecee man no chow!"

BESSEMER IRON AND STEEL

Original Process Involved Decarbonization, or Burning Out of Excess Carbon, by Blowing Air.

Henry Bessemer, who invented the method named for him in the manufacture of iron and steel, which revolutionized the industry, was granted a patent by the British government on October 17, 1855. This was the first patent given him, notes an exchange. Additional patents were taken out in the following December and February, covering improvements. Bessemer's original process involved decarbonization, or the burning out of the excess carbon, by blowing air through pig iron. This revolutionary invention was due indirectly to the Crimean war.

Bessemer undertook to invent an improved cannon, but found all available metals too weak for the gun he sought to make. He then began experiments in steel making, with the ultimate result of the production of "Bessemer steel." His invention won for him fame and fortune and the honor of knighthood. Sir Henry Bessemer was born in England, but was of French Huguenot descent. Since his pioneer invention, the process of converting iron into steel has been vastly improved.

That Bore of a Fond Parent.

Of course, you have a bright youngster who says and does amusing things, asserts a writer.

But all children do.

Your child has not a monopoly.

If you wish to be classed with the worst of bores, continue your constant eulogy of all that your child says or does.

If, for instance, some other child said or did what your boy or girl does, would you think it so excruciatingly funny?

Every bright, healthy, intelligent child is delightful in the unfolding.

To each fond father and mother the particular angles of understanding, as they come to light, are most interesting.

But the youngster is chiefly interesting to yourself.

You see traits and characteristics in the light of what you know you are yourself. That is what makes it sound so funny.

How about the mean little tricks that your own child has and that you cannot get away from? They all have them, too. Do you tell these things? No.

Then your wonderful tales are merely another form of braggadocio. How about it?

Everything in Its Place.

Mrs. H. had just employed a new maid, fresh from the old country. She asked the girl to take the baby out in the baby carriage. Gunhilde was delighted. She had never seen a baby before and from her articulate joy one might think that she had waited for this moment all her life. Mrs. H. was pleased to see that the girl was so willing. The baby was wrapped up and they started. Two minutes later Mrs. H. looked out of the window and her [illegible] rose with horror. [illegible] gently down the [illegible] baby should her child was being [illegible] down the middle [illegible]

NEWLYWEDS DINE ON STEW

Wifey Prepares Dainty Morsel With Own Little Hands — But Physician Must Be Called for Hubby.

The cook had insisted on a day off and young Mrs. Freshly-Wedd was in a quandary and her stunning new house gown of twisted percale, muses the Detroit Free Press.

"I'll make a stew—anybody can make a stew!" she cried.

And she proceeded to make a stew. In the icebox she found seven frankfurters, a dozen fried oysters and three pickled herring.

"How fortunate—meat is the very importantest thing!" she exclaimed. And she chopped it all up and added three cupfuls of salt and two of pepper so as to be sure not to forget the seasoning. Then—because she knew that a stew must have lots of variety—she put in a glass of olive oil, two tablespoonfuls of grated nutmeg, two packages of Saratoga chips, a can of salmon and a half cake of bitter chocolate.

At 6:30 Freshly-Wedd came home—her Ben, stalwart and handsome, who had never known an hour's illness in his life.

"Phew!" he exclaimed. "What's that smell?"

"It's a stew I made for you wiv my own 'ittle hands," she told him.

"Divine aroma!" cried Freshly-Wedd, and forthwith sat down and ate two big platefuls, while his wife watched him so eagerly that she forgot to eat any herself.

Three hours later, in response to a hurry call, Doctor Blister drove up and rang the front doorbell. Query: Who was the patient, and why?

Press Gang at Church.

The cursory examinations which many recruits allege they received in the earlier days of the war were far greater tests of endurance and stamina than the recruit of 50 years ago was wont to receive. In those days, if a man could count all his limbs and had sufficient teeth to enable him to crunch the hard army biscuits and salt beef, or bite off the end of a cartridge before putting it into his old Brown Bess, he was certain of being accepted.

In earlier times, however, there was no pretense at medical examination at all. When Queen Elizabeth resolved to assist in raising the siege of Calais in 1596, the lord mayor and aldermen of London received instructions to raise a thousand men for this service, and on Easter Sunday they proceeded to several churches with their constables, fastened the doors, and selected from the congregation the number of men required. Without any medical examination they were equipped and sent to Dover.—Tit-Bits.

Typical American Eloquence.

Following is the peroration of a speech delivered in an intercollegiate oratorical contest in central Kentucky, 1896:

"Standing upon the last decade of the grandest century ever measured by the flight of worlds, 'I dipt into the future as far as human eye could see; saw the vision of the world and the wonder that would be;' saw the American continent formed; saw it the great sun of the solar system of nations around which all revolved, giving life and liberty to each and prosperity and happiness to all; saw its ports filled with the argosies of commerce; its brow blooming with the wreath of science; the breath of heaven blessing its flag; yet, in the vigor and buoyancy of youth, scorning pessimism and decay, marching ever onward to the accomplishment of its grand and glorious destiny."—Exchange.

THIRD LIBERTY LOAN

Your allotment of Liberty Bonds was not large enough to make it hurt when you puachased st. Now read the ads furnished by our patriotic business men, then go and buy till it hurts.

WHAT YOUR BOND PURCHASE WILL ACCOMPLISH.

The following figures give one a definite idea of what his or her loan to the Government by the purchase of Liberty Bonds will accomplish when used by the War Department:

One $50 bond will buy trench knives for a rifle company, or 23 hand grenades, or 14 rifle grenades, or 37 cases of surgical instruments for enlisted men's belts, or 10 cases of surgical instruments for officers' belts.

A $100 bond will clothe a soldier, or feed a soldier for eight months, or purchase 5 rifles or 30 rifle grenades, or 43 hand grenades, or 25 pounds of ether, or 145 hot-water bags, or 2,000 surgical needles.

A $100 and a $50 bond will clothe and equip an Infantry soldier for service overseas, or feed a soldier for a year.

Two $100 bonds will purchase a horse or mule for Cavalry, Artillery, or other service.

Three $100 bonds will clothe a soldier and feed him for one year in France, or buy a motorcycle for a machine-gun company.

Four $100 bonds will buy an X-ray outfit.

One $500 bond will supply bicycles for the headquarters company of an Infantry regiment.

GOODRIDGE

The most progressive and the biggest little town in northern Minnesota.

ARNDT—KOEHLER

Married, at St. Ann's church of Goodridge Wednesday morning at ten o'clock, by the Rev. Noesen, J. H. Kohler of Goodridge and Miss May Arndt of Highlanding. The bridal couple was attended by John Guinan, best man, and Miss Sarah Arnt, sister of the bride, bridesmaid. The bride was becomingly attired in a blue suit and hat to match. After the ceremony a sumptuous dinner was served at the home of the brides' parents, Mr. and Mrs. Henry Arndt. They are both very well liked in this community and their many friends wish them a long and happy life. Mr. and Mrs. Kohler will make their future home on the groom's farm near Goodridge.

RURAL SCHOOL NOTES.

The County Superintendent feels the necessity of urging the School Boards of the rural schools to consider the question of hiring the teachers for next year at an early date. The State Department of Education has issued an appeal to all school authorities to see that teachers are hired at an early date as they will unquestionably be scarce.

Let me therefore ask the school boards to use their utmost efforts to hire their teachers now. Our teachers the last year did efficient work as a rule and their work would be appreciated if the teachers asked to continue for another school year.

The Normal Training department of the Thief River Falls hgh school will graduate a number of efficient teachers this year. Most of them will seek positions in the home school. When the school boards then receive applications, kindly acknowledge the receipt of them and take the question of hiring teachers up for immediate consideration. Do not let the teacher wait long for an answer. Boards are protected in their agreement with a teacher under contract and if the teacher does not live up to her agreement her certificate will be revoked, says the department of education.

The High School Board examinations begin May 21. Most of the schools will be closed at that time. Nevertheless, we wish to give the exams. to all pupils who feel prepared to take them. Teachers must send requests at once for such examinations. Please do not forget this otherwise the opportunity to take them may be lost for the schools.

Will the respective school boards see to it that all the requirements for state aid are complied with? The aid received is quite an item now in defraying the expenses of teachers' salaries. Why should not all schools partake in this income? Answer by certifying for state aid in all of our rural schools at next annual school election.

The following schools in the county, having organized Red Cross Auxiliaries have paid their dues: Dist. Nos. 4, 5, 6, 8, 9, 12, 25, 26, 28, 29, 30, 31, 33, 35, 33, 39, 41, 42, 44, 46, 48, 51, 53, 54, 59, 64, 66, 67, 68, 69, 78, 99, 106, 125, 127, 149, 165, 166, 178, 180, 221.

In visiting the schools of the county I have noted with considerable interest and satisfaction the spirit of patriotism and loyalty toward the government and the sympathy manifested toward the boys in the trenches. In several of the schools there have been service flags displayed denoting the number of boys who have gone forth from the respective rural districts. In these schools the spirit of patriotism has been unqualified.

In Dist. No. 4 we noted four persons had gone forth from one family, the McCrums; District No. 46 had six stars in its service flag, and we had the pleasure on the 12th to attend an entertainment in Dist. No. No. 154 where a service flag containing [illegible] stars was dedicated. One of the stars was a golden one, representing one Fred Nordland, who at one time attended school in this district, but who enlisted from Canada and who fell at the battle front in France. The schools have been represented by one or more of our best and bravest boys.

The teaching force of the county is represented in the service by the following persons who at some time taught school, namely, Iver K. Lind, Myles Jackson, A. O. Brevik and C. S. McReynolds. Mr. McReynolds enlisted from Clearwater county, but he taught the school of Dist. 37.

I am sure our boys will give good accounts of themselves in the service and we folks at home must not be lagging in their support.

Our schools are now closing. Uniformally the work has been well taken care of by a staff of efficient teachers. Your superintendent trusts that the teachers will remain and engage schools again. The county superintendent regrets to see some of our best teachers leave but the call of the country in its dire needs has by them been nobly answered and we wish again to extend to the boys God speed and success. I regret, too, to see school dist. 221 lose for its service Miss Amanda Storvick, who has done such excellent work the past school year.

More and more the undersigned comes to recognize the importance and value of education and training to our boys and girls. I wonder if we as educators—hereby meaning teachers and especially parents—see in the pupils of today, as it sits in the school or as we meet them in the daily walks of life, the future adult man or woman? Will they then be fully equipped, mentally, morally and physically to take up the duties of life? We should then behold them as succesful men and women, living wires, capable persons, to do the best for themselves and for society. The factors in this process of development are the parents, the homes, society in general, the school and the church.

Are these agencies the best? I know that there is room for advancement on all sides.

Let us especially in these times, when there is so much to distract us from the true educational course, be on our guard and do our best for the men and women to be, namely our boys and girls.

Respectfully submitted,
E. A. MOSTUE,
Co. Supt. of Schools.

COUNCIL PROCEEDINGS

SECTION 2 AND 4 OF ORDINANCE NO. 2 AMENDED.

The Village Council of Goodridge do ordain as follows:—

Sec. 2 — The license fee for operating and maintaining any billiard or pool table or tables. or any tables on which billards, pool bagatelle or pigeon hole or any other game which is played with ball and cue, is played shall be and the same hereby fixed at Fifteen and no one hundreds dollars ($15.00) per year for each table.

Sec. 4 — The number of license for billiard halls and pool rooms shall be limited to three (3) for each Five hundred (500) population or fraction thereof. Such population shall be determined by the last National, State or village census.

These amendments shall take immediately upon their passage and publication.

G. C. Guirud,
President of the Village Council.
Attest H. B. Rockne,
Village Recorder.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

Of The Eleven Towns published weekly at Goodridge, Minnesota for April 1, 1918.

State of Minnesota
County of Pennington

Before me, a Notary Public in and for the State and county aforesaid, personally appeared A. O. Halvorson, who, having been duly sworn according to law, deposes and says that he is the Editor and Owner of the Eleven Towns and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

That the names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher, A. O. Halvorson, Goodridge, Minnesota.
Editor, A. O. Halvorsen, Goodridge, Minn.
Managing Editor, A. O. Halvorson, Goodridge, Minn.
Business Managers, A. O. Halvorsen, Goodridge, Minn.

That the owners are:
A. O. Halverson, Goodridge, Minn.

That the known bondholders, mortgage, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or securities are:
H. W. Smith.

A. O. Halvorson.

Sworn to and subscribed before me this 26th day of March 1918.

J. P. Jensen.

My commission expires Oct. 12th 1918.

One Hundred and Forty-Two Years of Labor and Struggle

THE American people fought their first battles for liberty and the rights of self-government one hundred and forty-two years ago.

¶ At that time, and for many years thereafter, their realization of their national aspirations and of the goal toward which they were really striving was vague and indistinct. But step by step they struggled onward and upward toward a light which grew clearer as their eyes and minds slowly opened to its significance. Today, as a result of their struggles and their sacrifices, we possess and enjoy our priceless American institutions.

¶ These institutions must be preserved. The structure so laboriously reared in these one hundred and forty-two years will be utterly destroyed if we do not stand in its defense with every atom of our energy and determination. This is not a situation which may be trifled with, or evaded, or put off. It is one which must be met now—today—no matter what sacrifices it may entail, or what the cost may be.

The immediate need is the investment of our money in LIBERTY BONDS!

GOODRIDGE, - - MINNESOTA

Every Hand in the Land

EVERY hand in the land owes a duty to the Liberty Bell. The principles of Liberty and Justice which our fathers fought for in 1776 have been attacked.

The German Kaiser himself has written: "I am dreaming a dream of a German World Empire—*and my mailed fist shall succeed.*"

Already his horde of self-styled Huns has spread over the lands of five nations. And wherever it has gone it has left desolation.

In those nations today there are hundreds of thousands of men, women, and little children who can no longer raise their hands in defense of their country.

We say we live in a free land. But our freedom today stands or fails with the success or failure of our boys who are fighting for us.

That we may halt the Huns in their mad war of conquest, our Government needs Billions of Dollars in the Third Liberty Loan. Every hand in the land must give. Every dollar which is not being used for necessities, must ring the Liberty Bell. The man or woman who does not buy his or her share of Third Liberty Loan Bonds has no right to the Liberty he or she now enjoys.

Buy this Badge of Bonds—not Bondage
THIRD LIBERTY LOAN

Your allotment of Liberty Bonds was not large enough to make it hurt when you puachased st. Now read the ads furnished by our patriotic business men, then go and buy till it hurts.

WHAT YOUR BOND PURCHASE WILL ACCOMPLISH.

The following figures give one a definite idea of what his or her loan to the Government by the purchase of Liberty Bonds will accomplish when used by the War Department:

One $50 bond will buy trench knives for a rifle company, or 23 hand grenades, or 14 rifle grenades, or 37 cases of surgical instruments for enlisted men's belts, or 10 cases of surgical instruments for officers' belts.

A $100 bond will clothe a soldier, or feed a soldier for eight months, or purchase 5 rifles or 30 rifle grenades, or 43 hand grenades, or 25 pounds of ether, or 145 hot-water bags, or 2,000 surgical needles.

A $100 and a $50 bond will clothe and equip an Infantry soldier for service overseas, or feed a soldier for a year.

Two $100 bonds will purchase a horse or mule for Cavalry, Artillery, or other service.

Three $100 bonds will clothe a soldier and feed him for one year in France, or buy a motorcycle for a machine-gun company.

Four $100 bonds will buy an X-ray outfit.

One $500 bond will supply bicycles for the headquarters company of an Infantry regiment.

ARNDT—KOEHLER

Married at St. Ann's church of Goodridge Wednesday morning at ten o'clock, by the Rev. Noesen, J. H. Kohler of Goodridge and Miss May Arndt of Highlanding. The bridal couple was attended by John Guinan, best man, and Miss Sarah Arnt, sister of the bride, bridesmaid. The bride was becomingly attired in a blue suit and hat to match. After the ceremony a sumptuous dinner was served at the home of the brides' parents, Mr. and Mrs. Henry Arndt. They are both very well liked in this community and their many friends wish them a long and happy life. Mr. and Mrs. Kohler will make their future home on the groom's farm near Goodridge.

RURAL SCHOOL NOTES

The County Superintendent feels the necessity of urging the School Boards of the rural schools to consider the question of hiring the teachers for next year at an early date. The State Department of Education has issued an appeal to all school authorities to see that teachers are hired at an early date as they will unquestionably be scarce.

Let me therefore ask the school boards to use their utmost efforts to hire their teachers now. Our teachers the last year did efficient work as a rule and their work would be appreciated if the teachers asked to continue for another school year.

The Normal Training department of the Thief River Falls high school will graduate a number of efficient teachers this year. Most of them will seek positions in the home school. When the school boards then receive applications, kindly acknowledge the receipt of them and take the question of hiring teachers up for immediate consideration. Do not let the teacher wait long for an answer. Boards are protected in their agreement with a teacher under contract and if the teacher does not live up to her agreement her certificate will be revoked, says the department of education.

The High School Board examinations begin May 21. Most of the schools will be closed at that time. Nevertheless, we wish to give the exams. to all pupils who feel prepared to take them. Teachers must send requests at once for such examinations. Please do not forget this otherwise the opportunity to take them may be lost for the schools.

Will the respective school boards see to it that all the requirements for state aid are complied with? The aid received is quite an item now in defraying the expenses of teachers' salaries. Why should not all schools partake in this income? Answer by certifying for state aid in all of our rural schools at next annual school election.

The following schools in the county, having organized Red Cross Auxiliaries have paid their dues: Dist. Nos. 4, 5, 6, 8, 9, 12, 25, 26, 28, 29, 30, 31, 33, 35, 38, 39, 41, 42, 44, 46, 48, 51, 53, 54, 59, 64, 66, 67, 68, 69, 73, 99, 106, 125, 127, 149, 165, 166, 178, 180, 221.

In visiting the schools of the county I have noted with considerable interest and satisfaction the spirit of patriotism and loyalty toward the government and the sympathy manifested toward the boys in the trenches. In several of the schools there have been service flags displayed denoting the number of boys who have gone forth from the respective rural districts. In these schools the spirit of patriotism has been unqualified.

NOTICE is hereby given that Betsy R. Gedestad, of Goodridge, Minn., who, on August 19th, 1911, made Homestead Application Serial, No. [illegible], for Lots 1, 2 and S½NE¼, Section 1, Township 153 N., Range 41 W., 5th Principal Meridian, has filed notice of intention to make Commutation Proof, to establish claim to the land above described, before, before Wilhelm Michelet, U. S. Commissioner for district of Minnesota, at Thief River Falls, Minn., on the 6th dry of May, 1918.

Claimant names as witnesses;

Torje Hegtvedt, Kittel Jordeshaugen, Life Jordeskaugen, Nick Bundhund, all, of Goodridge, Minn.

Proof made according to law under which entry was made.

Peter M. Ringdal,
Register.

Wheat Conservation Is the Great Need at Present.

Lifting the ban on meat will probably help to some extent in reducing the demand for wheat. We have unlimited quantities of potatoes, and with plenty of potatoes served, also meat and gravy, good meals can be provided with use of a minimum of wheat. It is fortunate that our extreme shortage of wheat has come at this time of year. Eggs, milk, vegetables, meat and potatoes are all plentiful.

The regulations with reference to distribution of wheat flour are now as follows:

No family, whether in the country or in the city, shall be allowed more than a 30-days' supply of wheat flour based on 6 lbs. per capita per month. This means reducing the consumption of wheat flour to one third of normal. It will make necessary the liberal use of substitutes and rigid reduction in the use of articles containing any wheat.

March 26, 1918

NOTICE is hereby given that Betsy H. Gedestad, of Goodridge, Minn., who, on August 16th., 1911, made Homestead Application Serial, No. 06255, for Lots 1, 2 and S½NE¼, Section 1, Township 151 N., Range 41 W., 5th Principal Meridian, has filed notice of intention to make Commutation Proof, to establish claim to the land above described, before, before Wilhelm Michelet, U. S. Commissioner for district of Minnesota, at Thief River Falls, Minn., on the 6th dry of May, 1918.

Claimant names as witnesses;

Torje Hegtvedt, Kittel Jerdeshaugen, Life Jordeshaugen, Nick Bundhund, all, of Goodridge, Minn.

Proof made according to law under which entry was made.

Peter M. Ringdal,
Register.

Wheat Conservation Is the Great Need at Present.

Lifting the ban on meat will probably help to some extent in reducing the demand for wheat. We have unlimited quantities of potatoes, and with plenty of potatoes served, also meat and gravy, good meals can be provided with use of a minimum of wheat. It is fortunate that our extreme shortage of wheat has come at this time of year. Eggs, milk, vegetables, meat and potatoes are all plentiful.

The regulations with reference to distribution of wheat flour are now as follows:

No family, whether in the country or in the city, shall be allowed more than a 30-days' supply of wheat flour based on 6 lbs. per capita per month. This means reducing the consumption of wheat flour to one third of normal. It will make necessary the liberal use of substitutes and rigid reduction in the use of articles containing any wheat.

Politics.

The candidacy of Oscar Arneson for the Republican nomination for state auditor is now regarded as among the certainties. Friends this week were busy with the story that his chief, J. A. O. Preus, had fully decided to enter the congressional contest in the Fifth district and if this is true Oscar's many friends throughout the state might as well prepare to get busy. Uncertainty concerning what State Auditor Preus was going to do is all that kept him from filing so far. That Mr. Arneson will have competition is expected—close friends are now boosting Auditor Nic Nelson of Stillwater for the place—but they wil have to go some to beat him. Out in the country he is regarded as well nigh invincible. As a rival, Nelson of Washington county is not to be sneezed at—he has the undoubted support of the county auditors' association and quite a few in St. Paul regard him as one of the best of fellows, but Arneson's following is more extensive. As chief clerk of the house, a newspaper man, and at present in charge of the state timber interests his following, it might be, said, covers every county in the state and it is of a character that will stand by him to the finish. Besides Mr. Arneson is acquainted with the demands of the office. He has now put in better than a year as the head of the land and timber end of the game and his record to date has been a good one. He does not play favorites and he gets the money for the state.

THE COMMUNITY CLUB.

A very successful meeting of the Community club was held in the schoolhouse Friday evening. Miss Rockwood of the University Extension Division gave an instructive talk on food and food values. She spent considerable time in showing that there were a great many other foods just as high in food value and nourishment as wheat and meat, and proved that no one would suffer by substituting.

County Agent White then gave a ten minute talk on alfalfa, its importance and possibilities in this county.

There was not such a large audience as there could have been for the reason that many took the occasion to hear the class play rendered by the Thief River Falls high school graduating class the same evening.

OUST BARBERRY; SAVE THE WHEAT

State and Federal Agents Will Enforce Public Safety Commission's Order.

PLAN VIGOROUS DRIVE

School Children and Patriotic Citizens to Co-operate on Arbor Day, April 19—Barberry Is Vicious Ally of Black Rust.

If you have barberry bushes—any kind of barberry bushes except the Japanese (Berberris thunbergii)—on your place, whether it be a city lot or a farm, prepare to dig them now.

In accordance with an order recently issued by the Minnesota Commission of Public Safety, barberry bushes of all kinds, except the Japanese, are to be dug up and destroyed. A. G. Ruggles, state entomologist, has been commissioned to see that the order is carried out "forthwith," which means right now. He is already at work.

The reason for the order is seen in the fact that barberry bushes are the vicious allies of the black stem rust of wheat and other grains. This disease in 1916 caused a loss of 30,000,000 bushels of wheat in Minnesota alone—about $30,000,000 as wheat prices stood then, about $60,000,000 worth of wheat as prices stand now.

That the barberry bushes are allies of the black stem rust is seen in the fact that the winter spores of the rust, formed on wheat or grasses at harvest time and remaining on the straw until spring, cannot infect the wheat, oats, or grass plants directly, but must pass to the barberry plants, from which they are redistributed to the grains and grasses in condition to do mischief again. In this way, at least in part, the rust plague is repeated from year to year, especially if the weather conditions are favorable.

Safety Commission's Order.

The public safety commission's order for the eradication of the barberry was issued in order to bring the state into close co-operation with the federal government in a campaign against the black stem rust, under the general direction of E. C. Stakman of the Minnesota experiment station in the central west, and under the special direction of E. M. Freeman, dean of the Minnesota college of agriculture, in Minnesota.

The order in part reads:

"All barberry bushes except the species and variety known as Japanese barberry (Berberris thunbergii) are hereby declared to be, and the same are, a public nuisance and a menace to the public welfare, and their maintenance, propogation, sale or introduction in the state is forbidden. It shall be the duty of every person owning or having charge of any premises on which barberry bushes of the rust-producing varieties are grown, or at any time found growing, to forthwith destroy such bushes.

"The state entomologist is authorized. . . . to cause all rust-producing barberry bushes within the state of Minnesota to be eradicated. . . . It shall be the duty of the county board of every county in this state to order and cause the eradication of all such rust-producing barberry bushes within their respective counties under the instructions and according to the directions of the state entomologist."

Eradication on Arbor Day.

In compliance with this positive order, arrangements have been made to interest the schools and communities of the state in the large eradication of barberry plants on Arbor day, April 19.

The spring is chosen as the time for the eradication campaign, because it is then that the spores of the rust pass from the old straw to the barberry to gain a fresh lease of life before passing on to the new crop of grains and grasses. If the barberry bushes are destroyed at this time, therefore, there will be no new lease of life for the winter spores developed late last summer.

Japanese vs. Common Barberry.

The Japanese barberry is usually from 2 to 4 feet in height and has somewhat spreading, reddish brown stems, while the common barberry grows to a height of from 4 to 8 feet, with its stems mostly upright and of gray or grayish green color. The spines of the Japanese barberry are mostly single, while on the common barberry they are usually in groups of three. The spines on the former are generally smaller than on the latter, also. The buds and leaf clusters on the Japanese variety are about one-half inch or less apart; on the common variety they are about an inch apart. The leaves of the Japanese plants are spoon-shaped, smooth around the edges, and green, whereas those of the other kind are large and broad, have spiny teeth along the edges, and are either green or purple. The Japanese flowers and fruit grow singly or in small clusters, while those on the other grow in long clusters.

How to Destroy the "Spiny Huns."

To destroy the common barberry, dig it up, being careful to get the whole crown and the large roots so that it may not sprout again.

How Non-Poultry Keepers Can Help Produce White Meat.

There are some people who are so situated that they cannot keep chickens, but who loyally desire to do all they can to produce and conserve food in this time of world necessity. While every housewife is learning to keep the waste from her kitchen and table down to the minimum, there are always leftovers which, while they cannot be used on the family table, will help feed chickens. Thus every family so situated that they cannot keep poultry themselves should turn their waste over to the neighbor who is keeping chickens, so that even this waste may be utilized to produce food for human beings. Now a few hints as to just what waste can be utilized in this way may help you to so arrange the garbage that it will not be rendered useless or difficult of use for chicken food by being mixed with harmful waste. All vegetable parings, scraps of bread and meat, cereals or vegetables left on the plates, all green waste such as celery, beet and turnip tops make valuable food for poultry. Each housewife will be glad to put this food aside in one vessel and to hand it each day to her neighbor who keeps chickens. But let her see that no slop, paper, burnt matches, coffee or tea grounds, bones especially fish bones, orange or banana parings are thrown in with what is saved for the neighbor's chickens. Let her save also every otherwise waste drop of milk, for every teaspoonful of sour milk will help a little chick to grow into victory food in two short months. This is a little trouble, but not too much for our loyal women, to whose untiring industry our ultimate triumph over cruel powers will be due to so great an extent.

THIRD
LIBERTY LOAN
Enlist your dollars—Wear this Button

Closely Resembles Familiar Service Flag—To Be Awarded Towns, Counties and States—Individual Flag Idea Abandoned.

The Ninth district Liberty Loan headquarters has in stock a large number of village, county and state "We've Done Our Duty" flags.

Who's going to have these flags?

Why, they are going to fly from the flag pole of the village hall of the village which equals or exceeds its allotment of Liberty bonds.

And they are going to fly from the flag poles of the county court house of the counties which exceed their total of Liberty bonds of this Third Loan.

And they are going to fly from the flag poles of the State capitols of the States which go "Over the Top" in this Third Liberty Loan.

If our town is going to fly this flag it's got to live up to what is expected of it during the three-day short and sweet campaign of April 15 to 17, inclusive, and if our county is going to fly the flag, it's got to do its duty, and the same with our State.

The "We've Done Our Duty" flag was designed with the idea of flying it from every home, office or business house which has taken a bond, much

THREE—

as the Red Cross banners are displayed.

But the Ninth district Liberty Loan Executive committee saw right away that that wouldn't coincide with their democratic plan of bond distribution in this district. It can readily be seen that with the individual flags, the chap who should buy a thousand dollars in bonds but buys a fifty dollar bond could fly the flag and make more noise with it than the chap who couldn't really afford to buy a one hundred dollar bond but bought a two hundred dollar bond. It must be remembered at all times that the Ninth district card index plan of bond distribution contemplates making every person do his just share in proportion to his financial capabilities. That's why, in this district, the flags are to be community, county and state flags rather than individual flags.

The flag itself is a handsome affair. The field is white and the border a thin line of red. Three perour town and in our county? Well, we should rather guess!
pendicular bars of blue relieve the field of white.

THE MEAT PROBLEM

Meatless Meals and Meatless Days are no longer required. We may expect meat conservation to be required later in the summer, but at present, owing to lack of boats and railroad shipping facilities, decreased consumption and increased production, there is at present plenty of meat in the country and for the time being conservation is not necessary. Lifting this ban at present has been criticized by a few people on the assumption that the Food Administration didn't know what it was talking about when it asked us to conserve meat.

The fact is there has been urgent need of meat conservation and probably will be again early this summer. The guaranteed price of pork and the effort of farmers to feed soft corn this winter before warm weather has resulted in a production of an unusual amount of pork. Hogs were marketed considerably heavier than under normal conditions, but in spite of this increased production, which is desirable, it would still have been necessary for us to continue with our conservation had there been sufficient shipping to get meat to Europe. For many weeks the meat ration in Great Britian has been as low as three-fourths of a pound per capita. It is plain that all of our surplusses of meat could be disposed of quickly if we could ship them to the Allies.

WANTED—Somebody to break about 55 acres with team or tractor. Will pay $3.00 per acre cash.

adv. 2 wks. Salve O. Omlid, Erie.

SPECIAL SESSION OF LEGISLATURE?

A special session of the legislature to be called the latter part of this month is now regarded as among the certainties. State capitol circles can talk of nothing else. The call, so the talk runs, will be issued by Gov. Burnquist immediately on his return from Washington where he and his private secretary Gustaf Lindquist are at the present time. Nominally the assembling of the two branches of the legislature is for the purpose of enacting laws permitting Minnesota soldiers to vote and declaring a moratorium for all men in the military service, but the activities of the two bodies are expected to extend much farter and in consequence quite a few are very fearful as to what will happen. Many are really frightened. Left to Gov. Burnquist there would not be a special session, but the pressure the past week has been so strong that he has been compelled to make answer. As yours truly gets it he has decided to issue the summons, but he will not be responsible for what happens. If there is any curtailment of legislation those urging the call will have to take the initiative. It is hardly necessary to say that the activities of the Nonpartisan League are responsible for the proposed assembling of the legislature in special session. Big business generally, and small business for that matter, are much concerned as to who will control in the coming primaries and the soldier vote in the opinion of both will determine the question. They figure the soldier vote will put League candidates generally out of business. At least business hopes so and is determined to take a chance. With business, and in fact every voter who regards the League as a menace to good government, this is the time to act. Perhaps the cure may be worse than the diesase, but there is nothing like trying. In the language of the gambler, bet 'em hard and sleep in the street.

There is no getting around the fact that a special session of the legislature at this time is fraught with uncertainties. In many ways it is dangerous. Even should Gov. Burnquist not take any steps to confine the laws that would result to the desired few it is certain that the senate combine would busy itself, but such activity would not necessarily control. There is the house, which is a law unto itself and which if it desired could compel anything it attempted. Senate combines are all right, but it is history that the average senate organization is mighty wobbly around about election. If the call is issued, paste this in your hat, legislation attempted will not be confined to the soldier vote. It is of knowledge that a bill is in the making returning to the schools of the state the $1,070,000 denied them by the governor's veto of a year ago, an act increasing the gross earnings tax on the telephone companies in the state and a resolution calling for an investigation of the activities and expenditures of the state safety commisison. At the same time among the possibilities are bills putting Minnesota in the dry column, creating a general corporation tax, a tonnage tax, increasing liquor licenses and taking the control of telephone companies in the state away from the railroad and warehouse commission and proposing a constitutional amendment to allow the state to build or buy grain elevators. If the two latter should prevail it would practically put the railroad commission out of business. As pointed out, a special session of the legislature can make all kinds of trouble and the one now in contemplation is no exception to the rule. Those interested say some extra sessions held in the past got by all right, but the past is not always a good guide. This is 1918 and a bad year at that; worse than 1912 when Gov. Eberhart got his friends into all kinds of trouble by calling the lawmakers together to pass the primary law.

RAISE POULTRY

How Many Hens Shall I Keep?

That is the question frequently asked by those who wish to establish a back yard flock. The answer must depend to a great extent upon the size of the family or the conveniences for keeping fowls.

In no case should these back lot flocks be large; not more than from eight to fifteen hens unless the opportunity is unusual. Where room permits and waste can be secured from the neighbors, a flock up to twenty or more fowls can be profitably managed; but in no case should the hens be required to live from the garbage alone.

It will put them out of condition and they will not do so well. They should also be given charcoal and grit at all times. The runs may be small, ten or twelve square feet to each hen, but they should be spaded up frequently after scraping the refuse from the top to scatter upon the garden. The lawn clippings will be appreciated by the hens, and made by them into good food.

Little chicks may be allowed to run in the garden for some weeks, with benefit to both chicks and garden, but they should be shut up before the vegetables are far developed. The chicks will pick up worms and bugs that would do a great deal of damage.

Most of all, do not allow your chicks to bother your neighbor, for even tho the damage may be imaginary, you must respect your neighbor's rights.

The day-old chick will be procurable either in large or small numbers, and may be raised with the fireless brooder at practically no expense for equipment. Do not buy an incubator and brooder for the back lot flock.

In some localities chicks six weeks old can be obtained, and at this age the cockerels can be distinguished from the pullets. This is the desirable age to get the chicks when possible.

Are you wearing the Badge of Liberty

Notice

Order of the Village Council to the residents of the Village of Goodridge:

We expect to have all the back yards cleaned up from all kinds of rubbish, manure, and ashpiles by the first fo May. Those places found uncleaned by that time will be cleaned by the Village and expense charged to the owner.

G. C. Gulrud,
Pres. of the council.

THE JUNIOR RED CROSS

An army of 350,000 school children has been mustered in Minnesota, North and South Dakota, and Montana in the last six weeks. Each child enrolled has become a member of the Junior Red Cross for the Northern Division and has pledged his services to the government for the duration of the war.

The mobilization of this army began on Lincoln's birthday. The campaign was scheduled to last until Washington's Birthday. However, unexpected difficulties were encountered. There are approximately 20,000 schools in the four states of the Northern Division. Nearly 87½ per cent of these schools are in rural districts, extremely difficult to reach in winter weather and worse in the spring when country roads become seas of mud.

Therefore, instead of ending, the campaign for Juniors was really just begun on Washington's birthday. Today Miss Helen Harrison, Junior membership director for the division, reported to Washington on the work accomplished thus far by her department. Many of the schools, she reported, had not yet sent in returns from their enrollment campaigns. These totals are expected to swell considerably the record already made by the division.

Based on the reports that are already at hand, 6,050 schools in the four states have organized junior auxiliaries with a total membership of 349,968 pupils. The coming of settled weather, permitting a more thorough canvass of the country districts, Miss Harrison declares, will double that enrollment. In addition to organizing, the Northern Division Juniors have completed 20,000 garments for shipment to the refugee children in France and Belgium. With the coming of spring all are planning war gardens to help avert food shortage in this country when supplies are rushed across the ocean to our Allies this summer.

The best records for Junior membership enrollment were achieved by Norman, Wright and Big Stone counties in Minnesota; Grand Forks, N. D., and Lawrence, S. D. These counties are all credited with 100 per cent enrollment, every pupil in every school having become a Red Cross member and worker.

Three counties in South Dakota, Hughes, Sanborn and Minnehaha have obtained 90 per cent enrollment. Murray, Steele and Lac qui Parle counties, Minnesota and Walworth county, South Dakotaa, obtained 80 per cent enrollment. Next in line are Mower, Meeker and McLeod counties in Minnesota, Griggs, North Dakota, Codington, Grant, Brown and Hamlin, in South Dakota and Yellowstone county, Montana, with 70 per cent enrollment.

Hennepin county is in the 60 per cent class with Douglas, Goodhue, Kittson, Wilkin, Watonwan and Koochiching counties in Minnesota, Lake, Spink and Turner counties, South Dakota and Flathead, Big Horn and Gallatin counties, Montana.

Many other counties are expected to land with averages in the high percentage columns within a few more days or weeks, according to Miss Harrison. Reports are still coming in. Several of the larger counties, particularly Ramsey and St. Louis counties in Minnesota were slow getting under way with the campaign and in Montana and North Dakota it was almost impossible to campaign at all before the coming of spring.

One Hundred and Forty-Two Years of Labor and Struggle

THE American people fought their first battles for liberty and the rights of self-government one hundred and forty-two years ago.

¶ At that time, and for many years thereafter, their realization of their national aspirations and of the goal toward which they were really striving was vague and indistinct. But step by step they struggled onward and upward toward a light which grew clearer as their eyes and minds slowly opened to its significance. Today, as a result of their struggles and their sacrifices, we possess and enjoy our priceless American institutions.

¶ These institutions must be preserved. The structure so laboriously reared in these one hundred and forty-two years will be utterly destroyed if we do not spring to its defense with every atom of our energy and determination. This is not a situation which may be trifled with, or evaded, or put off. It is one which must be met now—today—no matter what sacrifices it may entail, or what the cost may be.

The immediate need is the investment of our money in LIBERTY BONDS!

FOOD ADMINISTRATION REQUIRES REPORT ON FLOUR SUPPLIES BE MADE BY MAY 1

To the People of Minnesota:

The Federal Food Administration hereby requires everyone who has more than 30 days' supply of wheat flour to return the flour at once to the dealer or miller from whom it was purchased or report to his County Food Administrator. This order applies to every one no matter where or how the flour was obtained. Thirty days' supply is determined on the basis of 6 lbs. for each member of the household. A family of four may have 24½ lbs. of wheat flour; and a family of eight, 49 lbs. Substitutes may be purchased in any amounts desired.

It is not assumed that having an excess of flour on hand makes one a hoarder. It does not. In normal times it is an indication of thrift and sensible buying to purchase flour in reasonably large quantities. We do not want any one who is following his normal method and has an excess of flour on hand to feel in any way that he has done wrong. He has not.

NEED OF FLOUR GREAT.

But conditions now are far from normal, hence this call. America and the Allies are short of wheat and wheat flour. The Allies are driven desperately for food. We are under obligations to furnish the food. Shipping facilities are limited. Bread they must have and bread we must furnish them. The government must know how much flour there is in the country and where it is. Our own people must use other foods which we have in abundance and save flour.

HOARDING.

Any one who insists on keeping more than one month's supply or is using more than 6 lbs. per person per month is considered a hoarder and will be dealt with accordingly. Hoarding of necessary foods is punishable by a fine of $5,000 or imprisonment for two years or both. It is hoped that no one in Minnesota will place himself in the hoarder class. We beg of the people to respond at once to this call and on or before May 1st, 1918, to dispose of any excess flour or report to their County Food Administrator as follows:

Name ....

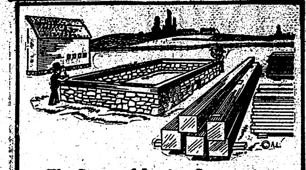
P. O. Address ....

No. in Family .... Amount of wheat Flour .... lbs.

Fill In, Cut Out and Mail to Food Administrator in Your County.

A. D. Wilson

Federal Food Administrator for Minnesota.



The Secret of Lasting Construction

No matter whether it's a house, barn, or shed lies not alone in your choice of siding material and shingles, but largely in the material that must support the building—that is

Good Timbers and Dimension

The kind we handle are the product of the best sawmills in the country and will support your building for years, Come in and let's talk over your building needs and let us show you why wood is cheaper as well as superior to all other materials.

John Magnuson was in Thief River Falls Saturday night and Sunday.

Elmer Stolson, of Fergus Falls, was a caller in Goodridge Saturday.

Rev. Tungseth was in Thief River Falls last Wednesday.

Clara Ferdinandson has employment at McLeod's, west of here.

FARMERS SHOULD LEARN FIRE PREVENTION METHODS.

Fire prevention on the farm should be one of the matters discussed at farmers' institutes. This is the opinion of George H Nettleton, Chief Assistant State Fire Marshal. The farmer just now occupies a more important place than ever and his farm is one of the most important assets of the government in its fight against the Hun.

,,It is therefore particularly necessary that the farm boy who is sent to the agricultural school this year or the older farmers who are attending farmers' institutes should be given some instruction towards fire prevention on the farm.

"One of the matters that could be discussed would be the proper design and arrangement of farm buildings and the use of the water system in checking fires. Most farmers have been lead to believe that lightning is the most dangersous element to contend with but recent reports have shown that there is more fire loss due to neglect of proper precautions against spontaneous combustion and carelessness than from lightning.

LETTER TO THE PUBLIC:-

Dear Friends, Drop in and see my line of specialties. I intend to specialize in those articles that I now have on hand, having seen the need of such a line in this town, and I hope that with a share of the town and farm business I may be able to keep it up in the future.

Yours for business,
Rosaire Morin.

The Goodridge fire department was called out Saturday afternoon to assist in extinguishing a bad prairie fire that was raging north of town. No serious loss occured.

A number met at the school house to make comfort kits bandages, and hospital shirts for the soldiers last Friday afternoon. Mrs. H. B. Rochne and Mrs. Geo. Josephson entertained the members of the Red Cross.

A number of the young people autoed to Anstad school house Friday evening, where they were entertained by Miss Lillian Korstad. All reported a very enjoyable evening spent.

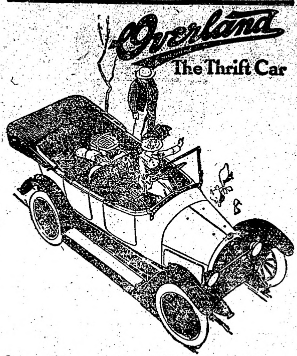
A farewell party was given Miss Gertrude H. Pries, who has been teaching in the Graff district the past year. Also Miss Lillian Korstad, who has been engaged in teaching the Anstad school, which closed Friday. The party was given by the Goodridge young people in the P. P. Palmer hall, Monday evening, April 22. A very pleasant evening was spent by all and it is hoped the two young ladies will return when the school year begins again.

Dean Thatcher of the college of Agriculture, U. of M., Prof. F. J. Olway, U. of M. and Prof. Selvig of the Crookston School of Agriculture will come to Goodridge Monday to inspect the ground and the proposition for the proposed peat experiment farm They will arrange to accept it, if it is suitable. Ground for this farm has been obtained from the following: Carl Lindstrom 10 acres, Prof. Hay 10 acres Ole San 15 acres.

Saturbay evening, April 27, the class of 1919 of the Thief River Falls High School will render a program in the Schoolhouse. The program will consist of two Plays entitled "Who is Who" and "Bachelors Studio". The admission to this entertainment will be 15 and 25 cents. The proceeds will go to the Goodridge Branch of the Red Cross. Don't forget the date. All be there.

Washington, D.C.

The United States Department of Agriculture again advises farmers to sell their hens gradually and not to glut the market immediately after May 20, when the restriction against sale of hens is removed. Hens should be sold gradually. This will stabilize the market and bring better price for the It also will mean more eggs. Every laying hen at this season produces eggs at far less cost for feed than during the winter.



Save Time—Get This Car *Now*

The increasing demand for quick personal transportation causes thousands to adopt this time-saving Model 90 for more efficient living.

They had thought it necessary to spend more in order to have beauty, room and modern conveniences.

They *now* know this Model 90 has all of these essentials for complete satisfection at a large saving in cost.

They *now* know it is economical with fuel, sparing of tires and is easy to handle.

You cannot get for less all of the advantages of this Model 90.

It has Auto-Lite starting and lighting, vacuum fuel system, rear cantilever springs and large tires, non-skid rear.

One salesman with it is worth two without it. For professional men it is an office-on-wheels. Housewives are able to bring fresh produce direct from farm-to-table.

More than 80,000 already sold save their owners time and money. Why not for you?

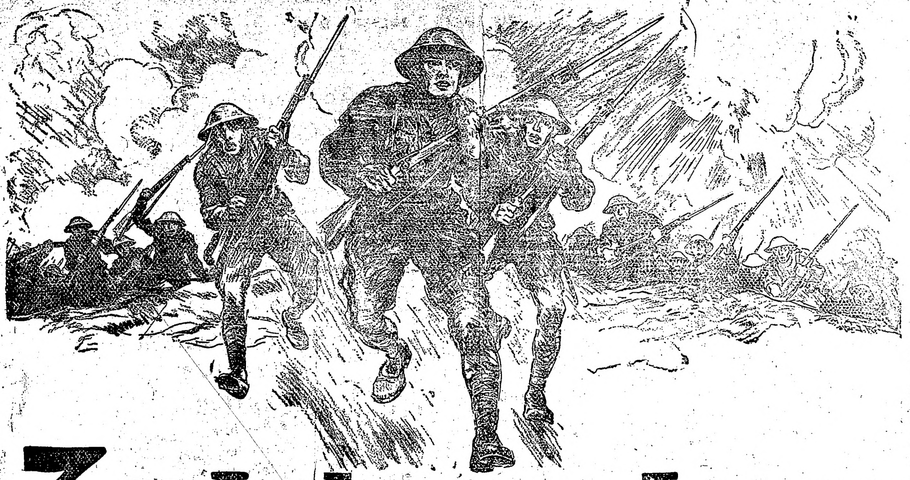
Over the Top with the



3RD Liberty Loan

The great Spring Drive is on.

Somewhere in France the boys must go "Over the Top."

Uncle Sam has called us here at home to go "Over the Top" also —with the Third Liberty Loan.

Uncle Sam must have, at once, Billions of Dollars to take care of the boys "over there" who are fighting the big fight.

Every man, woman and child in this great nation of one hundred million souls must get into action.

We must back our soldier boys with our dollars.

Uncle Sam is not asking for a gift—he is offering bonds on which he will pay interest every six months until redemption. When you buy Third Liberty Loan bonds, you receive a mortgage on all the property of all of the people of the richest nation in the world—the United States of America.

The Army Depends On You

Our Army is staking its life to make the world safe for you. Unless the men are properly equiped, their blood may be sacrificed to your selfishness. Every Third Liberty Loan Bond sold shortens the road to Berlin. You have a share in the Third Liberty Loan, no matter how many bonds you may have bought before.

Be a Leader "Over the Top"

Do not wait until someone asks you to buy. Go to your bank or post office today and subscribe in money as the soldiers subscribe in blood. We must go "Over the Top" with the Third Liberty Loan. Our commander has ordered "Charge!" Victory or defeat depends today on how you answer this call.

GERMAN WAR PRACTICES

WAR FRIGHTFULNESS TAUGHT BY GERMANY

Described in Important War Booklet Just Issued by U. S. Government.

Washington, D. C., April 17.—"It is permissible to destroy private property, to destate systematically evacuated regions, to terrorize the civil population of invaded districts, to deport people for compulsory service in the enemy country, thereby releasing its own men for the army, to compel them to aid the enemy in the construction of fortifications, to dig trenches, to serve as guides, and even to furnish information regarding their own army."

The teaching of the official German War Manual is thus summarized in a booklet issued today by the Government through the Committee on Public Information, Washington, D. C. The title of this booklet is "The German War Code." It is one of a series of war information booklets, and a copy will be sent free to anyone who will address the Department of Distribution, 6 Jackson Place, Washington, D. C.

The authors of "The German War Code" are Professors G.W. Scott, formerly of Columbia University, and J. W. Warner of the University of Illinois. In interesting fashion they analyze the official German War Manual, with its sneers at the "sickly sentimentality" of all rules of war dictated by chivalry, honor and generosity to the enemy, and they contrast it with the war manuals of Great Britian, France and United States, which are declared to be "the very opposite of the German in the law which their governments have laid down for their armies to observe in their dealing with the enemy."

The German War Manual was prepared by the German General Staff and was first issued in 1902. "It would seem," say Professors Scott and Garner, "from the way in which most of the Hague provisions are denounced, ridiculed and sneered at, that the real reason for issuing revised instructions was to counteract any influence which these provisions might have been expected to have upon German military officers, through Germany's having ratified the Hague treaties." The German War manual is shown to be the text book of that philosophy which has expressed itself in the form of "frightfulness" in Belgium, Poland, Servia, Armenia and wherever German officers have held sway. This booklet shows that the brutality, ruthlessness, terrorism and violence of the German forces have been coldblooddly planned for years by the German military authorities. It shows that it was the wholesale violation by Germany of the most sacred standards of human society that caused our Government to enter the war.

What the effect of such teachings and such practices must be upon the world is indicated by the authors of this pamphlet as follows—"Made in their (Germany) ambition to win, the German rulers have forgotten that the German nation must live and do business with the other peoples of the world after this war is over. Though International Law lacks the administrative means to judge and punish violations of its better [illegible] established rules [illegible] like all laws and customs, supported by a public opinion which never fails to manifest in numerous ways its detestation and horror for those who flagrantly misconduct themselves. For years the German Government and individual Germans in their intercourse with foreign people will be made to feel the suspicion and distrust in which they are held. This is bound to be a tremendous handicap. It is the penalty which mankind will inevitably exact from those who, while sneering at chivalry and characterizing the humanitarian tendencies of modern times as 'flabby emotion,' have carried on a system of terrorism that knows no bound."

Care and Feeding of Breeding Geese.

Geese do not require warm winter quarters. The floor of their pens should be well supplied with plenty of clean, dry straw.

Their food in winter should consist of whole grain as, oats and barley or oats and corn, (equal parts by weight) fed from troughs, all they care to eat. Boiled potatoes or sliced roots should be liberally fed. They should be let out on range early in spring, and as soon as the grass and clover become abundant this will be sufficient food until fall.

Care and Feeding of Goslings.

Goslings should not be disturbed until twenty-four hours of age. At the end of one week, if the weather is warm, they require no artificial heat. Until they are strong enough they should be confined to small, movable runs and coops, and these should be moved each day to supply fresh grass. Keep their sleeping places clean. For the first few days they should be fed on dry bread, soaked in skim milk and fed crumbly. After ten days change to ground grain such as, three-fourths shorts and one-fourth either corn or barley meal. This should be moistened with milk and fed similar to the bread and milk. Feed little and often. As soon as they are three weeks of age gradually wean them to grass and clover pasture. Always keep fresh water before them. If they are to be fattened, confine them to small runs for a week or ten days and feed them on a ration of about two parts corn and one of shorts mixed with sour milk, and feed all they care to eat.

Care and Feeding of Breeding Ducks.

House breeding ducks in winter similar to geese. They do best if provided with a pond to swim in. They must always be supplied with plenty of drinking water. They should be kept in moderate condition until about a month before mating time, when more liberal feeding is required. Food should then consist of mill feeds. A good ration is as follows: Equal parts by weight of bran shorts and corn or barley meal, mixed crumbly with skim milk. Feed twise a day. If possible mix chopped roots, grass or clover leaves with the mill feeds or feed separately all they care to eat. Give them plenty of range.

Care and Feeding of Ducklings.

Ducklings should be cared for similar to goslings. A very satisfactory ration for them is as follows: 'For three or four days feed one part hard-boiled eggs mixed with three parts dry bread. Mix shell and all. Gradually change to equal parts, by weight, of corn or barley meal, bran and shorts, mixed crumbly with skim milk and three times the bulk of chopped green stuff as, Onion tops, lettuce, beets, or garbage. Feed often and liberally for about six weeks. If they are to be fattened, feed in small yards a ration of two parts corn or barley meal, one part bran, one part shorts mixed with skim milk. At eight weeks of age they should be ready for market. If intended for breeding purposes, turn out on free range so as to keep them in good growing condition.

By C. E. BROWN,

Crookston Experiment Station.

P. S. Those interested in ducks, geese and turkeys may secure bulletins on these subjects by applying to Agricultural Extension Division, University Farm, St. Paul, Minn.

NOTICE.

All those who ha[illegible] shares in [illegible] and [illegible] haven't settled for their [illegible] creamery call at once [illegible] do so.

Nick Bundhund, Treasurer.

RAISE POULTRY

$252.11 Profit from Hens.

These were the actual receipts from 250 pullets during the months of December, January and February, over and above cost of feed which amounted to $179.48, according to the statement of H. C. Hansen, banker and creamery owner at Barnum, Minnesota, and no one questions the statement.

The eggs were not sold at fancy prices, altho they did bring more than the average farm eggs marketed in the usual way, but they were marketed just as all the eggs are at Barnum, thru the creamery, packed in cartons containing one dozen each and put upon the market in first class condition, as all such food products should be.

Mr. Hansen's was only one of several poultry plants visited at Barnum, and in nearly every case the receipts were similar to those above reported, and while feed prices are very high, everyone was optimistic as to the future of the poultry industry when operated along good business lines. There are no secrets about it. The pullet must be hatched early enough to develop laying before cold weather sets in and then she must receive a liberal amount of the right kinds of feed in comfortable quarters. Barnum is up near Duluth, therefore is not in a warm climate. The 250 pullets were all kept in one pen of suitable size, but it should be easier to get as good results in smaller flocks, and at less cost where the kitchen and table wastes go to make up part of the feed. In no case should these wastes constitute the whole ration. Some grain must be fed.

RED CROSS FILM TO BE SHOWN

The first official Red Cross film [illegible] will be offered to the public at the Princess Theatre of Thief River Falls Saturday and Sunday, May 4 and 5.

The picture, dealing particularly with Red Cross work in France, is entitled "Humanity's Appeal". This is a one-reel picture showing the work of the Red Cross at Evian—the French city where hundreds of repatried are received every day by the American Red Cross.

MICKIE SAYS

YOU'RE RIGHT, MICKIE! A MAN WHO SNEAKS OUT OF PAYING HIS BACK SUBSCRIPTION BY REFUSING THE PAPER AT THE POSTOFFICE IS A PESKY POLECAT AND AN ORNERY HYENA, BUT STILL IT WAS POOR JUDGMENT FOR YOU TO TELL HIM SO TO HIS FACE, FOR HE FEELS MEAN ENOUGH ALREADY, AND I CAN SUE HIM AND GET THE MONEY.
I CALLED HIM A POOD WARTHOG TOO, BOSS!

THE LIBERTY LOAN

WHAT IT PROVES

One thing at least has been demonstrated by the Third Liberty Loan campaign—that there is a better, purer spirit of loyalty throughout the Ninth district than has been evidenced at any time since the entrance of the United States into the world war. This is not the opinion of any one individual, nor is it the opinion of persons who have visited any one section of the Ninth Federal Reserve District, but the judgment of every worker who has been out in the field.

Particularly is this true of the persons of German birth or descent. The hysterical, intolerant patriotic speaker who shouted "Down with everything German", has seen his day, and his place has been taken by the more rational, more reasonable speaker who has felt that the men and women of German blood were entitled to know the facts.

For one thing, the German Lutheran Ministers have shown a more loyal activity than evidenced in either of the former Liberty Loans and it is felt that they now can be counted on almost to a man, to do all in their power to aid the United States Government now, and in the future. This in itself has been of material value in bringing persons of German blood to see the war straight. After a successful initial experiment, the Liberty Loan executive committee has made it a practice to send into German communities, speakers who could talk to the people of German blood in their own tongue, as thousands of Germans, particularly the older ones never have learned to speak the English language and the German literature which they have received in the past has often times carried an insidious Pro-German note. These later speakers have found an absolutely virgin field—audiences made up largely of persons who never have been told the truth about the war. They are unanimous in their opinion that as soon as these persons of German blood have heard the truth, they have not hesitated to line up with the United States government.

The Third Loan has demonstrated too, that the farmers are more awake to the war than ever before, and possess a better understanding of bond buying.

Field workers report that the farmers, when the final reckoning of this Third Loan campaign is all compiled, will prove to have bought more bonds than in both the other loans put together. In many instances farmers failed to buy in the first and second loan simply because they did not understand about United States Government bonds — many in fact thought that money invested in bonds was merely a donation to the Government, and that there never would be any return on it, and that the bond received in return for the money was merely an honorary certificate indicating that the possessor had made a donation to the Government.

Plan [illegible] Garden Early.

[illegible] your garden, allot the space [illegible] the vegetables you want to grow, buy your seeds, have your tools at hand, prepare for the opening of the growing season.

TEN REASONS BY AN EXPERT WHY

ALCOHOL THE GREATEST MENACE TO HEALTH.

In United States Senate document (No. 48, 1909), Dr. George W. Webster, President Illinois State Board of Health declares that alcohol is a greater menace to the people than tuberculosis. He says:

"The alcohol problem is more important than the tuberculosis problem as (1) it costs more lives and more money; (2) it costs the United States over $2,000,000,000 annually; (3) it probably causes directly and indirectly, at least 10 per cent of all deaths in the United States; 4) it predisposes to infection, destroys acquired immunity, prevents the occurrence of artificial immunity, at least in rabies, lessons resistance, leads to an increased mortality in all infectious diseases and after surgical operations; (5) it lessens the power of the individual to resist the injurious influences of extreme heat and cold; (6) it causes a deterioration of the quality of mental work; (7) it diminishes the power to withstand fatigue and lessens the general efficiency of the individual; (8) it is a poison and should be classed as such, instead of as food or stimulant; (9) when the physicians take hold of the question in the same spirit as they have shown concerning yellow fever, maleria, and small pox, instead of treating it as a moral question and leaving it to clergymen, temperance workers, and enthusiasite reformers, we may expect better results; (10) more may be accomplished by teaching the people the truth in regard to the fatal effects of alcohol upon mental and physical efficiency than by expatiating on the moral wickedness of drinking."

The Question Of Teachers

The Government has appealed to the public schools for assistance in many important ways and has not been disappointed. It will continue to rely upon them for such assistance. If the schools are to continue to help the Government during the war and are to be in a position to help it after the war is at an end, they must be kept open and be in the hands of teachers well qualified for the work. It will be very difficult to provide the number of qualified teachers sufficient to keep the schools in operation. The supply of properly trained teachers has not been adequate thus far. Enlistments in the various branches of the Government service and new social and economic conditions are responsible for the condition.

Obviously the most important measures for improving the situation are such as will increase the supply of well trained teachers. It is very evident that it would be unwise to lower the standard of requirements for teaching in the hope of increasing the supply. The needed increase in the number of trained teachers cannot be made until the rewards for teaching are made both more evident and more real. In the past, although the financial reward has not been especially attractive, teaching has generally been preferred because of the opportunities which it affords of rendering service of a high order of merit to young people and to society. Teaching has appealed to many because, as a calling, it offers large re[illegible] in values which are mo[illegible] than the material [illegible] esteemed of these is [illegible] from [illegible] monetary. Chief [illegible] the satisfaction derived [illegible] the consciousness of rendering service to society and of contributing to the development of right standards of citizenship and of life in the young. This is, of course, a worthy and very powerful motive with those who succeed best in teaching.

In this time of great need for high and disinterested service in all our institutional activities, especially those designed for the Country's defense, there are none which offer finer opportunities for effective service of the highest sort, whether one thinks of present or future needs. It is a type of service which cannot become as effective as the occasion requires unless those who are to render it shall be adequately trained for it. Fortunately the financial rewards for teaching are becoming more nearly commensurate with the value of the work [illegible] and the immediate future is likely to witness further increase in the compensation of teachers. Nothing else will so hasten the increase in the number of those who [illegible] render the kind of service now needed.

TIME TO START BIG CLEAN UP CRUSADE

National Bureau Is Helping Thousands of Communities Push the Attack.

READY FOR THE ONSLAUGHT

Headquarters of Great Organization, in Operation Five Years, Promotes Cleanliness, Comeliness, Cheeriness and Conservation.

"Clean up and paint up!"
Don't you hear the call?
Indoors and outdoors
Work for each and all!
Clean house—and paint house,
White or brown or red;
Tidy up the back yard!
And paint up the shed!
Burn the alley rubbish;
Send the tin can hence!
After that—the thought is right—
Fix that alley fence!

"Clean Up and Paint Up the National Capital!" shouted a Washington newspaper in type that was spread all over the top of a page, just a few days after Congress accepted Germany's gage of war. "Washington begins its spring cleaning and painting campaign," added the same journal, in type somewhat more subdued in tone. All Washington heard the call and heeded. It was the national capital's call to arms. Everybody volunteered. There was no age limit in either direction. Nobody was rejected because of defective teeth, ingrowing toe-nails, strabismus or housemaid's knee. The big army mobilized overnight. It armed itself—broomsticks in hand, brushes ditto, scrub-cloths, soap, water, rakes, paint cans and buckets!

No Lack of Preparedness.

Washington did not get its orders from the White House or from the big building under the gilded dome at the top of Pennsylvania avenue. The nation's capital took its cue for this campaign from a middle Western city—St. Louis, headquarters of the National Clean Up and Paint Up Campaign bureau. There was no lack of preparedness, for the bureau had been in operation five years. It was simply a call to mobilization. A similar mobilization of local forces is taking place right now in thousands of other communities throughout the land for [illegible]: cleanliness, comeliness, cheeriness and conservation.

This American national campaign is an annual affair. It may be called perennial, for somewhere it is going on all the time. According to climate, weather, local conditions it is controlled and carried on. It is a modern crusade. Hometown being the Holy City and every good citizen being a Richard Coeur de Leon, a lionhearted knight armed cap-a-pie with a rake and paintbrush, mop and varnish can.

There Are Many Advantages.

Through this nation-wide movement health is being conserved, the sick list is being shortened, the death rate is being lowered. Through it the owners of city and town property are getting lower rates of insurance, for it is a fire-prevention propaganda as well as a crusade against dirt and disease. Property values are increased by this salutary work. Dwellings and apartments and flats which are made and kept clean and varnished and painted to spick-and-span effect sell or rent more readily than when left untidy and going to wrack and ruin.

Let Us Make Our Town Cleanest in the World

The cleanest town in th[illegible] is the best town to [illegible] because it is [illegible] because [illegible] healthiest. Best [illegible] the fewest fires [illegible]

This Clean Up, Paint Up campaign reduces fire insurance rates and fire loss; it increases property values; makes gardens of vacant lots; removes unsafe buildings; swats the fly; develops school and home gardens; makes cleaner alleys, yards and homes; educates children in fire prevention and [illegible]; plants trees, removes rubbish; makes more attractive and safer homes and places of business. It develops a community spirit that permanently ensures a cleaner, safer, healthier and more beautiful city.

Willing co-operation in this work will accomplish wonders—a magic transformation of our city will be the result. It will—will you?

Cleanliness is the best fire insurance.

GERMAN WAR PRACTICES

WAR FRIGHTFULNESS TAUGHT BY GERMANY

Described in Important War Booklet Just Issued by U. S. Government.

Washington, D. C., April 17.—"It is permissible to destroy private property, to destate systematically evacuated regions, to terrorize the civil population of invaded districts, to deport people for compulsory service in the enemy country, thereby releasing its own men for the army, to compel them to aid the enemy in the construction of fortifications, to dig trenches, to serve as guides, and even to furnish information regarding their own army."

The teaching of the official German War Manual is thus summarized in a booklet issued today by the Government through the Committee on Public Information, Washington, D. C. The title of this booklet is "The German War Code." It is one of a series of war information booklets, and a copy will be sent free to anyone who will address the Department of Distribution, 8 Jackson Place, Washington, D. C.

The authors of "The German War Code" are Professors G.W. Scott, formerly of Columbia University, and J. W. Warner of the University of Illinois. In interesting fashion they analyze the official German War Manual, with its sneers at the "sickly sentimentality" of all rules of war dictated by chivalry, honor and generosity to the enemy, and they contrast it with the war manuals of Great Britian, France and United States, which are declared to be "the very opposite of the German in the law which their governments have laid down for their armies to observe in their dealing with the enemy."

The German War Manual was prepared by the German General Staff and was first issued in 1902. "It would seem," say Professors Scott and Garner, "from the way in which most of the Hague provisions are denounced, ridiculed and sneered at, that the real reason for issuing revised instructions was to counteract any influence which these provisions might have been expected to have upon German military officers, through Germany's having ratified the Hague treaties." The German War manual is shown to be the text book of that philosophy which has expressed itself in the form of "frightfulness" in Belgium, Poland, Servia, Armenia and wherever German officers have held sway. This booklet shows that the brutality, ruthlessness, terrorism and violence of the German forces have been coldbloodedly planned for years by the German military authorities. It shows that it was the wholesale violation by Germany of the most sacred standards of human society that caused our Government to enter the war.

What the effect of such teachings and such practices must be upon the the world is indicated by the authors of this pamphlet as follows—"Made in their (Germany) ambition to win, the German rulers have forgotten that the German nation must live and do business with the other peoples of the world after this war is over. Though International Law lacks the administrative means to judge and punish violations of its better established rules, it is, like all laws and customs, supported by a public opinon which never fails to manifest in numerous ways its detestation and horror for those who flagrantly misconduct themselves. For years the German Government and individual Germans in their intercourse with foreign people will be made to feel the suspicion and distrust in which they are held. This is bound to be a tremendous handicap. It is the penalty which mankind will inevitably exact from those who, while sneering at chivalry and characterizing the humanitarian tendencies of modern times as 'flabby emotion,' have carried on a system of terrorism that knows no bound."

Care and Feeding of Breeding Geese.

Geese do not require warm winter quarters. The floor of their pens should be well supplied with plenty of clean, dry straw.

Their food in winter should consist of whole grain as, oats and barley or oats and corn, (equal parts by weight) fed from troughs, all they care to eat. Boiled potatoes or sliced roots should be liberally fed. They should be let out on range early in spring, and as soon as the grass and clover become abundant this will be sufficient food until fall.

Care and Feeding of Goslings.

Goslings should not be disturbed until twenty-four hours of age. At the end of one week, if the weather is warm, they require no artificial heat. Until they are strong enough they should be confined to small, movable runs and coops, and these should be moved each day to supply fresh grass. Keep their sleeping places clean. For the first few days they should be fed on dry bread, soaked in skim milk and fed crumbly. After ten days change to ground grain such as, three-fourths shorts and one-fourth either corn or barley meal. This should be moistened with milk and fed similar to the bread and milk. Feed little and often. As soon as they are three weeks of age gradually wean them to grass and clover pasture. Always keep fresh water before them. If they are to be fattened, confine them to small runs for a week or ten days and feed them on a ration of about two parts corn and one of shorts mixed with sour milk, and feed all they care to eat.

Care and Feeding of Breeding Ducks.

House breeding ducks in winter similar to geese. They do best if provided with a pond to swim in. They must always be supplied with plenty of drinking water. They should be kept in moderate condition until about a month before mating time, when more liberal feeding is required. Food should then consist of mill feeds. A good ration is as follows: Equal parts by weight of bran shorts and corn or barley meal, mixed crumbly with skim milk. Feed twice a day. If possible mix chopped roots, grass or clover leaves with the mill feeds or feed separately all they care to eat. Give them plenty of range.

Care and Feeding of Ducklings.

Ducklings should be cared for similar to goslings. A very satisfactory ration for them is as follows: For three or four days feed one part hard-boiled eggs mixed with three parts dry bread. Mix shell and all. Gradually change to equal parts, by weight, of corn or barley meal, bran and shorts, mixed crumbly with skim milk and three times the bulk of chopped green stuff as, Onion tops, lettuce, beets, or garbage. Feed often and liberally for about six weeks. If they are to be fattened, feed in small yards a ration of two parts corn or barley meal, one part bran, one part shorts mixed with skim milk. At eight weeks of age they should be ready for market. If intended for breeding purposes, turn out on free range so as to keep them in good growing condition.

By C. E. BROWN,
Crookston Experiment Station.

P. S. Those interested in ducks, geese and turkeys may secure bulletins on these subjects by applying to Agricultural Extension Division, University Farm, St. Paul, Minn.

NOTICE.

All thos who ha[illegible] shares in t[illegible] and [illegible] en't settl'd for their [illegible] creamery call at once [illegible] so.

Nick Bundlund, Treasurer.

RAISE POULTRY

$252.11 Profit from Hens.

These were the actual receipts from 250 pullets during the months of December, January and February, over and above cost of feed which amounted to $179.48, according to the statement of H. C. Hansen, banker and creamery owner at Barnum, Minnesota, and no one questions the statement.

The eggs were not sold at fancy prices, altho they did bring more than the average farm eggs marketed in the usual way, but they were marketed just as all the eggs are at Barnum, thru the creamery, packed in cartons containing one dozen each and put upon the market in first class condition, as all such food products should be.

Mr. Hansen's was only one of several poultry plants visited at Barnum, and in nearly every case the receipts were similar to those above reported, and while feed prices are very high, everyone was optimistic as to the future of the poultry industry when operated along good business lines. There are no secrets about it. The pullet must be hatched early enough to develop laying before cold weather sets in and then she must receive a liberal amount of the right kinds of feed in comfortable quarters. Barnum is up near Duluth, therefore is not in a warm climate. The 250 pullets were all kept in one pen of suitable size, but it should be easier to get as good results in smaller flocks, and at less cost where the kitchen and table wastes go to make up part of the feed. In no case should these wastes constitute the whole ration. Some grain must be fed.

RED CROSS FILM TO BE SHOWN

The first official Red Cross film to be shown in this immediate vicinity will be offered to the public at the Princess Theatre of Thief River Falls Saturday and Sunday, May 4 and 5.

The picture, dealing particularly with Red Cross work in France, is entitled "Humanity's Appeal". This is a one-reel picture showing the work of the Red Cross at Evian--the French city where hundreds of repatried are received every day by the American Red Cross.

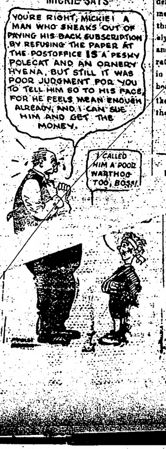
MICKIE SAYS



YOU'RE RIGHT, MICKIE! A MAN WHO SNEAKS OUT OF PAYING HIS BACK SUBSCRIPTION BY REFUSING THE PAPER AT THE POSTOFFICE IS A PESKY POLECAT AND AN ORNERY HYENA, BUT STILL IT WAS POOR JUDGMENT FOR YOU TO TELL HIM SO TO HIS FACE, FOR HE FEELS MEAN ENOUGH ALREADY, AND I CAN SUE HIM AND GET THE MONEY.
I CALLED HIM A POOR WARTHOG TOO, BOSS!

THE LIBERTY LOAN

WHAT IT PROVES

One thing at least has been demonstrated by the Third Liberty Loan campaign that there is a better, purer spirit of loyalty throughout the Ninth district than has been evidenced at any time since the entrance of the United States into the world war. This is not the opinion of any one individual, nor is it the opinion of persons who have visited any one section of the Ninth Federal Reserve District, but the judgment of every worker who has been out in the field.

Particularly is this true of the persons of German birth or descent. The hysterical, intolerant patriotic speaker who shouted "Down with everything German", has seen his day, and his place has been taken by the more rational, more reasonable speaker who has felt that the men and women of German blood were entitled to know the facts.

For one thing, the German Lutheran Ministers have shown a more loyal activity than evidenced in either of the former Liberty Loans and it is felt that they now can be counted on almost to a man, to do all in their power to aid the United States Government now, and in the future. This in itself has been of material value in bringing persons of German blood to see the war straight. After a succesful initial experiment, the Liberty Loan executive committee has made it a practice to send into German communities, speakers who could talk to the people of German blood in their own tongue, as thousands of Germans, particularly the older ones never have learned to speak the English language and the German literature which they have received in the past has often times carried an insidious Pro-German hot. These later speakers have found an absolutely virgin field--audiences made up largely of persons who never have been told the truth about the war. They are unanimous in their opinion that as soon as these persons of German blood have heard the truth, they have not hesitated to line up with the United States government.

The Third Loan has demonstrated too, that the farmers are more awake to the war than ever before, and possess a better understanding of bond buying.

Field workers report that the farmers, when the final reckoning of this Third Loan campaign is all compiled, will prove to have bought more bonds than in both the other loans put together. In many instances farmers failed to buy in the first and second loan simply because they did not understand about United States Government bonds — many in fact thought that money invested in bonds was merely a donation to the Government, and that there never would be any return on it, and that the bond received in return for the money was merely an honorary certificate indicating that the possessor had made a donation to the Government.

Plan [illegible] Di[illegible] your Garden Early. [illegible] program young ground, allot the space to the vegetables you want to grow, buy your seeds, have your tools at hand, prepare for the opening of the growing season.

commensurate with the value of the work done and the immediate future is likely to witness further increase in the compensation of teachers. Nothing else will so hasten the day for this as an increase in the number of htose who will render the kind of service now needed.

TEN REASONS BY AN EXPERT WHY

ALCOHOL THE GREATEST MENACE TO HEALTH.

In United States Senate document (No. 48, 1909), Dr. George W. Webster, President Illinois State Board of Health declares that alcohol is a greater menace to the people than tuberculosis. He says:

"The alcohol problem is more important than the tuberculosis problem as (1) it costs more lives and more money; (2) it costs the United States over $2,000,000,000 annually; (3) it probably causes directly and indirectly, at least 10 per cent of all deaths in the United States; 4) it predisposes to infection, destroys acquired immunity, prevents the occurrence of artificial immunity, at least in rabies, lessons resistance, leads to an increased mortality in all infectious diseases and after surgical operations; (5) it lessens the power of the individual to resist the injurious influences of extreme heat and cold; (6) it causes a deterioration of the quality of mental work; (7) it diminishes the power to withstand fatigue and lessens the general efficiency of the individual; (8) it is a poison and should be classed as such, instead of as food or stimulant; (9) when the physicians take hold of the question in the same spirit as they have shown concerning yellow fever, maleria, and small pox, instead of treating it as a moral question and leaving it to clergymen, temperance workers, and enthusiasite reformers, we may expect better results; (10) more may be accomplished by teaching the people the truth in regard to the fatal effects of alcohol upon mental and physical efficiency than by expatiating on the moral wickedness of drinking."

The Question Of Teachers

The Government has appealed to the public schools for assistance in many important ways and has not been disappointed. It will continue to rely upon them for such assistance. If the schools are to continue to help the Government during the war and are to be in a position to help it after the war is at an end, they must be kept open and be in the hands of teachers well qualified for the work. It will be very difficult to provide the number of qualified teachers sufficient to keep the schools in operation. The supply of properly trained teachers has not been adequate thus far. Enlistments in the various branches of the Government service and new social and economic conditions are responsible for the condition.

Obviously the most important measures for improving the situation are such as will increase the supply of well trained teachers. It is very evident that it would be unwise to lower the standard of requirements for teaching in the hope of increasing the supply. The needed increase in the number of trained teachers cannot be made until the rewards for teaching are made both more evident and more real. In the past, although the financial reward has not been especially attractive, teaching has generally been preferred because of the opportunities which it affords of rendering service of a high order of merit to young people and to society. Teaching has appealed to many because, as a calling, it offers large re[illegible] in values which are mo[illegible] [illegible] than the material [illegible] [illegible] of these is [illegible] esteemed from [illegible] monetary. Chief [illegible] the satisfaction derived [illegible] the consciousness of rendering service to society and of contributing to the development of right standards of citizenship and of life in the young. This is, of course, a worthy and very powerful motive with those who succeed best in teaching.

In this time of great need for high and disinterested service in all our institutional activities, especially those designed for the Country's defense, there are none which offer finer opportunities for effective service of the highest sort, whether one thinks of present or future needs. It is a type of service which cannot become as effective as the occasion requires unless those who are to render it shall be adequately trained for it. Fortunately the financial rewards for teaching are becoming more nearly

TIME TO START BIG CLEAN UP CRUSADE

National Bureau Is Helping Thousands of Communities Push the Attack.

READY FOR THE ONSLAUGHT

Headquarters of Great Organization, in Operation Five Years, Promotes Cleanliness, Comeliness, Cheeriness and Conservation.

"Clean up and paint up!"
Don't you hear the call?
Indoors and outdoors
Work for each and all!
Clean house—and paint house,
White or brown or red;
Tidy up the back yard
And paint up the shed;
Burn the alley rubbish;
Send the tin can 'hence'
After that—the thought is right—
Fix that alley fence!

"Clean Up and Paint Up the National Capital!" shouted a Washington newspaper in type that was spread all over the top of a page, just a few days after Congress accepted Germany's gage of war. "Washington begins its spring cleaning and painting campaign," added the same journal, in type somewhat more subdued in tone. All Washington heard the call and heeded. It was the national capital's call to arms. Everybody volunteered. There was no age limit in either direction. Nobody was rejected because of defective teeth, ingrowing toe-nails, strabismus or housemaid's knee. The big army mobilized overnight. It armed itself—broomsticks in hand, brushes ditto, scrub-cloths, soap, water, rakes, paint cans and buckets!

No Lack of Preparedness.

Washington did not get its orders from the White House or from the big building under the gilded dome at the top of Pennsylvania avenue. The nation's capital took its cue for this campaign from a middle Western city—St. Louis, headquarters of the National Clean Up and Paint Up Campaign bureau. There was no lack of preparedness, for the bureau had been in operation five years. It was simply a call to mobilization. A similar mobilization of local forces is taking place right now in thousands of other communities throughout the land to promote cleanliness, comeliness, cheeriness and conservation.

This American national campaign is an annual affair. It may be called perennial, for somewhere it is going on all the time. According to climate, weather, local conditions it is controlled and carried on. It is a modern crusade, Hometown being the Holy City and every good citizen being a Richard Coeur de Leon, a lionhearted knight armed cap-a-pie with a rake and paintbrush, mop and varnish can.

There Are Many Advantages.

Through this nation-wide movement health is being conserved, the sick list is being shortened, the death rate is being lowered. Through it the owners of city and town property are getting lower rates of insurance, for it is a fire-prevention propaganda as well as a crusade against dirt and disease. Property values are increased by this salutary work. Dwellings and apartments and flats which are made and kept clean and varnished and painted to spick-and-span effect sell or rent more readily than when left untidy and going to wrack and ruin.

Let Us Make Our Town Cleanest in the World

The cleanest town in the [illegible] is the best town to [illegible] because it is [illegible] live in. Best because [illegible] healthiest. Best [illegible] has the fewest fires [illegible] the most beautiful.

This Clean Up, Paint Up campaign reduces fire insurance rates and fire loss; it increases property values; makes gardens of vacant lots; removes unsafe buildings; swats the fly; develops school and home gardens; makes cleaner alleys, yards and homes; educates children in fire prevention and clean up measures; plants trees, removes rubbish; makes more attractive and safer homes and places of business. It develops a community spirit that permanently ensures a cleaner, safer, healthier and more beautiful city.

Willing co-operation in this work will accomplish wonders—a magic transformation of our city will be the result. It will—will you?

Cleanliness is the best life insurance. It is the best fire insurance.

COMMUNITY CLUB MEETING

The Goodridge community club will hold its May meeting in the schoolhouse Friday evening May 10. A rousing good program will be presented consisting among other things of community singing led by Miss [illegible]. This is a feature everyone will appreciate. We should all attend these meetings and get the spirit of good fellowship obtainable from singing together. Another big feature on the program is an address by Prof. Hay of Thief River Falls, a number all will like and no one should miss.

"OF VALUE TO A PAPER."

The newspaper man is blamed for a whole lot of things he can't help, such as using partiality in mentioning visitors, giving news about some folks and leaving others out, etc. He simply prints all the news he can find. Some people inform him about such things and others do not. An editor should not be expected to know the names and residences of all your uncles, aunts and cousins, even if he should see them get on or off the train. Tell us about it. Its news that makes the newspaper and every man, woman and child can associate editor if they only will. Never apologize when you give this bit of information to an editor, for if there lives one so dead that he has lost his appreciation of such favors he is dead, indeed, to every virtue that imparts value to a paper.

E. H. C.

BE A "HOME GUARDENER"

The home gardens of America are the home guard in food production.

The "home guardener", of this year—our second in the war—is forewarned and thus forearmed.

The "home guardener," before he arms himself with his hoe, must fortify himself with knowledge.

Every peck of vegetables produced for home use this year from ground that never before grew food will mean a certain quantity of meat or wheat released for use behind our battle lines.

Join the "home guardeners."

Garden Space Valuable.

Just what vegetables are to be grown depends, of course, upon the individual tastes of the family. In general, the aim of the home gardener should be to raise vegetables in which freshness is an important quality. Peas, string beans, Lima beans, asparagus and sweet corn, for example, lose much if they are not cooked almost immediately after they are picked. In the case of potatoes, corn, cucumbers, squashes and melons, it should be remembered that these vegetables occupy a large area in proportion to their yield and in a small garden consume valuable space which, in most cases, could be used more profitably. In the case of potatoes, however, it also should be noted that they are easily stored and are an extremely good staple crop, and many gardeners will find it to advantage to plant as much ground to potatoes as possible after sufficient space has been allotted to the other garden crops.

HOME GARDEN PLAN SAVES TIME, MONEY, AND LABOR FOR GARDENER

PLAN AND PREPARE

Prepare to do your part in increasing America's food supply by raising your own vegetables in your home garden.

Plan your garden on paper. Map out your campaign. You will profit through time, labor, and money saved.

Planning is preparing.

Plan your home garden in advance. Make a diagram of the available space; allot the ground to the vegetables you want to grow. Prepare to make your garden work until frost next fall. That is advice to home gardener by horticulturists of the United States Department of Agriculture.

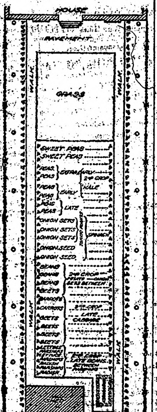
Interest in the planning all members of the family, especially the children who, by being given a partnership now, will know their duties when the time comes. Read such gardening publications as are available. Write to the Department of Agriculture for a home gardening bulletin.

In making a diagram of the garden it is well to use tough paper, such as heavy wrapping paper, which will stand repeated handling out of doors. A fairly large scale should be adopted so that full notes can be kept in the spaces representing rows. If the garden is fairly large or abnormally long the diagram may be made in separate sections for the sake of convenience.

Plan for Home Needs.

A typical plan of this character is shown in the illustration. This plan, of course, is of use chiefly as an example, and in most cases a different arrangement will be necessary to meet the conditions surrounding individual garden spaces. On the plan the gardener may indicate the approximate date when each of his projected crops is to be planted. No more space should be allotted to each than is needed to furnish a sufficient quantity of the vegetable for family consumption or for other known needs.

Make the garden work all summer. Make your plans so that when one crop is ready for the table or for canning another vegetable can be planted between the old rows and new plantings can take the space vacated.



Plan for a Small Garden.

In this plan all the vegetables named are planted in rows across from the inside lateral rows of strawberries. As rapidly as each kind of peas matures and the crop is over, kale is planted in its place. The ground to be used for tomatoes is first planted with onion sets, and these onions are used as rapidly as needed. When the time comes to set out the tomatoes, some of the onions are dug to make space for the tomato plants. When the tomato crop is over, the ground is occupied by spinach as the third crop. Spinach is also planted as soon as the bulb onions from the side are gathered. The beans, carrots, and peas are succeeded by late cabbage, and between the rows of late cabbage "potato-onion" sets are planted. Late beans are planted between the rows of parsnips after the radishes and lettuce have been gathered.

Turning The Waste Products of The Farm Into $$$$$$$$$

The war is putting the nation on a new basis of thrift

THRIFT and *ECONOMY*

Every item of **waste** on the farm, in business, and in the home must be **stopped** or converted into profit.

The waste products of the farm can be easily and successfully converted into profit, foodstuffs that the nation needs, through poultry. And to make poultry produce, a warm, sanitary and convenient poultry house is essential. It means EARLIER HATCHES and MORE WINTER EGGS. Lumber is NOT HIGH in price compared to the value of farm products. It pays to build well. Doubling your poultry production pays for a poultry house in a surprisingly short time. It puts your poultry raising on a business basis.

THEY ARE LISTENING OVER THERE

RING THE LIBERTY BELL

RING IT NOW RING IT LOUD

Buy

3RD Liberty Loan Bonds

The boys in the trenches are listening today to learn how the folks at home subscribe the Third Liberty Loan. They are listening for the sound of the new Liberty Bell.

Each boy over there is wondering if **his** folks will be the first to buy Liberty Bonds.

He is looking across No Man's Land, facing death, that American homes may be safe from German brutality. He is enduring hardship and danger willingly that American Liberty and Justice may endure.

In front of him is the powerful, domineering German nation, mobilized to the last man — to the last ounce of strength—all experts in the fighting game.

Back of him, 3,000 miles away, are we, the folks at home — free, independent, perhaps critical.

"Over there" the boys have faith that we here at home will do our part—and our part right now is to buy Bonds of the Third Liberty Loan.

Have you answered the call? Have you rung the Liberty Bell as your forefather did in 1776, or are you saying: "Others can afford to do it better than I. I will let them fight my battles for me."

The boys are listening.

RURAL CARRIER EXAMINATION.

The United States Civil Service Commission has announced an examination for the County of Pennington, Minn. to be held at Thief River Falls, on May 25, 1918, to fill the position of rural carrier at Thief River Falls and vacancies that may later occur on rural routes from other post offices in the above-mentioned county. The examination will be open only to citizens who are actually domiciled in the territory of a post office in the county and who meet the other requirements set forth in Form No. 1977. This form and application blank may be obtained from the office mentioned above or from the Unite States Civil Service Commission at Washington, D. C. Applications should be forwarded to the Commission at Washington at the earliest practicable date.

WAR GARDEN SONG

To the tune, "Over There"

Johnnie, get your hoe, get your hoe get your hoe;
Mary, dig your row, dig your row, dig your row;
Down to business, girls and boys,
Learn to know the gardener's joys,
Uncle Sam's in need, pull the weed, plant the seed.
While the sunbeams lurk, do not shirk get to work.
All the lads must spade the ground,
All the girls must hustle 'round.

CHORUS

Over there, over there;
Send the word, send the word over there,
That the lads are hoeing, the lads are hoeing;
The girls are sowing everywhere
Each a garden to prepare,
Do your bit so that we can all share
With the boys, with the boys, the brave boys,
Who will not come back 'till it's over over there.
OVER THERE!

JOE LEE DAVIS.

New Swindle Takes Money from Parents of Soldiers

Parents of soldiers in camps are warned by the War Department of a swindle which has been successfully operated in various camps.

A telegram is sent informing that the soldier has a furlough and requesting funds by wire to some home waiving identification. The rest is a mere matter of detail.

Parents and friends should be warned of this game and of the similar one where the telegraphic request is to mail money to the soldier, care general delivery.

—MAKE W.S.S. PLEDGES—

The Flour Survey.

The flour survey being conducted through the state under the direction of county food administrators in each county is now well under way, and the administrators report that voluntary reports are being made in large numbers understanding that the mere act of having excess flour is not an offence providing they make report of their supply to the food administrator and show a willingness to surrender their excess or place it at the disposal of the food administration.

The state food administration has issued the following instructions to the county food administrator regarding the handling of flour after it has been reported: "If the householder secured the flour since January 1, 1918, require the mill or dealer who furnished it to take it back, and pay the same price as paid by the consumer. Dealer had no right to sell over 30 days' supply and must take it back at the price paid.

If secured before January 1, 1918, ask dealer to take it back at market value if they can handle it.

If dealers can't handle it, give householder permit signed by the county food administrator stating that he is allowed to hold subject to food administration order ... lbs. of wheat flour.

He may use out of it 6 pounds of flour per capita per month and no more.

If anyone refuses to give up flour when requested by the county food administrator to do so, or if there is evidence of an attempt to conceal excess supplies report the fact to the state food administration.

—MAKE W.S.S. PLEDGES—

THE MARKETING OF WHEAT.

The order requiring that all wheat be marketed by May 15, means that no wheat may be retained from the present supply for spring planting next year, according to an announcement received by the state food administration from the national food administration this week, and the seed for next year's crop must be obtained from the crop grown this year. This ruling was passed upon by the national food administration, at the request of many Minnesota farmers who desired to hold over sufficient seed for planting another crop, a thing they have done for years previous to this.

The only exception to the sale of wheat order applies to winter wheat. Those who desire to plant winter wheat this fall may retain seed for the purpose. The reason for this, the administration explains, is that it may be necessary to seed this winter wheat crop before the seed is available from the present crop, and because a great deal of the last winter wheat crop is a total loss from freezing.

4 THRIFT STAMPS GIVEN AWAY.

VARIOUS LIBERTY BOND ISSUES.

There are at present issued and outstanding four issues of Liberty Bonds. They are as follows:

1. The original bonds of the First Liberty Loan; these bear 3½ per cent interest and mature June 15, 1947, but are redeemable at the Government's option on or after June 15, 1932. They have a conversion privilege.

2. The original bonds of the Second Liberty Loan; they bear 4 per cent interest and mature November 15, 1942, but are redeemable at the Government's option on or after November 15, 1927. They have a conversion privilege.

3. Bonds of the second issue which have been obtained by the conversion of bonds of the first issue into bonds of the second; they bear 4 per cent interest and mature June 15, 1947, but are redeemable on or after June 15, 1932. They have a conversion privilege.

4. The original bonds of the Third Liberty Loan; they bear 4¼ per cent interest and mature September 15, 1928, and are not redeemable until maturity. They have no conversion privilege.

The other two issues which will soon be outstanding will be 4¼ per cent bonds obtained by the conversion of bonds of the first issue, and 4¼ per cent bonds obtained by conversion of bonds of the second issue, into bonds of the Third Liberty Loan. They will have no conversion privilege.

THE DEBTS OF THE WARRING NATIONS.

The London Economist for February places the total gross debt of Great Britian at 5,678,600,000 pounds ($27,636,000,000).

The French minister of Finance in presenting the budget for 1918 estimated the public debt of France on December 31, 1918, at 115,166,058,000 francs ($22,227,000,000).

The public debt of Italy at the end of 1917 is estimated at about 35,000,000,000 lire ($6,676,000,000).

The debts of the Central Powers are estimated as follows: Germany, $25,4[illegible]8,000,000; Austria, $13,314,000,000; and Hungary, $5,704,000,000.

Our own public debt is now around $[illegible]000,000,000, but more than half of this amount has been loaned to our Allies and will be repaid us. It is estimated that of the total net expenditures of the United States for the fiscal year of 1918, exclusive of our advances to our Allies, more than one-half will be defrayed by taxation.

Obituary

Alice Besancon, the oldest daughter of Mr and Mrs E. H. Besancon died at the Physicians Hospital at Thief River Falls Wednesday morning at Eleven o clock after a long and painful illness. She first had an attack of rheumatism followed by pleurisy which developed into leakage of the heart.

Last September she entered the Thief River Falls High School to complete her high school course. Had she lived a few weeks longer she would have graduated. The body was taken Thursday Morning accompanied by the family to Stephen where the funeral was held.

She was a very bright and industrious young lady and loved by all who knew her. The sympathy of the community is extended to her sorrowing relatives.

The REAL MAN

*Potato	[illegible]	5 pounds	30 to 36 in.	24 to 36 in.	18 to 24 in.	4 in.	....	April to June	90 to 150 days
Pumpkin	20	½ ounce	8 to 12 ft.	8 to 12 ft.	8 to 12 ft.	1 to 2 in.	....	May and June	100 to 120 days
*Radish	25	1 ounce	24 to 30 in.	10 to 16 in.	1 to 2 in.	½ to 1 in.	March	March to September	20 to 40 days
*Rhubarb, plants	40	33 roots	4 to 5 ft.	3 to 5 ft.	3 ft.	2 to 3 in.	....	Autumn or Early Spring	1 to 2 years
Rutabaga	40	¼ ounce	30 to 36 in.	18 to 24 in.	6 to 8 in.	½ to 1 in.	....	June	90 to 120 days
Salsify	25	1 ounce	30 to 36 in.	18 to 24 in.	2 to 3 in.	½ in.	....	Early Spring	150 to 180 days
*Spinach	150	1 ounce	30 to 36 in.	10 to 16 in.	1 to 2 in.	1 in.	....	April and September	40 to 60 days
Squash, bush	10	¼ ounce	3 to 4 ft.	3 to 4 ft.	2 to 4 ft.	1 to 2 in.	March	May and June	60 to 80 days
*Squash, late	30	½ ounce	8 to 10 ft.	8 to 10 ft.	7 to 9 ft.	1 to 2 in.	....	May and June	120 to 160 days
Swiss Chard	20	2 ounces	24 to 30 in.	18 to 24 in.	3 to 6 in.	1 in.	....	April and May	60 to 120 days
*Tomato	75	¼ ounce	4 to 5 ft.	3 to 4 ft.	3 ft.	½ to 1 in.	March	June	100 to 140 days
*Turnip	75	½ ounce	24 to 30 in.	18 to 34 in.	1 in.	½ in.	....	April and July	50 to 80 days
Watermelon	100	1 ounce	8 to 12 ft.	8 to 12 ft.	8 to 10 ft.	1 in.	....	May and June	100 to 120 days

*The most important vegetables or the ones that should be in every garden.

Several plantings of many of these vegetables may be made to maintain the supply. For example there may be 2 of bush beans and beets, from 3 to 5 of corn, and so on.

The average date of the last killing frost in the spring is April 26, and the first killing frost in the fall is October 8. Frosts may be expected as late as June 1 or as early as September 1.

RURAL CARRIER EXAMINATION.

The United States Civil Service Commission has announced an examination for the County of Pennington, Minn. to be held at Thief River Falls, on May 25, 1918, to fill the position of rural carrier at Thief River Falls and vacancies that may later occur on rural routes from other post offices in the above-mentioned county. The examination will be open only to citizens who are actually domiciled in the territory of a post office in the county and who meet the other requirements set forth in Form No. 1977. This form and application blank may be obtained from the office mentioned above or from the Unite States Civil Service Commission at Washington, D. C. Applications should be forwarded to the Commission at Washington at the earliest practicable date.

WAR GARDEN SONG

To the tune, "Over There"

Johnnie, get your hoe, get your hoe
get your hoe;
Mary, dig your row, dig your row,
dig your row;
Down to business, girls and boys,
Learn to know the gardener's joys,
Uncle Sam's in need, pull the weed,
plant the seed,
While the sunbeams lurk, do not shirk
get to work.
All the lads must spade the ground,
All the girls must hustle 'round.

CHORUS

Over there, over there;
Send the word, send the word over
there,
That the lads are hoeing, the lads are
hoeing;
The girls are sowing everywhere
Each a garden to prepare,
Do your bit so that we can all share
With the boys, with the boys, the
brave boys,
Who will not come back 'till it's over
over there.
OVER THERE!

JOE LEE DAVIS.
Lexington, Ky.

New Swindle
Takes Money from
Parents of Soldiers

Parents of soldiers in camps are warned by the War Department of a swindle which has been successfully operated in various camps.

A telegram is sent informing that the soldier has a furlough and requesting funds by wire to come home waiving identification. The rest is a mere matter of detail.

Parents and friends should be warned of this game and of the similar one where the telegraphic request is to mail money to the soldier, care general delivery.

The Flour Survey

The flour survey being conducted through the state under the direction of county food administrators in each county is now well under way, and the administrators report that voluntary reports are being made in large numbers, understanding that the mere act of having excess flour is not an offence providing they make report of their supply to the food administrator and show a willingness to surrender their excess or place it at the disposal of the food administration.

The state food administration has issued the following instructions to the county food administrator regarding the handling of flour after it has been reported: "If the householder secured the flour since January 1, 1918, require the mill or dealer who furnished it to take it back, and pay the same price as paid by the consumer. Dealer had no right to sell over 30 days' supply and must take it back at the price paid.

"If secured before January 1, 1918, ask dealer to take it back at market value if they can handle it.

"If dealers can't handle it, give householder permit signed by the county food administrator stating that he is allowed to hold subject to food administration order [illegible] lbs. of wheat flour.

"He may use out of it 6 pounds of flour per capita per month and no more.

"If anyone refuses to give up flour when requested by the county food administrator to do so, or if there is evidence of an attempt to conceal excess supplies report the fact to the state food administration."

THE MARKETING OF WHEAT.

The order requiring that all wheat be marketed by May 15, means that no wheat may be retained from the present supply for spring planting next year, according to an announcement received by the state food administration from the national food administration this week, and the seed for next year's crop must be obtained from the crop grown this year. This ruling was passed upon by the national food administration, at the request of many Minnesota farmers who desired to hold over sufficient seed for planting another crop, a thing they have done for years previous to this.

The only exception to the sale of wheat order applies to winter wheat. Those who desire to plant winter wheat this fall may retain seed for the purpose. The reason for this, the administration explains, is that it may be necessary to seed this winter wheat crop before the seed is available from the present crop, and because a great deal of the last winter wheat crop is a total loss from freezing.

4 THRIFT STAMPS GIVEN AWAY.

Four Thrift Stamps will be given to any girl or boy for each name sent of those that need glasses, if they will get them in gold frames on my next visit. Names must be in before any date advertised. If [illegible] not understood, write to C. C[illegible], O. S., Grand Forks, N. D.

The ELEVEN TOWNS
A. O. HALVORSON, Editor

Entered at the postoffice at Goodridge, Minn. as a second class mail matter.

This paper has enlisted with the government in the cause of America for the period of the war

—MAKE W.S.S. PLEDGES—

Last week Mr. W. J. Labree handed us his announcement as candidate for re-election as sheriff of Pennington Co. As member of the local draft board he will have little time to devote to lectioneering. We are not well enough acquainted with county politics yet to say whether or not Mr. Labree ought to be re-elected. But we want to say this much in a general way, that since he desires the position for another term and has done his duty in the past faithfully and conscientiously he ought not to be forced to spend his time lectineering, when he is needed by the government on the draft board.

We are already receiving letters complimenting our paper very highly on the splendid appearance it has and the great iunflenee it has in molding the minds of its readers and a lot more of that kind of stuff, and winding up with the statment that the writer or dictater, is a candidate for some state, national, district or county office. and the support of "your vlauable paper will be greatly appreciated" but never a word is said about pay for the space of the article, oh, no! We have a barrel of money and might donate that amont of stock in trade. That may do for some papers that don't consider that amount of our stock in trade. That may do for some papers that don't consider that space in their paper is worth anything or, that they can tuck it on to the home advertisers heavy enough to make up for the donation. No, we won't do that. If the space in The Eagle is worth anything to a candidate for a public office it is worth paying for and if a candidate doesn't consider that the assistance that The Eagle can give him is worth a reasenable check, he better save a stamp-

Grygla Eagle.

Them's my sentiments too.

Rural School Notes

The attention of teachers is called to the following announcements of the State Department of Education relative to professional courses, and the summer schools for training of teachers:

"The summer school will open at the State Normal schools and at University Farm, St. Paul, Crookston and Morris. Each summer school begins on Monday, June 17th and closes on July 26th.

"Teachers' examinations will be held July 29th, 30th and 31st.

"This is the last summer in which professional courses will be given in the three university schools. They will be offered this summer only to those teachers who have completed at least four of the eight professional credits. New registrants for professional training will register this year and will enroll in the summer session of the normal schools.

"After this summer, professional courses will be offered only at the normal schools.

"It will be true therefore that after this present summer the means for obtaining a first class certificate in this state will be either through the normal schools or through the teachers' training department of the high schools."

I would urge upon all teachers who expect to teach in the county and who have to renew their certificates to attend the summer schools. Plan early and write to the normal schools or to Supt. C. G. Selvig, Crookston for further information.

The government makes an earnest appeal to every home and to every pupil in our public schools to engage in a home garden project for this year. Let every boy and girl have the best plot in which to plant his or her seed. Thus boys and girls will constitute the "U. S. S. G. Army."

Let me again remind school boards of the necessity of hiring their teachers at earliest convenience.

Patriotic exercises for organization of Red Cross Junior auxiliaries is still being conducted in our schools.

The returns of the March high school board examinations have been received. The results are most gratifying.

Pupils who do not receive their certificates within ten days are asked to write to this office. There are some of whose address we are ignorant.

The next high school board examinations will be held May 24, 27, 28, 29; examinations in all subjects.

Teachers will please report their schools at once for listing of questions.

There will be a county graduation this year as soon as the results of the May examinations are known.

Pupils who have finished four subjects will be entitled to graduation. These are arithmetic, composition and grammar as one credit; geography and U. S. history, or any four of these if composition and grammar have been written as two distinct examinations including physiology. Spelling is not counted as a subject for graduation.

Pupils who have these credits should send them together with their address and number of school district to this office at their earliest convenience.

Here follows the list of H. S. Board certificates gained:

Return of State High School Board examinations held March 21 and 22, 1916:

Anderson, Edna E., A; Baird, Therma B., A; Baker, Rachel, A. G. Gr.; Beiswinger, Augusta M., A. Gr.; Bjoneraa, Dreng, A. G. H. S.; Blomberg, Edward A., A.; Bryant, Eber S. L., A. H. RHEUMATISM

Chiropractic has proven that rheumatism is caused by nerve pressure; by carefully palpating the spine of a patient so afflicted, locating the displaced or subluxated vertebrae, and adjusting them to their normal position thereby releasing the impingement or nerve pressure, thereby allowing free and uninterrupted transmission of nerve force or mental impulses access to the affected part or parts, which restores the patient to normal through nature's ways. A multitude of cases are on record who have obtained complete and permanent relief from rheumatism as well as disease of the liver, stomach, kidneys, bowels, insomnia, headache, nervousness, backaches, etc,

Consultation is free.

Hours 10 to 12 a. m. 2 to 5 p. m. or by appointment.

Thief River Falls, Minn.

Turning The Waste Products of The Farm Into $$$$$$$$

The war is putting the nation on a new basis of thrift

THRIFT

and

ECONOMY

Every item of waste on the farm, in business, and in the home must be stopped or converted into profit.

The waste products of the farm can be easily and successfully converted into profit, foodstuffs that the nation needs, through poultry. And to make poultry produce, a warm, sanitary and convenient poultry house is essential. It means EARLIER HATCHES and MORE WINTER EGGS. Lumber is NOT HIGH in price compared to the value of farm products. It pays to build well. Doubling your poultry production pays for a poultry house in a surprisingly short time. It puts your poultry raising on a business basis.

COMMISSION SEES FARM RESOURCES AS PEACE AGENCY

March Says America, With Forces Unified, Can Drive Prussianism From the Earth.

SURPLUS IN MINNESOTA

Gopher State One of Few In Union With Oversupply of Food—Governor Early Urged Co-operation and Aid for Farmers.

One of the greatest agencies for world peace in the opinion of Col. C. H. March of the Minnesota State Safety Commission is the great agricultural resources of the state and the Northwest, mobilized and unified, to wage a determined and victorious war on Prussian autocracy and efficiently working with all other forces for the one great patriotic purpose.

With our forces thus unified, he says, Prussianism can be driven from the face of the earth and a Hun menaced world made safe for Democracy. Similar convictions are held by Governor Burnquist.

Recently Col. March with members of the State Railroad and Warehouse commission and others interested in Northwest agricultural development work returned from Washington where they conferred with President Wilson and members of his cabinet relative to aid and legislation of Minnesota and Northwest farmers generally and he spoke interestingly of his visit. Col. March is chief in command of the agricultural division of the State Safety Commission and his visit to Washington, which was at the instance of Gov. Burnquist, will develop into something of tremendous benefit in the future.

Washington and the President, Col. March says, are keenly interested in farm development and much in the way of federal aid for the farmers of Minnesota and the Northwest is under consideration. Cooperation in a farm aid way with Gov. Burnquist and the State Safety commission was practically pledged.

"Unfortunately in the minds of many," said Col. March, speaking broadly on the subject of the Minnesota State Safety commission and its relation to the farmers of the state, "there is a fixed impression that our Commission has solely to do with the acts of disloyalty and sedition. With others it is the dissemination of loyalty propaganda. The scope of our work, however, is much greater than the beliefs quoted. Every phase of war aid in which Minnesota may be of help to the nation is included and not the least of our activities is agricultural development.

"One of the first to answer the President's call for increased production in foodstuffs," continued Col. March, "was Gov. Burnquist, and realizing that such increased production was a matter of farm development principally, he early impressed upon our commission the necessity of giving the farmers of Minnesota every aid possible. Help the farmer, he argued, as on his prosperity depends much; food is the one weapon now that will bring victory.

"No one can know Gov. Burnquist and not be impressed by his sincerity and honesty of purpose and realizing the importance of his warning regarding food increase our commission at once began work. At the Governor's direction every known agricultural development unit in the state was consulted and their co-operation urged. Many departments in aid of the various phases of agricultural work were created and experienced men placed in charge. 'Find out the farmer's needs and speed up,' was the command. Even before the State Safety commission was organized, Gov. Burnquist, I might say, was on the job as one of our first official acts was the promulgation of the Governor's food proclamation which was drafted by the Governor almost on entry of the United States into the war. That proclamation which was directed at the food producers of the state put Minnesota in the front rank of commonwealths anxious to aid the nation in its hour of distress."

With the declaration of war against Germany one of the first defensive steps was the taking of an inventory of food stocks and as pointed out by Col. March it found Minnesota one of the few states with a surplus. To conserve and increase this surplus was a duty that impressed the Governor and without delay he appointed a Committee on Food Production and Conservation. The creation of this committee by Gov. Burnquist was in advance of the organization of the State Safety commission and showing the wisdom of the step, Minnesota's agricultural development and the general conservation of food in the state was advanced in a way that brought almost immediate complimentary attention from the federal war heads. Washington was unstinting in its praise.

"To the farmer, labor and plenty of it is as essential as good seed," explained Col. March, "and one of our first acts was the drafting of plans for an adequate supply of harvest help. This in part we secured by the taking over of one of the state's largest free employment bureaus—by the way another of the many valuable suggestions made by Gov. Burnquist. Through this bureau communication was had with every farmer in the state regarding help needed and later with the help of the federal government the required labor was equitably distributed. Our plans for harvest labor this year are even more extensive.

While to Minnesota has been assigned the task of adding materially this year to the world's supply of grain and other food products of which the broad and fertile acres of the North Star State are capable, accomplishment, however, is not alone in mere production. This Gov. Burnquist and the State Safety commission appreciate and every energy and resource at the command of both is being directed at overcoming the obstacles that will of necessity intrude.

As pointed out by Col. March those obstacles run to many things. For instance, lack of a plentiful supply of pure seed which the commission has already taken steps to provide, terminal and car congestion, and above all, a fair return for the producer. They are all problems in a way and unless mastered disaster will be the return. Fortunately a government fixed minimum which the commission hopes to see increased has partially relieved the problem of a fair return, but this is not all that the Governor and the commission propose to realize for the farmers of the state. An open market in transportation in season will be insisted on. For the farmer's comfort and prosperity many things have been set in motion.

One of the aggravating and perplexing things of the 1917 crop was that of transportation. Constant watch only kept Minnesota's bumper grain crop moving and it can be said with truth that Minnesota was one of the few states with an adequate supply of cars. Working through the state railroad and warehouse commission cars were placed on sidings almost on demand and terminal congestion minimized. Elevator abuses were likewise reduced.

One of the pleasant experiences of Col. March was his conference with President Wilson regarding the needs of Minnesota farmers and the almost uncanny knowledge of Northwest agricultural conditions as displayed by the chief executive. Col. March's visit to the National Capital was at the suggestion of Gov. Burnquist who had in mind a number of federal helps for the farmers of the state.

"The conference," said Col. March, "was participated in by a number of men interested in Northwest farm development and what surprised and pleased me was the president's intimate knowledge of food conditions in Minnesota and other Northwest states. He was particularly interested in the 1918 crop and asked many questions. Minnesota farmers, he said, had answered the call nobly and he asked me to assure Gov. Burnquist and the State Safety commission that every federal help possible would be given. At this conference a number of matters vitally concerning the farmers of Minnesota were discussed not the least of them being a reorganization of the present federal grain standards so as to conform to the former Minnesota grades. I firmly believe that all our requests and suggestions will be favorably answered."

Minnesota last year raised over 20,000,000 bushels of potatoes, the largest crop in the history of the state and showing what the State Safety commission has done and is doing for the Minnesota farmers. Col. March and his committee of agricultural experts hope to have every bushel marketed before another planting begins. As an aid to the movement of about 13,000,000 bushels still remaining Gov. Burnquist recently sent a vigorously worded telegram to President Wilson asking for a war market and the required cars for the movement of the surplus.

Through orders of the commission last year forest fires were greatly minimized and growing crops aided materially. Precautions to be put in effect by the commission this year will be even more stringent.

At the request of the commission the State Board of Control has promised to push its production of state made binding twine to the limit. A price under the trust controlled product has also been secured.

As explained by Col. March his brief explanation of what the commission has already done in aid of the farmers of the state is only a small part of what really has been done. Plans for this year are much more extensive.

More Money Saved to Farmers.

Through its wide powers given it by the legislature, the State Safety Commission was able to promulgate Order No. 29 providing for the eradication of the tall barberry. This was promptly done and Barberry Eradication Day was set for May 4th.

The barberry is a breeder of rust in wheat and altho many laws have been passed providing for its extermination it remained for the Safety Commission, through the exercise of its powers, to solve the question.

The Commission is ever awake to every welfare of the agricultural interests of the state and its action in the Barberry matter is a concrete example of the many measures put over during the past year to insure crops and protect the farmer.

WOMEN AS LOGICAL CAMPAIGN LEADERS

American Matrons Have Keen Sense of Necessity of Clean Up and Paint Up.

POINTERS ON WHAT TO DO

Chairman of Woman's National Bureau Offers Excellent Suggestions on How to Obtain Desired Renovation.

Here are some pointers for women who would regenerate their community with a real Clean Up and Paint Up campaign, as suggested by Mrs. Clarence J. Baxter, State chairman of civics and health, Missouri Federation of Women's Clubs and chairman of the Women's committee of the National Clean Up and Paint Up campaign bureau, St. Louis:

Ten Good Suggestions.

1. Take away all the ashes and trash from your back yard immediately. Send your rubbish to the dumping ground.

2. Suggest to several men with teams that they drive through the alleys with a sign, "Clean Up Wagon" on their wagons; also a bell calling attention. People are only too glad to pay such a man for hauling their trash away.

3. Burn all rubbish that will burn. Clean your vacant lots and alley ways.

4. Make your street and parking look as trim and well kept as possible.

5. Refrain from throwing old paper, banana and orange skins into the streets.

6. Plant some grass and flower seeds to make your home beautiful.

Use Plenty of Paint.

7. If your store front is dingy, paint it. Nothing will do more to improve the appearance of a town than the liberal use of paint.

8. If there are unnecessary, unsightly, sheds in your back yards; tear them down. They detract from the beauty of your home and the town. Open spaces and fresh air are better.

9. If your walk is an eyesore to those traveling over it, repair it or build a new one.

10. Clean out the alleys back of the business houses at once.

By all means do your part to help make your town cleaner and more attractive.

CLEAN UP PAINT UP ON FARM

Well-Kept Rural Home Is Appraised at Higher Value and Adds to Attractiveness of the Community.

The incentive to Clean Up and Paint Up which is stirred in the breasts of the townspeople is shared by the surrounding rural districts. The Ohio board of agriculture issued a bulletin urging the removal of ramshackle farm buildings, the painting of those that remain, trimming hedges and trees, spraying shrubbery and cleaning and painting tools and machinery.

Secretary W. W. Flannagan, of the federal farm loan board, says: "It hardly needs any argument to convince anyone that a well-painted, well-kept home or barn would naturally be appraised at a higher value than one not so renovated."

Paint Up Goes Hand in Hand With a Clean Up

1—Because a clean up without a paint up is useless and absurd. Houses that are unpainted eyesores are made uglier and more conspicuous when only streets and grounds are cleaned up.

2—Because the painted surface, inside and outside, is washable and therefore can be kept clean and sanitary. "Paint—paint your walls, floors and ceilings often," says Dr. Leonard Keene Hirshberg. A. B., M. A., M. D. (Johns Hopkins university). in his "Why It's Cheaper to Keep Well—Prevention the Way."

3—Because, as Prof. H. H. King, of the Kansas State Agricultural college declares, after several year's experience in conducting painting tests for that state: "The annual loss through lack of painting is greater than the annual loss by fire."

Many cities in Europe and South America require regular painting in prescribed colors by city ordinance.—Augusta. Ga. Herald.

U. S. DEPT. OF AGRICULTURE

HOW TO GROW

Irish Potatoes.

The culture of the Irish potato is familiar to almost everyone who has ever had a garden. In brief, the potatoes should be planted as soon as the ground can be worked in spring, two weeks before the average date of the last killing frost being none too early. The tubers should be cut so that each piece contains from one to two eyes, and the pieces planted in rows from 24 to 30 inches apart, and from 10 to 15 inches apart in the rows, depending on the variety. Cultivation should be frequent and thorough. It is an excellent idea to work soil up to the plants as they develop, so that there will be plenty of soil to cover the potatoes as they form.

Early potatoes in the central and southern sections of the country will mature in sufficient time for the gardener to grow a crop of sweet corn, late cabbage or turnips on the same ground. It is often possible to plant the second crop between the potato rows before the potatoes are dug. Early potatoes may be used as soon as large enough, an old rule being to begin using them when they are as large as a hen's egg. The usual method is to dig them as needed, leaving the main part of the crop to develop to maturity.

In the central portion of the United States the late crop may be planted from June 15 to July 1, but in the northern sections the main crop is planted earlier than this, no attempt being made to produce early and late potatoes, as in many sections the growing season is too short for the production of but one crop. Late potatoes are allowed to grow until they mature or until the frost kills the vines. The cultivation of the late crop is similar to that employed in the case of the early crop.—U. S. Department of Agriculture.

U. S. DEPT. OF AGRICULTURE

HOW TO GROW

Squash.

There are two types of squash—the bush varieties, which may be planted 5 and 6 seeds to the hill in hills 4 or 5 feet apart each way, and the running varieties which require considerable more room for their development. Squash may properly be grown in the garden, as three or four hills will produce all that is required for the average family. They require a rather rich soil, preferably one that is well mixed with rotted manure.

Squash for summer use should be planted as soon as the ground is thoroughly warmed up, which will be about one month after the last killing frost. Such varieties as the Hubbard for fall and winter use may be planted at any time during the spring after the ground is thoroughly warmed up, and will grow the entire season. They should be gathered in fall, as soon as hard frosts occur. They may be kept in a storage room in the basement, or in any cool, dry place. It is necessary to handle them carefully to avoid bruising, or rot is liable to occur.—U. S. Department of Agriculture.

U. S. DEPT. OF AGRICULTURE

HOW TO GROW

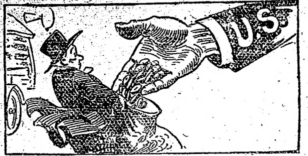
Turnips.

The turnip requires a rich soil and may be grown either as an early or late crop. For an early crop, sow the seeds in drills 12 to 18 inches apart as early in the spring as the condition of the soil will permit. A half-ounce of seed is sufficient for a 100-foot row. After the plants appear thin to about 3 inches apart. The roots will be ready for use before hot weather.

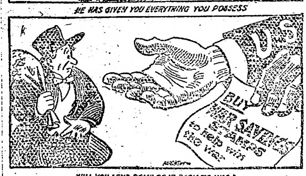
For late turnips, the seeds are usually sown broadcast on land from which some early crop has been removed, and for this reason the turnip is a good crop to grow for storage for winter. They are quite hardy, and the roots need not be gathered until after the first frosts. They may be stored in banks or pits or in the out-door cave or cellar, and keep best when kept rather cool.

The turnip is a good crop for interplanting between rows of late corn or late beans.—U. S. Department of Agriculture.

MINNESOTA W-S-S PLEDGE WEEK BEGINS JUNE 6



HE HAS GIVEN YOU EVERYTHING YOU POSSESS



U.S
BUY WAR SAVINGS STAMPS to help win the war

WILL YOU LEND SOME OF IT BACK TO HIM?

WAR STAMPS TO HAVE BIG DRIVE

June 6 Is Opening Day for Minnesota Pledge Week for Their Purchase.

"GOING OVER THE TOP"

Director Culver Confident That Loyalty of People Will Bring Oversubscription of State's Quota of $47,000,000.

Director D. S. Culver of the Minnesota War Savings Committee today set aside the week starting June 6th and ending on June 13th, as Minnesota pledge week for the purchase of war savings stamps. In making the announcement, he evinced confidence that the loyalty of people in this state will be manifested by pledging themselves to make purchases during the balance of this year which will result in oversubscribing the state's quota of $47,000,000.

All county chairmen are now preparing for the drive that will soon start. In messages sent from state headquarters in the Metropolitan bank building, Minneapolis, a few days ago, sub-chairmen were asked the probabilities of their respective counties "going over the top" in the coming drive. Practically all replied that they expected to exceed the amounts allotted to their counties.

"During [illegible] week all citizens in Minnesota will be asked to pledge the purchase of War Savings Stamps during [illegible] 1918 on a minimum basis of [illegible] per capita," said Mr. Culver today. "This does not mean that [illegible] is to be solicited for cash subscriptions. Minnesota must raise her [illegible] quota during the year and the [illegible], something less [illegible] does not make a very good [illegible]."

[illegible] are reports coming in from various county chairmen that [illegible] us a great majority [illegible] will not only secure [illegible] required quotas, but will [illegible] exceed their allotments.

County chairmen are already adding to the personnel of their campaign committees with the expectation of making a hundred per cent showing during the big thrift stamp drive. Several recently have visited headquarters here in an effort to derive new ideas and straighten out minor details so the work during June will go along without a single hitch.

Vice Director J. H. Meyering, heading the sales forces, said the purpose of the campaign is not solely to ask immediate cash purchases. On the contrary, he explained, the pledges to be made during the week from June 6 to 13, are for W. S. S. purchases throughout the year. These will probably be on a monthly basis to extend through the coming months in equal portions.

"The purpose of the government in inaugurating its War Savings Stamps sales is to encourage thrift," said Mr. Meyering. "That means that citizens can save from unnecessary expenditures enough money to buy their quota of savings stamps. If all do that the campaign in Minnesota will be a great success."

BUY W. S. S.

SAVING "CHICKEN FEED" TO BUY SAVING STAMPS

Minneapolis Editor Says Opportunity Is Making Us Nation of Savers.

Saving buffalo nickels and new dimes to buy War Savings stamps is a pastime these days with Elbert E. Stevens, editor of the Labor Digest, a Minneapolis publication. He has during the past month purchased two W. S. S. with change given to him in these denominations.

HOW MANY PAVE WAY TO SAVE TO BUY W. S. S.

Some men eat only 2 meals a day!

Heavy smokers buy a thrift stamp when they light a cigar!

Golfers play for W. S. S.!

Country clubs sell W. S. S. when members call for drinks!

Autoists reduce time spent in pleasure driving!

Some office employes take lunches to work!

One woman saved $4 on her new hat and bought a W. S. S.!

Sell old clothes and shoes and buy W. S. S.!

Some walk to and from work and spend money on W. S. S.!

Take less expensive vacation trips to buy W. S. S.!

Reduce number of visits to movies each week by one to buy W. S. S.!

Plant a war garden. Use money saved by time so spent and from sale of products to buy W. S. S.!

HINTS FOR W. S. S. CAMPAIGN

Worker Gives Suggestion to Make Pledge Week a Success.

Minnesota can exceed her quota of $47,000,000 in the War Stamp Pledge Week drive beginning Thursday, June 6 by observing the following hints, said a prominent worker:

Aiding the W. S. S. campaign is giving help to the Allied cause and to U. S. soldiers;

Buying stamps is nailing a plank in the nation's ultimate victory over the enemy;

Pledging purchases to be made throughout the year means support for those engaged in forever putting down a regime that glories in the murder of women, children and other civilians;

Creating interest on the part of others to buy W. S. S. is helping to build monuments for those heroes who have died and been wounded fighting for YOUR protection;

He who does not pledge $20 as a minimum for each person dependent upon him is not helping America to make the world a safe place to live in;

You can lend a helping hand to those who are today fighting YOUR BATTLES in the front line of trenches by buying or pledging to buy your FULL QUOTA OF WAR SAVINGS STAMPS. This applies to every man, woman and child in every township, village, and county in MINNESOTA.

BUY W. S. S.

HAVE FAMILY OF BABY BONDS

Childless Couple Pledge Themselves to Buy W. S. S.

Until two weeks ago Mr. and Mrs. (deleted by censor) had been without children during their six years of married life. Now they have two infants born just a week apart—and it all came about in a unique way.

They had a wedding anniversary on April 25 to which their friends were invited. Before the guests arrived, however, the door bell rang and there, on the front porch when they answered the bell, they found a basket in which was wrapped a tiny infant. How delighted they were.

Taking it into the house they removed the coverings and there, sure enough, was their much longed for baby. It was a Baby Bond. Soon the guests arrived and extended hearty congratulations, for the baby—the Baby Bond—was their gift to the happy couple.

Mr. and Mrs. (censored) have vowed they are going to have a large family of children for they have pledged themselves to purchase four War Savings Stamps (Baby Bonds) each month during the balance of this year. By so doing, they told their anniversary guests, they are realizing their wishes to raise a good sized family as well as to give Uncle Sam their support in his battle against autocracy.

BUY W. S. S.

War Savings Stamps and Liberty Bonds work well together.

March Says America, With Forces Unified, Can Drive Prussianism From the Earth.

SURPLUS IN MINNESOTA

Gopher State One of Few in Union With Oversupply of Food—Governor Early Urged Co-operation and Aid for Farmers.

One of the greatest agencies for world peace in the opinion of Col. C. H. March of the Minnesota State Safety Commission is the great agricultural resources of the state and the Northwest, mobilized and unified, to wage a determined and victorious war on Prussian autocracy and efficiently working with all other forces for the one great patriotic purpose.

With our forces thus unified, he says, Prussianism can be driven from the face of the earth and a Hun menaced world made safe for Democracy. Similar convictions are held by Governor Burnquist.

Recently Col. March with members of the State Railroad and Warehouse commission and others interested in Northwest agricultural development work returned from Washington where they conferred with President Wilson and members of his cabinet relative to aid and legislation of Minnesota and Northwest farmers generally and he spoke interestingly of his visit. Col. March is chief in command of the agricultural division of the State Safety Commission and his visit to Washington, which was at the instance of Gov. Burnquist, will develop into something of tremendous benefit in the future.

Washington and the President, Col. March says, are keenly interested in farm development and much in the way of federal aid for the farmers of Minnesota and the Northwest is under consideration. Cooperation in a farm aid way with Gov. Burnquist and the State Safety commission was practically pledged.

"Unfortunately in the minds of many," said Col. March, speaking broadly on the subject of the Minnesota State Safety commission and its relation to the farmers of the state, "there is a fixed impression that our Commission has solely to do with the acts of disloyalty and sedition. With others it is the dissemination of loyalty propaganda. The scope of our work, however, is much greater than the beliefs quoted. Every phase of war aid in which Minnesota may be of help to the nation is included and not the least of our activities is agricultural development.

"One of the first to answer the President's call for increased production in foodstuffs," continued Col. March, "was Gov. Burnquist, and realizing that such increased production was a matter of farm development principally he early impressed upon our commission the necessity of giving the farmers of Minnesota every aid possible. Help the farmer, he argued, as on his prosperity depends much; food is the one weapon now that will bring victory.

"No one can know Gov. Burnquist and not be impressed by his sincerity and honesty of purpose and realizing the importance of his warning regarding food increase our commission at once began work. At the Governor's direction every known agricultural development unit in the state was consulted and their co-operation urged. Many departments in aid of the various phases of agricultural work were created and experienced men placed in charge. 'Find out the farmer's needs and speed up,' was the command. Even before the State Safety commission was organized, Gov. Burnquist, I might say, was on the job as one of our first official acts was the promulgation of the Governor's food proclamation which was drafted by the Governor almost on entry of the United States into the war. That proclamation which was directed at the food producers of the state put Minnesota in the front rank of commonwealths anxious to aid the nation in its hour of distress."

With the declaration of war against Germany one of the first defensive steps was the taking of an inventory of food stores and as pointed out by Col. March it found Minnesota one of the few states with a surplus. To conserve and increase this surplus was a duty that impressed the Governor and without delay he appointed a Committee on Food Production and Conservation. The creation of this committee by Gov. Burnquist was in advance of the organization of the State Safety commission and [illegible] the wisdom of the step. Minnesota's agricultural development and the general conservation of food in the state was advanced in a way that brought almost immediate complimentary attention from the federal heads at Washington [illegible]

[illegible] accomplishment, however, is not alone in mere production. This Gov. Burnquist and the State Safety commission appreciate and every energy and resource at the command of both is being directed at overcoming the obstacles that will of necessity [illegible]

As pointed out by Col. March the obstacles run to many things, for instance lack of a plentiful supply of [illegible] which the commission has already taken steps to provide, terminal and car congestion, and above all a fair return for the producer. They are all problems in a way and unless mastered disaster will be the return. Fortunately a government fixed minimum which the commission hopes to see increased has partially relieved the problem of a fair return, but this is not all that the Governor and the commission propose to realize for the farmers of the state. An open market in transportation in season will be insisted on. For the farmer's comfort and prosperity many things have been set in motion.

One of the aggravating and perplexing things of the 1917 crop was that of transportation. Constant watch only kept Minnesota's bumper grain crop moving and it can be said with truth that Minnesota was one of the few states with an adequate supply of cars. Working through the state railroad and warehouse commission cars were placed on sidings almost on demand and terminal congestion minimized. Elevator abuses were likewise reduced.

One of the pleasant experiences of Col. March was his conference with President Wilson regarding the needs of Minnesota farmers and the almost uncanny knowledge of Northwest agricultural conditions as displayed by the chief executive. Col. March's visit to the National Capital was at the suggestion of Gov. Burnquist who had in mind a number of federal helps for the farmers of the state.

"The conference," said Col. March, "was participated in by a number of men interested in Northwest farm development and what surprised and pleased me was the president's intimate knowledge of food conditions in Minnesota and other Northwest states. He was particularly interested in the 1918 crop and asked many questions. Minnesota farmers, he said, had answered the call nobly and he asked me to assure Gov. Burnquist and the State Safety commission that every federal help possible would be given. At this conference a number of matters vitally concerning the farmers of Minnesota were discussed not the least of them being a reorganization of the present federal grain standards so as to conform to the former Minnesota grades. I firmly believe that all our requests and suggestions will be favorably answered."

Minnesota last year raised over 3[illegible],000,000 bushels of potatoes, the largest crop in the history of the state and showing what the State Safety commission has done and is doing for the Minnesota farmers, Col. March and his committee of agricultural experts hope to have every bushel marketed before another planting begins. As an aid to the movement of about 13,000,000 bushels still remaining Gov. Burnquist recently sent a vigorously worded telegram to President Wilson asking for a war market and the required cars for the movement of the surplus.

Through orders of the commission last year forest fires were greatly minimized and growing crops aided materially. Precautions to be put in effect by the commission this year will be even more stringent.

At the request of the commission the State Board of Control has promised to push its production of state made binding twine to the limit. A price under the trust controlled product has also been secured.

As explained by Col. March his brief explanation of what the commission has already done in aid of the farmers of the state is only a small part of what really has been done. Plans for this year are much more extensive.

More Money Saved to Farmers.

Through its wide powers given it by the legislature the State Safety Commission was able to promulgate Order No. 29 providing for the eradication of the tall barberry. This was promptly done and Barberry Eradication Day was set for May [illegible]

The barberry is a breeder of rust in wheat and although many laws have been passed providing for its extermination it remained for the [illegible]

[illegible]

[illegible] Sense of [illegible] of Clean Up and Paint Up

POINTERS ON WHAT TO DO

Chairman of Woman's National Bureau Offers Excellent Suggestions on How to Obtain Desired Renovation.

Here are some pointers for women who would regenerate their community with a real Clean Up and Paint Up campaign, as suggested by Mrs. Clarence [illegible] Baxter, State chairman of civics and health, Missouri Federation of Women's Clubs, and chairman of the Women's committee of the National Clean Up and Paint Up campaign bureau, St. Louis.

Ten Good Suggestions.

1. Take away all the ashes and trash from your back yard immediately. Send your rubbish to the dumping ground.

2. Suggest to several men with teams that they drive through the alleys with a sign, "Clean Up Wagon," on their wagons; also a bell calling attention. People are only too glad to pay such a man for hauling their trash away. [illegible]

3. Burn all rubbish that will burn. Clean your vacant lots and alley ways.

4. Make your street and parking look as trim and well kept as possible.

5. Refrain from throwing old paper, banana and orange skins into the streets.

6. Plant some grass and flower seeds to make your home beautiful.

Use Plenty of Paint.

7. If your store front is dingy, paint it. Nothing will do more to improve the appearance of a town than the liberal use of paint.

8. If there are unnecessary, unsightly sheds in your back yards, tear them down. They detract from the beauty of your home and the town. Open spaces and fresh air are better.

9. If your walk is an eyesore to those traveling over it, repair it or build a new one.

10. Clean out the alleys back of the business houses at once.

By all means do your part to help make your town cleaner and more attractive.

CLEAN UP PAINT UP ON FARM

Well-Kept Rural Home Is Appraised at Higher Value and Adds to Attractiveness of the Community.

The incentive to Clean Up and Paint Up which is stirred in the breasts of the townspeople is shared by the surrounding rural districts. The Ohio board of agriculture issued a bulletin urging the removal of ramshackle farm buildings, the painting of those that remain, trimming hedges and trees, spraying shrubbery and cleaning and painting tools and machinery.

Secretary W. W. Flannagan, of the federal farm loan board, says: "It hardly needs any argument to convince anyone that a well-painted, well-kept home or barn would naturally be appraised at a higher value than one not so renovated."

Paint Up Goes Hand in Hand With a Clean Up

1—Because a clean up without a paint up is useless and absurd. Houses that are unpainted eyesores are made uglier and more conspicuous when only streets and grounds are cleaned up.

2—Because the painted surface, inside and outside, is washable and therefore can be kept clean and sanitary. "Paint—paint your walls, floors and ceilings often," says Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins university), in his "Why It's Cheaper to Keep Well—Prevention the Way."

3—Because, as Prof. H. H. King, of the Kansas State Agricultural college, declares, after several years' experience in conducting painting tests for that state, "The annual loss through lack of painting is greater than the annual loss by fire." [illegible] cities in Europe and South America require regular painting in prescribed colors by city ordinance.—Augusta [illegible]

U. S. DEPT. OF AGRICULTURE

HOW TO GROW

[illegible]

The culture of the Irish potato is familiar to almost everyone who has ever had a garden. In brief, the potatoes should be planted as soon as the ground can be worked in spring, two weeks before the average date of the last killing frost being none too early. The tubers should be cut so that each piece contains from one to two eyes, and the pieces planted in rows from 24 to 30 inches apart and from 10 to 15 inches apart in the rows, depending on the variety. Cultivation should be frequent and thorough. It is an excellent idea to work soil up to the plants as they develop, so that there will be plenty of soil to cover the potatoes as they form.

Early potatoes in the central and southern sections of the country will mature in sufficient time for the gardener to grow a crop of sweet corn, late cabbage or turnips on the same ground. It is often possible to plant the second crop between the potato rows before the potatoes are dug. Early potatoes may be used as soon as large enough, an old rule being to begin using them when they are as large as a hen's egg. The usual method is to dig them as needed, leaving the main part of the crop to develop to maturity.

In the central portion of the United States the late crop may be planted from June 15 to July 1, but in the northern sections the main crop is planted earlier than this, no attempt being made to produce early and late potatoes, as in many sections the growing season is too short for the production of but one crop. Late potatoes are allowed to grow until they mature or until the frost kills the vines. The cultivation of the late crop is similar to that employed in the case of the early crop.—U. S. Department of Agriculture.

U. S. DEPT. OF AGRICULTURE

HOW TO GROW

Squash.

There are two types of squash—the bush varieties, which may be planted 5 and 6 seeds to the hill in hills 4 or 5 feet apart each way, and the running varieties which require considerable more room for their development. Squash may properly be grown in the garden, as three or four hills will produce all that is required for the average family. They require a rather rich soil, preferably one that is well mixed with rotted manure.

Squash for summer use should be planted as soon as the ground is thoroughly warmed up, which will be about one month after the last killing frost. Such varieties as the Hubbard for fall and winter use may be planted at any time during the spring after the ground is thoroughly warmed up, and will grow the entire season. They should be gathered in fall, as soon as hard frosts occur. They may be kept in a storage room in the basement, or in any cool, dry place. It is necessary to handle them carefully to avoid bruising, or rot is liable to occur.—U. S. Department of Agriculture.

U. S. DEPT. OF AGRICULTURE

HOW TO GROW

Turnips.

The turnip requires a rich soil and may be grown either as an early or late crop. For an early crop, sow the seeds in drills 12 to 18 inches apart as early in the spring as the condition of the soil will permit. A half-ounce of seed is sufficient for a 100-foot row. After the plants appear thin to about 8 inches apart. The roots will be ready for use before hot weather.

For late turnips, the seeds are usually sown broadcast on land from which some early crop has been removed, and for this reason the turnip is a good crop to grow for storage for winter. They are quite hardy, and the roots need not be gathered until after the first frosts. They may be stored in banks or pits or in the out-door cave or cellar, and keep best when kept rather cool.

The turnip is a good crop for interplanting between rows of late corn or late beans.—U. S. Department of Agriculture.

WAR STAMPS TO HAVE BIG DRIVE

June 6 Is Opening Day for Minnesota Pledge Week for Their Purchase.

"GOING OVER THE TOP"

Director Culver Confident That Loyalty of People Will Bring Oversubscription of State's Quota of $47,000,000.

Director D. S. Culver of the Minnesota War Savings Committee today set aside the week starting June 6th and ending on June 13th, as Minnesota pledge week for the purchase of war savings stamps. In making the announcement, he evinced confidence that the loyalty of people in this state will be manifested by pledging themselves to make purchases during the balance of this year which will result in oversubscribing the state's quota of $47,000,000.

All county chairmen are now preparing for the drive that will soon start. In messages sent from state headquarters in the Metropolitan bank building, Minneapolis, a few days ago, sub-chairmen were asked the probabilities of their respective counties "going over the top" in the coming drive. Practically all replied that they expected to exceed the amounts allotted to their counties.

"During Pledge week all citizens in Minnesota will be asked to pledge the purchase of War Savings Stamps during the balance of 1918 on a minimum basis of $20 per capita," said Mr. Culver today. "This does not mean that one is to be asked for cash subscriptions. Minnesota must raise her $47,000,000 quota during the year and the [illegible] amount, something less [illegible], does not make a very good [illegible]

"[illegible] reports coming in from the various county chairmen that [illegible] convinced us a great majority [illegible] will not only secure pledges for their required quotas, but will [illegible] likely exceed their allotments."

County chairmen are already adding to the personnel of their campaign committees with the expectation of making a hundred per cent showing during the big thrift stamp drive. Several recently have visited headquarters here in an effort to derive new ideas and straighten out minor details so the work during June will go along without a single hitch.

Vice Director J. H. Meyering, heading the sales forces, said the purpose of the campaign is not solely to ask immediate cash purchases. On the contrary, he explained, the pledges to be made during the week from June 6 to 13, are for W. S. S. purchases throughout the year. These will probably be on a monthly basis to extend through the coming months in equal portions.

"The purpose of the government in inaugurating its War Savings Stamps sales is to encourage thrift," said Mr. Meyering. "That means that citizens can save from unnecessary expenditures enough money to buy their quota of savings stamps. If all do that the campaign in Minnesota will be a great success."

HINTS FOR W. S. S. CAMPAIGN

Worker Gives Suggestion to Make Pledge Week a Success.

Minnesota can exceed her quota of $47,000,000 in the War Stamp Pledge Week drive beginning Thursday, June 6 by observing the following hints, said a prominent worker:

Aiding the W. S. S. campaign is giving help to the Allied cause and to U. S. soldiers;

Buying stamps is nailing a plank in the nation's ultimate victory over the enemy;

Pledging purchases to be made throughout the year means support for those engaged in forever putting down a regime that glories in the murder of women, children and other civilians;

Creating interest on the part of others to buy W. S. S. is helping to build monuments for those heroes who have died and been wounded in fighting for YOUR protection;

He who does not pledge $20 as a minimum for each person dependent upon him is not helping America to make the world a safe place to live in;

You can lend a helping hand to those who are today fighting YOUR BATTLES in the front line of trenches by buying or pledging to buy your FULL QUOTA OF WAR SAVINGS STAMPS. This applies to every man, woman and child in every township, village, and county in MINNESOTA.

BUY W. S. S.

HAVE FAMILY OF BABY BONDS

Childless Couple Pledge Themselves to Buy W. S. S.

Until two weeks ago Mr. and Mrs. (deleted by censor) had been without children during their six years of married life. Now they have two infants born just a week apart—and it all came about in a unique way.

They had a wedding anniversary on April 25 to which their friends were invited. Before the guests arrived, however, the door bell rang and there, on the front porch when they answered the bell, they found a basket in which was wrapped a wee infant. How delighted they were.

Taking it into the house they removed the coverings and there, sure enough, was their much longed for baby. It was a Baby Bond. Soon the guests arrived and extended hearty congratulations, for the baby—the Baby Bond—was their gift to the happy couple.

Mr. and Mrs. (censored) have vowed they are going to have a large family of children for they have pledged themselves to purchase four War Savings Stamps (Baby Bonds) each month during the balance of this year. By so doing, they told their anniversary guests, they are realizing their wishes to raise a good sized family as well as to give Uncle Sam their support in his battle against autocracy.

BUY W. S. S.

Now And Then

WHAT THE GOVERNORS OF DRY STATES SAY

Governor Rye, Tennessee:

"We have lost the liquor traffic and we are glad. Crime reduced, streets free from drunkards, bank deposits enormously increased, property more valuable, life safer, people more prosperous and happier, public morals on a high plane."

Governor Keer, North Carolina:

"Twenty-one per cent more children attending school; bank deposits increased 100 per cent; building and loan association stock increased 250 per cent; benefits great and continually increasing."

Governor Carlson, Colorado:

"Two thousand new savings accounts opened in one month; collections in department stores broke all records; credit men report many over-due accounts, deemed uncollectible, paid up; crime reduced greatly."

Governor Hunt, Arizona:

"Marked decrease in commitments to prison and insane hospital; needy families perceptibly decreased; no adverse effect upon legitimate business."

Governor Hanna, North Dakota:

"Both from moral and financial standpoint prohibition has been a success in North Dakota."

Governor Capper, Kansas:

"Wealth per capita greater than any other State; death rate lowest per capita; bank deposits largest of any State; fewest tenants, most home-owners of any State; no open barrooms and auto to every fifth family; two million people who never saw a saloon."

Governor Alexander, Idaho:

"Never such beneficial results from any measure in so short a time; Boise chief of police and four policemen dismissed because no longer needed; police courts deserted; city and county jails empty; savings banks deposits increased; accidents decreased."

Governor Hartfield, West Virginia:

"Business has improved; arrests decreased; insane commitments less; savings banks deposits swelled; prohibition a great success."

Governor Clark, Iowa:

"Arrests reduced forty to forty-five per cent; commitments to State hospitals greatly decreased; demands on poor fund much reduced; practically all merchants say collections much improved; importation of intoxicants reduced nine-tenths."

Governor Hays, Arkansas:

"Ninety per cent fewer arrests for drunkenness; prohibition decided success."

All Join To Kill The Barberry

SCOUTS HUNT STATE FOR THE BARBERRY

A. G. Ruggles, state entomologist, with his headquarters at University Farm, has started scouts out over the state to begin a statewide hunt for the common barberry, which is a menace of wheat and other grains.

The Minnesota Commission of Public Safety a few weeks ago issued an order that every owner or agent of property on which common barberry plants—not the Japanese barberry—are found should dig up and destroy such plants. The commission instructed Mr. Ruggles to see that the order was carried out, and these scouts are being sent out in compliance with these instructions.

Those wishing aid in identifying the common barberry as distinguished from the Japanese barberry can have it in the form of Special Bulletin 26 on "The Common Barberry—An Enemy of Wheat," prepared by E. M. Freeman of the division of plant pathology and botany at University Farm, if they will address Office of Publications, University Farm, St. Paul.

FOOD WILL WIN
THE WAR

BOYS GET READY FOR PIG CONTEST

The boys and girls of Minnesota are getting ready for the fourth annual pig contest carried on under the direction of T. A. Erickson, state leader of Minnesota boys and girls clubs. More than 700 boys and girls enrolled for this contest last year, and an even larger number is expected this year.

Any boy or girl between the ages of 10 and 18 may become a club member. Each club member must agree to keep a feed record on at least one pig not more than three months old at the time the record is started, for at least four months.

A valuable help to those entering the contest will be found in directions as to selecting, handling, and feeding pig-club pigs by R. G. Ashby of the division of animal husbandry, University Farm. These directions are found in Special Bulletin 24 of the agricultural extension division of the University of Minnesota.

Copies of this bulletin may be had by addressing Office of Publications, University Farm, St. Paul.

"An opportunity seldom equalled is now being offered by the United States Navy in a new, great drive, recently ordered. It allows men to enroll in the Naval Reserve Force and remain on inactive duty for an indefinite period.

Advices to this effect have just been received from Lieut. George A. Treadwell, of the Minneapolis Recruiting Station, in charge of Naval duty, the dispatch indicates, allowing men to remain at home or at their respective occupations, sometimes for months, before being called. While no definite time can be set for the calling of new recruits into active service, the probabilities are that men who enroll now will not be called before fall.

The new order does not exclude draft registrants. All men in the draft who secure certificates from their local boards to the effect that they are not required to fill any current quotas of the national army are eligible. All branches of the Navy are open with the exception of aviation mechanics.

Absent Soldiers may vote at the primaries

VOTING BY ABSENT SOLDIERS AND SAILORS AT PRIMARY ELECTION ON JUNE 17, 1918.

The Minnesota Commission of Public Safety has by order extended the provisions of the so-called Absent Voters Law, Chapter 68, Laws 1917, with certain modifications, to the primary election to be held June 17, 1918. Under the terms of this order any person in the military or naval service of the United States, who is absent from his election district on that day may vote by mail. To do so, however, the absent voter must first make an application for ballots in a form prescribed by said order. He must also subscribe to the oath printed on the back of such form and mail the application and oath to the County Auditor of the county in which he is entitled to vote. The auditor will then mail the voter the necessary ballots to be marked by him and the envelopes in which to mail the same to the election judges, with full instructions as to the procedure to be followed.

Friends and relatives of soldiers and sailors are requested to procure and mail the blank applications for ballots to them. When sending a blank to your boy, include several others, to the end that he may hand the extra copies to other Minnesota voters who may not otherwise be supplied.

When possible, persons sending these blanks to absent voters should ascertain and inform the voter the proper description of the election precinct in which the voter for whom it is intended will be entitled to vote. He may not know or remember the ward and precinct in which he has his residence. This is especially true as to voters residing in cities having many election districts. Attention to this matter on the part of the "folks at home" will greatly facilitate the work of the county auditor and insure the proper casting and counting of the absent voter's ballot. Blank applications for ballots may be had without charge by applying to the county auditor or the secretary of the Minnesota Commission of Public Safety. It is also intended to supply them to the banks and newspapers of the state for free distribution.

It is also important that these blank applications should be gotten into the hands of the absent voters at once. The county auditors will be very busy in getting out election supplies during the twenty days immediately preceding June 17, and so far as the matters above referred to [illegible]

U. S. Must Cut Use Of Wheat by One-Half

America Consumed 42,000,000 Bushels Monthly. From Now Until Harvest Must Use Only 21,000,000.

RATION PER PERSON IS 1½ POUNDS OF WHEAT PRODUCTS WEEKLY

Military Necessity Calls for Greater Sacrifice Here—Allied War Bread Must Be Maintained—Our Soldiers and Sailors to Have Full Allowance.

If we are to furnish the Allies with the necessary proportion of wheat to maintain their war bread from now until the next harvest, and this is a military necessity, we must reduce our monthly consumption to 21,000,000 bushels a month, as against our normal consumption of about 42,000,000 bushels, or 50 per cent of our normal consumption. This is the situation as set forth by the U. S. Food Administration at Washington. Reserving a margin for distribution to the army and for special cases, leaves for general consumption approximately 1½ pounds of wheat products weekly per person. The Food Administration's statement continues: Many of our consumers are dependent upon bakers' bread. Such bread must be durable and therefore, requires a larger proportion of wheat products than cereal breads baked in the household. Our army and navy require a full allowance. The well-to-do in our population can make greater sacrifices in the consumption of wheat products than can the poor. In addition, our population in the agricultural districts, where the other cereals are abundant, are more skilled in the preparation of breads from these other cereals than the crowded city and industrial populations.

With improved transportation conditions we now have available a surplus of potatoes. We also have in the spring months a surplus of milk, and we have ample corn and oats for human consumption. The drain on rye and barley, as substitutes, has already greatly exhausted the supply of these grains.

To effect the needed saving of wheat we are wholly dependent upon the voluntary assistance of the American people and we ask that the following rules shall be observed:

1. Householders to use not to exceed a total of 1½ pounds per week of wheat products per person. This means not more than 1¼ pounds of Victory bread containing the required percentage of substitutes and one-half pound of cooking flour, macaroni, crackers, pastry, pies, cakes, wheat breakfast cereals, all combined.

2. Public eating places and clubs to observe two wheatless days per week, Monday and Wednesday, as at present. In addition thereto, not to serve to any one guest at any one meal an aggregate of breadstuffs, macaroni, crackers, pastry, pies, cakes, wheat breakfast cereals, containing a total of more than two ounces of wheat flour. No wheat products to be served unless specially ordered. Public eating establishments not to buy more than six pounds of wheat products for each ninety meals served, thus conforming with the limitations requested of the householders.

3. Retailers to sell not more than one-eighth of a barrel of flour to any town customer at any one time and not more than one-quarter of a barrel to any country customer at any one time, and not to sell wheat products without the sale of an equal weight of other cereals.

4. We ask the bakers and grocers to reduce the volume of Victory bread sold by delivery to the three-quarter pound loaf where the pound was sold before, and corresponding proportions in other weights. We also ask bakers not to increase the amount of their wheat flour purchases beyond 70 per cent of the average monthly amount purchased in the four months prior to March 1.

5. Manufacturers using wheat products for non-food purposes should cease such use entirely.

6. There is no limit upon the use of other cereals, flours, and meals, corn, barley, buckwheat, potato flour, et cetera.

Many thousand families throughout the land are now using no wheat products whatever, except a very small amount for cooking purposes, and are doing so in perfect health and satisfaction. There is no reason why all of the American people who are able to cook in their own households cannot subsist perfectly well with the use of less wheat products than one and one-half pounds a week, and we specially ask the well-to-do households in the country to follow this additional programme in order that we may provide the necessary marginal supplies for those parts of the community less able to adapt themselves to so large a proportion of substitutes.

In order that we shall be able to make the wheat exports that are absolutely demanded of us to maintain the civil population and soldiers of the allies and our own army, we propose to supplement the voluntary co-operation of the public by a further limitation of distribution, and we shall place at once restrictions on distribution which will be adjusted from time to time to secure as nearly equitable distribution as possible. With the arrival of harvest we should be able to relax such restrictions. Until then we ask for the necessary patience, sacrifice and co-operation of the distributing trades.

Now And Then

WHAT THE GOVERNORS OF DRY STATES SAY.

Governor Rye, Tennessee:

"We have lost the liquor traffic and we are glad. Crime reduced; streets free from drunkards; bank deposits enormously increased; property more valuable; life safer; people more prosperous and happier; public morals on a high plane."

Governor Keer, North Carolina:

"Twenty-one per cent more children attending school; bank deposits increased 100 per cent; building and loan association stock increased 250 per cent; benefits great and continually increasing."

Governor Carlson, Colorado:

"Two thousand new savings accounts opened in one month; collections in department stores broke all records; credit men report many over-due accounts, deemed uncollectible, paid up; crime reduced greatly."

Governor Hunt, Arizona:

"Marked decrease in commitments to prison and insane hospital; needy families perceptibly decreased; no adverse effect upon legitimate business."

Governor Hanna, North Dakota:

"Both from moral and financial standpoint prohibition has been a success in North Dakota."

Governor Capper, Kansas:

"Wealth per capita greater than any other State; death rate lowest per capita; bank deposits largest of any State; fewest tenants, most home-owners of any State; no open barrooms and auto to every fifth family; two million people who never saw a saloon."

Governor Alexander, Idaho:

"Never such beneficial results from any measure in so short a time; Boise chief of police and four policemen dismissed because no longer needed; police courts deserted; city and county jails empty; savings banks deposits increased; accidents decreased."

Governor Hartfield, West Virginia:

"Business has improved; arrests decreased; insane commitments less; savings banks deposits swelled; prohibition a great success."

Governor Clark, Iowa:

"Arrests reduced forty to forty-five per cent; commitments to State hospitals greatly decreased; demands on poor fund much reduced; practically all merchants say collections much improved; importation of intoxicants reduced nine-tenths."

Governor Hays, Arkansas:

"Ninety per cent fewer arrests for drunkenness; prohibition decided success."

All Join To Kill The Barberry

SCOUTS HUNT STATE FOR THE BARBERRY.

A. G. Ruggles, state entomologist, with his headquarters at University Farm, has started scouts out over the state to begin a statewide hunt for the common barberry, which is a menace of wheat and other grains.

The Minnesota Commission of Public Safety a few weeks ago issued an order that every owner or agent of property on which common barberry plants—not the Japanese barberry—are found should dig up and destroy such plants. The commission instructed Mr. Ruggles to see that the order was carried out, and these scouts are being sent out in compliance with these instructions.

Those wishing aid in identifying the common barberry as distinguished from the Japanese barberry can have it in the form of Special Bulletin 26 on "The Common Barberry—An Enemy of Wheat," prepared by E. M. Freeman of the division of plant pathology and botany at University Farm, if they will address Office of Publication, University Farm, St. Paul.

FOOD WILL WIN THE WAR

can be attended to before June 1st to that extent efficient attention to his duties under the order will be insured.

MINNESOTA COMMISSION OF PUBLIC SAFETY,
J. A. A. BURNQUIST,
Governor and Ex-officio Chairman.
H. W. LIBBY, Secretary.
Approved:

—MAKE W.S.S. PLEDGES—

BOYS GET READY FOR PIG CONTEST.

The boys—and girls, too—of Minnesota are getting ready for the fourth annual pig contest carried on under the direction of T. A. Erickson, state leader of Minnesota boys' and girls' clubs. More than 700 boys and girls enrolled for this contest last year, and an even larger number is expected this year.

Any boy or girl between the ages of 10 and 18 may become a club member. Each club member must agree to keep a feed record of at least one pig not more than three months old at the time the record is started for at least four months.

A valuable help to those entering the contest will be found in directions as to selecting, handling, and feeding pig-club pigs by R. C. Ashby of the division of animal husbandry, University Farm. These directions are found in Special Bulletin 24 of the agricultural extension division of the University of Minnesota.

Copies of this bulletin may be had by addressing Office of Publications, University Farm, St. Paul.

An opportunity seldom equalled is now being offered by the United States Navy in a new, great drive, recently ordered. It allows men to enroll in the Naval Reserve Force and remain on inactive duty for an indefinite period.

Advices to this effect have just been received from Lieut. George A. Treadwell, of the Minneapolis Recruiting Station, in charge of Naval duty, the dispatch indicates, allows men to remain at home or at their respective occupations, sometimes for months, before being called. While no definite time can be set for the calling of new recruits into active service, the probabilities are that men who enroll now will not be called before fall.

The new order does not exclude draft registrants. All men in the draft who secure certificates from their local boards to the effect that they are not required to fill any current quotas of the national army, are eligible. All branches of the Navy are open with the exception of aviation mechanics.

Absent soldiers may vote at the primaries

VOTING BY ABSENT SOLDIERS AND SAILORS AT PRIMARY ELECTION ON JUNE 17, 1918.

The Minnesota Commission of Public Safety, has by order, extended the provisions of the so-called Absent Voters' Law, Chapter 68, Laws 1917, with certain modifications, to the primary election to be held June 17, 1918. Under the terms of the order any person in the military or naval service of the United States, who is absent from his election district on that day may vote by mail. To do so, however, the absent voter must first make an application for ballots in a form prescribed by said order; he must also subscribe to the oath printed on the back of such form and mail the application and oath to the County Auditor of the county in which he is entitled to vote. The auditor will then mail the voter the necessary ballots to be marked by him, and the envelopes within which to mail the same to the election judges, with full instructions as to the procedure to be followed.

Friends and relatives of soldiers and sailors are requested to procure and mail the blank "applications for ballots" to them. When sending a blank to your boy include several others, to the end that he may hand the extra copies to other Minnesota voters who may not otherwise be supplied.

When possible, persons sending these blanks to absent voters should ascertain and inform the voter the proper description of the election precinct in which the voter for whom it is intended will be entitled to vote. He may not know or remember the ward and precinct number in which he has his residence. This is especially true as to voters residing in cities having many election districts. Attention to this matter on the part of the "folks at home" will greatly facilitate the work of the county auditor and insure the proper casting and counting of the absent voter's ballot. Blank "applications for ballots" may be had without charge by applying to the county auditor or the secretary of the Minnesota Commission of Public Safety. It is also intended to supply them to the banks and newspapers of the state for free distribution.

It is also important that these blank applications should be gotten into the hands of the absent voters at once. The county auditors will be very busy in getting out election supplies during the twenty days immediately preceding June 17, and so far as the matters above referred to

U. S. Must Cut Use Of Wheat by One-Half

America Consumed 42,000,000 Bushels Monthly. From Now Until Harvest Must Use Only 21,000,000.

RATION PER PERSON IS $1\frac{1}{2}$ POUNDS OF WHEAT PRODUCTS WEEKLY

Military Necessity Calls for Greater Sacrifice Here—Allied War Bread Must Be Maintained—Our Soldiers and Sailors to Have Full Allowance.

If we are to furnish the Allies with the necessary proportion of wheat to maintain their war bread from now until the next harvest, and this is a military necessity, we must reduce our monthly consumption to 21,000,000 bushels a month, as against our normal consumption of about 42,000,000 bushels, or 50 per cent. of our normal consumption. This is the situation as set forth by the U. S. Food Administration at Washington. Reserving a margin for distribution to the army and for special cases, leaves for general consumption approximately $1\frac{1}{2}$ pounds of wheat products weekly per person. The Food Administration's statement continues: Many of our consumers are dependent upon bakers' bread. Such bread must be durable and therefore, requires a larger proportion of wheat products than cereal breads baked in the household. Our army and navy require a full allowance. The well-to-do in our population can make greater sacrifices in the consumption of wheat products than can the poor. In addition, our population in the agricultural districts, where the other cereals are abundant, are more skilled in the preparation of breads from these other cereals than the crowded city and industrial populations.

With improved transportation conditions we now have available a surplus of potatoes. We also have in the spring months a surplus of milk, and we have ample corn and oats for human consumption. The drain on rye and barley, as substitutes, has already greatly exhausted the supply of these grains.

To effect the needed saving of wheat we are wholly dependent upon the voluntary assistance of the American people and we ask that the following rules shall be observed:

1. Householders to use not to exceed a total of $1\frac{1}{2}$ pounds per week of wheat products per person. This means not more than $1\frac{1}{2}$ pounds of Victory bread containing the required percentage of substitutes and one-half pound of cooking flour, macaroni, crackers, pastry, pies, cakes, wheat breakfast cereals, all combined.

2. Public eating places and clubs to observe two wheatless days per week, Monday and Wednesday, as at present. In addition thereto, not to serve to any one guest at any one meal an aggregate of breadstuffs, macaroni, crackers, pastry, pies, cakes, wheat breakfast cereals, containing a total of more than two ounces of wheat flour. No wheat products to be served unless specially ordered. Public eating establishments not to buy more than six pounds of wheat products for each ninety meals served, thus conforming with the limitations requested of the householders.

3. Retailers to sell not more than one-eighth of a barrel of flour to any town customer at any one time and not more than one-quarter of a barrel to any country customer at any one time, and in no case to sell wheat products without the sale of an equal weight of other cereals.

4. We ask the bakers and grocers to reduce the volume of Victory bread sold by delivery of the three-quarter pound loaf where one pound was sold before, and corresponding proportions in other weights. We also ask bakers not to increase the amount of their wheat flour purchases beyond 70 per cent. of the average monthly amount purchased in the four months prior to March 1.

5. Manufacturers using wheat products for non-food purposes should cease such use entirely.

6. There is no limit upon the use of other cereals, flours, and meals, corn, barley, buckwheat, potato flour, et cetera.

Many thousand families throughout the land are now using no wheat products whatever, except a very small amount for cooking purposes, and are doing so in perfect health and satisfaction. There is no reason why all of the American people who are able to cook in their own households cannot subsist perfectly well with the use of less wheat products than one and one-half pounds a week, and we specially ask the well-to-do households in the country to follow this additional programme in order that we may provide the necessary marginal supplies for those parts of the community less able to adapt themselves to so large a proportion of substitutes.

In order that we shall be able to make the wheat exports that are absolutely demanded of us to maintain the civil population and soldiers of the allies and our own army, we propose to supplement the voluntary co-operation of the public by a further limitation of distribution, and we shall place at once restrictions on distribution which will be adjusted from time to time to secure as nearly equitable distribution as possible. With the arrival of harvest we should be able to relax such restrictions. Until then we ask for the necessary patience, sacrifice and co-operation of the distributing trades.

FEDERAL STANDARDS.

Order Makes New Grades for Shelled Corn and Wheat Effective On and After July 15, 1918.

Revised standards which affect the grading of wheat and shelled corn which moves in interstate and foreign commerce on and after July 15, 1918, were fixed and established by order of the Secretary of Agriculture on Saturday, April 13, 1918, under the provision of the United States grain standards supersede those now used and which will continue in effect until July 15, 1918.

The New Wheat Grades.

The department announces that of the new wheat a greater proportion of the crop fall into the higher grades. The more important of the changes are:

Dockage will be expressed in terms of whole per cent rather than half per cent disregarding fractions, and the definition of dockage specifically requires recleaning and rescreening so that as large a proportion as possible of cracked wheat will be recovered.

The more definite term "foreign material other than dockage" has been substituted for "inseparable foreign material."

The allowance for wild peas, corn cockle, and similar impurities is more liberal. The percentages of hard kernel required in the premium subclasses of Hard Red Spring, Hard Winter, and Common White have been changed and made more liberal.

The minimum test weight per bushel requirements generally are reduced except for grades 2, 3, and 4 in Hard Red Spring wheat and grades 1 to 4 in common White and Club White.

The maximum percentages of moisture allowed have been increased for all grades except for grade No. 2 in Hard Red Spring and Durum. The total wheat of other classes permissible is increased in every grade, No. 1 now permitting 5 per cent and other grades 10 per cent.

Special limitations for certain wheats of other classes now apply only to the first two grades.

RHEUMATISM

Chiropractic has proven that rheumatism is caused by nerve pressure; by carefully palpating the spine of a patient so afflicted, locating the displaced or subluxated vertebrae, and adjusting them to their normal position thereby releasing the impingement or nerve pressure, thereby allowing free and uninterrupted transmission of nerve force or mental impulses access to the affected part or parts, which restores the patient to normal through nature's ways. A multitude of cases are on record who have obtained complete and permanent relief from rheumatism as well as disease of the liver, stomach, kidneys, bowels, insomnia, headache, nervousness, backaches, etc.

Consultation is free.

Sometimes flies just will congregate on one of the doors, ready to swoop in the moment the door is opened. They will not do so if a bag or two filled with lavender is fastened to the outside door casing.

Great Wheat Stocks Isolated.

It's the shortage in ships that is putting the Allies and the United States on wheat rations. Great stocks of wheat are isolated in India, and Australia. At great sacrifice in ship space and use the Allies are forced to secure some wheat from Argentina.

On January 1, Australia had stored 100,000,000 bushels of wheat that was ready for export—but there were no ships. Then came the new crop with an exportable surplus of 80,000,000 bushels. Now Australia has approximately 180,000,000 bushels waiting for ships.

India, at the same time, had 70,000,000 bushels of wheat stored for export. During April 50,000,000 bushels more out of the new crop will be added to the pile.

Argentina closed the last shipping season with 11,000,000 bushels of wheat left in the stock available for export. The new crop will add 185,000,000 to the left over.

It is not a problem that the wheat does not exist in the world—it is entirely a problem of shipping, which has thrown on America the obligation of dividing our stock with the Allies.

CHAPTER I.

Bank Cashier and Society Man.

It was ten minutes of eight when J. Montague Smith had driven his runabout to its garage and was hastening across to his suite of bachelor apartments in the Kincaid terrace. There was reason for the haste. It was his regular evening for calling upon Miss Verda Richlander, and time pressed.

The provincial beatitudes had chosen a fit subject for their illustration in the young cashier of the Lawrenceville Bank and Trust. From his earliest recollections Montague Smith had lived the life of the well-behaved and the conventional. He had his niche in the Lawrenceville social structure, and another in the small-city business world, and he filled both to his own satisfaction and to the admiration of all and sundry. Ambitions, other than to take promotions in the bank as they came to him, and, eventually, to make money enough to satisfy the demands which Josiah Richlander might make upon a prospective son-in-law, had never troubled him. An extremely well-balanced young man his fellow townsmen called him, one of whom it might safely be predicted that he would go straightforwardly on his way to reputable middle life and old age; moderate in all things, impulsive in none.

Even in the affair with Miss Richlander, sound common sense and sober second thought had been made to stand in the room of supersentiment. Smith did not know what it was to be violently in love; though he was a charter member of the Lawrenceville Athletic club and took a certain pride in keeping himself physically fit and up to the mark, it was not his habit to be violent in anything. Lawrenceville expected its young men and young women to marry and "settle down," and J. Montague Smith, figuring in a modest way as a leader in the Lawrenceville youngest set, was far too conservative to break with the tradition, even if he had wished to. Miss Richlander was desirable in many respects. Her father's ample fortune had not come early enough or rapidly enough to spoil her. In moments when his feeling for her achieved its nearest approach to sentiment the conservative young man perceived what a graciously resplendent figure she would make as the mistress of her own house and the hostess at her own table.

Smith snapped the switch of the electrics and began to lay out his evening clothes, methodically but with a certain air of calm deliberation, inserting the buttons in the waistcoat, choosing hose of the proper thinness, rummaging a virgin tie out of its box in the top dressing-case drawer.

It was in the search for the tie that he turned up a mute reminder of his nearest approach to any edge of the real chasm of sentiment: a small glove, somewhat soiled and use-worn, with a tiny rip in one of the fingers. It had been a full year since he had seen the glove or its owner, whom he had met only once, and that entirely by chance. The girl was a visitor from the West, the daughter of a ranchman, he had understood; and she had been stopping over with friends in a neighboring town. Smith had driven over one evening in his runabout to make a call upon the daughters of the house, and had found a lawn party in progress, with the western visitor as the guest of honor.

Acquaintance—such an acquaintance as can be achieved in a short social hour—had followed. At all points the bewitching young woman from the wilderness had proved to be a mocking critic of the commonplace conventions, and had been moved to pillory the same in the person of her momentary entertainer. Some thrills this young person from the wide horizons had stirred in him were his only excuse for stealing her glove. There remained now nothing of the clashing encounter at the lawn party save the soiled glove, a rather obscure memory of a face too piquant and attractive to be cheapened by the word "pretty;" these and a thing she had said at the moment of parting: "Yes; I am going back home very soon. I don't like your smug middle West civilization, Mr. Smith—it smothers me. I don't wonder that it breeds men who live and grow up and die without ever having a chance to find themselves."

Some day, perhaps, he would tell Verda Richlander of the sharp-tongued little Western beauty. Verda—and all sensible people—would smile at the idea that he, John Montague Smith, was of those who had not "found" themselves, or that the finding—by which he had understood the Western young woman to mean something radical and upsetting—could in any way be forced upon a man who was old enough and sane enough to know his own lengths and breadths and depths.

He was stripping off his coat to dress when he saw two letters which had evidently been thrust under the door during his absence with Debritt. One of the envelopes was plain, with his name scribbled on it in pencil. The other bore a typewritten address with the card of Westfall Foundries company in its upper left-hand corner. Smith opened Carter Westfall's letter first and read it with a little twinge of shocked surprise, as one reads the story of a brave battle fought and lost.

"Dear Monty," it ran. "I have been trying to reach you by phone off and on ever since the adjournment of our stockholders' meeting at three o'clock. We, of the little inside pool, have got it where the chicken got the ax. Richlander had more proxies up his sleeve than we thought he had, and he has put the steam roller over us to a finish. He was able to vote 55 per cent of the stock straight, and you know what that means: a consolidation with the Richlander foundry trust, and the hearse and white horses for yours truly and the minority stockholders. We're dead—dead and buried.

"Of course, I stand to lose everything, but that isn't all of it. I'm horribly anxious for fear you'll be tangled up personally in some way in the matter of that last loan of $100,000 that I got from the Bank and Trust. You will remember you made the loan while Dunham was away, and I am certain you told me you had his consent to take my Foundries stock as collateral. That part of it is all right, but, as matters stand, the stock isn't worth the paper it is printed on, and—well, to tell the bald truth, I'm scared of Dunham. Brickley, the Chicago lawyer they have brought down here, tells me that your bank is behind the consolidation deal, and if that is so, there is going to be a bank loss to show up on my paper, and Dunham will carefully cover his tracks for the sake of the bank's standing.

"It is a hideous mess, and it has occurred to me that Dunham can put you in bad, if he wants to. When you made that $100,000 loan, you forgot—and I forgot for the moment—that you own ten shares of Westfall Foundries in your own name. If Dunham wants to stand from under, this might be used against you. You must get rid of that stock, Monty, and do it quick. Transfer the ten shares to me, dating the transfer back to Saturday. I still have the stock books in my hands, and I'll make the entry in the record and date it to fit. This may look a little crooked, on the surface, but it's your salvation, and we can't stop to split hairs when we've just been shot full of holes.

"WESTFALL."

Smith folded the letter mechanically and thrust it into his pocket. Carter Westfall was his good friend, and the cashier had tried, unofficially, to dissuade Westfall from borrowing after he had admitted that he was going to use the money in an attempt to buy up the control of his own company's stock. Smith was thinking of the big bank loss and the hopeless ruin of Carter Westfall when he tore the second envelope across and took out the inclosed slip of scratch-paper. It was a note from the president and it was dated within the hour. Mr. Dunham was back in Lawrenceville earlier than expected, and the note had been written at the bank. It was a curt summons; the cashier was wanted, at once.

At the moment, Smith did not connect the summons with the Westfall cataclysm, or with any other untoward thing. Mr. Watrous Dunham had a habit of dropping in and out unexpectedly. Also, he had the habit of sending for his cashier or any other member of the banking force at whatever hour the notion seized him. Smith went to the telephone and called up the Richlander house. The promptness with which the multimillionaire's daughter came to the phone was an intimation that his ring was not entirely unexpected.

"This is Montague," he said, when Miss Richlander's [illegible] "Main four six eight—Mr. Richlander's residence" came over the wire. Then: "What are you going to think of a man who calls you up merely to beg off?" he asked.

Miss Richlander's reply was merciful, and he was permitted to go on and explain. "I'm awfully sorry, but it can't very well be helped, you know. Mr. Dunham has returned, and he wants me at the bank. I'll be up a little later on, if I can break away, and you'll let me come. . . . Thank you, ever so much. Goodby."

The Lawrenceville Bank and Trust, lately installed in its new marble-veneered quarters, was only four squares distant. As he was approaching the corner, Smith saw that there were only two lights in the bank, one in the vault corridor and another in the railed-off open space in front which held the president's desk and his own. Through the big plate-glass windows he could see Mr. Dunham. The president was apparently at work, his portly figure filling the padded swing-chair. He had one elbow on the desk, and the fingers

To be continued.

ALLIES DEMAND MORE CEREALS

American Meat Restrictions Relaxed to Effect Greater Wheat Savings.

ARGENTINE ARRIVALS SHORT.

Meat Supply Here Considerably Enlarged — Food Administration, However, Warns Against Waste.

The allies have made further and increased demands for breadstuffs, these enlarged demands being caused to some degree by shortage in arrivals from the Argentine. It is, therefore, necessary for the U. S. Food Administration to urge a still further reduction in the consumption of bread and breadstuffs generally if we are to meet our export necessities. The Food Administration has issued a statement explaining the situation in detail, particularly the reasons which lead it, for the purpose of centering effort for the time being upon the cereal situation to relax temporarily the restrictions on meat consumption.

Experience shows, this statement says, that the consumption of breadstuffs is intimately associated with the consumption of meat. For various reasons our supplies of meat for the next two or three months are considerably enlarged, and we can supply the allies with all of the meat products which transportation facilities render possible and at the same time somewhat increase our own consumption. In these circumstances the Food Administration considers it wise to relax the voluntary restrictions on meat consumption to some extent with a view to further decreasing bread consumption.

Conservation of food must be adjusted to meet necessities from time to time, for neither production, nor allied demands are constant factors, nor can any of these factors be anticipated for long periods in advance in the disturbed conditions in which we at present live. While the world situation is not one that warrants any relaxation in the efforts to eliminate waste or to relax economy in food, the Administration desires to secure better adjustment in food balances.

So long as the present conditions continue the only special restrictions we ask are the beefless and porkless Tuesday.

The meatless meal and the porkless Saturday are no longer asked.

The farmers of the United States are responding to the national call to increase hog production. Their increase, to all appearances, is being attained more rapidly. Of more immediate importance, however, are several complex factors which have effected an immediate increase in meat supplies.

The transportation shortage before the government took over the railroads, the bad weather in January and early in February, the large percentage of immature corn in the last harvest and the necessity of feeding this corn as rapidly as possible to save it from decay, have not only resulted in backing up the animals—particularly hogs—on the farms for a longer period of feeding, but have resulted in a great increase in their average weight and will result, with improved transportation conditions, which already appear, in larger than normal arrivals at market for the next two or three months. The weight of hogs coming to the market for the past two weeks indicates an increase in weight of from an average of 203 pounds last year to the almost unprecedented average of 232 pounds, or a net increase in their meat value of over 15 per cent. This is a distinct addition to the nation's meat supply. It therefore now seems certain that we have such enlarged supplies for at least some months to come, that we can not only increase our exports to the allies to the full extent of their transportation facilities, but at the same time can properly increase our domestic consumption.

The response of the public to our requests for reduced consumption of meat during the past few months has been most gratifying and this service alone has enabled the government during this period to provide such supplies as transportation to the allies permitted.

The Administration also suggests that in those parts of the country where the old fashioned home preservation of pork is still the custom this practice should be extended at the present time, as it will relieve the burden upon transportation [illegible] from the packing houses and is economically sound as saving the cost of packing operations and at the same time will provide home supplies of pork to last over the months of decreased supplies.

The Food Administration desires to repeat that it does not want to give the impression that these are times when simplicity and moderation of living are not critically necessary, but that its sole desire is to secure an adjustment between our different food supplies and meet changing conditions from time to time and to keep the public fully and frankly advised of its position with the full confidence and reliance that whenever it becomes necessary renewed appeals for saving will meet the same loyal response as in the past.

GROCERS HELP IN 50-50 PLAN

SIGN PLEDGE TO CARRY OUT FOOD ADMINISTRATION PROGRAM.

POST CARDS IN STORES.

Explain New Wheat Ruling to Thousands of Customers—Insures Greater Food Saving.

Grocers of the nation have accepted enthusiastically the 50-50 basis for the purchase of wheat flour and are doing their utmost to explain the new regulation to the housewife. This ruling by the U. S. Food Administration requires each purchaser of wheat flour to buy one pound of cereal substitute, one kind or assorted, for every pound of wheat flour. It was necessary to restrict the use of wheat flour in order that the allies and our fighting forces abroad might be assured of an adequate supply of wheat to meet their vital needs. This supply must come from our savings because we have already sent our normal surplus.

Wheat saving pledge cards were forwarded by the Food Administration to all retail food merchants, and these are being signed and posted in stores throughout the country. This card states, "We pledge ourselves loyally to carry out the Food Administration program. In accordance with this order we will not sell any wheat flour except where the purchaser buys an equal weight of one or more of the following, a greater use of which in the home will save wheat:

"Cornmeal, corn flour, edible corn starch, hominy, corn grits, barley flour, potato flour, sweet potato flour, soy bean flour, feterita flour and meals, rice, rice flour, oatmeal, rolled oats and buckwheat flour."

Some confusion has resulted on the part of the consumer in construing this "50-50" ruling to mean that an equal amount in value of substitutes must be purchased with wheat flour. This is a mistaken idea. The ruling states that the consumer in purchasing flour shall "buy at the same time an equal weight of other cereals."

One exception to this ruling is concerning graham flour and whole wheat flour, which may be sold at the ratio of three pounds to five pounds of wheat flour. This provision is made because approximately 25 per cent. more of the wheat berry is used in the manufacture of these flours than standard wheat flour.

Another exception is that concerning mixed flours containing less than 50 per cent. of wheat flour, which may be sold without substitutes. Retailers, however, are forbidden to sell mixed flours containing more than 50 per cent. of wheat flour to any person unless the amount of wheat flour substitutes sold is sufficient to make the total amount of substitutes, including those mixed in flours, equal to the total amount in wheat flour in the mixed flour. For instance, if any mixed flour is purchased containing 60 per cent. wheat flour and 40 per cent. substitutes it is necessary that an additional 20 per cent. of substitutes be purchased. This brings it to the basis of one pound of substitutes for each pound of wheat flour.

A special exemption may be granted upon application in the case of specially prepared infants' and invalids' food containing flour where the necessity is shown.

Some misunderstanding seems to exist on the part of consumers in assuming that with the purchase of wheat flour one must confine the additional 50 per cent. purchase to one of the substitutes. This is not the case. One may select from the entire range of substitutes a sufficient amount of each to bring the total weight of all substitutes equal to the weight of the wheat flour purchased. For instance, if a purchase of 24 pounds of wheat flour is made a range of substitutes may be selected as follows:

Cornmeal, 8 pounds; corn grits, 4 pounds; rice, 4 pounds; buckwheat, 2 pounds; corn starch, 1 pound; hominy, 2 pounds; rolled oats, 3 pounds.

These substitutes may be used in the following manner:

Cornmeal, 8 Pounds.—Corn bread, no flour; corn muffins or spoon bread, one-fourth flour or one-third rice or one-third hominy; 20 per cent. substitutes in whole bread.

Corn Starch, 1 Pound.—Thickening gravy, making custard, one-third substitute in cake.

Corn Grits, 4 Pounds.—Fried like mush, used with meat in making corn bread.

Rolled Oats, 3 Pounds.—One-fourth to one-third substitutes in bread, one-half substitute in muffins; breakfast porridge, use freely; oatmeal cookies, oatmeal soup.

Buckwheat Flour, 2 Pounds.—One-fourth substitute in bread, buckwheat cakes.

Hominy, 2 Pounds.—Boiled for dinner, baked for dinner, with cheese sauce.

Rice, 4 Pounds.—One-fourth substitute in wheat bread, one-third substitute in corn bread, boiled for dinner (a bread cut), as a breakfast food, to thicken soups, rice pudding instead of cake or pie, rice batter cakes.

Several grocers have stated that their customers who strictly observe the 11 wheatless meals each week find it necessary to buy substitutes in addition to those ordered under the 50-50 plan.

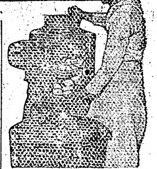
AMERICAN NAVY ELIMINATES WASTE

SLICING BACON ON BATTLESHIP

JACKIES in the American navy are classed as the best fed body of men in the world. In the ship's galleys every effort is made to eliminate waste.

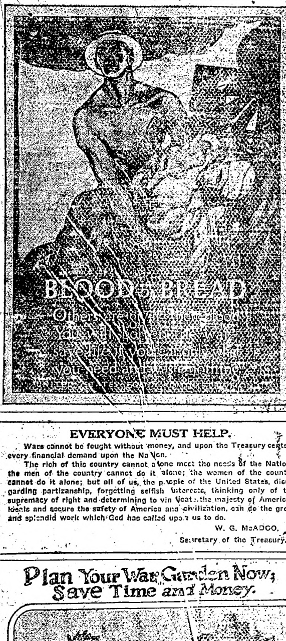
In the upper photo one of the cooks on the North Dakota is operating a meat slicer that cuts bacon with the least possible wastage. Fat is fuel for fighters. Bacon is badly needed in the allied armies and navies. The allied needs in pork products are 150,000,000 pounds monthly, three times as much as before the war.

Another waste eliminator on the North Dakota is the potato peeler, shown in the lower photo. Nothing is lost except the actual potato skin.



HOW THEY PEEL POTATOES ABOARD SHIP

There is a sufficient quantity of potatoes in America for greater use in every home and for all needs of army and navy. Eat more potatoes, eat less wheat.



EVERYONE MUST HELP.

Wars cannot be fought without money, and upon the Treasury centers every financial demand upon the Nation.

The rich of this country cannot alone meet the needs of the Nation; the men of the country cannot do it alone; the women of the country cannot do it alone; but all of us, the people of the United States, disregarding partizanship, forgetting selfish interests, thinking only of the supremacy of right and determining to vindicate the majesty of American ideals and secure the safety of America and civilization, can do the great and splendid work which God has called upon us to do.

W. G. McADOO,
Secretary of the Treasury.

Plan Your War Garden Now; Save Time and Money.

HELP INCREASE OUR EXPORT FOOD STOCKS

IN CITY and country more war gardens are needed this year than ever before. Patriotism prompted 2,000,000 Americans to plant gardens last year, according to estimates of the United States Department of Agriculture. Transportation facilities of the nation will be strained this year hauling munitions of war and foods for the Allies. The surplus food created by home gardens will help in the railroad problem. And the nation will eat less of the goods we must export—wheat, meat, fats and sugar. Every boy and girl that helps with the garden is helping win the war. Leaflets of instruction in garden making may be secured from the Department of Agriculture at Washington, upon request, without charge.

CHAPTER I.

Bank Cashier and Society Man.

It was ten minutes of eight when J. Montague Smith had driven his runabout to its garage and was hastening across to his suite of bachelor apartments in the Kincaid terrace. There was reason for the haste. It was his regular evening for calling upon Miss Verda Richlander, and time pressed.

The provincial beatitudes had chosen a fit subject for their illustration in the young cashier of the Lawrenceville Bank and Trust. From his earliest recollections Montague Smith had lived the life of the well-behaved and the conventional. He had his niche in the Lawrenceville social structure, and another in the small-city business world, and he filled both to his own satisfaction and to the admiration of all and sundry. Ambitions, other than to take promotions in the bank as they came to him, and, eventually, to make money enough to satisfy the demands which Josiah Richlander might make upon a prospective son-in-law, had never troubled him. An extremely well-balanced young man his fellow townsmen called him; one of whom it might safely be predicted that he would go straightforwardly on his way to reputable middle life and old age; moderate in all things, impulsive in none.

Even in the affair with Miss Richlander sound common sense and sober second thought had been made to stand in the room of supersentiment. Smith did not know what it was to be violently in love; though he was a charter member of the Lawrenceville Athletic club and took a certain pride in keeping himself physically fit and up to the mark, it was not his habit to be violent in anything. Lawrenceville expected its young men and young women to marry and "settle down," and J. Montague Smith, figuring in a modest way as a leader in the Lawrenceville youngest set, was far too conservative to break with the tradition, even if he had wished to. Miss Richlander was desirable in many respects. Her father's ample fortune had not come early enough or rapidly enough to spoil her. In moments when his feeling for her achieved its nearest approach to sentiment the conservative young man perceived what a graciously resplendent figure she would make as the mistress of her own house and the hostess at her own table.

Smith snapped the switch of the electrics and began to lay out his evening clothes, methodically but with a certain air of calm deliberation, inserting the buttons in the waistcoat, choosing hose of the proper thinness, rummaging a virgin tie out of its box in the top dressing-case drawer.

It was in the search for the tie that he turned up a mute reminder of his nearest approach to any edge of the real chasm of sentiment: a small glove, somewhat soiled and use-worn, with a tiny rip in one of the fingers. It had been a full year since he had seen the glove or its owner, whom he had met only once, and that entirely by chance. The girl was a visitor from the West, the daughter of a ranchman, he had understood; and she had been stopping over with friends in a neighboring town. Smith had driven over one evening in his runabout to make a call upon the daughters of the house, and had found a lawn party in progress, with the western visitor as the guest of honor.

Acquaintance—such an acquaintance as can be achieved in a short social hour—had followed. At all points the bewitching young woman from the wilderness had proved to be a mocking critic of the commonplace conventions, and had been moved to pillory the same in the person of her momentary entertainer. Some thrills this young person from the wide horizons had stirred in him were his only excuse for stealing her glove. There remained now nothing of the clashing encounter at the lawn party save the soiled glove, a rather obscure memory of a face too piquant and attractive to be cheapened by the word "pretty;" these and a thing she had said at the moment of parting: "Yes; I am going back home very soon. I don't like your smug middle West civilization, Mr. Smith—it smothers me. I don't wonder that it breeds men who live and grow up and die without ever having a chance to find themselves."

Some day, perhaps, he would tell Verda Richlander of the sharp-tongued little Western beauty. Verda—and all sensible people—would smile at the idea that he, John Montague Smith, was of those who had not "found" themselves, or that the finding—by which he had understood the Western young woman to mean something radical and upsetting—could in any way be forced upon a man who was old enough and sane enough to know his own lengths and breadths and depths.

He was stripping off his coat to dress when he saw two letters which had evidently been thrust under the door during his absence [illegible]. One of the envelopes was plain, with his name scribbled on it in pencil. The other bore a typewritten address, with the card of Westfall Foundries company in its upper left-hand corner. Smith opened Carter Westfall's letter first and read it with a little tinge of shocked surprise as one reads the story of a brave battle fought and lost.

"Dear Monty," it ran, "I have been trying to reach you by phone off and on ever since the adjournment of our stockholders meeting at three o'clock. We, of the little inside pool, have got it where the chicken got the ax. Richlander had more proxies up his sleeve than we thought he had, and he has put the steam roller over us to a finish. He was able to vote 55 per cent of the stock straight, and you know what that means: a consolidation with the Richlander foundry trust, and the hearse and white horses for yours truly and the minority stockholders. We're dead—dead and buried.

"Of course, I stand to lose everything, but that isn't all of it. I'm horribly anxious for fear you'll be tangled up personally in some way in the matter of that last loan—the $100,000 that I got from the Bank and Trust. You will remember you made the loan while Dunham was away, and I am certain you told me you had his consent to take my Foundries stock as collateral. That part of it is all right, but, as matters stand, the stock isn't worth the paper it is printed on, and—well, to tell the bald truth, I'm scared of Dunham. Brickley, the Chicago lawyer they have brought down here, tells me that your bank is behind the consolidation deal, and if that is so, there is going to be a bank loss to show up on my paper, and Dunham will carefully cover his tracks for the sake of the bank's standing.

"It is a hideous mess, and it has occurred to me that Dunham can put you in bad, if he wants to. If Dunham wants to stand from under, this might be used against you. You must get rid of that stock, Monty, and do it quick. Transfer the ten shares to me, dating the transfer back to Saturday. I still have the stock books in my hands, and I'll make the entry in the record and date it to fit. This may look a little crooked on the surface, but it's your salvation, and we can't stop to split hairs when we've just been shot full of holes.

"WESTFALL."

Smith folded the letter mechanically and thrust it into his pocket. Carter Westfall was his good friend, and the cashier had tried, unofficially, to dissuade Westfall from borrowing after he had admitted that he was going to use the money in an attempt to buy up the control of his own company's stock. Smith was thinking of the big bank loss and the hopeless ruin of Carter Westfall when he tore the second envelope across and took out the inclosed slip of scratch paper. It was a note from the president and it was dated within the hour. Mr. Dunham was back in Lawrenceville earlier than expected, and the note had been written at the bank. It was a curt summons; the cashier was wanted at once.

At the moment Smith did not connect the summons with the Westfall cataclysm, or with any other untoward thing. Mr. Watrous Dunham had a habit of dropping in and out unexpectedly. Also, he had the habit of sending for his cashier or any other member of the banking force at whatever hour the notion seized him. Smith went to the telephone and called up the Richlander house. The promptness with which the multimillionaire's daughter came to the phone was an intimation that his ring was not entirely unexpected.

"This is Montague," he said when Miss Richlander's [illegible] "Main four, six, eight—Mr. Richlander's residence" came over the wire. Then: "What are you going to think of a man who [illegible] cheerfully to beg off?" he asked.

Miss Richlander's reply was [illegible], and he was permitted to go on and explain. "I'm awfully sorry, but it can't very well be helped, you know. Mr. Dunham has returned, and he wants me at the bank. I'll be up a little later on, if I can break away, and you'll let me come. . . . Thank you, ever so much. Goodby."

The Lawrenceville Bank and Trust, lately installed in its new marble-[illegible] quarters, was only four squares distant. As he was approaching the corner Smith saw that there were only two lights in the bank, one in the public corridor and another in the railed-in open space in front which held the president's desk and his own. Through the big plate-glass windows he could see Mr. Dunham, the president, apparently at work, his portly figure filling the padded swing chair. He had one elbow on the desk, and [illegible]

(To be continued.)

The allies have made further and increased demands for breadstuffs, these enlarged demands being caused to some degree by shortage in arrivals from the Argentine. It is therefore necessary for the U. S. Food Administration to urge still further reduction in the consumption of bread and breadstuffs generally if we are to meet our export necessities. The Food Administration has issued a statement explaining the situation in detail, particularly the reasons which lead it, for the purpose of centering effort for the time being upon the cereal situation to relax temporarily the restrictions on meat consumption.

"Experience shows," this statement says, "that the consumption of breadstuffs is intimately associated with the consumption of meat. For various reasons our supplies of meat for the next two or three months are considerably enlarged, and we can supply the allies with all of the meat products which transportation facilities render possible and at the same time somewhat increase our own consumption. In these circumstances the Food Administration considers it wise to relax the voluntary restrictions on meat consumption to some extent with a view to further decreasing bread consumption.

"Conservation of food must be adjusted to meet necessities from time to time, for neither production, nor allied demands are constant factors, nor can any of these factors be anticipated for long periods in advance in the disturbed conditions in which we at present live. While the world situation is not one that warrants any relaxation in the efforts to eliminate waste or to relax economy in food, the Administration desires to secure better adjustment in food balances.

"So long as the present conditions continue the only special restrictions we ask are the beefless and porkless Tuesday.

"The meatless meal and the porkless Saturday are no longer asked.

"The farmers of the United States are responding to the national call to increase hog production. Their increase, to all appearances, is being attained more rapidly. Of more immediate importance, however, are several complex factors which have effected an immediate increase in meat supplies.

"The transportation shortage before the government took over the railroads, the bad weather in January and early in February, the large percentage of immature corn in the last harvest and the necessity of feeding this corn as rapidly as possible to save it from decay, have not only resulted in backing up the animals—particularly hogs—on the farms for a longer period of feeding, but have resulted in a great increase in their average weight and will result, with improved transportation conditions, which already appear, in larger than normal arrivals at market for the next two or three months. The weight of hogs coming to the market for the past two weeks indicates an increase in weight of from an average of 203 pounds last year to the almost unprecedented average of 232 pounds, or a net increase in their meat value of over 15 per cent. This is a distinct addition to the nation's meat supply. It therefore now seems certain that we have such enlarged supplies for at least some months to come, that we can not only increase our exports to the allies to the full extent of their transportation facilities, but at the same time can properly increase our domestic consumption.

"The response of the public to our requests for reduced consumption of meat during the past few months has been most gratifying and this service alone has enabled the government during this period to provide such supplies as transportation to the allies permitted.

"The Administration also suggests that in those parts of the country where the old-fashioned home preservation of pork is still the custom this practice should be extended at the present time, as it will relieve the burden upon transportation as well as from the packing houses and is economically sound as saving the cost of packing operations and at the same time will provide home supplies of pork [illegible] over the months of decreased supplies.

"The Food Administration desires to repeat that it does not want to give the impression that these are times when simplicity and moderation of living are not critically necessary, but that we endeavor also to secure an adjustment between our different food [illegible]

[illegible] CARDS IN STORES

Explain New Wheat Ruling to Thousands of Customers—Insures Greater Food Saving.

Grocers of the nation have accepted enthusiastically the 50-50 basis for the purchase of wheat flour and are doing their utmost to explain the new regulation to the housewife. This ruling by the U. S. Food Administration requires each purchaser of wheat flour to buy one pound of cereal substitute, one kind or assorted, for every pound of wheat flour. It was necessary to restrict the use of wheat flour in order that the allies and our fighting forces abroad might be assured of an adequate supply of wheat to meet their vital needs. This supply must come from our savings because we have already sent our normal surplus.

Wheat saving pledge cards were forwarded by the Food Administration to all retail food merchants, and these are being signed and posted in stores throughout the country. This card states, "We pledge ourselves loyally to carry out the Food Administration program. In accordance with this order we will not sell any wheat flour except where the purchaser buys an equal weight of one or more of the following, a greater use of which in the home will save wheat:

"Cornmeal, corn flour, edible corn starch, hominy, corn grits, barley flour, potato flour, sweet potato flour, soy bean flour, feterita flour and meals, rice, rice flour, oatmeal, rolled oats and buckwheat flour."

Some confusion has resulted on the part of the consumer in construing this "50-50" ruling to mean that an equal amount in value of substitutes must be purchased with wheat flour. This is a mistaken idea. The ruling states that the consumer in purchasing flour shall "buy at the same time an equal weight of other cereals."

One exception to this ruling is concerning graham flour and whole wheat flour, which may be sold at the ratio of three pounds to five pounds of wheat flour. This provision is made because approximately 25 per cent. more of the wheat berry is used in the manufacture of these flours than standard wheat flour.

Another exception is that concerning mixed flours containing less than 50 per cent. of wheat flour, which may be sold without substitutes. Retailers, however, are forbidden to sell mixed flours containing more than 50 per cent. of wheat flour to any person unless the amount of wheat flour substitutes sold is sufficient to make the total amount of substitutes, including those mixed in flours, equal to the total amount in wheat flour in the mixed flour. For instance, if any mixed flour is purchased containing 60 per cent. wheat flour and 40 per cent. substitutes it is necessary that an additional 20 per cent. of substitutes be purchased. This brings it to the basis of one pound of substitutes for each pound of wheat flour.

A special exemption may be granted upon application in the case of specially prepared infants' and invalids' food containing flour where the necessity is shown.

Some misunderstanding seems to exist on the part of consumers in assuming that with the purchase of wheat flour one must confine the additional 50 per cent. purchase to one of the substitutes. This is not the case. One may select from the entire range of substitutes a sufficient amount of each to bring the total weight of all substitutes equal to the weight of the wheat flour purchased. For instance, if a purchase of 24 pounds of wheat flour is made a range of substitutes may be selected as follows:

Cornmeal, 8 pounds; corn grits, 4 pounds; rice, 4 pounds; buckwheat, 2 pounds; corn starch, 1 pound; hominy, 2 pounds; rolled oats, 3 pounds.

These substitutes may be used in the following manner:

Cornmeal, 8 Pounds.—Corn bread, no flour; corn muffins, or spoon bread, one-fourth flour or one-third rice or one-third hominy; 20 per cent. substitutes in whole bread.

Corn Starch, 1 Pound.—Thickening gravy, making custard, one-third substitute in cake.

Corn Grits, 4 Pounds.—Fried like mush, used with meal in making corn bread.

Rolled Oats, 3 Pounds.—One-fourth to one-third substitutes in bread, one-half substitute in muffins, breakfast porridge, use freely, oatmeal cookies, oatmeal soup.

Buckwheat Flour, 2 Pounds.—One-fourth substitute in bread, buckwheat cakes.

Hominy, 2 Pounds.—Boiled for dinner, baked for dinner, with cheese sauce.

Rice, 4 Pounds.—One-fourth substitute in wheat bread, one-third substitute in corn bread, boiled for dinner (a bread cut), as a breakfast food, in chicken soups, rice pudding instead of cake or pie, rice batter cakes.

Several grocers have stated that their customers who strictly observe [illegible]

SLICING BACON ON BATTLESHIP

JACKIES in the American navy are classed as the best fed body of men in the world. In the ship's galleys every effort is made to eliminate waste.

In the upper photo one of the cooks on the North Dakota is operating a meat slicer that cuts bacon with the least possible wastage. Fat is fuel for fighters. Bacon is badly needed in the allied armies and navies. The allied needs in pork products are 150,000,000 pounds monthly, three times as much as before the war.

Another waste eliminator on the North Dakota is the potato peeler, shown in the lower photo. Nothing is lost except the actual potato skin.

There is a sufficient quantity of potatoes in America for greater use in every home and for all needs of army and navy. Eat more potatoes, eat less wheat.

EVERYONE MUST HELP.

Wars cannot be fought without money, and upon the Treasury centers every financial demand upon the Nation.

The rich of this country cannot alone meet the needs of the Nation; the men of the country cannot do it alone; the women of the country cannot do it alone; but all of us, the people of the United States, disregarding partizanship, forgetting selfish interests, thinking only of the supremacy of right and determining to vindicate the majesty of American ideals and secure the safety of America and civilization, can do the great and splendid work which God has called upon us to do.

W. G. McADOO,
Secretary of the Treasury.

Plan Your War Garden Now; Save Time and Money.

HELP INCREASE OUR EXPORT FOOD STOCKS

IN CITY and country more war gardens are needed this year than ever before. Patriotism prompted 2,000,000 Americans to plant gardens last year, according to estimates of the United States Department of Agriculture. Transportation facilities of the nation will be strained this year hauling munitions of war and foods for the Allies. The surplus food created by home gardens will help in the railroad problem. And the nation will eat less of the goods we must export—wheat, meat, fats and sugar. Every boy and girl that helps with the garden is helping win the war. Leaflets of instruction in garden making may be secured from the Department of Agriculture at Washington [illegible]

—MAKE W.S.S. PLEDGES—

GOODRIDGE

The most progressive and the biggest little town in northern Minnesota.

The Creamery An Inportant Institution.

On Monday, May 27, 1918 the Goodridge Creamery opens up for business. This event opens up a new era of prosperity for the community. It will not only bring more cash into the pockets of its patrons, but it will foster a spirit of cooperation that is absolutely essential to the progress of a community. If it shall do this however all must work together [illegible] farmers have united in establishing this enterprize they will continue to stand united in its support. Otherwise the undertaking will prove more disastrous to all than if none had been understaken.

The warragement has succeeded in securing an experienced buttermaker in Mr. Osterberg. He is enthusiastic over the outlook and predicts a successful future for the creamery business, provided the patrons do their share. He proposes to receive cream on Monday, Wednesday and Friday of each week, until the noon hour. If business warrants it he will receive cream every day. Settlement will be made twice a month after June 25th.

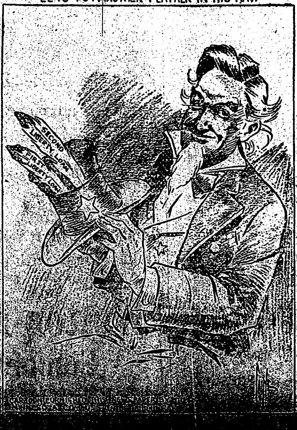
LETS PUT ANOTHER FEATHER IN HIS HAT.



"Let Us Give Unto Them Our Daily Bread"--Says Hoover in Message to the People of Minnesota Expressing Gratitude and Encouragement

Delivered by J. W. Hallowell, Representing Mr. Hoover at Meeting of Minnesota's County Food Administrators.

Mr. Hoover sends a message of gratitude and encouragement to Minnesota: Gratitude for the spirit of understanding and willingness to practice self-denial which the families and trades of this great state are exemplifying in innumerable voluntary activities to conserve food for those who are fighting our battles abroad. There is much work still to be done in Minnesota to make the people as a whole realize the grave necessity of food conservation in order that the ever increasing needs of our Allies and our own Army and Navy are to be satisfied and the Food Administration is confident that this work will be done both loyally and efficiently.

A message of encouragement is possible because Mr. Hoover is able to announce that our recent exports to the Allies of pork products and beef are up to our promises, thus alleviating somewhat the anxiety and strain under which the Allies were laboring last winter when the railroad congestion in this country was the cause of our falling far behind the promised volume of exports. Exports of wheat are improving as conservation throughout the country increases.

During March, our exports to the Allies of wheat and other cereals aggregated 35,000,000 bushels, of which about 10,500,000 bushels were wheat; beef 70,000,000 pounds and pork products the heretofore unheard of total of approximately 300,000,000 pounds; the April record of exports was equally encouraging.

What a God-send to France, England and Italy? This accomplishment would have been impossible except for the voluntary cooperation of the people and food trades of this country.

With the continued stress of unprecedented warfare abroad and with the rapidly increasing numbers of our troops "over there," the problem of feeding both our Allies and our own Army and Navy becomes more and more acute. This will require the continued loyalty of the American People in following the requests which the Food Administration may make from time to time.

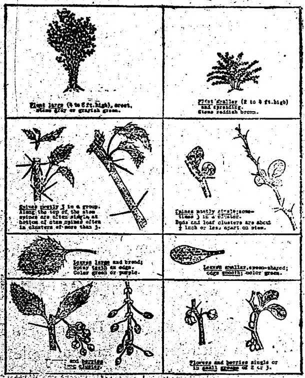
> **Until the next harvest, the cry of suffering France will be for wheat, wheat and more wheat. We should remember that we are sitting at a common table with the Allies and that as there is not enough to go around, it is good manners to take a smaller portion.**

We have the balance of food; the Allies have the present balance of fighting strength. Food is fuel for fighters; that which we have and they need does not belong to us but to them and our own troops abroad. The Food Administration with the assistance of such sterling citizens as A. D. Wilson, Federal Food Administrator for Minnesota, backed up by this wonderfully resourceful country of ours, intends to see that they get it.

LET US GIVE UNTO THEM OUR DAILY BREAD!

COMMON BARBERRY. It Harbors and Propagates Black Stem Rust of Grain.

JAPANESE BARBERRY. It Does Not Harbor or Propagate Black Stem Rust of Grain.



Plant large (4 to 8 ft. high), erect, Stems gray or grayish green.
Plant smaller (2 to 4 ft. high) and spreading. Stems reddish brown.
Spines mostly 3 in a group. Along the top of the stem spines are often single, at bottom of stem spines often in clusters of more than 3.
Spines mostly single; sometimes 3 in a cluster. Buds and leaf clusters are about ½ inch or less apart on stem.
Leaves large and broad; spiny teeth on edge. Color green or purple.
Leaves smaller, spoon-shaped; edge smooth; color green.
Flowers and berries in a cluster.
Flowers and berries single or in small groups of 2 or 3.

People Ask How to Know Wheat's Hun Enemy, the Common Barberry

The people of Minnesota are asking the representatives of the United States government and of the state, who are in charge of the campaign to eradicate the common barberry as a foe of wheat and other grains, how to identify the plant and how to distinguish it from the Japanese barberry which is harmless. They are not willingly but eager to help to destroy a plant which in 1916 helped the black stem rust of wheat to rob the farmers of Minnesota of 10,000,000 bushels of wheat and the business of the state of about $30,000,000 [illegible] knowing wheat's enemy when they see it. [illegible] food administration which is interested [illegible]

The New Draft Bill.

Within the next few days President Wilson will attach his signature to the new draft bill, requiring all men who have attained the age of 21 years since June 5, 1917 to register for military service. Registration day has not been fixed, as yet, but will more than likely be on the same date as last year, June 5. This action will place over 1,000,000 additional men at the call of the country, and is expected to furnish about 700,000 Class 1 men.

In view of the foregoing facts, Major John D. Yost, recruiting officer for the Minnesota district, is urging all young men who will be required, under the law to register, to get into service at once, while they still have an opportunity to select the branch of the service they most desire. The mintue a man is registered under the selective service law he becomes ineligible for voluntary enlistment in the army, and when called by his local board must go into the corps they select for him.

Hundreds of high school boys in the state will have to register next month. Most of them are particularly well suited for specialized branches of the service, and an excellent opportunity is afforded them in the army for further training. Innumerable training schools have been established by the war department in various sections of the country, and high school boys are especially well fitted to attend them. Credits can be secured from practically every high school in the state by boys who wish to get into the army at this time. As the time is short, Major Yost advises them to act at once, and to enlist before the end of May. Only three weeks remain.

Army recruiting officers throughout the Minnesota district have been instructed to make special efforts to secure men who will have to register next month, and to point out to high school boys the advantages of getting into service now rather than later.

Remember the Ladies Aid Ice Cream Social and sale of contributed articles, June 1st.

At my Auction I will sell my Ford Car, one Cow, Coming Fresh in June: 23 chickens.
H. A. Halvorson.

Fred Peterson of Calloway arived this morning to take the place of H. A. Halvorson, who has resigned his position with the Hanson and Barzen co. and will move to Duluth in the near future.

Mrs. Argall and daughter Gladys arived Wednesday morning from Walker for a visit with the formers sister, Mrs. R.H. McDonald.

Mrs. N. H. Dahl arived Wednesday morning.

Edna Stephenson arrived home Friday from North Dakota where she has been for the past two months.

Ross P. White, our county agent, was a caller in Goodridge Sunday.

Miss Tereas Griefer spent the week end at her home in Thief River Falls.

Miss Ruth Anderson visited with friends in Thief River Falls last Friday night.

Mr. and Mrs. R. H. McDonald and two children, Harry and Ruth, Ruth Anderson, Marion Murray and Sam Rouze were entertained at Morgan Vaughn's home Sunday for dinner.

Carl Loen spent Friday night in Thief River Falls.

John Steen of Thief River Falls came Monday to take Carl Loen's place in the Goodridge State bank as assistant cashier.

Mr. and Mrs. Jay Payne and Daniel, Mr. and Mrs. Henry Rockne and Hubert, were entertained at the McLeod home Sunday.

Mr. Thorson has been on the sick list for the past week.

Evangeline Causins spent Saturday night and Sunday at McLeod's.

Guy Rouze, Carl Loen and B. G. Walker were business callers in Thief River Falls Monday afternoon.

V. C. McLeod was in Thief River Falls Thursday afternoon.

The Red Cross drive was started Monday. Mrs. Thorson and Mrs. McDonald canvassed in the village and Mrs. Morgan Vaughn and Miss Murray in the country Tuesday. The last reports were way over the top.

E. H. Causins was in Thief, River Falls Thursday afternoon.

Mr. and Mrs. E. K. Rime returned Monday from Grygla where they have been visiting Mrs. Rime's brother, Mr. Tamen at the Grygla hospital.

Carrie Urdahl spent Friday night in Thief River Falls with friends.

Rev. James Orrock preached in the old school house last Friday night and all enjoyed the service very much.

G. C. Gulrud is erecting a new residence on Main street.

Mrs. T. T. Hauge, of Anoka, Minn., spent a fe wdays last week with Mrs. Gilbert Gunderson.

Mr. and Mrs. Bennie Johnson were business callers in Thief River Falls Saturday night.

Miss Anna Rowberg, of Crookston, is visiting at Christ Urdahl's and Edwin Rowberg's this week.

Daniel Payne spent Saturday at Germantown.

Nick Bundhund and family were Sunday visitors at Germantown.

Gladys Johnson returned home on Saturday night from Thief River Falls where she has been going to school.

Mr. and Mrs. Jay Payne were callers at Germantown last Thursday night.

News came from Winnipeg that Ethel Davis had passed away at a hospital there on May 12, where she had undergone an operation. She formerly worked here in Goodridge and her many friends will be sorry to hear of her death. She was 21 years of age, and the daughter of Mr. and Mrs. James Davis, of Eric.

GERMANTOWN NEWS.

Mrs. Henry Rockne, of Goodridge, made a short visit with her sister, Mrs. Will Wayne, last week.

Miss Lois Struble returned home Saturday from Thief River Falls where she had been attending the high school for the last year.

Mrs. Carl Betten received word that her son, Fred, has arrived safely in France.

Daniel Payne, of Goodridge, made a short visit with his sister, Mrs. Will Wayne.

Henry Klockmann made a flying trip to Thief River Falls Friday morning.

Mr. and Mrs. Clarence Wayne and

hund, were visitors at the Aug. Ristau home Thursday night.

Mr. and Mrs. Nick Bundhund were callers at Aug. Ristau's Sunday afternoon.

Miss Hattie Klockmann and Miss Linda Betten were callers at the Clarence Wayne home Friday morning.

Miss Tillie Ristau and her sister, Miss Emma, were callers at Carl Habedank's home Sunday night.

Mrs. Aug. Ristau was a caller at the Paul Stock home Saturday afternoon.

Mrs. John Phillip was calling at Mavie last Friday afternoon.

Miss Hattie Klockmann was a caller at John Phillip's home Friday afternoon.

A number of young people attended the dance at Mavie and all reported a good time.

Frank Kainz was a caller at Mavie Friday morning.

Rural School Notes

The high school board examinations for May will be held Friday, Monday, Tuesday and Wednesday the 24, 27, 28 and 29. For the Rural schools the program will be as follows:

Friday, May 24: 2:00 p. m. Physiology.

Tuesday, May 28th: 10:15 a. m. Spelling, 30 minutes; 2:00 p. m. Eighth grade grammar and composition.

Wednesday, May 29th: 8:00 a. m. Arithmetic; 2:00 p. m. Geography.

High School Board examinations will be conducted in the following schools:

District No. 178—Mabel Satre, conductor.
District No. 130—Mabel Engen, conductor.
District No. 102—A. O. Halvorson, conductor.
District No. 52—Gertrude I. Olson, conductor.
District No. 66—Tillie Thompson conductor.
Districts Nos. 35, 154, 12—Lilly M Baehm, conductor, Hazel.
District No. 55—Anna Thompson conductor.
District No. 25—Ella Engen, conductor.
District No. 28—Emma Tandberg conductor.
District No. 57—Louise Furstnau, conductor.
District No. 73—Carrie B. Holden, conductor.

Pupils of district No. 35 and 154 will take the examinations in District No. 12 at Hazel and pupils No. 18 at District No. 57 at Torgerson.

Pupils who have the required credits for graduation should not fail to send the credits to this office.

School clerks kindly make sure that all reports, Library and State aid be sent to this office at their earliest convenience. May I again ask that the question of hiring teachers for next year be considered at their earliest convenience.

Let me ask the rural schools yet in session to report to the chairman of the county committee for the purchase of Thrift Stamps if the respective schools have organized the War Saving society. This matter was presented through literature sent to every school and through presentation made by your superintendent during his visitations in March and April.

Let me also urge that all pupils who have bought Thrift Stamps, but not as yet have completed their cards to do their best so to do, so as to obtain in exchange the War Saving Stamps and thus to be assured interest and return of their money.

I do hope that many schools with many pupils will be able to show thrift by presenting war saving certificates, when the solicitors come around in the war saving drive which is presently to take place.

In this way the pupil will become one of the great army of children as well as men and women who put Uncle Sam to work, for Uncle Sam, you know, will have to pay both principal and interest, besides doing all the other things to be done for the good of our country.

Let us all feel that we are one among the number by getting our Thrift Stamp card in order and in obtaining a new war saving certificate for the old card.

Yours truly,
E. A. MOSTUE,
Member of County Committee

The Lawrenceville Bank and Trust, lately installed in its new marble-veneered quarters, was only four squares distant. As he was approaching the corner, Smith saw that there were only two lights in the bank, one in the vault corridor and another in the railed-in open space in front which held the president's desk and his own. Through the big plate-glass windows he could see Mr. Dunham. The president was apparently at work, his portly figure filling the padded swing-chair. He had one elbow on the desk, and the fingers of the uplifted hand were thrust into his thick mop of hair.

Smith had his own keys and he let himself in quietly through the door on the side street. The night-watchman's chair stood in its accustomed place in the vault corridor, but it was empty. To a suspicious person the empty chair might have had its significance; but Montague Smith was not suspicious. The obvious conclusion was that Mr. Dunham had sent the watchman forth upon some errand; and the motive needed not to be tagged as ulterior.

Without meaning to be particularly noiseless, Smith—rubber heels on tiled floor assisting—was unlatching the gate in the counter railing before his superior officer heard him and looked up. There was an irritable note in the president's greeting.

"Oh, it's you, at last, is it?" he rasped. "You have taken your own good time about coming. It's a half-hour and more since I sent that note to your room."

CHAPTER II.

Metastasis.

Smith drew out the chair from the stenographer's table and sat down. Like the cashiers of many little-city banks, he was only a salaried man, and the president rarely allowed him to forget the fact. None the less, his boyish gray eyes were reflecting just a shade of the militant antagonism in Mr. Watrous Dunham's when he said: "I was dining at the Country club with a friend, and I didn't go to my rooms until a few minutes ago."

The president sat back in the big mahogany swing-chair. His face, with the cold, protrusive eyes, the heavy lips, and the dewlap lower jaw, was the face of a man who shoots to kill.

"I suppose you've heard the news about Westfall?"

Smith nodded.

"Then you also know that the bank stands to lose a cold hundred thousand on that loan you made him?"

The young man in the stenographer's chair knew now very well why the night-watchman had been sent away. Smith saw the solid foundations of his small world—the only world he had ever known—crumbling to a threatened dissolution.

"You may remember that I advised against the making of that loan when Westfall first spoke of it," he said after he had mastered the premonitory chill of panic. "It was a bad risk—for him and for us."

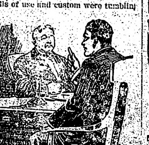
"I suppose you won't deny that the loan was made while I was away in New York," was the challenging rejoinder.

"It was. But you gave your sanction before you went East."

The president twirled his chair to face the objector and brought his palm down with a smack upon the desk slide.

"No!" he stormed. "What I told you to do was to look up his collateral and you took a snap judgment and let him have the money! Westfall is your friend, and you are a stockholder in his bankrupt company. You took a chance for your own hand and put the bank in the hole. Now I'd like to ask what you are going to do about it."

Smith looked up quickly. Somewhere inside of him the carefully erected walls of use and custom were tumbling



"I Am Not Going to Do What You [illegible]"

[illegible] me to do, Mr. Dunham—[illegible] your convenient [illegible]," he said, wondering a little in his inner recess how he was finding the sheer brute man-courage to say such a thing to the president of the Lawrenceville Bank and Trust. "I suppose you have reasons of your own for wishing to shift the responsibility for this particular loss to my shoulders. But whether you have or haven't, I decline to accept it."

The president tilted his chair and locked his hands over one knee.

"It isn't a question of shifting the responsibility, Montague," he said, dropping the bullying weapon to take up another. "The loan was made in my absence. You have taken the bank's money to bolster up a failing concern in which you are a stockholder. Go to any lawyer in Lawrenceville—the best one you can find—and he'll tell you exactly where you stand."

While the big clock over the vault entrance was slowly ticking off a full half-minute the young man whose future had become so suddenly and so threateningly involved neither moved nor spoke, but his silence was no measure of the turmoil of conflicting emotions and passions that were rending him.

"I may not prove quite the easy mark that your plan seems to prefigure, Mr. Dunham," he returned at length, trying to say it calmly. "Just what are you expecting me to do?"

"Now you are talking more like a grown man," was the president's crusty admission. "You are in a pretty bad boat, Montague, and that is why I sent for you tonight."

"Well?" said the younger man.

"You can see how it will be. If I can say to the directors that you have already resigned—and if you are not where they can too easily lay hands on you—they may not care to push the charge against you. There is a train west at ten o'clock. If I were in your place, I should pack a couple of suitcases and take it. That is the only safe thing for you to do. If you need any ready money—"

It was at this point that J. Montague Smith rose up out of the stenographer's chair and buttoned his coat.

"'If I need any ready money,'" he repeated slowly, advancing a step toward the president's desk. "That is where you gave yourself away, Mr. Dunham. You authorized that loan, and did it because you were willing to use the bank's money to put Carter Westfall in the hole so deep that he could never climb out. Now, it seems, you are willing to bribe the only dangerous witness. I don't need money badly enough to sell my good name for it. I shall stay right here in Lawrenceville and fight it out with you!"

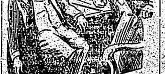
The president turned abruptly to his desk and his hand sought the row of electric bell-pushes. With a finger resting upon the one marked "police," he said: "There isn't any room for argument, Montague. You can have one more minute in which to change your mind. If you stay, you'll begin your fight from the inside of the county jail."

Now there had been nothing in John Montague Smith's well-ordered quarter century of boyhood, youth, and business manhood to tell him how to cope with the crude and savage emergency which he was confronting. But in the granted minute of respite something within him, a thing as primitive and elemental as the crisis with which it was called upon to grapple, shook itself awake. He stepped quickly across the intervening space and stood under the shaded desk light within arm's reach of the man in the big swing-chair.

"You have it all cut and dried, even to the setting of the police trap, haven't you?" he gritted, hardly recognizing his own voice. "You meant to hang me first and try your own case with the directors afterward. Mr. Dunham, I know you better than you think I do: you are not only a crook—you are a yellow-livered coward, as well! You don't dare to press that button!"

While he was saying it, the president had half risen, and the hand which had been hovering over the bell-pushes shot suddenly under the piled papers in the corner of the desk. When it came out it was gripping the weapon which is never very far out of reach in a bank.

Good judges on the working floor of the Lawrenceville Athletic club had said of the well-muscled young bank cashier that he did not know his own strength. It was the sight of the pistol that maddened him and put the driving



Smith Knew What He Had Done.

force behind the smashing blow that landed upon the big man's chest. The lifted pistol dropped from Mr. Watrous Dunham's grasp and he wilted, settling back into his chair, and then slipping [illegible] the floor.

[illegible] Smith knew what he had done. Once, one evening when he had been induced to put on the gloves with the Athletic club trainer, he had contrived to plant a body blow which had sent the wiry little Irishman to the mat, gasping and fighting for the breath of life. "If ever ye'll be givin' a man that heart-punch wid th' bare fisht, Misther Montygue, 'tis you f'r th' fasht thrain widout shtoppin' to buy anny ticket—it'll be murther in the first degree," the trainer had said, when he had breath to compass the saying.

With the unheeded warning resurgent and clamoring in his ears, Smith knelt horror-stricken beside the fallen man. On the president's heavy face and in the staring eyes there was a foolish smile, as of one mildly astonished. Smith loosened the collar around the thick neck and laid his ear upon the spot where the blow had fallen. The big man's heart had stopped like a smashed clock.

Smith got upon his feet, turned off the electric light, and, from mere force of habit, closed and snap-locked the president's desk. The watchman had not yet returned. Smith saw the empty chair beside the vault door as he passed it on his way to the street. The cashier's only thought was to go at once to police headquarters and give himself up. Then he remembered how carefully the trap had been set, and how impossible it would be for him to make any reasonable defense.

With one glance over his shoulder at the darkened front windows of the bank, Smith began to run, not toward the police station, but in the opposite di[illegible] [illegible] Smith [illegible] from shadow to shadow, down the [illegible] lighted cross street and listening momentarily for the footfalls of pursuit, a new hour had struck. It was all prodigiously incredible. The crowding sensations were terrifying, but they were also precious, in their way. Long-forgotten bits of brutality and tyranny on Watrous Dunham's part came up to be remembered and, in this retributive aftermath, to be triumphantly crossed off as items in an account finally settled. On the Smith side the bank cashier's forebears had been plodding farmers, but old John Montague had been the village blacksmith and a soldier—a shrewd smiter in both trades. Blood will tell. Parental implantings may have much to say to the fruit of the womb, but atavism has more. Smith's jaw came up with a snap. He was no longer an indistinguishable unit in the ranks of the respectable and the well-behaved; he was a man fleeing for his life. What was done was done, and the next thing to do was to avert the consequences.

At the railroad station a few early comers for the west-bound passenger train due at ten o'clock were already gathering, and at the bidding of a certain new and militant craftiness Smith avoided the lighted waiting rooms as if they held the pestilence. A string of box cars had been pushed up from the freight-unloading platforms recently, and in the shadow of the cars he worked his way westward to the yard where a night switching crew was making up a train.

Keeping to the shadows, he walked back along the line of cars on the make-up track, alertly seeking his opportunity. Half-way down the length of the train he found what he was looking for: a box car with its sidedoor hasped but not locked. With a bit of stick to lengthen his reach, he unfastened the hasp, and at the switching crew's addition of another car to the "make-up" he took advantage of the noise made by the jangling crash and slid the door. Then he ascertained by groping into the dark interior that the car [illegible] on the [illegible] the next [illegible]

THE HOPE OF THE WORLD

By HAROLD BELL WRIGHT.

THE hope of the world is not alone that the armies of humanity will be victorious, but that the spirit and purpose of our warfare will prevail in our victory. The hope of the world is in the Red Cross, because the Red Cross is voicing this spirit and purpose that must, through the force of our arms, triumph. Just to the degree that we can evidence this Red Cross spirit of mercy and brotherhood we will hold true in the dangerous hour of victory to the ideals that have forced us into the trenches in the defense of human rights and human liberty.

The one sane and saving thought in this delirium of death that now possesses the world is the Red Cross.

Wherever the storms of battle hell rage, amid the fires of ruthless destruction, in trench and camp and hospital, these soldiers of mercy with heroism unsurpassed are carrying the flag of the highest conceivable ideals of humanity. The ideals for which our armies have taken the field are, by these unarmed hosts, proclaimed to friend and foe, in that unmistakable language of universal mercy and brotherhood. In the terms of wasted towns rebuilt, of broken humanity salvaged, of dying children rescued, of desolate families succored, the Red Cross declares the cause for which we war and proclaims the principles and ideals that must and will in the end prevail. Above the thunder of the guns, the roar of exploding mines, the crash of fallen cities and the cries of tortured humanity, the voice of the Red Cross carries clear and strong the one message of hope to our war-burdened world.

The black horror of this world's crisis would be unbearable were it not for the spirit and work of this mighty force. The normal mind refuses to contemplate the situation without this saving power.

It is the knowledge that in every city, town and hamlet, men, women and children are united in this work of declaring to the world, through the Red Cross, our message of mercy and brotherhood, that keeps our hearts from sinking under the burden of woe and sustains our faith in human kind. It is the constant daily, almost hourly touch with the Red Cross work that is felt by every citizen in the land, that inspires us with courage and hope.

Out of this hell of slaughter the Red Cross will guide the warring nations to a heaven of world-wide peace and brotherhood.

Because it is the living expression of those ideals and principles in defense of which we are giving our all in lives and material wealth—because on every field of death it is proclaiming its message of life—because it keeps ever before us and the world the cause for which we war—because it will preserve us in the hour of our victory from defeating ourselves—the Red Cross is the hope of the world.

THE HOPE OF THE WORLD

By HAROLD BELL WRIGHT.

THE hope of the world is not alone that the armies of humanity will be victorious but that the spirit and purpose of our warfare will prevail in our victory. The hope of the world is in the Red Cross, because the Red Cross is voicing this spirit and purpose that must, through the force of our arms, triumph. Just to the degree that we can evidence this Red Cross spirit of mercy and brotherhood we will hold true in the dangerous hour of victory to the ideals that have forced us into the trenches in the defense of human rights and human liberty.

The one sane and saving thought in this delirium of death that now possesses the world is the Red Cross.

Wherever the storms of battle hell rage, amid the fires of ruthless destruction, in trench and camp and hospital, these soldiers of mercy with heroism unsurpassed are carrying the flag of the highest conceivable ideals of humanity. The ideals for which our armies have taken the field are, by these unarmed hosts, proclaimed to friend and foe, in that unmistakable language of universal mercy and brotherhood. In the terms of wasted towns rebuilt, of broken humanity [illegible], of dying children rescued, of desolate families succored, the Red Cross declares the cause for which we war and proclaims the principles and ideals that must and will in the end prevail. Above the thunder of the guns, the roar of exploding mines, the crash of fallen cities and the cries of tortured humanity, the voice of the Red Cross carries clear and strong the one message of hope to our war-burdened world.

The black horror of this world's crisis would be unbearable were it not for the spirit and work of this mighty force. The normal mind refuses to contemplate the situation without this saving power.

It is the knowledge that in every city, town and hamlet, men, women and children are united in this work of declaring to the world, through the Red Cross, our message of mercy and brotherhood, that keeps our hearts from sinking under the burden of woe and sustains our faith in human kind. It is the constant daily, almost hourly touch with the Red Cross work that is felt by every citizen in the land, that inspires us with courage and hope.

Out of this hell of slaughter the Red Cross will guide the warring nations to a heaven of world-wide peace and brotherhood.

Because it is the living expression of those ideals and principles in defense of which we are giving our all in lives and material wealth—because on every field of death it is proclaiming its message of life—because it keeps ever before us and the world the cause for which we war—because it will preserve us in the hour of our victory from defeating ourselves—the Red Cross is the hope of the world.
